COMMISSION.

VICTORIA R.

L. S.

VICTORIA, by the Grace of God of the United Kingdom of Great Britain and Ireland Queen, Defender of the Faith: To The Right Reverend Father in God, JOHN Bishop of Chester, Our Trusty and Wellbeloved GEORGE PEACOCK, Doctor in Divinity, Dean of Ely; Sir JOHN FREDERICK WILLIAM HERSCHEL, Baronet; Sir JOHN ROMILLY, Knight, Our Attorney-General; and ADAM SEDGWICK, Clerk, Master of Arts, Woodwardian Professor of Geology in Our University of Cambridge, Greeting:

WHEREAS, WE have deemed it expedient for divers good causes and considerations that a Commission should forthwith issue for the purpose of enquiring into the State, Discipline, Studies, and Revenues of Our University of Cambridge and of all and singular the Colleges in Our said University.

NOW KNOW YE, that We, reposing great trust and confidence in your knowledge, ability, and discretion, have authorized and appointed, and do by these Presents authorize and appoint you, the said JOHN Bishop of Chester, GEORGE PEACOCK, Sir JOHN FREDERICK WILLIAM HERSCHEL, Sir JOHN ROMILLY, and ADAM SEDGWICK, to be Our Commissioners for enquiring into the State, Discipline, Studies, and Revenues of Our University of Cambridge, and of all and singular the Colleges in Our said University.

And for the better enabling you to carry these Our Royal Intentions into effect, We do by these Presents authorize and empower you or any three or more of you, to call before you, or any three or more of you, such persons as you may judge necessary, by whom you may be the better informed on the matters herein submitted for your consideration; also to call for and examine all such Books, Documents, Papers, and Records, as you shall judge likely to afford you the fullest information on the subject of this Our Commission, and to enquire of and concerning the Premises by all other lawful ways and means whatsoever.

And it is Our further Will and Pleasure that you, or any three or more of you, do report to Us in Writing, under your Hands and Seals, within the space of two years from the date of these Presents, or sooner if the same can reasonably be, your several proceedings by virtue of this Our Commission, together with your opinions touching the several matters hereby referred for your consideration.

And We will and command, and by these Presents ordain, that this Our Commission shall continue in full force and virtue, and that you Our said

Commissioners, or any three or more of you, may, from time to time, proceed in the execution thereof, and of every matter and thing therein contained, although the same be not continued from time to time by adjournment.

And for your further assistance in the execution of these Presents, We do hereby authorize, and empower you to appoint a Secretary to this Our Commission, whose services and assistance We require you to use from time to time as occasion may require.

Given at Our Court at St. James', the thirty-first day of August, 1850, in the fourteenth year of Our Reign,

By Her Majesty's Command,

G. GREY.

REPORT.

TO THE QUEEN'S MOST EXCELLENT MAJESTY.

WE, your Majesty's Commissioners, appointed to inquire into the State, Discipline, Studies, and Revenues of the University and Colleges of Cambridge, humbly beg to submit to Your Majesty the result of the inquiries made by us in obedience to Your Majesty's command.

The first step we took was to address His Royal Highness the Prince Albert, Chancellor of the University, presenting to His Royal Highness a Copy of Your Majesty's Commission, and expressing a hope that in the performance of the duty entrusted to us we should be encouraged by His Royal Highness's countenance and favour.

His Royal Highness was pleased to return the following most gracious answer:

"MY DEAR LORD, *Windsor Castle, November* 6, 1850.

"I HAVE had the pleasure of receiving your Lordship's letter of the 4th "instant, enclosing a copy of the Commission which has been issued by Her "Majesty for inquiring into the State, Discipline, Studies, and Revenues of the "University of Cambridge, and of which your Lordship is at the head.

"From the high character and well-known abilities of your Lordship and "those who are associated with you in this inquiry, I cannot doubt that it will "be conducted in the manner best calculated to attain the object for which it has "been instituted and to promote the true interests of the University.

"I have lost no time in forwarding the Copy of the Commission to the Vice-"Chancellor, to be by him submitted to the University Authorities; and they "will, I feel confident, meet you in the performance of your important duties "with that ready co-operation, which the deference due to Her Majesty's Com-"mission, and their respect for the personal characters of the Commissioners, "would alike prompt them to afford.

I remain,
My dear Lord,
Yours, very truly,
ALBERT C.

"*The Right Reverend the Bishop of Chester,*"
&c. &c.

We proceeded to address inquiries to the Vice-Chancellor and other officers of the University; to the Heads and the Societies of the several Colleges; to the Professors of the University, and to others of its Members distinguished by their station, character, and experience.

What degree of success we have had in the performance of our duty, the subjoined Report and Evidence will explain. It has been our desire to conduct our inquiries in a manner respectful to the University; to express praise where praise is justly due, and to describe such measures of improvement and reform as the extent of our information has enabled us to suggest.

REPORT.

The University of Cambridge is a lay corporation, possessing various privileges under Charters of the Crown and Acts of Parliament or by prescription. The earliest Royal Letters Patent, which can now be traced as authentic, are of the reign of King Henry the Third. These, however, do not found the University, but recognise it as already existing with an organized constitution and regular form. Other Letters and Charters were granted from time to time by subsequent monarchs, of which the most ample and the most important is the Charter granted by Queen Elizabeth in the third year of her reign, confirming former and conferring new privileges. In the thirteenth year of the same reign an Act of Parliament was passed whereby it was enacted that "the Chancellor, Masters, and "Scholars of the University of Cambridge" should be incorporated with perpetual succession under that title; and that the Letters Patent of the Queen, made in the third year of her reign, and also all other Letters Patent by any of Her Majesty's progenitors or predecessors, should be good in law to all intents.

The more important of the privileges granted to the University by these Royal Letters, and confirmed by Parliament, will be noticed in the course of the present Report.

Colleges.

In the early state of the University the Students lodged in hostels or houses hired in the town; but in process of time Colleges were founded and endowed by various benefactors for the promotion of piety and learning under a well-ordered system of internal discipline, and for affording assistance towards the maintenance of the inmates. As the number of Colleges increased, the hostels declined, and were either merged in the Colleges or disused. In the Statutes for the government of the University, made in the reign of Queen Elizabeth, it is implied that every Student of the University was then a member of some College. The University now contains in itself seventeen Colleges, or Halls which possess equal privileges with the Colleges, differing only in name. In many of the Colleges the buildings have been recently greatly enlarged, and much praise is due for the liberality and spirit which has been so beneficially exerted in these improvements. But the accommodation within the Colleges generally is still inadequate to the number of Students, many of whom reside at lodgings in the town, with the license and under the supervision of the authorities of the University. In order, however, to be a member of the University, it is necessary for every person to be a member of some College, whether he be a resident within its walls or not, the only exception being a small class, entitled Commorantes in Villa. These are Graduates residing in the town, either Masters of Arts or of a superior degree, who, having formerly been members of some College, have been permitted to withdraw their names from it, and register themselves, with certain formalities, under the before-mentioned title, so as to retain the privilege of being still members of the University itself.

Statutes.

The University, in its earlier stages, was regulated, as to its internal administration, by Statutes or Ordinances framed and passed by its own Legislative Senate. But in the reign of King Henry the Eighth, some Injunctions of a general nature were issued to the University by the Royal authority; and in the following reign, certain Commissioners, appointed by King Edward the Sixth, drew up a formal code of Statutes for its government, to which were added, by like authority, some supplemental injunctions and interpretations. The great work of the reformation of religion had then commenced, and all the vicissitudes of that momentous struggle affected the condition of the University. Queen Mary, on her accession to the throne, set aside the new code, and in its stead certain ordinances were substituted by the authority of Cardinal Pole, as Legate to this kingdom from the Pope. These were in turn displaced by Queen Elizabeth, who gave to the University two successive codes. The former of them was issued in the first year of her reign, and was superseded in the twelfth year of the same by the second code, which still remains in force.

In the following year the Act of Parliament was passed, which has been already mentioned as confirming the Charter or Letters Patent granted by the Queen in the third year of her reign, and all other Charters and Letters Patent of Her Majesty's predecessors. These Charters and Letters conferred privileges which affected parties extraneous to the University itself. The code of Statutes affected only the internal administration of the University, and neither received nor required the like Parliamentary confirmation. Nor was it accepted by any formal Act of the University, but became obligatory by the joint effect of the authority from which it emanated, and of its actual adoption by the University in practice.

The code of the twelfth year of Queen Elizabeth repealed all such antecedent laws and customs as were contradictory to itself, leaving the rest in their former validity and force. It also gave to the Chancellor of the University, with the consent of the whole body, authority to frame and establish from time to time new Statutes for the advancement of learning and the maintenance of order, provided they were not obstructive to, or derogatory from, its own contents. In the event of any doubt arising as to the meaning of any part of it, the point is to be interpreted by the Chancellor of the University, and a majority of the Heads of Colleges.

In accordance with these principles the whole system of laws by which the University is now regulated, may be divided into two distinct classes.

The one comprises the code of Queen Elizabeth, such earlier Royal Ordinances as that code left still in force, and such subsequent Royal Ordinances as the Sovereigns of the Realm from time to time have given, and the University has accepted, either by some formal expression of assent, or by actual adoption in practice. As respects this class of laws it is not properly competent to the University by its own act to abrogate or alter them without the sanction of the Crown. The Royal authority by which they were originally established, is, in like manner, necessary to any change in them.

The second class consists of Ordinances and Regulations made by the University itself, whether ancient Statutes, prior to the Elizabethan code, or bye-laws of a later date. These are (in general) revocable by the same authority of the University Senate by which they were at first made. There is also another collection of Ordinances, called Decrees of the Heads of Colleges, being either interpretations of the Elizabethan Statutes, or regulations affecting the general system of collegiate discipline.

This whole mass of laws, the growth of such a long course of years, comprehends a miscellaneous variety of details. That part which consists of Ordinances of the University Senate, so far as it is applicable to present practice, might be advantageously reduced into a more convenient and coherent form by re-arrangement and consolidation. Moreover the Statutes of Queen Elizabeth, though possessing a permanent authority, contain many directions which have become obsolete, as being no longer suited to the present course of study. The members of the University have shown that they are sensible of the evil of this incongruity, and desirous of obtaining a remedy for it. As a preliminary measure to this end they appointed, on the 7th of March, 1849, a Syndicate or Committee to revise the Statutes, and indicate the particulars in which alteration is required or improvement may be made. The Syndics, after having been engaged in their task for upwards of two years, prepared a Draft of such an amended Code as should bring the law and the practice of the University into more exact conformity, and give, in many respects, increased efficiency and utility to the academical system. No opinion of the Senate has yet been expressed upon the Draft thus prepared, which, if approved by the University, will, after that, depend for its validity upon the sanction of the Crown. But the preliminary proceeding, so far as it has advanced, is a gratifying proof of the desire prevailing in the University itself for its own improvement. Many of the more important of the suggested changes will be noticed in the course of the present Report.

Changes in the Statutes necessary.

We have caused the Statuta Antiqua of the University and the Code of the 12th year of Queen Elizabeth to be printed in a separate form.

We now proceed to mention the principal executive authorities of the University.

The Chancellor.

The highest academical office is that of Chancellor. For many years past it has been successively filled by individuals of exalted rank and honourable name, in the selection of whom the University has sought to render a graceful homage to eminence in public and private virtue.

The election is made by poll of the members of the Senate, and determined by the majority of votes. Stat. Eliz., c. 33.

It is only on rare occasions of extraordinary interest that the Chancellor is present in the University. Provision is made for the performance of his duties in his absence by the appointment of a

Stat. Eliz., c. 34. Mode of Election.

This latter officer is elected annually. On the third day of November in each year, the day on which the office becomes vacant, the Heads of the several Colleges or, in the absence of any of them, their official representatives, assemble in the Senate House and nominate two Graduates of a degree not inferior to that of Master of Arts. The nomination, as soon as made, is openly announced, and, on the following day, the members of the Senate elect one of the two to be the Vice-Chancellor of the ensuing year.

It has long been the general custom to nominate two Heads of Colleges, according to a certain rotation. This practice, in whatever point of view it may be regarded, tends to prevent contests of ambitious rivalry. It also precludes the anomaly that would arise if the Head of a College, who within it possesses the paramount authority, should yet in another respect be subordinate to one of its resident members, who, by holding the office of Vice-Chancellor, would possess the superior authority in the University at large. Still it should be borne in mind that this arrangement is merely matter of practice, and that the nomination is not thus limited by the requirements of the Statutes themselves, nor is any such limitation proposed in the Draft of the revised Statutes.

The Vice-Chancellor, as will be perceived from the foregoing description, does not derive his authority by delegation from the Chancellor, but by election from the Senate. Whatever functions are assigned by the Statutes to the Chancellor of the University are, by the same Statutes, directed to be exercised, in his absence, by the Vice-Chancellor.

Stat. Eliz., c. 42. Functions of the Office.

The functions of the office are of great importance. The Chancellor or, in his absence, the Vice-Chancellor, superintends the whole administration of the affairs of the University. By the Statutes of Queen Elizabeth it is his office to hear and decide all controversies of members of the University and their servants in a summary manner, according to the rules of the Civil Law, and the privileges and customs of the University; to call Congregations of the Senate, and to fine those members who depart before the end of the Congregation without leave, or who, being resident within the precincts of the University and having been summoned, are absent from the Congregation; to confer Degrees on fit persons who have fulfilled the statutable requirements, and to reject the unfit; to punish transgressors of the Statutes or of good order and discipline, either by his sole authority or with the concurrence of a majority of the Heads of Colleges, according to the extent of the punishment and the academical degree and official rank of the offender; to see that the officers of the University do their duty; and to make, with the consent of the University, new Statutes for the advancement of learning and the maintenance of order, provided the same be not obstructive to, or derogatory from, Her Majesty's Statutes.

It should be added that the Vice-Chancellor is by Act of Parliament a magistrate, both for the county and the town of Cambridge, during the continuance of his office.

Jurisdiction.

One particular in the preceding enumeration appears to require especial notice; namely, the jurisdiction which the Chancellor is empowered to exercise on behalf of the University. Its extent is more amply stated in the Charter or Letters Patent of Queen Elizabeth. That Charter gave to the Chancellor, Masters and Scholars of the University the exclusive cognizance of all personal pleas as well of debts, accounts, contracts, and wrongs, as of breaches of the peace committed within the precincts of the University (maim and felony only excepted) in all cases where a Master or Scholar, or Scholar's servant, or public officer (*minister*) of the University, is one of the parties. All which causes, whether promoted *ex-officio* or at the suit of a party, are to be heard and finally determined in the University Court, and judgment thereupon is to be carried into execution according to the laws and customs of the University, or according to the Statutes of the realm. And the Court is made a Court of Record.

In this Court the Chancellor, or, in his absence, the Vice-Chancellor, presides as Judge, the Heads of Colleges being his Assessors in such cases as may involve a sentence requiring their concurrence. The exclusive jurisdiction of the Court, however, has been materially affected by the indirect operation of an Act of Parliament passed in the ninth year of the reign of King George IV., which gives to magistrates a summary power of punishing for common assaults. As this Act does not contain any express reservation of the privileges of the University, the

effect is understood to be that it is now competent to the magistrates of the borough to hear and decide charges of assault, even in cases where one of the parties is a Member of the University.

We may be allowed also to observe, that, so far as the exclusive jurisdiction of the University remains unimpaired, the assertion of the privilege is attended with considerable difficulty, in consequence of the formalities required for establishing the claim of cognizance when the complaining party, instead of bringing his case before the University Court, has applied to the municipal magistrates or to the superior Courts of Law. It may not be an unfit subject for consideration, whether some greater facility might not be reasonably afforded to the University in this respect.

Commissary.

Besides the Court of the Chancellor, there is also a subordinate Court, called the Court of the Commissary; an officer who is appointed by the Chancellor, and has jurisdiction in all causes belonging to the cognizance of the University, excepting cases wherein one of the parties is a Proctor or Taxor of the University, or a Master of Arts, or Graduate of superior degree.

From the sentence of the Commissary an appeal lies to the Vice-Chancellor, by the Statutes of Queen Elizabeth, c. xlviii. From the Vice-Chancellor, whether the cause may have been originally commenced in his Court or carried before him by appeal from the Commissary, there lies in either case an appeal to the University Senate, by whom the examination of the cause is committed to delegates chosen from their own body; not fewer than three or more than five; and the sentence of the delegates is final.

Evidence, p. 35.

Relations between the University and the Town.

In the course of our inquiries we received a Memorial from the Mayor, Aldermen, and Burgesses of the Borough of Cambridge, calling our attention to such of the privileges of the University as affect the mutual relation between the University and the Town. Amongst other points, the Memorialists submit to our consideration whether the time has not arrived when the right to exclusive judicial power on the part of the University may be beneficially abolished. "We believe," they say, "it will be found upon examination that the proceedings "in the Court of the Vice-Chancellor and Heads of Colleges are very inconsistent "with the spirit of our free constitution. The proceedings are secret. There is "no jury. The accused has no adequate previous notice of the charge. He is "denied professional assistance; and is cross-examined by the Judges, who are his "accusers also; and from their decision there is no appeal."

We thought it right to communicate the before mentioned Memorial to the authorities of the University, that they might have the opportunity of offering any remarks upon it in the way of explanation. With respect to the University jurisdiction, they state in their reply, "It is not thought necessary to enter into any "general justification of the proceedings in the Chancellor's Court; but it may "be remarked that they are conducted according to the rules of the Civil Law, "which do not require a jury. Neither is there one at Petty Sessions. 'The "accused,' it is said, 'has no adequate previous notice of the charge.' The "answer to which is, that the charge is always stated in the summons. He "thus has at least a longer notice than if he were brought up before the magis-"trates of the town: and as to the statement that the offender 'is cross-examined "'by the Judges, who are his accusers also,' it is no more correct than if the "same had been said of the Judges of the land before prisoners were by a recent "law allowed to have counsel. The Chancellor is the sole Judge, and there are "never wanting among his Assessors those who, by such cross-examination, as "it is termed, carefully elicit all the circumstances favourable to the person "charged."

Evidence, p. 45.

It is stated in the Memorial itself that "excepting in cases of discipline and dis-"communing, the University Courts may be considered as obsolete." The subject of discommuning will be noticed in a subsequent part of our Report. As respects cases of discipline, when a person *in statu pupillari* is charged with some offence against the laws and good order of the University, the form of proceeding in the Vice-Chancellor's Court appears to be well adapted for the purpose both of visiting offenders with temperate punishment, and of preventing offences by the wholesome exercise of academical authority. We have reason to believe that the accused party is never required to state anything that may criminate himself; but is at perfect liberty either voluntarily to acknowledge his fault, or to offer such statements as he may think fit in his defence, and to produce such witnesses as can support his case.

Report.

In the investigation of these cases of internal and domestic discipline, publicity may not be essential to the ends of justice and correction; but in all strictly judicial cases, where the accused party is not a member of the University, it appears to us to be desirable and proper that the Court should be open and the proceedings public.

We proceed to notice some other privileges which are exercised by the Vice-Chancellor either solely or in connexion with the Heads of Colleges, and which are made subjects of remark in the Memorial of the Borough Council.

OATHS TAKEN BY THE MAYOR OF CAMBRIDGE AND OTHERS BEFORE THE CHANCELLOR OF THE UNIVERSITY.

On the election of the Mayor and Bailiffs of the Borough, the Vice-Chancellor and Proctors of the University attend at the Guildhall, where the Senior Proctor administers to them an oath, which was formerly expressed in the following terms.

"You shall swear that you will observe and keep, so far forth as in you lieth, "the liberties and customs of this University, as concerning the keeping of the "peace, as also the assize of bread, and ale, and other victuals; and that you shall "not unduly, nor of malice, impugn the other liberties and due customs of the "said University, as far forth as you shall have knowledge thereof."

The authority for this proceeding is derived from the ancient Charters of the University. By an Act of Parliament, 6 and 7 Will. IV., c. 37, the then existing modes of regulating the assize and price of bread in the kingdom were abolished. Since that time, the mention of bread in the foregoing form, is stated by the University to have been omitted in tendering the oath, as no longer applicable.

In every year also, on the Friday before the Feast of St. Simon and St. Jude, two Aldermen, four Burgesses, and two inhabitants of each Parish in the town, appear in the Vestry of the Church of Saint Mary the Great, and there before the Vice-Chancellor, the Proctors, and the Mayor, take the following oaths, administered by the Senior Proctor.

The Aldermen's Oath.

"You shall swear that (*if called upon*) you shall diligently assist, and faith-"fully counsel the Mayor and Bailiffs of the Town of Cambridge, for peace both "of the University and the Town to be kept; and to search for evil-doers and "troublers of peace, and vagabonds of the night, and receivers of thieves and "evil-doers. All this you and every of you shall promise to do faithfully."

The Oath for the four Burgesses.

"You shall swear to observe fidelity towards our Sovereign Lady the Queen's "Majesty, and (*if called upon*) to be assisting and counselling to Her Majesty's "Mayor and Bailiffs of Cambridge for the searching out of malefactors and per-"turbers of Her said Majesty's peace, and vagabonds in the night, and receivers of "thieves and malefactors, all which things you shall diligently observe."

The Oath of two of every Parish.

"You shall swear every fortnight, to make (*if called upon*) diligent and faithful "search for all suspected persons lying within your parish, and to present every "such so tarrying for three nights to the Vice-Chancellor and the Mayor."

The qualifying words "if called upon," appear to have been usually, but not uniformly, introduced in tendering the several oaths of late years.

Great Assembly.

This ceremonial, which is called the Great Assembly, is founded on an ancient charter of the University, whereby it is directed that there shall be two Aldermen and four of the more discreet Burgesses associated to them, all of whom shall swear to be assisting and counselling the Mayor and Bailiffs for conservation of the peace and keeping the assize, and to search for evil-doers and troublers of the peace: also two in every parish, who shall swear to make diligent search, every fortnight, in their parish, for all suspected persons; and that they shall answer for any one who had received any such for three nights in his house.

The Memorialists "submit that no adequate reason exists for any of these "oaths; and that the exacting them tends much to impair the solemnity with "which an oath ought ever to be regarded; and engenders or sanctions a notion "that the Town authorities are dependent on the University."

The University in their reply, observe, that "the oath of the Mayor and "Bailiffs is of a comprehensive character, and imposes on the chief officers of the "Town the highest obligation to preserve the privileges of the University. When it "is considered that these privileges materially contribute to the maintenance of "order and discipline among the members of the University, and to the protection "of public morality and decorum, it does not seem unreasonable that they should "be supported and sanctioned by an oath which is administered to those officers "upon their election."

Oaths recommended to be discontinued.

The reply does not enter into any vindication of the proceedings at the Great Assembly. However useful or necessary they may have been in former times, the system has now been practically superseded by the institution of an efficient borough police. It has ceased to be productive of any good effect; it is endured reluctantly by the Town, and may, in our opinion, be advantageously discontinued.

With respect to the oath of the Mayor and Bailiffs, though we cannot regard it as either a grievance or a humiliation to the Town, yet neither does it appear to us to be essential for the security of the University privileges. Those privileges, so far as they are founded in law, are protected by law; and their continued permanence must depend upon a general conviction of their operating usefully and beneficially. Under this impression, and with a strong sense of the importance of removing occasion of jealousy on the part of the Town towards the University, we are of opinion that this oath also might, without any real disadvantage, be discontinued.

WINE AND ALE LICENSES.

The Vice-Chancellor exercises, on behalf of the University, an exclusive right of granting licenses for the sale of wine in the town of Cambridge. This, which is regarded by the University as a prescriptive privilege, was confirmed by an Act of Parliament in the 17th year of the reign of King George the Second. In the exercise of this power, the Vice-Chancellor is authorized by the University to act alone.

He also claims and exercises a prescriptive right, on behalf of the University, to license ale-houses in the town of Cambridge and the adjacent village of Chesterton, acting for this purpose with an assistant, usually some Head of a College whose name is included in the Commission of the Peace for the Borough. The licenses, however, are sealed and signed by the Vice-Chancellor alone.

Subsequently to the passing of the Municipal Corporations Reform Act, 5 & 6 Will. IV., c. 76, the Magistrates of the Borough have also assumed the power of granting licenses to ale-houses in the Town at Borough Sessions. The inconvenience of such a concurrent power in two different bodies is a point noticed in the before-mentioned Memorial, and in the reply of the University thereto. The Memorialists also quote the following opinion expressed by the late Very Reverend Dr. Lamb, Dean of Bristol, and Master of Corpus Christi College in Cambridge. The passage occurs in the Preface to a collection of University Documents published by him in the year 1838. "It is a matter of no importance to the "University, as it concerns its discipline, whether the Vice-Chancellor or the "Town Magistrates have the power of licensing alehouses; but in times of "political excitement this power may be abused to party purposes; and against "such an abuse there seems to be better security by vesting it in a bench of "magistrates than in an individual. At Oxford, where the authority of the "Vice-Chancellor is kept distinct from that of the Town Magistrates, nothing of "this kind has occurred. The latter have always licensed the ale-houses; and "no complaint has been made that the discipline of the University has in anywise "suffered by such an arrangement." On the other hand, the reasons for which the University attaches importance to its possession of this privilege, are thus stated in the reply: "The Vice-Chancellor, having the power to grant licenses, "has by consequence the power to revoke them; and this has been found to "supply the University with a very salutary influence over publicans in general, "whenever any of the lower class of them have sought to afford facilities for "improper meetings, or any of the higher to afford opportunities for improvident

Evidence, p. 42.

REPORT.

"expenditure: nor is the control over vintners less necessary or less efficacious "for restraining such expenditure than that over innkeepers." We are of opinion that there is much weight in the reasons thus assigned by the University.

Recommendation respecting Ale-House Licenses.

It appears to us to be very important for the purposes of discipline, that the Vice-Chancellor should possess the power of revoking the license of any victualler, who shall have been proved before him to have afforded facilities for the reception of women of improper character in his house, or to have permitted students to resort to it for the practice of games disallowed by the University, or to have infringed such rules as the Vice-Chancellor and Heads of Colleges may have passed for controlling the expenses of persons *in statu pupillari*. To be effective, this power of revocation should, in our opinion, be absolute and without appeal. If such a power were legally confirmed to the Vice-Chancellor, we think that it would be a graceful and expedient concession on the part of the University to yield up the right of granting Licenses for Ale Houses to the Magistrates of the Borough; subject, however, to the condition that in any case where a License shall be revoked by the Vice-Chancellor, it shall not be competent to the Borough Magistrates to grant a new one either to the offending party, or to any tenant of the same house, without the formal consent of the Vice-Chancellor to that effect. By such an arrangement between the University and the Borough, each party would be in possession of that particular power which is presumed to be, in a more especial manner, the object of its desire.

THEATRICAL AND OTHER ENTERTAINMENTS.

By an Act passed in the Session of the 6th and 7th years of Your Majesty's reign, it is provided that no theatre license shall be in force within the University of Cambridge, or within fourteen miles of the Town of Cambridge, without the consent of the Chancellor or Vice-Chancellor of the University; and that the rules for the management of any theatre, which shall be licensed with such consent within these limits, shall be subject to the approval of the said Chancellor or Vice-Chancellor; and that in case of the breach of any of the said rules, or any condition on which the consent of the Chancellor or Vice-Chancellor shall have been given, it shall be lawful for such Chancellor or Vice-Chancellor to annul the license, and thereupon such license shall become void.

The Memorialists express their belief that "no valid reason exists why theatrical "and other entertainments of the like nature should be subject to other control "at Cambridge than elsewhere."

The University, in that part of their reply which relates to this subject, remark, that "the Vice-Chancellor exercises a discretion as to allowing public enter- "tainments, especially in full Term. It would have seemed that the reason "for the occasional withholding of his permission is as obvious as it is valid, "namely, the hazard of tumult and disturbance, when a large assembly of young "men is collected together at night. The inhabitants of the Town cannot but "be sensible of the evil, and the Council of the Borough might not unreasonably "have been expected to concur in the expediency of preventing it. Nor can any "one fail to perceive how certain and injurious the interruption to the proper "pursuits of the Students would be, were frequent entertainments to take place. "During the vacations the Vice-Chancellor rarely, if ever, interposes to prevent "them."

It appears that the above quoted provision in the Act of Parliament extends to the neighbouring towns of Newmarket, Royston, and St. Ives; which are respectively situated within the prescribed distance of the town of Cambridge. We are not aware that this has been attended with any practical inconvenience, or given occasion to any complaint; but the reasons for preserving to the University the control over theatrical entertainments within the town or suburbs of Cambridge do not appear to apply to the cases of the neighbouring towns above-mentioned.

DISCOMMUNING.

The Vice-Chancellor, in conjunction with the Heads of Colleges, exercises, when occasion requires, the power of discommuning tradesmen and others; that is, of prohibiting persons *in statu pupillari* from having any dealings with any tradesman or inhabitant of the Town, who has violated the privileges or regulations of the University.

REPORT.

One most important duty, to which attention has at all times, but especially of late years, been paid by the University, is that of restraining persons *in statu pupillari* from habits of extravagant expense. With this view the Vice-Chancellor and Heads of Colleges have published a series of regulations intended to bring the expenses of the Students, as far as is practicable, under the knowledge and control of the authorities of the several Colleges. Those regulations will be more minutely described in a subsequent part of our Report, with reference to the discipline of the University. The general purpose of them is to require tradesmen to send to the Tutors of the different Colleges notice of the amount of debt, (if exceeding five pounds,) that has been contracted with them by any student *in statu pupillari* and remained unpaid at the end of the preceding quarter of the year. The object is as well to prevent wasteful expense and continued accumulation of debt by Students, as also to secure the regular and prompt discharge of just and reasonable claims of tradesmen. The regulations are accompanied by a public warning that any tradesman, who shall disobey them, shall be liable to be discommuned.

P. 16.

In cases where these regulations have been disobeyed, or where facilities have been afforded for the practice of prohibited games, or where loans of money have been made by inhabitants of the Town to Students *in statu pupillari* at an exorbitant rate of interest, the offending party is called upon to appear before the Vice Chancellor and Heads of Colleges; and if he fails to clear himself by some satisfactory defence or explanation, an order for discommuning him is made; and thereupon an edict is sent to the several Colleges prohibiting all persons *in statu pupillari* from having any dealings with him, and warning them of the academical punishment which they will incur if they shall disobey the edict.

This proceeding is so far of a judicial character that regular evidence is produced in support of the charge, an opportunity of defence is afforded to the accused party, and a formal decision on the case is recorded; but there is not any fine or like penalty inflicted upon the offender. He is reached indirectly, by being excluded from the benefit he might otherwise have derived from the members of the University continuing to employ him. The exercise of this power, in a temperate and judicious manner, is in our opinion well adapted to produce salutary effects by checking improper expenses and preventing mischievous facilities of credit. We observe that the legality and reasonableness of the power appear to have been recognized on a recent occasion by the Judges of the highest of Your Majesty's Courts of Common Law.

THE HIGH STEWARD.

The next office to be mentioned is that of High Steward: an office of great honour and distinction, which has been filled by a succession of men, eminent by their rank and personal merit.

In describing the privileges of the Chancellor's Court within the precincts of the University, we noticed that cases of maim and felony were excepted from its jurisdiction. The trial of these cases, when the accused party is a member of the University, is, by a particular Charter, committed to the High Steward. This, however, may be regarded as having now become, in practice at least, a merely nominal power.

The High Steward's Court.

The High Steward, or his Deputy, has also the privilege of holding a Court Leet. The proceedings of this Court have, of late years, been limited to receiving presentments against persons selling by defective weights and measures not stamped by the University officers, and against persons keeping billiard or other gaming tables disallowed by the University. The presentments have been made by a Jury consisting of thirty persons, two from each parish in the Town and suburbs; who are expected to visit and examine the different shops. Pecuniary fines of small amount, apparently limited by custom, have been imposed upon offending parties. But it appears very doubtful whether the infliction of these small fines had much effect in repressing offences. The mode also of proceeding in the Court, by means of a formal presentment from a Jury, is encumbered with great practical difficulty and inconvenience. If it be thought really important that this ancient privilege of the University should be retained, it would be manifestly expedient that by competent authority the form of proceeding in the Court should be rendered more simple, and a more efficient power be given to the Judge both to summon offenders and to impose and enforce fines of such an amount as might operate to repress illegal practices. Certainly, in its present state, the Court appears to be inefficient for any practical good.

REPORT.

Mode of Electing High Steward.

The mode of appointing the High Steward is by Grace of the Senate, a mode which is found to be attended with inconvenience, in cases where more candidates than one are proposed. To obviate this inconvenience, on the occasion of the last vacancy of the office, a Grace was passed by the Senate to the effect that the election should for that time be made by poll, and determined by the majority of votes, in the same way as the election of Chancellor. The Syndicate for the revision of the University Statutes have very judiciously recommended that the election should be so conducted in all future cases.

His Deputy.

The appointment of the Deputy High Steward is by Letters Patent from the High Steward, subject to confirmation by Grace of the Senate.

THE PROCTORS.

Stat. Eliz., c. 35.

Appointment.

The Proctors are elected annually. There is a certain cycle, according to which two Colleges in every year nominate, each College one person, to be Proctor for the next ensuing academical year; and the persons so nominated are proposed to the Regent House in the Senate for confirmatory election. They must be Masters of Arts of two years standing at least; and if of more than five years standing, they resume their Regency as a matter of course by virtue of their office.

Duties.

It is their duty to be present at all Congregations of the Senate; to recite the Graces proposed in the Regent House; to collect the votes of the Regents for or against any Grace that is opposed; and to announce the result.

A most important part of their office is to act, on behalf of the University, as especial guardians of the public morals. In this respect, it is their duty as well to exercise a vigilant control over the behaviour of persons *in statu pupillari*, as also to protect that younger class from temptation, by preventing the intrusion of women of improper character. The power with which they are armed for this latter purpose, under the authority of the Charter of Queen Elizabeth, is peculiar in itself, and much more extensive than any possessed by the municipal authorities of the place for like objects. We forbear entering into minute details. But observations on this point will be found in the Memorial of the Town Council,

Evidence pp. 36 and 42.

and in the Remarks of the University in reply thereto. Unquestionably, the power granted to the University by the Charter in this respect requires to be exercised with judgment and discretion. We are disposed to think that, with few exceptions, it has been so exercised, and with results no less conducive to the comfort of the respectable inhabitants of the Town than to the decorum and morals of the University.

Especial care, however, should be taken by the Colleges to select fit persons for the office. Not only discreet judgment, but also some experience in the practical administration of the University, is requisite for the successful discharge

Recommendation as to persons to be appointed.

of such important duties. With this view we think it would be advantageous if a regulation were made that no person should be eligible to the office who has discontinued his residence, and been absent from the University for a period of two years immediately antecedent to the time of election.

It is understood that the University are desirous of having the cycle of nomination modified, so far as to admit the comparatively modern foundation of Downing College into the rotation.

Pro-Proctors.

The office of Pro-Proctor was permanently instituted by a Grace of the Senate in the year 1818, in consequence of the increasing number of Students. Two persons, of the degree of Masters of Arts or Bachelors of Divinity, are appointed in each year, to assist the Proctors in the maintenance of good order and discipline.

The Proctors and Pro-Proctors, in the exercise of their office, are constantly brought into contact with the inhabitants of the Town. Cases, though few in number, have yet occurred, in which their authority has been disputed, and they have been summoned before the magistrates of the Town on the charge of having stopped or apprehended persons unlawfully. It is, undoubtedly, right and necessary that they should be amenable for any illegal excess in the exercise of their power. But it is also desirable that the investigation and decision of such charges should be made by a tribunal, exempt from the possible operation of local partialities and influences. With this view, we venture respectfully to suggest, as a point for consideration, whether it might not be expedient to provide, by some legislative measure, that such charges should be cognizable only in the superior Courts of Law, and not before the local magistrates in the way of summary jurisdiction.

Taxors.

Two Taxors are appointed annually in the same manner as the Proctors, each College, in the year after it has nominated a Proctor, nominating a Taxor, and the nomination requiring a confirmatory election by the Regents. Stat. Eliz., c. 37.

The Taxors must be Masters of Arts, and, if of more than five years standing, resume their Regency, as a matter of course, by virtue of their office.

A principal part of their duty has been to inspect weights and measures, and to bring any defects therein under the notice of the University Courts. The exercise of such a power is necessary for the discovery and punishment of fraud, and for the protection of the fair tradesman and the public. But in the present state of things we are of opinion that it would be more conveniently exercised by the municipal authorities than by the University; and that the office of Taxors might be discontinued.

The office of Taxor recommended to be discontinued.

Scrutators.

Two Scrutators are appointed annually in a manner similar to that used in the appointment of Proctors and Taxors, each College, in the second year after it has nominated a Proctor, nominating a Scrutator, and the nomination requiring a confirmatory election by the Non-Regents. Stat. Eliz., c. 36.

The Scrutators must be Non-Regents. Their duty is to attend all Congregations; to recite the Graces in the Non-Regent House; to collect the votes of the members of that House when any Grace is opposed; and to announce the assent or dissent of the House.

The Orator.

An office of great honour and high precedency in the University is that of Orator. On a vacancy, the Heads of Colleges or their official representatives nominate two persons for the office, one of whom is elected on the following day by the votes of the Senate.

The Orator is spokesman of the Senate upon public occasions, presents persons of rank to honorary Degrees with an appropriate speech, and writes letters of thanks or congratulation, in the name of the Senate, to benefactors of the University, or others to whom such mark of respect and honour may be due. He also takes an important part in the examinations for University Scholarships and other classical prizes.

The Librarian.

The Librarian is appointed in the same manner as the Orator, and, as his title indicates, has the principal care and superintendence of the large and valuable library belonging to the University, of which a particular account will be found in the subsequent part of our Report. P. 127.

The Registrary.

The Registrary is appointed in the same manner as the Orator and the Librarian. He is charged with the care of the Records and Muniments of the University. It is also his duty to attend all Congregations, to receive the Graces passed by the Senate, and to register them in the University Records; to attend the University Court, take down the evidence, and record the sentence; to attend at the fixing of the University Seal to any instrument; to take the subscriptions of all Undergraduates at their matriculation; and also the subscriptions of all Candidates for Degrees.

The Esquire Bedells.

The three Esquire Bedells are appointed in the same manner as the Orator. Their duty is to attend the Chancellor or Vice-Chancellor on all occasions of public solemnity; to be present at Congregations, and assist in the forms of conducting the business of the Senate; to attend the Acts and Exercises in the Schools of the three Faculties of Divinity, Law, and Physic; and, when necessary, to summon to the Chancellor's Court Graduates of a higher degree than that of Bachelor of Arts. Stat. Eliz., c. 38.

We find that in the Draft of the revised Statutes, of which mention was made in a former part of this Report, it is proposed to reduce the number of Esquire

REPORT.

Recommendation as to the reduction of the number,

Bedells from three to two. In the most ancient notice that is found of the office the number appears to have been two, but it was increased to three at a very early date, that being the number specified in the Statutes of King Edward VI. and Queen Elizabeth. The practical duties now required from these officers would, in our opinion, admit of the proposed reduction of the number without any inconvenience.

And as to the customary duties of the Esquire Bedells.

It is the custom for the Esquire Bedells to precede the Vice-Chancellor through the public streets, carrying their staves of office, whenever he goes from his College to the Senate House or to the University Church, and again on his return. It is also customary for one Esquire Bedell to precede in like manner a Candidate for a Degree in the Faculty of Divinity or Civil Law or Physic, when he goes to the Schools to keep his Act, and afterwards when he returns to his College. We beg to express our opinion that these ancient forms may without any inconvenience be discontinued; and we suggest that in future the Esquire Bedells should not be required to carry their staves in any procession through the public streets, unless when they are in attendance upon the Chancellor of the University himself; or upon the Vice-Chancellor in cases of extraordinary public solemnity. On ordinary occasions, it would still be their duty to receive the Vice-Chancellor with fit honour at the entrance of the Senate House.

The Moderators and other Examiners who conduct the Public Examinations connected with the degree of Bachelor of Arts, as also the Auditors of the University accounts, will be more conveniently noticed in subsequent parts of our Report. Other inferior officers of the University do not appear to us to require any special observations. We proceed, therefore, to describe the constitution of

REPORT.

THE SENATE OR LEGISLATIVE BODY OF THE UNIVERSITY.

The Senate is divided into two Houses, corresponding to the Academical distinction of Regents and Non-Regents.

The Regent House consists of the Chancellor, the Vice-Chancellor, the Proctors, the Taxors, the Moderators, the Esquire Bedells, provided they be Masters of Arts, all Masters of less than five, and Doctors of Divinity, Civil Law, and Physic, of less than two years standing; five years in the former case and two in the latter being the period during which the rules of the University impose a liability to perform the duties of Regency, that is of presiding at the public Disputations or Exercises in the Schools.

The Non-Regent House is composed of Masters of Arts of more than five years' standing, of Bachelors of Divinity who have previously been Masters of Arts, and Doctors of Divinity, Civil Law, and Physic, of more than two years' standing.

Doctors, however, of these three Faculties, of more than two years' standing, and also the Orator, have the privilege of voting in either House at their own option.

No Graduate is permitted to vote in the Senate, unless he has his name on the books of some College, or in the list of Commorantes in Villa. The temporary withdrawal also of the name from the books of a College after the first Degree involves, by the bye-laws of the University, a disqualification for the right of suffrage; and this bar can only be removed by a course of further residence for three Terms.

THE CAPUT SENATUS. Stat. Eliz., c. 41.

From the Members of the two Houses there is formed a Council, called the *Caput Senatus*, or Head of the Senate; consisting of the Vice-Chancellor, a Doctor in each of the Faculties of Divinity, Civil Law and Physic; one Non-Regent Master of Arts; and one Regent Master of Arts.

The appointment of the five persons, who are associated with the Vice-Chancellor in this Council, is made annually in the following manner:

The Vice-Chancellor proposes the names of five persons, who are qualified to serve in the several capacities. Each of the two Proctors also proposes the names of five other persons so qualified. Out of the fifteen thus proposed, the Vice-Chancellor, the Heads of Colleges (or, in the absence of any of them, their official Representatives), the Doctors of the three Faculties and the two Scrutators elect, by majority of votes, five; who, with the Vice-Chancellor, constitute the Caput for the ensuing year.

In case of the absence of any of the five members of the Caput from a Congregation of the Senate, it is provided that the Senior of his Faculty present shall supply his place for that time.

The ordinary subjects, requiring the votes of the Senate, may be distinguished into two classes; first, Supplicats for Degrees; and secondly, general Graces, under which name are now comprehended all Grants, Orders, and Rules made by the authority of the Senate for the administration of the University affairs.

The Supplicats and Graces are, in the first instance, submitted to the Caput; each member of which has, by the Statutes of Queen Elizabeth, the power of rejection by his sole negative voice.

If they pass the Caput, they are then submitted for the sanction of the Senate. There is some little variation in the form of proceeding with Supplicats according to the particular Degree. The mode of proceeding with a general Grace is as follows:

After passing the Caput, it is publicly recited, first by the Scrutators in the Non-Regent House, and next by the Proctors in the Regent House. The Congregation is then suspended for a customary interval of time; and, on its re-assembling, the Grace is again recited in the Non-Regent House, where, in case of any opposition to it, the Scrutators collect the votes. If it be passed there by a majority of votes, it is then forwarded to the Regent House where the Proctors observe a like form in taking the opinion of that House. The Grace, if passed by them, becomes thereby valid, and is registered in the Records of the University.

There are some useful Regulations, limiting the introduction of general Graces; as, for instance, that no such Grace shall be proposed unless there be twenty-five members at least of the Senate present; and, again, that a general Grace, of which there has not been notice given three days previously, shall not be pro-

REPORT.

posed unless there be forty members, at least, present. The object of these Regulations is, very properly, to prevent collusion or surprise.

The element, however, in this legislative system that requires especial consideration is the constitution and power of the Caput. So far as it is the duty of that body to ascertain by careful inquiry whether Candidates for Degrees have complied with the Regulations and fulfilled the requirements of the University, the machinery of the Caput may work conveniently and usefully. The first institution of such a Council probably originated in the necessity there was found to be, at a very early time, for diligent scrutiny in this particular respect, in order to prevent irregularities. Though, even for this especial purpose, it may be doubted whether it is necessary, or expedient, to arm each individual member with an absolute Veto.

But in a more extended view, and with reference to the general legislation of the Senate, we are of opinion that the Caput is at once too limited in the mode of its appointment to be a satisfactory representative of the University, and too absolute in its power to be consistent with that freedom of developement and facility of improvement which the institutions of the University from time to time require. As, moreover, the fundamental constitution and principles of the University are defined and fixed by the Royal Statutes; and as it is only in subordination thereto that the legislative power of the Senate can be exercised; there appears to be no reason for apprehending danger or inconvenience from a greater liberty of action within the limited sphere to which internal legislation is thus confined.

We are happy to perceive that an impression of this kind exists in the University itself. The Syndicate, already mentioned as having been appointed to revise the Statutes, have suggested some important changes in the appointment and functions of the Caput.

Recommendations of the Syndicate for the revision of the Statutes.

They recommend that the appointment should be made in the following manner: "The Doctors in each of the three Faculties shall nominate two Doctors, not "being of one and the same College, of their own Faculty. The College which "nominated the Senior Scrutator the year before, shall nominate two Non-"Regents; and the College which nominated the Junior Scrutator, shall nomi-"nate two Regents . . . . The names of the ten persons thus nominated "shall be forthwith announced, and again at a Congregation the next day, to the "Senate; who shall then elect from them one of each Faculty, one Non-Regent, "and one Regent; and these five, with the Chancellor, or Vice-Chancellor, shall "be the Caput for the next year."

The object of this proposal is to give to the constitution of the Caput something of a more representative character. But the Syndicate have also made another and a far more important recommendation as to the functions of the Caput.

They suggest that the Caput, elected and constituted in the manner just described, should have its power limited to the consideration of Supplicats and Graces for conferring Degrees; and that for the consideration of all other Graces to be offered to the Senate there shall be a Council formed in the following manner:—

"The Heads of Colleges shall appoint three Members.

"The Doctors in the Faculties of Divinity, Law, and Physic, not being Heads of "Colleges, shall appoint three members; that is to say: the Doctors in Divinity "one, the Doctors in Law another, and the Doctors in Physic a third.

"The Professors, not being Heads of Colleges or Doctors in any one of the said "three Faculties, shall appoint three Members.

"And, lastly, the Colleges shall appoint three Non-Regents and three Regents.

"One Member of each of the five Classes above mentioned shall go out in rota-"tion every year on a certain day, being, however, re-eligible; and on the same "day, the appointments by the Heads of Colleges, Doctors, and Professors, shall "be made in the Senate House; the Chancellor, or Vice-Chancellor, and the Head "of a College, senior in Degree, the two Doctors in each Faculty senior in "Degree, and the two Professors senior in Degree, standing in scrutiny. They "that have most votes in the first scrutiny shall be deemed to be appointed, and "so likewise if it be necessary to resort to a second or third and last scrutiny. "At the same time the names of the Non-Regent and Regent appointed by the "Colleges (the appointment of them resting with those Colleges whose turn it "may be to appoint the Scrutators), shall be certified to the Chancellor or Vice-"Chancellor by the Masters of those Colleges, or their Deputies. The names of all "the persons appointed shall be immediately published to the Senate by the Senior "Proctor.

"The day after (Sunday not being reckoned in either case), all the five persons "so appointed shall be separately proposed to the Senate for election by Grace for "three years, and fifteen persons so elected, shall, with the Chancellor, or Vice-"Chancellor, and the Vice-Chancellor of the preceding year, constitute the said "Council."

Provision is made for supplying vacancies by death or any other cause; and if any person appointed in the manner before described be not elected by the Senate, then the election is to be made in the same manner as that of Vice-Chancellor.

It is presumed that the appointment of the three Non-Regents and the three Regents at the first formation of the Council is intended to be made by the six Colleges, whose turn it may be at that time to nominate Proctors, Taxors, and Scrutators.

"The duty of the Council shall be to consider and prepare all Graces to be "offered to the Senate, excepting those for conferring Degrees, whether proceed-"ing from individual Members of the Senate, or from Syndicates; nor shall any "Grace, except for conferring a Degree, be offered to the Senate without the pre-"vious sanction of the major part of those voting upon it in the Council.

"No business shall be transacted in the Council, unless five Members at the least "be present, of whom the Chancellor (or Vice-Chancellor) shall always be one; "and he shall have the casting vote when the votes are equally divided. In case "of a difference of opinion between him and a majority of the Members of the "Council present, no act of the Council shall be valid without the approval of a "majority of the whole number of persons constituting the Council.

"Meetings of the Council shall be held at least in every alternate week during "Term time, and also at such other times as to the Chancellor (or Vice-Chancellor) "may seem fit."

Provisions are also made with a view to securing a full attendance of Members of the Council.

Approval of these recommendations.

We cannot hesitate to express our pleasure to find such a proposal emanating from the University itself. It has evidently been framed with careful deliberation, and with an especial view as well to preserve a balance of power among the several Colleges, as also to prevent the excitements and rivalries of a more popular and unlimited mode of appointment. The suggested scheme has received the unanimous approval of the Syndicate; and we hope it may in due time receive the sanction of the Senate.

REPORT.

DISCIPLINE.

We now proceed to remark upon the moral discipline of the University. This is, in a very great measure, sustained by the internal system of the several Colleges. The domestic constitution of a College contains in itself a combination of the most wholesome and beneficial influences for this end. In the first place, all the Members of it are subject to a code of internal laws and rules framed for the maintenance of good order and decorum and moral and religious habits. Again, the Master and the Fellows, if they are true to their duty, stand in the relation of rulers, guardians, advisers, friends, and examples to the Students. As some of the Fellows are but little removed from the Students in point of age, facilities for personal intimacies and friendly companionship between the two classes blend happily with the more grave and paternal authority which the senior Members of the Society exercise in their official functions. Again, the Students exert no small or unimportant influence on each other. Though sprung from different ranks, with different fortunes, different prospects, yet, as Members of the College, they meet, to a certain extent, on a footing of equality. Living under the same domestic rule; many of them lodged within the same walls; all assembling in the same common dining hall; associating in their course of study and in the routine of their daily habits, they are naturally drawn to each other by attractions of mutual kindness. While particular individuals and smaller groups form for themselves their own closer intimacies and friendships, a general spirit of sympathy pervades the whole; and there is one predominant feeling not to do anything that tends to bring discredit on the College, or falls below the tone of good manners and the standard of honourable conduct. In this way social sympathy becomes auxiliary to moral discipline and academical authority.

P. 145. These influences, however, will be again the subject of our notice, when the Collegiate system comes under our more direct consideration. The University, as distinct from the Colleges, is not unmindful of this most important branch of its duties. The Statutes of Queen Elizabeth contain various injunctions for the P. 4. maintenance of moral discipline, and, as has been already stated in our Report, the Chancellor, or Vice-Chancellor, is invested with authority to punish cases of transgression. Again, the Proctors, as we have already mentioned, are especially charged P. 10. with the duty and armed with the power of securing the Students against the intrusion of the grosser class of temptations. They also inflict suitable censures on any person *in statu pupillari* whom they find offending against the rules of discipline; or, if the offence be of a graver character, it is reported by them either to the authorities of his College or to the Vice-Chancellor of the University to be dealt with in a more formal manner and visited with a severer punishment.

Restraints on Extravagance. Again, the Vice-Chancellor and Heads of Colleges have always taken measures to prevent the resort of Students to such places of amusement as are likely to encourage gaming or idleness or dissipation. They have also endeavoured by various regulations to control and limit the expenses of persons *in statu pupillari*.

The attainment of this latter object, so desirable in itself, is attended with considerable practical difficulties. The Students are at an age, when they cannot be subjected to the minute surveillance and rigid constraint exercised in a school, and when, on the other hand they are not fit to be intrusted with absolute liberty and independence in acting for themselves. They are in a state of transition from the subjection of boyhood to the freedom of manhood; and no system of discipline can be properly suited to such a state unless it contains in itself a mixture of constraint and liberty; so much constraint as may guard the inexperienced against the temptations of youth and the dangers of wasteful extravagance; so much liberty, as may serve to develope the qualities of their moral character, and prepare them gradually for the weightier responsibilities and fuller freedom of Evidence p. 433. after life. Some excellent observations to this effect will be found in the very p. 386. valuable Evidence of the Reverend Dr. Phelps, Master of Sidney College, and the Reverend Dr. Cartmell, Master of Christ's College.

Considerations of this kind may possibly prevent unreasonable expectations, by pointing out a just limit to what is capable of being attained, or even desirable to be attempted, under a system of academical discipline. As respects the particular evil of wasteful expense, the following regulations were made not many years ago by the authority of the Vice-Chancellor and Heads of Colleges, with the object of checking extravagance and preventing the accumulation of debts.

"1. That if any Vintner or Victualler shall be proved before the Vice-Chancellor

"to have permitted any person *in statu pupillari* to contract a debt for wine or "spirituous liquors exceeding the sum of ten pounds, without the knowledge and "consent of the Tutor of such person, he shall be deprived of his license.

"2. That any Vintner or Victualler with whom any person *in statu pupillari* "shall contract any debt for wine or spirituous liquors, shall be required to send "notice of the amount of the same at the end of each quarter to the College Tutor "of the person so indebted, on pain of deprivation of his license.

"3. That any Tradesman or Dealer with whom any person *in statu pupillari* "shall contract a debt exceeding the sum of five pounds, shall be required to send "notice of the amount of the same at the end of every quarter to the College "Tutor of the person so indebted, on pain of being punished by discommuning or "otherwise, as to the Vice-Chancellor and Heads of Colleges shall seem fit.

"4. That if any Vintner, Victualler, Tradesman, Dealer, or other person, shall "take from a person *in statu pupillari*, without the consent of his College Tutor, "a promissory note, he shall for so doing be punished by deprivation of his license, "by discommuning, or otherwise, as to the Vice-Chancellor and Heads of Col-"leges shall seem fit."

The difficulty of framing any restrictive rules of this kind, so as to give general satisfaction, cannot be more strikingly shown than by the objections to the foregoing Regulations, which have been alleged by the Council of the Borough of Cambridge in their Memorial. They say,

"Whilst we are not unwilling to believe that these decrees were made under an "impression that they would repress extravagance on the part of the Students, we "cannot refrain from observing that they have had no such effect; they have, how-"ever, seriously injured the trade of the town, as a Student who requires credit "can easily evade these decrees by dealing with some person, who, not residing in "the town, cannot therefore be punished by deprivation of his license, by discom-"muning, or otherwise; and the manifest tendency of these decrees is to induce "the Students to trade with such persons rather than with the inhabitants of the "town, and this is so well understood, that, from the time these decrees were "first promulgated, the town has been literally overrun with non-resident traders, "soliciting orders from Undergraduates." Evidence, p. 39.

To this the University, in their remarks on the Memorial, reply— p. 44.

"If Students have been led to deal with tradesmen in London and elsewhere, "it is probably owing to the increased facilities of communication and other causes, "quite irrespective of the edicts complained of.

"If any tradesmen in Cambridge are thwarted in their desire to allow undue "credit, one of the main objects of the edicts is secured; and if the University be "unable to prevent tradesmen elsewhere from granting such credit to the "Students, that would hardly excuse it from not using its best endeavours to pre-"vent tradesmen in Cambridge from doing so, especially when the advantage "which the latter have of ascertaining the family connexions and means of a "Student is considered, as well as his proximity to the temptations which it is in "their power to offer. Neither should it be understood, because the objection "adverts only to the topic of credit, that the edicts alluded to relate to no other "point of discipline, in respect of which the inhabitants of the town may be said "to be controlled. The Students cannot seek at a distance carriages or horses, or "the more perishable luxuries."

In the same remarks of the University it is stated, that in framing and enforcing these and like regulations, "the Vice-Chancellor and Heads of Colleges "have no design whatever to interrupt in the slightest degree the business of the "respectable part of the tradesmen in the town, carried on in a fair and open way. "All tradesmen that desire to encourage the system of credit are of course much "opposed to these edicts, and it is not unusual for a tradesman, after first evading "them, to serve a writ upon the Student, who may have been led to contract a debt "with him."

In reference to this latter point, there exists a decree of the Vice-Chancellor and Heads of Colleges to the following effect: "That if any inhabitant of the "town engaged in any trade or profession shall institute legal proceedings for the "recovery of a debt due to him from any person *in statu pupillari*, without first "giving reasonable notice of his claims to the Tutor of such person, he shall be "punished by discommuning, or otherwise, as to the Vice-Chancellor and Heads "of Colleges shall seem fit."

The preamble to this decree states the object with which it was framed, namely,

REPORT.

"that it is expedient, as well for protecting persons *in statu pupillari* against im-
"positions or vexatious proceedings at law, as for securing the regular and prompt
"payment of all just and lawful debts contracted by them, that the expenses in-
"curred by such persons should be brought, as far as is practicable, under the in-
"spection and control of the Tutors of their respective Colleges."

On this, however, the Memorialists observe,

Evidence, p. 38.

"It appears to us that it cannot be right to punish a person for merely availing
"himself of the remedies for the recovery of his debt which are given to him by
"the laws of the land; and we are quite certain that if the decree in question
"were really intended to secure the regular and prompt payment of all just and
"lawful debts contracted by Students, that object has not been in any degree
"obtained. This decree rather tends to encourage amongst the Students an idea
"that, having contracted debts, they cannot be compelled to pay them, and many
"instances might be cited in which Students, when applied to for debts, have set
"their creditors at defiance, and cited this decree in justification of their conduct."

The University state, in reply—

p. 44.

"The very terms of the preamble point out that one main object of the
"University authorities in issuing the edict was to secure the regular and
"prompt payment of all just and lawful debts contracted by persons *in statu*
"*pupillari*, which would in general be effected by application to their parents;
"and it is by no means an object of the edicts, nor the desire of those who make
"them, to hinder any person who does not in this manner obtain payment,
"from availing himself of legal remedies for the recovery of debts, much less to
"punish him for doing so."

To whatever extent these decrees and regulations may be effective in checking the contracting of debts within the Town of Cambridge, it is manifest that the University possesses no available means of extending the like control to tradesmen in London or other places. The general law of the land prevents a tradesman from recovering in Your Majesty's Courts any debt contracted by a minor without the consent of his parents or guardians, unless it be for necessaries. Though parents, in many cases, are unwilling to avail themselves of the protection thus afforded, yet it can scarcely be doubted that the law has the effect of restraining, to some extent, facilities of credit. We respectfully suggest, as a point for consideration, whether the law relating to minors might be extended to the case of all Undergraduates in the Universities, who shall obtain from any tradesman articles, not coming under the class of necessaries, without the express consent of their parents or guardians, or of the Tutor of their College; provided it can be shown that the tradesman, furnishing those articles, was aware of the academical condition of the purchasers.

We have great satisfaction in expressing our opinion that the expenses of the great majority of the Students are moderate. The fact reflects credit both on themselves, and on the authorities of the University and the several Colleges. By reference to the Evidence it will be seen that the necessary expense of residence is small; and that the actual average expense does not exceed a reasonable limit.

Supervision of Lodging Houses.

Another mode, by which the University provides for the maintenance of discipline, is the supervision exercised by it over houses in the town, in which those Students are lodged, who cannot have the accommodation of rooms within the walls of the Colleges. The Vice-Chancellor and the Proctors grant lodging-house licenses to householders, who produce satisfactory certificates of their respectability from the Master and Tutor of some College, and engage to observe the rules prescribed by the University for the management of their houses. These rules require that a report should be made to the College of the time at which a Student, belonging to it, returns to his lodgings, if later than a specified hour in the evening. They also prohibit dinner and supper parties in lodgings, without the consent of the Tutor of the College of which the lodger is a member. If a lodging-house keeper is detected in sending a false report to the Colleges, or in any other transgression of the rules, he is liable to have his license revoked or suspended by the Vice-Chancellor and the Proctors. The fear of this penalty is, no doubt, a great security for the due observance of the rules; but as there is always some facility for collusion between the keeper of the house and the lodger, the efficacy of the regulations must depend in a great measure on the conscientious care taken by the Masters and Tutors of Colleges to give certificates to none but persons of respectability and probity.

REPORT.

The system itself, if carefully and vigilantly guarded, appears to be capable of securing, to a great extent, the substantial benefit of collegiate superintendence, and, at the same time, of affording free and ample facilities for the admission of any number of Students desirous of the advantages of an University education. An opinion has been expressed in some quarters that it would be more conducive to the ends of discipline if, in connexion with and dependence on the Colleges, there were hostels or public buildings established for the reception of Students under a system of closer inspection and stricter control than can be attained while they are dispersed in private lodgings throughout the town. There does not appear to be any impediment to the execution of such a design, if adequate funds can be provided for the purpose. This subject will be again noticed in a subsequent part of our Report.

Hostels in connexion with Colleges.

P. 144.

REPORT.

DEGREES.

The next subject inviting our attention is the course of Residence, Studies, Exercises and Examinations, required by the University as preliminaries to the various Academical Degrees in Arts, Divinity, Civil Law, and Physic. Of these the Degree of

BACHELOR OF ARTS

comes first under our consideration.

Stat. Eliz., c. 6. Course of Study prescribed by the Statutes.

The Statutes of Queen Elizabeth prescribe a course of study extending over four years for this Degree: the first year being devoted to Rhetoric; the second and third to Dialectics; and the fourth to Philosophy. At the time when the Statutes were given, there were, besides other Professors, four Ordinary Lecturers; namely, one in Mathematics, and three corresponding to the before-mentioned subjects of study. The Lecturer of Philosophy is directed by the Statutes to give instruction in the Problemata, Ethics and Politics of Aristotle; in Pliny; or in Plato. The Lecturer of Dialectics is to teach the Elenchi of Aristotle or the Topica of Cicero. The Lecturer of Rhetoric is to explain Quintilian, Hermogenes, or some part of the Rhetorical Treatises of Cicero. An undergraduate Student in Arts was to attend this series of Lectures; receiving also in his College instruction in the same subjects; and after passing through certain Scholastic Exercises and customary Examinations as a test of his proficiency, he was admitted, on the completion of the four years, to the Degree of Bachelor of Arts.

The present practice.

The Statutes relative to these points remain unchanged; but the actual practice of the University has undergone considerable modifications. By the present Regulations, a Candidate for the Degree of Bachelor of Arts is required to have been resident in the University during the major part of each of ten Terms, intermediate between the Term in which he was first admitted a Member of some College and that in which he applies for his Degree. As the Academical year is divided into three Terms, and as, by the present practice, the Degree of Bachelor of Arts is not conferred until the Student's twelfth Term, the requirement of the Statutes for the completion of a course of four years is, by a leniency of interpretation, regarded as fulfilled.

It will be observed that the computation of time necessary for obtaining this Degree is now made from the date of admission into some College. But the Student, on commencing his residence, is also required to be matriculated, or registered in the Books of the University; and if he should neglect this form beyond a period of three Terms, the residence he has kept without being duly matriculated is not allowed to be counted towards the obtaining of a Degree.

The general mode of admission into a College is either by an actual Examination of the applicant before the authorities of the College; or, where personal attendance is dispensed with, by a testimonial to his respectability and qualifications from some Master of Arts or higher Graduate of the University or of Oxford. There is not any Examination when he subsequently offers himself to the University to be matriculated, but he is accepted on the presentation of his College.

The greatest modification, however, has taken place in the Course of Study. This, to a very considerable extent, is necessarily conformed to the character of the Public Examinations which have been instituted as tests of proficiency for the Degree. There are two Examinations for this purpose. One of them takes place, ordinarily, at the end of the fifth Term of residence; the other after the completion of a residence of five Terms more.

The subjects of the first, or "Previous" Examination, as it is called, are the same for all the Students. They are:—

One of the four Gospels in the original Greek;
Paley's Evidences of Christianity;
The Old Testament History;
A portion of the Works of one of the Greek, and one of the Latin Classical Authors;
The First and Second Books of the Elements of Euclid; and
The most common and useful Rules of Arithmetic.

For the Second or Final Examination, the Students are divided into two sets; according as they are, or are not, Candidates for Mathematical Honours.

The subjects of Examination for those who are not Candidates for Mathematical Honours, are:—

The first or the last half of the Acts of the Apostles, and one of the longer, or two or more of the shorter Epistles of the New Testament in the original Greek;
A portion of the works of one of the Greek and one of the Latin Classical authors;
Three of the six Books of Paley's Moral Philosophy;
The History of the Christian Church from its origin to the assembling of the Council of Nice;
The History of the English Reformation;
The General Rules of Arithmetic;
The Rudiments of Algebra;
The Third, and part of the Sixth Book of the Elements of Euclid; and
The Elementary Principles of Mechanics and Hydrostatics.

In order to be admitted to this Examination, every Candidate is required to have attended the Lectures delivered during one Term at least by some one or more of the following list of Professors, and to have obtained a Certificate of having passed an Examination satisfactory to one of the Professors whose Lectures he has chosen to attend. The Professors included in the List are:—

The Regius Professor of Law,
The Regius Professor of Physic,
The Professor of Moral Philosophy,
The Professor of Chemistry,
The Professor of Anatomy,
The Professor of Modern History,
The Professor of Botany,
The Woodwardian Professor of Geology,
The Jacksonian Professor of Natural and Experimental Philosophy,
The Downing Professor of the Laws of England,
The Downing Professor of Medicine,
The Professor of Mineralogy,
The Professor of Political Economy.

This Final Examination of those who are not Candidates for Mathematical Honours is conducted by six Examiners. As many as pass it satisfactorily are arranged in four classes according to merit; the names in each Class being placed alphabetically.

The Examination of the Candidates for Mathematical Honours occupies eight days, and is divided into two stages. On the first three days, the Candidates are examined in,

The Elements of Euclid,
Arithmetic,
The Elementary parts of Algebra,
Plane Trigonometry,
Conic Sections,
The more Elementary parts of Statics, Dynamics, Hydrostatics, Optics, and Astronomy.

After this first stage of the examination there is an interval of eight days; before the expiration of which the Moderators and Examiners announce the names of those Candidates who have acquitted themselves in such a satisfactory manner as to deserve some Mathematical Honour.

The examination is then resumed and extended over five additional days; during which the Candidates whose names have been previously announced with approbation, are further examined in the higher parts as well of Abstract Mathematics as of their application to the several branches of Natural Philosophy.

These Candidates are also required to attend the general examination in Paley's Moral Philosophy, the New Testament and Ecclesiastical History.

The object of the preliminary stage in this examination is to ascertain that the Candidates are well-grounded in the principles of Mathematics, and have laid sound foundation before aspiring to the higher ranges of Science. We regard this

REPORT.

as a judicious plan; equally adapted to strengthen the mental powers by wholesome discipline, and to give coherence and solidity, and, consequently, real value to the acquisitions of knowledge.

Board of Mathematical Studies.

With the view of regulating the higher department of this examination, a Board of Mathematical Studies has been, of late years, instituted; consisting of—

The Lucasian Professor of Mathematics,
The Plumian Professor of Astronomy,
The Lowndean Professor of Geometry and Astronomy, and
The Jacksonian Professor of Natural and Experimental Philosophy,
Together with the Moderators and Examiners for Mathematical Honours for the year, as also those of the two years immediately preceding.

Their province is to consult together from time to time on all matters relating to the actual state of Mathematical Studies and Examinations, and to present an annual Report thereupon to the Vice Chancellor, to be by him communicated to the University at large. This arrangement is designed as well to direct the Students in their course of preparation, as also to secure a correspondence between the lectures of the Mathematical Professors and the subjects of examination. It is also calculated to exercise a beneficial influence on the nature of the examination itself; by introducing such progressive changes as the advance of Science may suggest, without either disturbing the general system by abrupt transitions, or extending it over too wide and discursive a range to be compatible with precision and solidity of knowledge. We observe with pleasure that the Board has shewn a disposition to confine the range within limits suitable to the severe character of the study and the time allowed for preparation. But the importance of the subject requires a more full and systematic notice, which we reserve for a subsequent part of our Report.

P. 105.

The examination for Mathematical Honours is conducted by four Examiners; two of whom are distinguished by the title of Moderators; a name descriptive of their original duty of presiding at the Scholastic Disputations in Arts. These Disputations, being no longer usefully applicable to the present improved and extended course of study, have been reduced to a mere nominal form, sufficient to carry with it an appearance of conformity to the letter of the Statutes. The duties of the Moderators are now therefore confined to the Public Examinations, according to the existing Regulations of the University. The other two Examiners usually are the persons who filled the office of Moderators in the preceding year; a judicious arrangement, as they carry with them the advantage of previous experience, and preserve, so far as is desirable, uniformity in the actual mode of conducting the Examinations. The Moderators are nominated by the Proctors; subject to confirmation by the Senate.

At the close of the Examination, the names of those Candidates who have given satisfactory proofs of their proficiency are arranged in three Classes of Honour, in the order of their merits individually. This list of Honours is called the Mathematical Tripos.

The course of study, actually pursued by a large class of Undergraduates, is moreover greatly affected by the Public Examination for the

CLASSICAL TRIPOS.

This Examination has been instituted for the purpose of conferring Academical Honours for proficiency in Classical learning. It is voluntary; and follows, at a short interval, the Examination for the Degree of Bachelor of Arts. Persons are admissible to it who have gained a place in the Mathematical Tripos or who having failed in doing so, have subsequently passed such further Examination as entitles them to a Degree; or who have obtained a place in the first of the four Classes in which the names of those are arranged who have not been Candidates for Mathematical Honours.

There are four Examiners; nominated by the several Colleges according to the cycle of Proctors and confirmed by the Senate.

The Examination extends over six days. The Candidates are required to translate into English passages selected from the best Greek and Latin authors, and to give explanatory answers to such questions as arise immediately out of those passages; to translate also passages from English into Greek and Latin both in prose and verse; and to answer questions relating to Ancient History.

The names of those persons who pass the Examination with credit are, by an

arrangement similar to that of the Mathematical Tripos, placed in three Classes; except that the third Class in the Classical Tripos is arranged, not in the order of individual merit, but alphabetically.

Other Boards of Studies recommended.

In describing the Mathematical Examinations, we noticed the institution of a Board, for regulating the course of study and the process of Examination in that particular department. We are of opinion that great advantage might be derived from the establishment of similar Boards for other departments of Academical study, and, with more especial reference to our present subject, for the regulation of Classical studies. By a composition analogous to that of the Mathematical Board, it might consist of the Greek Professor, the Orator, the Examiners for the Classical Tripos, and the persons who held the same office of Examiners in the two years immediately preceding. To these might be added, if it appeared to be expedient, other Members of the Senate, who, from their office or attainments, might be thought suitable for such a charge. The use of this Board would be to regulate the extent and character of the examination, and consequently to direct the Student in his preparation. But in a further point of view, a plan might be traced, marking out a systematic course of historical and philosophical reading, and excepting more expressly out of the wide range of general examination such authors as fall below the standard of pure Classical taste, or such parts of the writers even of the best ages as are open to objection on moral grounds.

But though we offer this suggestion, we beg at the same time to express, even more confidently, our opinion that the institution of such Boards, and the regulation of the course of study and forms of examination for all Academical Honours and Degrees, should be left to the free judgment and discretion of the University Senate. The Statutes of Queen Elizabeth enter into such minutiæ as to prescribe even the particular books for various branches of study; and it is only by tacitly disregarding the letter of the injunction, that the University has been able to give to its system a development corresponding to the advance of learning and science. We observe with satisfaction that, in the draft of the Revised Statutes, it is proposed to allow to the University a considerable latitude of discretion in these respects. The subjects of study enumerated in it for the degree of Bachelor of Arts, are described in the most general terms; and a liberty is reserved to the University of introducing other subjects in addition to those expressly named. The minute details, necessary for filling up the general outline and carrying the system into effect, are properly left to be treated as matters of internal regulation. The University may reasonably sue for such a measure of confidence, and cannot have any temptation to abuse it, if conceded. We should be glad if the same principle were extended to the various forms and exercises prescribed for other Degrees. Such minute details must admit and require frequent modifications; and it is a mistake to stamp them with the same fixed and permanent character that is properly given by the Statutes to the fundamental principles and essential objects of the Academical system.

Mathematical and Classical Prizes.

Great importance of Mathematical and Classical Learning.

The Studies, which, of late years at least, have been carried to the greatest extent in the University, are those of Mathematical and Classical learning. Beyond all question, they rightfully challenge a prominent place in every system of liberal education, both on account of the intrinsic value of the acquirement, and as instruments of mental discipline. It is by the application of mathematical principles and processes to such branches of natural philosophy as admit of this exact mode of treatment, that the noblest triumphs and most useful improvements of modern science have been achieved in mechanics, in optics, in astronomy, in the exposition of the system of the world. While mathematical knowledge is thus of the highest value, considered as an acquirement, the study of it is equally valuable as a discipline of the intellect. It may be regarded as the best and most effectual exercise of the reasoning powers; habituating the mind to clearness of ideas, precision of statements, and coherence of argument. In this manner it has a wholesome influence beyond the bounds of its own immediate province, and serves to check vague and extravagant speculations even in such popular branches of natural or moral science as are not reducible to the rigour of mathematical demonstration. Again, Classical literature possesses high and peculiar recommendations. A knowledge of it is indispensable to the Student in Divinity who seeks an accurate and critical acquaintance with the books of the New Testament

REPORT.

in their original language, and with the early monuments of Christian Theology. In a more general point of view, the spirit of the Classical authors has infused its influence into the whole range of modern literature, and their works are held in universal admiration as the noblest specimens of genius and purest models of taste, in all their varied styles. Moreover, Mathematical and Classical studies are in a peculiar manner fitted for the purposes of Examination. They require a much closer and severer attention, and admit of a much more exact and conclusive test of proficiency than is the case in the more popular branches of speculative or experimental knowledge. Accordingly the University has long afforded peculiar encouragements by its public honours to these particular studies. Prizes, indeed, strictly so called, for mathematical attainments are few in number. Two are awarded annually to the two commencing Bachelors of Arts of the year who are the best proficients in Mathematics and Natural Philosophy. A biennial prize has also been recently instituted in honour of Mr. Adams, the distinguished Astronomer of St. John's College: but as it is open to Graduates of any standing it is rather an encouragement to the continued cultivation of mathematical science afterwards, than an incentive to Students in the first stages of their career.

Classical prizes are more numerous. Two Medals are annually given by the Chancellor of the University to two commencing Bachelors of Arts, who having obtained a place in the first or second class of Mathematical Honours, are judged to be the best proficients of their year in Classical learning. There are also the following annual prizes for Undergraduates:—

The Camden Medal for original composition in Latin Hexameter Verse;
The Browne's Medals for Greek and Latin Odes and Epigrams; and
The Porson Prize for a Translation from Shakspeare or some other of our early Dramatic writers, into Greek Iambic or Trochaic Metre.

There are also four Prizes given by the Representatives in Parliament for Dissertations in Latin Prose; two being awarded to Undergraduates, and two to Bachelors of Arts.

There are also the following University Scholarships open to Undergraduates, namely:—

Five on the Foundation of Lord Craven; one founded by Dr. Battie; one by Dr. Davies; and one founded in memory of the distinguished Statesman, William Pitt.

To these may be added:—

One founded by Sir W. Browne, but with the condition that the successful candidate, if not already of St. Peter's College, shall become a member of it.

All these Scholarships are rewards for general proficiency in Classical learning.

There are also eight Scholarships founded by Dr. William Bell, but confined to the sons of Clergymen; the Examinations being principally in Classical learning, but combining therewith a certain extent of Elementary Mathematics.

Recently another Classical Scholarship has been founded, in memory of the eminent Critic, Professor Porson; but the foundation does not take effect until the Endowment has accumulated to a specified amount.

There are also in the several Colleges rewards, in the form of Prizes and Scholarships, for proficiency in Mathematical and Classical Studies. But the most effective encouragements and rewards are, beyond all doubt, the Fellowships in the Colleges. These, by their value and their credit, are the great incentive to exertion. They are openly held out as prizes for eminence in Academical attainments, but especially in Mathematics and Classics; they produce a spirit of generous and ardent emulation in the Students; and they are bestowed with an impartiality which, of late years at least, has never left an opening for a breath of suspicion or a murmur of complaint.

RECENT EXTENSION OF THE COURSE OF STUDY.

However deserving Mathematical and Classical studies may be of a prominent place in any well constructed system of liberal education, yet they ought not to be allowed to deprive other studies of a fair share of consideration. The legitimate principle is preference without exclusion. The University has always, to some extent, acted on this principle. In addition to the predominant study of Mathematical and Classical knowledge, it has always afforded facilities for the cultivation

Recent extension of the course of Study.

of other collateral subjects by the institution of Professorships and Lectures. Recently, however, it has given a vastly increased impulse in this direction. While still recognizing the superiority of Mathematical and Classical studies to all others as the basis of general education, the University nevertheless perceived the expediency of affording greater encouragement to the pursuit of various other branches of science and learning, which are rapidly acquiring increased importance and estimation in the world, and for the teaching of which it already possessed, to a great extent, the means, in its present course of Professorial Lectures, and even in its existing apparatus, however imperfect, of Museums. With the view of inducing a more numerous attendance at many of these Lectures, it has been recently required, as we have stated in a former part of our Report, that Candidates for the Degree of Bachelor of Arts, who do not engage in the competition for Mathematical Honours, shall attend for one Term at least the Lectures of some one or more of a specified list of Professors, and produce a certificate of having passed a satisfactory Examination in the subject of the Lectures before they are admitted to a Degree. But an impulse of still more generous emulation has been given by the institution of Triposes of Honour in the Moral and Natural Sciences, analogous to the Mathematical and Classical Triposes.

A Moral Sciences Tripos

has been established; the places in which are determined by an Examination in the following subjects:—

Moral Philosophy,
Political Economy,
Modern History,
General Jurisprudence,
The Laws of England.

The Examiners are:—

The Regius Professor of Law,
The Professor of Moral Philosophy,
The Professor of Modern History,
The Downing Professor of the Laws of England,
The Professor of Political Economy,
With one additional Examiner, to be nominated by the Vice-Chancellor, and appointed by Grace of the Senate.

A provision is made for the appointment, when necessary, of Deputy Examiners.

The Examination extends over four days.

All Students, who have passed the required Examinations and Exercises for the Degree of Bachelor of Arts, or Law, or Medicine, are admissible as Candidates for Honours in this Tripos.

The Candidates whom the Examiners deem worthy of an Honour are arranged in three classes; the places being determined by estimating the aggregate merits of each Candidate in all the subjects of the Examination; and marks of distinction beng affixed to the names of such of the Candidates as have shewn eminent proficiency in particular subjects.

The Reverend Dr. Whewell, Master of Trinity College and Professor of Moral Philosophy, wishing to promote that study and to enhance the honour of a place in the Moral Sciences Tripos, has instituted three Prizes, two (to be continued during his tenure of the Professorship) of Fifteen Pounds each for the two commencing Bachelors, and one (to be continued for four years) of Twenty Pounds for the Bachelor of the year above, who shall show the greatest proficiency in Moral Philosophy, at the Examination for the Moral Sciences Tripos.

Corresponding to the Tripos which has been just described, another has been established with the title of

The Natural Sciences Tripos.

The places in it are determined by an Examination in the following subjects:—

Anatomy,
Comparative Anatomy,
Physiology,

Chemistry,
Botany,
Geology,
Mineralogy (excluding the Mathematical part of Crystallography.)

The Examiners are:—

The Regius Professor of Physic,
The Professor of Chemistry,
The Professor of Anatomy,
The Professor of Botany,
The Woodwardian Professor of Geology,
The Professor of Mineralogy,
With one additional Examiner, to be nominated by the Vice-Chancellor and appointed by Grace of the Senate.

The rules, concerning the duration of the Examination, the admission of Candidates and the distribution of Honours, and also the appointment, when necessary, of Deputy Examiners, are the same as those of the Moral Sciences Tripos.

We hail with pleasure these indications of a liberal spirit of progress within the University itself. In a subsequent part of our Report we shall have occasion to remark on the manner in which the several subjects are grouped together in the recently instituted Triposes. At present we would observe, in a more general point of view, that some additions seem to us to be still required to give completeness to the range of general study. We would especially mention the want of a course of instruction for Students in Civil Engineering: such a course would easily ally itself to the study of Theoretical Mathematics, and give to them, in this particular line, a practical application. There can scarcely be a doubt that this extension of the academical system would commend itself by its manifest utility to public approbation.

Additions to the course of Study required:

Civil Engineering

Another addition, still more obviously suggested by considerations of utility, is the study of modern languages. A system of liberal education cannot be regarded otherwise than as defective, if it does not afford facilities and inducements for acquiring a knowledge of the treasures of German, French, and Italian literature. This branch of study is also daily becoming more important in consequence of the great and happy increase in the peaceful intercourse of nations. We confidently indulge the hope that it will, ere long, be recognized by the University as worthy of being fostered by honours and rewards. We shall have occasion to revert to this subject in our remarks on the Professorship of Modern History.

and Modern Languages.

P. 61 and p. 100.

In connexion with the course of study in Arts, it may be convenient to notice here another Examination, which though anterior in its institution to the two Triposes we have just described, is yet itself of recent date; we refer to the

VOLUNTARY THEOLOGICAL EXAMINATION.

The subjects for Examination are:—

The New Testament in Greek;
Assigned portions of the writings of the early Fathers,
Ecclesiastical History;
The Articles of Religion and the Liturgy of the Church of England.

The Examination is conducted by the Regius and Margaret Professors of Divinity; or, in case of necessity, by duly appointed deputies.

The Examination is open to all Students who have passed the required Examinations and Exercises for the Degree of Bachelor of Arts or of Law, and who have attended the Lectures delivered, during one Term at least, by two of the three Theological Professors; namely, the Regius, the Margaret, and the Norrisian Professor of Divinity.

The names of the Candidates, who have passed the Examination to the satisfaction of the Examiners, are published and registered in alphabetical order.

Any persons, who have been thus approved and registered, are at liberty to offer themselves to be further examined by the Regius Professor of Hebrew in some previously assigned portion of the Hebrew Scriptures, and the result is registered in the same manner as in the former case.

PROPOSAL FOR A RE-ARRANGEMENT OF THE COURSE OF STUDY FOR THE DEGREE OF B.A.

We have experienced sincere gratification in recording the recent improvements which the University has made. It is with no desire to detract, in any measure, from the praise so justly due in this respect, that we now proceed to suggest a further re-arrangement of the Academical system, which would, in our opinion, both give increased effect to the changes already introduced, and be attended with a very beneficial influence on the general course and habits of study.

We have already mentioned that, at the end of the fifth Term of Residence, Candidates for the Degree of Bachelor of Arts undergo the "Previous Examination;" which comprises a range of elementary subjects, not otherwise than well suited for the purpose. After the completion of five more Terms, those Candidates for the Degree of Bachelor of Arts, who do not offer themselves for Mathematical Honours, are again subjected to an Examination, differing but little in its general character from that which they passed in the middle of their time. Mathematics and Greek and Latin, still form a considerable part of it. But these are subjects, in which time had long since shown that most of this class of Students did not possess the desire or the aptitude to excel. If their taste and talents had inclined that way, the majority of them would no doubt have been found in the career of competition for Mathematical and Classical Honours. For five weary Terms they have been compelled to continue a course of reading, which, whatever attractions, whatever benefits, it may have for others, is to them irksome, and, need we hesitate to add, little better than unprofitable. We are willing to think that the changes, already made or contemplated by the University itself in its own system, point the way to an arrangement by which these inconveniences may be removed.

In the first place, our suggestion will be more clearly understood, if we mention that the Syndicate for the Revision of the Statutes have proposed to reduce the number of Terms of necessary residence for the Degree of Bachelor of Arts from ten to nine. We are of opinion that such an abridgment of time may be conveniently made, without any disadvantageous effect on the benefits derived from the general course of study. For as Students now usually commence their residence at a greater age and with greater attainments than in former times, the University would be enabled, under the proposed alteration, still to maintain a high standard of attainment in all the Examinations for Academical Honours. Moreover, by the suggested curtailment of one Term, the rotation of residence would be simplified and facilitated. One set of Students, having completed their course, could be cleared away in time to make room for the influx of the next new comers at the ensuing re-commencement of the Academical cycle. The inconvenience would thus be obviated which is now felt during the Michaelmas Term, when Students in their first and Students in their fourth year are accumulated together upon the care and accommodation of the Colleges, in consequence of the awkward manner in which the present course overlaps itself. But more directly to compensate the curtailment of a Term, the Syndicate recommend that a greater length of residence should be exacted in each Term; namely, two-thirds of the Term, instead of half as at present. This will be a solid advantage; giving greater continuity to the course of study, and longer opportunity of improvement in each several Term with comparatively little corresponding addition to the Terminal expense.

Concurring entirely in these proposals of the Syndicate, we venture to engraft upon them a further suggestion of our own. It has reference, in a considerable measure, to the regulations recently made for encouraging the study of the Moral and Natural Sciences, and also to the Voluntary Theological Examination.

What we suggest, then, is that the Examination of Students in Arts at the end of the fifth Term of residence should take place as at present, and in the same subjects, with the addition of such further parts of Euclid and Algebra as are now introduced at the Final Examination of those who are not candidates for Mathematical Honours. After the general body of Students have passed this Examination collectively, they might, then, in our opinion, be allowed, for the following four Terms, to select freely for themselves, with the sanction of their College Tutor, such lines of recognized Academical study as were best suited to their aptitudes and tastes, and professional destinations. Some would aspire to Honours in the several Triposes. Others would prepare themselves for the first Degree in Law or Physic. The rest, who sought or obtained no Honours, would be finally subjected to some process of examination, in order to make it evident that they had

Recommendation that Students be allowed to select the Studies best suited to their aptitudes and destinations.

REPORT.

attended such a range of lectures in their last four Terms, and acquired such a proficiency, as to qualify them for a first Degree in Arts.

Without entering into minute details, we may indicate, in a general manner, the kind of arrangement which, on the plan now proposed, would be necessary to replace the present Final Examination for the Degree of Bachelor of Arts. According to our view, a Student, who had passed the "Previous Examination" satisfactorily, should be allowed, after a further residence of four Terms, to become a candidate for a place in any one or more of the four Triposes; namely, the Mathematical, or the Classical, or the Moral Sciences, or the Natural Sciences. If he succeeded in obtaining an Honour in any one of them, he should thereupon be entitled to the Degree of Bachelor of Arts, so far as regards Academical proficiency. The same rule should be extended and applied to the case of any new Triposes, which may eventually be instituted; as for instance, a Tripos of Honours for Modern Languages; or for Civil Engineering. Corresponding to the Examination for Honours in each several Tripos, there should be a collateral Examination at the same time and in the same subjects for those Students who had adopted that particular line of study, though not seeking the distinction of an Academical Honour in it. As many as passed this collateral Examination satisfactorily, should also be thereupon entitled, in point of Academical proficiency, to the Degree of Bachelor of Arts. In like manner those Students should be entitled to it, who, not having adopted the line of any of the Triposes, but having attended the lectures of the Theological Professors for the same course of time, should pass satisfactorily either the Voluntary Theological Examination in its present form, or some Examination of the like kind specially instituted for the purpose.

Some adjustment would be required of the order and intervals of the Examinations for the several Triposes, so as to permit the same Student to be a candidate at more than one. Probably also some change would be expedient in the time at which the Voluntary Theological Examination occurs. It might moreover be attended with further advantage, in the event of this plan being adopted, that the year of Academical residence should be made to commence in the latter part of January instead of the middle of October, as is now the case. By this means the more arduous and protracted Examinations, which involve no slight trial of physical strength and mental anxiety to the Candidates, would be thrown into a season of the year more favourable for the purpose than the heat of the Summer Term.

Benefits that would result from this change.

The change itself of the system, which we have proposed, would in our opinion be attended with great advantages. There would still be, as now, an ardent competition and high standard of attainment preserved both in the Mathematical and Classical Triposes. Eminent distinction gained in them would still continue to be the prelude to a Fellowship in a College. At the same time, the Moral and Natural Sciences Triposes would rise into increased importance, in proportion as the Colleges began to recognize superior merit in those departments as forming also a recommendation to a Fellowship. But the positive advantage would probably be the most marked in the case of that numerous class of Students, who are contented with an ordinary Degree, not feeling themselves fitted to embark in the competition for Academical Honours. After passing the First Examination, they might turn their four remaining Terms to really profitable account by preparing themselves for their future professions; or, at least, they might continue to find in Academical pursuits that degree of interest and improvement, which arises from variety and choice of study.

Evidence, p. 111.

We have been confirmed in these views by the very valuable evidence of the Right Honourable Sir James Stephen, the Professor of Modern History, which will be again noticed in a subsequent part of our Report, but to which we here especially beg to direct attention, as it possesses peculiar interest and importance in connexion with the subject now under review.

We are fully sensible that the fame of the University must depend upon the eminence it maintains in science and learning. The standard of attainment must be high to make Academical distinctions really honourable. But we nevertheless think that it would be a mistake to estimate the importance and utility of the University solely by its effect in carrying forward young men of superior talents to high degrees of acquirement in scientific and literary Studies. There has always resorted to the University a very numerous class, who, from the circumstances of their birth and fortune, have no inducement to seek either Collegiate emoluments in the University, or professional income afterwards in the world. Not a few,

indeed, of this class, impelled by the consciousness of intellectual power, have entered into the race of competition and not disdained to adorn a noble lineage with the graceful addition of Academic Honours. But there are many more, belonging to the superior ranks of society, who resort to the University with no other purpose beyond that of obtaining such a creditable measure of liberal knowledge as is expected in a well-educated gentleman. The resort of this particular description of Students is attended with reciprocal advantages to themselves and to the University. They are entrusted to instructors of real knowledge and tried principles; they mix with a number of young men of their own age but from different ranks, and by this freedom of intercourse acquire both larger ideas and kindlier feelings; they are taught to appreciate, and so are led to cherish, the institutions of their country, while yet they claim for themselves, and learn to concede to others, that liberty and latitude of opinion without which neither truth can be elicited nor improvement forwarded. They leave the University, at the termination of their course, carrying with them, it is to be hoped, much benefit from the instruction and discipline they have received, and much grateful attachment to the place where they have passed some of the happiest years of life. We feel the great importance of encouraging the resort of this class of Students to the University. Their training there may fit them for the duties of the high stations which they are to occupy in the world, and, in return, their influence in society may be exerted to give support and strength to the place of their education. With this view, we think that every fair inducement and attraction should be offered to them by variety and choice of useful study, and that it is not desirable to exclude them either from entrance or from an ordinary Degree by a continual increase of difficulty in the Public Examinations beyond that necessary standard which the essential credit of the University requires. For the same reason, we forbear to offer any remarks on the slight anomalies existing in the case of Honorary Degrees.

Similar feelings still accompany and influence us as we proceed to consider the subsequent Degree of

Master of Arts.

This is the Degree which gives the great majority of the Members of the University a permanent connexion with it in its corporate capacity; cementing their attachment and embodying their support by the communication of important rights and privileges. We think that admission to the Degree should not be rendered more difficult than it is at present, nor be made dependent on any further residence or Academical Examination; but that, at the expiration of the customary period, those Bachelors of Arts, whose moral respectability is satisfactorily attested, and who have complied with the general laws and requirements of the University, should, as at present, be admitted to the Degree of Master of Arts. It appears to us, however, to be desirable that the present interval of three years between the Degrees of Bachelor and Master of Arts should still be preserved; in order that persons may attain a somewhat maturer age and larger experience before they are intrusted with the exercise of those important powers which the superior Degree confers.

Ancient privilege surrendered by King's College.

In closing this description of Degrees in Arts, we may remark that, by an ancient prescriptive privilege, Students of King's College were admitted to the Degree of Bachelor of Arts, on being presented to the University by their College, without undergoing any University Examination. We are happy to be able to state that this anomaly in the Academical system has now been removed; the Society of King's College having, by their own spontaneous concession, surrendered this privilege and entered into an engagement with the University that their Students shall be subjected to the same Examinations as the candidates for the Degree of Bachelor of Arts from other Colleges. The spirit of this concession is honourable to the College, and will, we hope, prove beneficial to it also. Its Students will feel a greater sense of self-respect and a nobler impulse of emulation when no longer standing aloof under the shelter of an inglorious immunity, but mingling on equal terms in the open career of generous competition.

We proceed now to notice the Degrees in Divinity, Law and Physic.

REPORT.

DEGREE OF B. D.

The Statutes of Queen Elizabeth direct that a Master of Arts proceeding to the Degree of Bachelor in Divinity, shall take part in the Disputations in Philosophy for four years; and that after that he shall take part in the Disputations in Theology, attend the Lectures in Theology and Hebrew, and study the same, so as to complete a period of seven years. But by an Interpretation of the date of 1575, only five years after the Statutes were given, a power was recognized in the University to relax the stringency of these requirements in favour of non-residents.

The Exercises required by the Statutes for this Degree are an Act to be kept after the fourth year from the Degree of Master of Arts, and two Opponencies; but if the Act be kept against a Doctor, the Opponencies are excused. The candidate is also required to preach an English Sermon and a Latin Concio ad Clerum in the University Church. These Exercises and Sermons are still kept up in practice.

There is not any other Examination either prescribed by the Statutes or instituted by the University. The Statutes however direct that every person proceeding to this Degree should promise to preach, within a year thereafter, once at St. Paul's Cross in London. This last mentioned particular has long ago become obsolete.

The foregoing description applies to the case of persons proceeding to the Degree of Bachelor in Divinity from the antecedent degree of Master of Arts. A particular Statute also concedes the privilege of the Degree of Bachelor in Divinity to persons who repair to the University after having attained the age of twenty-four years, and complete a period of ten years in Tneological study; provided they duly perform the same Exercises for the Degree as are prescribed to those who have previously graduated in Arts. By a Decree of the Vice-Chancellor and Heads of Colleges, these persons are required to reside for three Terms in the course of the last two years of the ten mentioned in the Statutes. They are also required to pass an examination to the satisfaction of the Regius Professor of Divinity before they are presented for their Degree. This examination was, we believe, first instituted by the present Bishop of Lincoln, Dr. Kaye, at the time when he held the Professorship with such distinguished honour to himself and to the University.

Stat. Eliz., c. 9.

DEGREE OF D. D.

The Statutes place an interval of five years between the Degrees of Bachelor and Doctor in Divinity. The Exercises are the same as in the case of the inferior Degree; but if the candidate keep his Act against a Doctor, the English Sermon is excused as well as the Opponencies. After obtaining his Degree, he is required to read a Determination on some Theological question in the schools. This requirement is in practice generally satisfied by the forfeiture of the sum deposited as a caution or pledge for the performance of the Exercise.

By the ancient Interpretation already mentioned, the University is empowered to excuse a non-resident Master of Arts from the Exercises prescribed for any superior Degree, provided that, when presenting himself for such Degree, he be of the requisite standing in point of time, and be known to the University as a person of learning and good character. The dispensing power thus possessed by the University admits of a Master of Arts proceeding to the Degree of Doctor in Divinity *per saltum*; that is, so as to overleap the intermediate Degree of Bachelor in Divinity. Originally the benefit of the Dispensation appears to have been intended for non-residents, as such. In practice it has been applied to the case of persons who, after becoming Masters of Arts, have removed their names from the books of their College and subsequently replaced them.

Proposals of the Syndicate for the revision of the Statutes.

With respect to the Exercises for Degrees in Divinity, the Syndicate for the Revision of the Statutes, dropping those particulars which have become obsolete in practice, propose to retain the existing requirements as to Acts and Opponencies. The Regius Professor of Divinity, in reply to our inquiries, has expressed an opinion that "unless the period required for the Degrees of Bachelor and Doctor "in Divinity be abridged, it is not desirable to change, to any considerable extent, "the nature of Exercises which, being in conformity with long established usage, "appear to be well adapted to the age and position of the Candidates." Probably they are sufficient to deter and repel such persons as are conscious of deficiency in the command of the Latin language and in Theological knowledge. But in accordance with a principle, which we advanced in a former part of our Report, we think

it is desirable that the present system of Exercises should not be positively stamped with the permanence of a Statute, but that a power should be left to the University to modify or vary these Forms at any future time, if such a change should be thought conducive to the advancement of Theological learning and the greater credit of the Degrees. REPORT. Recommendation.

The Syndicate do not propose to abridge the periods of time required for the Degrees of Bachelor and Doctor in Divinity. But as respects the transition from the Degree of Master of Arts to that of Doctor in Divinity without taking the intermediate Degree of Bachelor in Divinity, the Syndicate, reverting to the original intent of the ancient Interpretation before-mentioned, have offered to the Senate the following recommendation:— D.D. *per saltum.*

"That the privilege of taking the Degree of Doctor in Divinity *per saltum*, "(that is, without having previously taken the Degree of Bachelor in Divinity,) "shall be conceded only to non-resident Masters of Arts, and of them to such "only as are employed in ecclesiastical or civil affairs creditably to themselves "and usefully to others, who being of the usual standing for the Degree of "Doctor in Divinity, (twelve whole years from their admission to the Degree of "Master of Arts,) and having performed all the Exercises and all other things "required from a Bachelor in Divinity proceeding to the same Degree, shall produce "a Certificate, under the hand and seal of the Master of their College, that six "years have elapsed since they were resident in the University; and shall further "produce another Certificate, under a fixed form to be prescribed by the Senate, "respecting their learning and moral character, signed by the Chancellor and "major part of the Heads of Colleges; and lastly that it shall neither be neces-"sary nor of any avail for Masters of Arts to erase their names from the Boards "of their College in order to the obtaining of this privilege."

The Syndicate further propose to abolish the peculiar privilege by which the Degree of Bachelor in Divinity has hitherto been accessible, without a previous Degree in Arts, to that class of persons before described who enter the University after attaining the age of twenty-four years, and complete a period of ten years, with a residence of three Terms in the last two years of the ten. We believe that this class of persons has never been a very numerous one. In order to comply with the requirements for the Degree, they must be in Holy Orders. Their motive for repairing to the University is to obtain, by the acquisition of this Degree, some additional importance in public estimation, either as Clergymen or as Masters of Schools. The privilege itself may be regarded as an anomaly in the Academical system; but as it afforded the means of gratifying a class of respectable men and attaching them to the University, we look upon the proposal to abolish it with some feelings of regret. Ten-year men.

As a compensation however for the suppression of this privilege, the Syndicate suggest the institution of an entirely new class of Theological Students. They propose Licentiates in Theology.

"That, under regulations to be laid down by the Senate, and after making the "same subscription as Bachelors of Arts, Students in Theology may obtain the "title of Licentiates in Theology: provided that, when any one has obtained this "title, no residence kept by him for the purpose of obtaining it shall avail for the "obtaining of any Degree."

We do not hesitate to express our general approbation of this proposal. Of late years, happily, great efforts have been and continue to be made to meet the spiritual wants of the country by the building of new Churches. Societies also have been instituted for the purpose of promoting the employment of additional Curates and affording Pastoral aid in populous parishes. Corresponding to these benevolent movements, there is a demand for an additional supply of persons properly qualified to undertake the duties of the Ministerial office. We are aware that a course of education, with the especial purpose of contributing to furnish such a supply, has been established in the University of Durham; in King's College, London; and in other Institutions under a more or less authorized form. But we think it highly important that the University of Cambridge should take a part, and a leading part, in meeting this peculiar exigency of the times. The endowments of many of the new Churches and the stipends of Assistant Curates are so small, that in many cases they come into the hands of men who have not been able to afford the time or expense requisite for obtaining an Academical Degree. It is in the power of the University to render an important service by providing for

REPORT.

this class a course of clerical education limited to such a moderate period of time as may suffice for ensuring a competent measure of proficiency. The University has always exercised, and, we hope, will long continue to exercise, an extensive influence on the education of the Clergy; and, by the adoption of such a plan as has been suggested, it would, in our opinion, equally consult the interests of the Church and its own.

Restrictive condition objectionable.

The Syndicate have, however, attached a condition to this plan, namely, "that "when any one has attained the title of Licentiate in Theology, no residence kept "by him for the purpose of obtaining it shall avail for the obtaining of any "Degree." We confess that we do not perceive the expediency of such an unfavourable condition. It is quite reasonable that a person who has obtained the title should not be admitted to any Academical Degree without passing through all the Examinations and criteria of proficiency which are required from other Candidates for the same. But as regards the point of residence, we are not aware of any inconvenience that would arise from allowing the Terms which he kept for his License to be reckoned in the computation of time for a Degree in Arts. On the contrary, such a permission would, we venture to think, be attended with positive advantage, as it would supply a connecting link between this particular class and the general body of Students.

Recommendation.

If, however, the restrictive condition should be retained, we would suggest another mode by which an appropriate indulgence might be extended to this new class of Students. The Syndicate, as has been stated, propose to abolish entirely the privilege whereby persons, entering the University at the age of twenty-four years or more, are admissible after a period of ten years, to the Degree of Bachelor in Divinity, without previously graduating in Arts. It appears to us that an exception might properly be made in favour of the proposed Licentiates in Theology. We think that a person who had obtained the title of Licentiate, and subsequently been received into Holy Orders in the Church of England, might be permitted to proceed to the Degree of Bachelor in Divinity, after a period of ten years from the date of his Priest's Orders, provided he have complied with the existing requirements of the University as to Residence, Exercises, and Examination. Such an arrangement seems to be peculiarly adapted to the circumstances of this case.

Board of Theological Studies.

With respect, however, to the general administration of the Faculty of Theology, we are of opinion that great advantages would result from the institution of a Board of Theological Studies, analogous to that which already exists for Mathematical, and to that which has been suggested for Classical Studies. It might be composed of the Professors of Divinity and the Regius Professor of Hebrew, with the addition of a certain number of other Members of the Senate, who should consult on all points relating to the Voluntary and other Theological Examinations; to the granting of the proposed Licenses in Theology; and to the Academical qualifications for Theological Degrees; with the power of reporting their opinions on these subjects from time to time through the Vice Chancellor to the Senate.

THEOLOGICAL PRIZES.

There are various inducements to graduate in Theology. The Statutes of several Colleges require the Fellows to make Theology their study and to proceed to Degrees in that Faculty. The Heads of many of the Colleges are also required to be Graduates in it. In a more general point of view, there are also several University Prizes for the encouragement of Theological Study.

The Norrisian Prize, annually given for an English Prose Essay on a sacred subject to persons who either are or have been Students of the University and are between the ages of twenty and thirty years.

The Hulse Prize, annually given for an English Dissertation on a Theological subject to a Member of the University under the Degree of Master of Arts.

In connexion with these may be mentioned the Burney Prize, annually given to a Bachelor of Arts of the First Year for an English Essay "on some "Moral or Metaphysical Subject, on the Existence, Nature, and Attributes "of God, or on the Truth and Evidence of the Christian Religion."

There are also

Three Crosse Theological Scholarships for Bachelors of Arts of the First

Year; the succession being so arranged as to produce one vacancy every year. REPORT.

Six Tyrwhitt Hebrew Scholarships, in which there are two vacancies every year, open, with some slight limitations, to Bachelors and Inceptors in Arts, and Examined Students in Law and Physic.

There are also Prizes for the encouragement of Theological Learning in most of the Colleges.

Degree of Bachelor of Laws.

The Statutes require that a Student in Civil Law, proceeding to the Degree of Bachelor in that Faculty, shall pursue his Studies in the University six entire years. They direct him to study within his College during the first year; and to attend the Lectures of the Professor of Civil Law for the remaining five years. They enjoin no other Examination or Exercise for his Degree but one Act. Statutes.

The course marked out by the Statutes, has, however, been greatly modified in practice. According to the existing regulations of the University, the Student is not obliged to be actually resident for six years; but only to be a member of some College for that period, and to reside nine Terms, which are equivalent to three years. He is required to pass the general "Previous Examination" already mentioned in the description of the proceedings for the Degree of Bachelor of Arts. In the course of study peculiar to his Faculty, he is required to attend the lectures of the Professor of Civil Law, for three Terms. The course of study and the lectures are adapted to each other. The present Professor, Dr. Maine, states that "for some years past the character of the course has remained substan- "tially the same; and its subject may be described as General Jurisprudence, "illustrated by the Roman and English Law. Large portions of Moral Philo- "sophy and of Legal History have been naturally comprised in it; and in the "studies of some years International Law has formed an important element." Present practice.

In addition to attendance on the lectures of the Professor, the Student is required to pass a series of Terminal Examinations in the subject of them. These Examinations were first instituted by the Reverend Dr. James William Geldart, who, by this judicious measure, greatly increased both the efficiency of this department of study and the credit of the Law Degrees. Dr. Geldart resigned the Professorship in the year 1847; but a similar plan is pursued by the present Professor. As the result of the Examination, the names of the Candidates are arranged in three classes, in the order of merit. Occasionally, when a Candidate is judged to have done sufficient to escape rejection, but not to deserve a positive mark of credit, he is allowed to proceed to his Degree, but without being classed.

The Student is further required to keep an Act in the Schools. If he has not succeeded in obtaining a place in the first Class of his own Faculty, he must, before keeping the Act, produce a Certificate of having attended during one Term at least the lectures of some one or more of the following Professors:

The Regius Professor of Physic,
The Professor of Moral Philosophy,
The Professor of Chemistry,
The Professor of Anatomy,
The Professor of Modern History,
The Professor of Botany,
The Woodwardian Professor of Geology,
The Jacksonian Professor of Natural and Experimental Philosophy,
The Downing Professor of the Laws of England,
The Downing Professor of Medicine,
The Professor of Mineralogy,
The Professor of Political Economy.

The Certificate must further express that he has passed an Examination satisfactory to the Professor whose lectures he has chosen to attend.

It will be observed that some of the subjects of lectures included in the foregoing enumeration, as Moral Philosophy and Modern History, have a certain connexion with the principles of Jurisprudence, or may be illustrative of the influence of the Roman Law on the civilization of Modern Europe. Attendance at the lectures on other subjects of a more extraneous character may be accepted as at least a proof of time diligently employed.

A Student in Law is at liberty to compete with Students in Arts for most of the

REPORT.

University Classical Scholarships and Prizes; for Honours in the Moral Sciences' and the Natural Sciences' Triposes; for the Tyrwhitt's Hebrew Scholarships; and for some Theological Prizes.

A Bachelor of Arts may proceed to the Degree of Bachelor of Laws; but, in doing so, he must comply with all the requirements for the Law Degree that are additional to those affecting the Degree in Arts.

DEGREE OF DOCTOR OF LAWS.

Statutes.

The Statutes require that a Bachelor of Laws proceeding to the Degree of Doctor shall continue to attend the Lectures of the Professor of Civil Law for five years more. But this obligation is relaxed in practice; partly under the ancient Interpretation of the year 1575, already mentioned in a former part of our Report.

Present practice.

The Exercises required are two Acts and one Opponency; but, under the same Interpretation, it is usual to give a dispensation to clergymen from one Act and the Opponency, to laymen from the Opponency only. Cautions, however, that is deposits as pledges for the performance of the omitted Exercises, are taken, and in case of non-performance within a certain time are forfeited.

No other Examination is required either by the Statutes or by the regulations of the University.

A Master of Arts of seven years' standing, having at the proper time declared his intention of proceeding in Law, may be admitted to the Degree of Doctor of Laws, provided he has performed the Exercises required from a candidate who had been previously Bachelor of Laws.

Proposals of the Syndicate for the Revision of the Statutes.

The Syndicate for the Revision of the Statutes have proposed that the Faculty of Civil Law shall in future be denominated the Faculty of Law. The formal adoption of this title will indicate a larger and more comprehensive subject, and recognize more authoritatively that combination of the study of English with Roman Law, which has already been carried out to some extent in the lectures of the Professor. A further advantage would be gained, if the opportunity were taken, which is thus afforded, for bringing the lectures of the Downing Professor of the Laws of England into more direct and necessary connexion with Degrees in the Faculty of Law.

The Syndicate also propose—

That a Student in Law may be admitted to the Degree of Bachelor of Law after five instead of six years;

That a Bachelor of Arts may be admitted to the Degree of Bachelor of Law after two instead of four years standing from the actual Degree in Arts;

That, upon the Senate being satisfied that a Bachelor of Law is seeking the Degree of Doctor for the purpose of actual practice in the Courts, he may be admitted to it after four instead of five years.

These appear to us to be reasonable and desirable changes, and would enter properly as parts of a new code of Statutes.

The Syndicate further propose that one Act shall in future suffice for the Degree of Doctor of Law instead of two. With respect also to the Act still to be kept, they recommend that "the reading of the Dissertation being re- "tained, the Act may be conducted by the Regius Professor, if he think fit, either "wholly or in part after the manner of a *vivâ voce* Examination, the same being "restricted to the subjects proposed; and that the Professor himself shall per- "form the part of Opponent or Disputant as well as Examiner, and no one else "shall be required to do so."

Entirely concurring in this last mentioned proposal and recommendation of the Syndicate, we beg leave to repeat the opinion we have expressed in former parts of our Report, namely, that the regulations for these minute forms and Exercises should not be tied up with the stringency of a Statute, but be left, as they may be safely and conveniently, to the discretionary power of the University itself.

Evidence, p. 77.

Having offered these remarks, we beg leave to invite attention to the very valuable evidence of Dr. Maine, the Regius Professor of Civil Law, upon the whole subject of his Faculty. He has made one important suggestion that is in harmony with recommendations offered by ourselves in relation to other departments of study. As a means of giving greater definiteness to the study of Law,

Board of Legal Studies.

he suggests "the establishment of a *Board of Legal Studies*, analogous to the "*Board of Mathematical Studies*, which has been lately invested with a measure

" of control over the Mathematical Examinations of the University." He adds that " it might be deemed expedient to reduce the period of attendance at the " Civil Law Professor's Lectures to one Term, attendance being demanded at the " Lectures of the Professor of English Law during a second Term, and at " those of the Professor of Moral Philosophy during a third. Lastly, one or " two Examiners, appointed by the Senate, might be associated with the Civil " Law Professor in the conduct of the Law Examinations. The appointment " of such Examiners would be an important improvement, since it would re- " lieve the Professor from the invidious responsibility of his present functions, and " would gradually diminish that ignorance of the system pursued in the Law " Schools which is common in the University, and which has defeated the efforts " of successive Professors to enhance the reputation of the Faculty confided to their " direction." Report.

We think these suggestions deserving of attention. It is manifestly most desirable to elevate by well-timed improvements this important Faculty, which forms so direct a bond of connexion between the University and the Members of the English Bar.

Bachelor of Physic.

The Statutes regulating Degrees in Physic, bear a considerable analogy to those we have had under review, relating to Degrees in Law. They require that a Student, proceeding to the Degree of Bachelor of Physic, shall study Physic six years, be a constant attendant at the lectures of the Professor in Hippocrates or Galen, and witness two dissections. The exercises required by them are two Acts and one Opponency. They prescribe no other Examination.

The course, marked out by the Statutes, has however, as in the case of the Faculty of Law, been greatly modified in practice.

The prescribed period of study is six years. That is also the period for the Degree of Bachelor of Law. But in the case of Law, the years are expressly required to be entire and complete; *annum integrum*; *quinquennium totum*. There not being any such stringent epithet in the case of Physic; the direction as to time has, by a leniency of construction, been so understood as to admit a Student to the Degree of Bachelor of Physic at any time after he has completed his fifth year. He is not absolutely obliged to be actually resident five years; but only to be a member of some College for that period, and to reside nine Terms, which are equivalent to three years. During the two other years he may either reside in the University and attend the lectures there in the course of his Faculty; or, on applying for his Degree, he must produce a Certificate of his having, throughout the period of his absence, attended Medical lectures and the Practice of a Hospital in some accredited and acknowledged School of Medicine. Present practice.

He is required to pass the general " Previous Examination " already mentioned in the description of the proceedings for the Degree of Bachelor of Arts. In the course of study peculiar to his Faculty, he is obliged to attend the lectures of the Regius Professor of Physic, which are no longer confined to the authors mentioned in the Statute, but embrace an extended range of subjects corresponding to the advanced state of medical science. The Student is further required to attend the lectures of the Professor of Anatomy, of the Professors of Chemistry and Botany, and of the Downing Professor of Medicine. He must also pass an Examination to the satisfaction of these several Professors before he is admissible to the Degree of Bachelor of Physic.

With respect to the Exercises prescribed by the Statutes, namely two Acts and one Opponency, the Student is still obliged to keep one of the Acts and the Opponency; the other Act having been dispensed with by a Royal letter of the year 1681.

A Student in Physic, like a Student in Law, has the liberty of competing with Students in Arts for various Classical and other Scholarships and Prizes, and may be a Candidate for the Honours of the Moral Sciences', and Natural Sciences' Triposes.

An actual Bachelor of Arts, being then reckoned to be of four years standing as a member of the University, may, after the completion of one year more, be admitted to the Degree of Bachelor of Physic. But he is obliged to comply with the same regulations which affect other Students proceeding to that Degree without having previously graduated in Arts.

REPORT.

DOCTOR OF PHYSIC.

Statutes.

The Statutes require a Bachelor of Physic proceeding to the Degree of Doctor, to be of five years standing; to have kept two Acts and one Opponency, and to have witnessed two dissections. No other Examination is prescribed.

Present practice.

In practice one Act at least is always kept; a Dispensation, if desired, being granted for the other Exercises, under the antient Interpretation of the year 1575, referred to already in former parts of our Report. Caution money, however, for the performance of the omitted Exercise within a limited period of time is deposited, and in case of non-performance, forfeited.

The Candidate must produce Certificates of his having attended on Hospital Practice, either in or out of the University for three years, exclusive of the nine Terms which he kept for the Degree of Bachelor of Physic, and of his having attended lectures on the following subjects; namely:

Practice of Physic and Pathology,
Anatomy and Physiology,
Chemistry,
Botany,
Medical Jurisprudence,
Materia Medica and Pharmacy,
Principles of Surgery,
Principles of Midwifery,
Practical Anatomy for two seasons.

He must also pass an Examination to the satisfaction of the Regius Professor of Physic, the Professor of Anatomy, the Downing Professor of Medicine, and a Doctor of Physic to be nominated annually by the Vice-Chancellor and approved by the Senate.

A Master of Arts of seven years standing, having at the proper time declared his intention of proceeding in Physic, may be admitted to the Degree of Doctor of Physic, provided that he shall produce Certificates of having been employed in the study of Physic for five years after his admission to the Degree of Bachelor of Arts, and of having attended on Hospital Practice for three of those five years, and also of having attended lectures in the subjects above enumerated; and that he shall moreover have passed an Examination to the satisfaction of the Examiners above mentioned.

The University, in some cases, grants a Licence *ad practicandum in Medicina* to Bachelors of Physic or Masters of Arts who are not of complete standing for the Degree of Doctor of Physic; but the same Certificates must be produced and the same Examination passed as for that Degree.

The foregoing description, however brief, will shew how much has been done to extend the course of medical education and raise the standard of proficiency, so as to be worthy of the present state of science and the character of the University. For these great improvements Cambridge is mainly indebted to the intelligence and zeal of Dr. Haviland, the late Regius Professor. The important services which he rendered to the University entitle him to a place in the grateful remembrance of all its Members and to this tribute of our willing praise.

The measures, however, of improvement adopted by the Senate on his suggestion, were necessarily limited by the unyielding fixity of the Statutes. The great length of time required by those Statutes for the Degree of Doctor of Physic compared with the corresponding period in most other Universities, and possibly the very increase introduced by himself into the range of Study and Examination, have prevented Cambridge becoming a great resort of Medical Students. The credit of the Medical School was raised, but without a corresponding increase of its numbers.

Suggestions of the Syndicate for the revision of the Statutes.

The Syndicate for the revision of the Statutes have made some suggestions with the view of counteracting this disadvantage. They propose that "whereas "at present a Bachelor of Physic must be of five years standing as such, and a "Master of Arts of seven years standing as such, before he can be admitted to the "Degree of Doctor of Physic, in future a Bachelor of Physic of three years stand-"ing as such, and a Master of Arts of four years standing as such, may respec-"tively be admitted to the Degree of Doctor of Physic." This would be an advantageous change, and enable Cambridge to compete with other Schools of Medicine on less unequal terms.

The Syndicate have also proposed a modification of the Statutes in respect of the Exercises for the Degree of Doctor of Physic; namely, that instead of two

Acts as now required, in future one shall suffice. Moreover, as to the forms in keeping an Act, they make the same recommendation in the case of the Faculty of Physic that they did before in the Faculty of Law; namely, that "the reading of "the Dissertation being retained, Acts may be conducted by the Regius Professor, "if he think fit, either wholly or in part after the manner of a *vivâ voce* Examina- "tion, the same being restricted to the subjects proposed; and that the Professor "himself shall perform the part of Opponent or Disputant as well as Examiner, "and no one else be required to do so." On these suggestions we can only repeat the remark made by us on the like points in the case of the Faculty of Law; that in our opinion the regulations affecting these minute forms and modes of Examination should not be stamped with the permanent character of a Statute, but be left to the discretion of the University itself.

Evidence, p. 80. p. 82. Board of Medical Studies.

The evidence of Dr. Haviland, the late respected Regius Professor of this Faculty, and of his able successor, Dr. Bond, will be found full of interest. The present Professor expresses an opinion that "it might perhaps be considered as "consistent with the position of the Professor of Physic, that he should preside "over a Medical Educational Board, formed in conjunction with Professors of the "allied branches of study, so as to ensure more effectually an uniform system of "instruction, facilitate its adaptation to the requirements of the Profession as "they might arise, and also exercise a combined and more influential control "over the Class of Medical Students as a body, on the termination of their more "immediate connexion with the tuition and discipline of their respective Colleges."

This suggestion meets with our entire approbation. It is in unison with an opinion expressed to the like effect by the Professor of Law in relation to that Faculty, and with suggestions offered in our own Report in relation to other departments of study.

Degrees in Music.

The University confers the Degrees of Bachelor and Doctor of Music. The conditions for either Degree are the same; namely, that the Candidate be a Member of some College; and that he satisfy the Professor of Music as to his proficiency in the Art, more particularly by composing a solemn piece of Music to be performed, at the appointment of the Vice-Chancellor, before the University.

Cautions for Exercises.

In describing the proceedings for Degrees in Law and Physic, it has been mentioned that in certain cases deposits of money are required as cautions, or securities for the future performance of omitted exercises; and that in the event of these exercises not being performed within the time allowed the cautions are forfeited. The same practice prevails also in the case of the Degree of Doctor in Divinity being conferred *per saltum*; that is, without the previous Degree of Bachelor in Divinity.

This practice of allowing Academical exercises to be commuted for a payment in money is evidently objectionable. The exercises ought not to be more numerous than is suitable for the intended end, and should be really performed. The Syndicate for the revision of the Statutes very properly propose that, in the event of the revised Code receiving the requisite sanction, Cautions for Exercises shall not in future be accepted.

Report.

DECLARATIONS AND OATHS REQUIRED AT MATRICULATION AND ADMISSION TO DEGREES.

It appears from the most ancient ordinances of the University that an oath was required from Students at their Matriculation; containing an engagement to obey the Chancellor and authorities of the University; to maintain the peace and honour of the University; and to defend it against adversaries and wrongs.

The form of the Oath was established by an Ordinance of the Senate in the year 1545, as follows:—

"*Concepta verba jurisjurandi.*

"Cancellario, Procancellarioque Academiæ Cantabrigiensis, quatenus jus fasque "est et pro ordine in quo fuerim, quamdiu in hac republica degam comiter obtem- "perabo; leges, statuta, mores approbatos et privilegia Cantabrigiensis Academiæ "quantum in me est observabo; pietatis et bonarum literarum progressum et "hujus Academiæ statum, honorem, dignitatem tuebor quoad vivam, meoque "suffragio atque consilio rogatus ac non rogatus defendam: ita me Deus adjuvet "et sancta Dei Evangelia."

Rather more than a century later, namely, in the year 1647, the following Grace was passed by the Senate, to the effect that, for the security and relief of those who should take the foregoing and other like Academical oaths, the Senate decreed and declared that, if persons, who might offend against the laws and customs of the University, should humbly submit themselves to the corresponding penalties and censures, they should not be, nor be held to be, guilty of perjury.

"Placet vobis ut in majorem in posterum cautelam jurantium et levamen hæc "verba sint annexa juramentis Academiæ matriculationis, admissionis, creationis.

"Senatus Cantabrigiensis decrevit et declaravit eos omnes qui monitionibus, "correctionibus, mulctis et pœnis statutorum, legum, decretorum, ordinationum, "injunctionum et laudabilium consuetudinum hujus Academiæ transgressoribus "quovis modo incumbentibus humiliter se submiserint, nec esse nec habendos "esse perjurii reos.

The intent of the Senate was most commendable, but the expedient to which they resorted is extraordinary and singular. It is however not necessary to discuss any question of moral casuistry which this Declaratory Grace might suggest, inasmuch as a different course has since been taken by the University. In conformity with the Act of Parliament of the 5th and 6th William IV., c. 62, the oath at Matriculation has been converted by a Grace of the Senate into an equivalent Affirmation or Promise.

No other engagement or test is required at Matriculation.

Degree of Bachelor of Arts.

The Academical Oath, formerly taken before admission to this Degree, has also, since the passing of the Act of Parliament just mentioned, been converted into an equivalent Affirmation and Promise.

The form of it is as follows:—

"Affirmabis quod nihil ex iis omnibus sciens, volens, prætermisisti quæ per "leges aut probatas consuetudines hujus Academiæ ad hunc Gradum quem ambis "adipiscendum aut peragenda aut persolvenda requiruntur; nisi quatenus per "Gratiam ab Academia concessam tecum dispensatum fuerit.

"Dabis fidem quod Cancellario et Procancellario nostro comiter obtemperabis, "et quod statuta nostra, ordinationes et consuetudines approbatas observabis.

"*Respondet admittendus.*

"Ita affirmo et ita do fidem."

Admission to higher Degrees.

The Academical Oath to be taken on admission to any higher Degree is in the following form:—

"Jurabis quod nihil ex iis omnibus sciens, volens, prætermisisti quæ per leges "aut probatas consuetudines hujus Academiæ ad hunc Gradum quem ambis adi- "piscendum aut peragenda aut persolvenda requiruntur; nisi quatenus per "Gratiam ab Academia concessam tecum dispensatum fuerit.

" Jurabis etiam quod Cancellario et Procancellario nostro comiter obtemperabis; " et quod statuta nostra, ordinationes et consuetudines approbatas observabis.

" Denique jurabis quod compositionem inter Academiam et Collegium Regale " factam sciens, volens, non violabis; et quod in Bibliothecam Publicam et Mu- " seum Honoratissimi Domini Vice-Comitis Fitzwilliam admissus jure isto tuo ita " uteris, ut, quantum in te est, nihil inde detrimenti capiat vel Bibliotheca vel " Museum prædictum.

" In hæc autem virba jurabis secundum tenorem Senatus consulti in cautelam " jurantium facti."

Any observations which we might have intended to offer on this point have been superseded by a recommendation of the Syndicate for the revision of the Statutes to the following effect:—

" That no Academical Oath shall in future be required of any person upon " admission to a Degree; nor any affirmation of his having performed what the " Statutes require him to have done, of which the University receives sufficient " testimony from others; but that a solemn promise shall be required of obedience " to the laws and executive authority of the University, and also of using the " privileges granted to him upon admission without abusing them."

CREATION.

The Degrees of Master of Arts and of Doctor in the several Faculties require, after admission by the Vice-Chancellor, a further ceremony for their completion, which is technically called creation. At this ceremony the following oath is administered to a Master of Arts:—

" Jurabis de continuatione Regiminis tui in biennium. Jurabis etiam quod extra " hanc Universitatem nusquam, præterquam Oxoniis, in illa Facultate incipies aut " lectiones tuas solenniter resumes, nec consenties ut aliquis alibi in Anglia incipiens " hic pro Magistro in illa Facultate habeatur."

An Oath substantially the same is administered to Doctors in the several Faculties; the word biennium being substituted for quinquennium, and Doctore for Magistro.

We are happy to find that the Syndicate for the revision of the Statutes recommend the discontinuance of this Oath, both in the case of Masters of Arts and of Doctors; and we earnestly hope that the University will be freed from restrictions which are so uncongenial to the liberal spirit of the age, and would be so embarrassing in their practical operation were they not, in many instances, treated as obsolete, and consequently disregarded.

SUBSCRIPTION BEFORE ADMISSION TO A DEGREE.

The remarks which we propose to offer on this subject will be rendered clearer by prefixing the 36th Canon of the Church of England.

" *Subscription required of such as are to be made Ministers.*

" No person shall hereafter be received into the Ministry, nor either by insti- " tution or collation admitted to any ecclesiastical living, nor suffered to preach, " to catechise, or to be a Lecturer or Reader of Divinity in either University, or " in any cathedral or collegiate church, city or market town, parish church, chapel, " or in any other place within this realm, except he be licensed either by the " Archbishop or by the Bishop of the Diocese, where he is to be placed, under " their hands and seals, or by one of the two Universities under their seal likewise; " and except he shall first subscribe to these three Articles following in such " manner and sort as we have here appointed:

" 1. That the King's Majesty, under God, is the only supreme Governor of " this realm and of all other his Highness's dominions and countries, as well in all " spiritual or ecclesiastical things or causes, as temporal: and that no foreign prince, " person, prelate, state or potentate hath, or ought to have, any jurisdiction, power, " superiority, preeminence or authority, ecclesiastical or spiritual, within his Ma- " jesty's said realms, dominions and countries.

" 2. That the Book of Common Prayer, and of Ordering of Bishops, Priests, " and Deacons containeth in it nothing contrary to the word of God, and that it may " lawfully so be used; and that he himself will use the form in the said Book pre- " scribed, in public Prayer and Administration of the Sacraments, and none other.

" 3. That he alloweth the Book of Articles of Religion agreed upon by the

REPORT.

"Archbishops and Bishops of both Provinces and the whole Clergy in the "Convocation holden at London in the year of our Lord God one thousand five "hundred sixty and two; and that he acknowledgeth all and every the Articles "therein contained, being in number nine and thirty besides the Ratification, to "be agreeable to the word of God.

"To these three Articles whosoever will subscribe, he shall, for the avoiding of "all ambiguities, subscribe in this order and form of words, setting down both "his christian and surname, viz.: *I, N. N., willingly and ex animo subscribe to these "three Articles above mentioned, and to all things that are contained in them.* And "if any Bishop shall ordain, admit or license any, as is aforesaid, except he first "have subscribed in manner and form as here we have appointed, he shall be sus-"pended from giving of Orders and Licenses to preach for the space of twelve "months. But if either of the Universities shall offend therein, we leave them to "the danger of the law and his Majesty's censure."

The Canons were made in the year 1603 at the commencement of the reign of King James the First. Ten years later, the King sent a letter to the Vice-Chancellor of the University, requiring that the University should pass an Ordinance to prevent any person having the Degree of Bachelor of Divinity or of Doctor in Divinity, Law, or Physic, without first subscribing to the three Articles in the 36th Canon. The letter is interesting and important.

"JAMES R.

"Trusty and well-beloved, we greet you well. Upon signification to you not "long since, of our dislike of the Degree of a Doctor of Physick granted in "that our University of Cambridge without subscription to the three Articles "mentioned in the six and thirtieth Canon of the Book of Ecclesiastical Con-"stitutions and Canons made and published in the year of our Lord God one "thousand six hundred and three, and one thousand six hundred and four, and in "the first and second years of our reign of this our realm of England, to "Mr. Burgesse, who, upon a humour or spirit of faction or schism apostating "from his orders and ministry, hath betaken himself to the profession of physick, "understanding by your private answer at that time made unto our challenge to "you for the same that there was no established decree or ordinance in that our "University for the denial of Degrees to such as should refuse to subscribe as "aforesaid, and duly considering with ourselves to how little effect our care and "endeavour of preserving as well uniformity in order as unity of truth in this our "Church will tend, if we should not carefully provide for the deriving of both out "of the nurseries and fountains of our church and commonwealth (our uni-"versities), we have thought good by these our letters to signify unto you both "our apprehension of the necessity of the establishing of such an ordinance or "decree and also our pleasure for the performance thereof presently in that our "University of Cambridge, to wit that by a publick ordinance and decree of the "body of that our University passed by a Grace with you it may be decreed and "ordained that from henceforth no man shall have granted unto him the "Degree either of Bachelor in Divinity or of Doctor in any Faculty, Divinity, "Law or Physick, unless he shall first and before the propounding of his said "Grace to the body of the University in the presence of the Vice-Chancellor, or "his deputy for the time being, subscribe to the aforesaid three Articles contained "in the aforesaid six and thirtieth Canon in such manner and form as in the said "Canon is expressed and required. Hereof we thought it the more necessary "to admonish you, and hereunto require you by these our letters partly for that "in the foresaid six and thirtieth Canon the neglect of the doing thereof in either "of our Universities is provisionally left to our censure, and partly for that we "understand our University of Oxford hath long since made a public ordinance "and constitution in this behalf in so much that they grant not so much as the "Degree of a Bachelor of Arts without subscription first had; whereas with you "there hath not hitherto so much care been had in that our University of "Cambridge as to require this subscription of such as receive the Degree of Bache-"lor or Doctor in Divinity with you.

"Our pleasure therefore is that you publish these our letters to the body of "the University at the next Congregation that shall be had there with you "after the receipt of these our letters; which being done, either at the same "Congregation or at the next that shall ensue it, we require you to propound and

" endeavour to pass a Grace to the effect aforesaid, and in due time to certify us of " your performing hereof, and the effect of the same.

" Given under our signet at our palace of Westminster the thirtieth day of June, " in the eleventh year of our reign of England, France and Ireland, and of Scot- " land the six and fortieth."

It will be observed that the first paragraph of the Canon specifies Lecturers or Readers of Divinity in either University. Under this description all Doctors of Divinity, being on their Creation bound to a course of Regency for two years, might possibly be supposed to be included by implication. But the direction in the King's Letter to the University extended to Bachelors of Divinity and Doctors in Law and Physic, and was to be rendered operative by an Ordinance of the Senate, passed in conformity with the Royal Injunction. Accordingly the following Grace was passed by the Senate in obedience to the King's pleasure:—

" Julii 7, 1613. Placet vobis ut juxta tenorem literarum a serenissimo rege " Jacobo missarum hoc in senatu decernatur ut nullus in posterum sibi concessam " habeat gratiam pro gradu baccalaureatus in theologia vel doctoratus in aliqua " facultate adipiscendo qui non prius coram domino procancellario aut ejus " deputato tribus articulis, nimirum regii primatus, liturgiæ Anglicanæ, et " articulorum religionis de quibus convenerunt archiepiscopi et episcopi anno " domini millesimo quingentesimo sexagesimo secundo, propria manu sua sub- " scripserit, et ut hæc concessio vestra loco statuti habeatur et in libris procura- " torum infra decem dies inscribatur."

About three years after the passing of this Grace, the King being at Newmarket, the Vice-Chancellor of the University, and some other Heads of Colleges, repaired thither and received from His Majesty certain oral instructions, which were afterwards reduced to writing and sent to the Vice-Chancellor with the King's signature, and the date 12th December, 1616.

The first Article of these Instructions is,—" His Majesty signified his pleasure " that he would have all that take any Degree in the Schools to subscribe to the " three Articles."

There is not, as in the former Letter of the King, any direction that an Ordinance of the Senate should be passed in conformity with the Instructions. Neither is there, we believe, any trace of a Grace having been passed. But the King's Injunction was certainly obeyed in practice; as appears from the following remarkable Petition presented to the King by the Registrary of the University:—

" To the King's Most Excellent Majesty.

" The humble Petition of James Tabor, Register of the University of Cam- " bridge, sheweth,

" That whereas your Majesty did about ten (sic) years past command the " Vice-Chancellor and Heads of Colleges in your said University, that all persons " to be admitted to any Degree there should first subscribe to the Articles of Su- " premacy, Liturgy of the Church of England, and the Articles of Religion " agreed upon by the Archbishops and Bishops and whole clergy in the year " 1562, for the religious observation of which your Majesty's command, your " supplicant hath always been appointed by the Vice-Chancellor to attend that " service to his great trouble and hindrance, the profits of his place being very " small, and having no allowance given him for any such public service:

" May it therefore please your most sacred Majesty to give order that the " Vice-Chancellor and Heads aforesaid, or the greater part of them (for the con- " tinuance and due performance of your Majesty's pleasure herein), shall decree " as well for the manner and time of every Graduate's subscription, as for " such reasonable allowance as they think fit every person hereafter admitted to " any Degree in the said University shall pay to the Register there for his diligent " and faithful keeping the book of the said subscriptions and attendance of that " service."

To this Petition the King was pleased to return the following answer:—

" At the Court at Hampton, 27° Februarii, 1623.

" His Majesty, in his princely care for the good government of the said " University, and for the better observance of his Highness's directions heretofore " signified concerning subscription, is graciously pleased that the Vice-Chancellor

REPORT.

" and the greater part of the Heads of Colleges of the said University shall take " such order and make such decrees concerning the matters desired in this " petition as they shall think fit, and cause the same to be entered amongst " the other decrees of the said University, and to be duly observed hereafter.

" SYDNEY MONTAGUE."

In obedience to this intimation, the Vice-Chancellor and eleven other Heads of Colleges, made the following Decree:

" We, the Vice-Chancellor and Heads of Colleges, whose names are hereunder " written, by virtue of the reference and order above written made and directed to " us by the King's most Excellent Majesty, do order and decree as followeth:—

" First, that the Register of the University shall, from time to time, provide " and safely keep the book of subscriptions fairly bound and clasped or tied up.

" Secondly, that two days at the least before the general admissions of Inceptors " in Arts and Questionists, the said Register shall procure a bill to be set up " upon the School-gates, subscribed by the Vice-Chancellor for the time being, " or his deputy, therein signifying the day, time, and place appointed for the said " Graduates' subscription. And after they have all subscribed, he shall truly " compare the same with the names which the Proctor hath of those which " are to be admitted at the next Congregation.

" Thirdly, that the said Register shall yearly enter into the said book at the " beginning of every year all the Articles which every Graduate is to subscribe " unto, and the names of every College in that order as they are placed in the " University Statutes, leaving several distances for those which are to subscribe to " underwrite their names, and shall also, under the name of every College, write " these words,

" *We, whose names are here underwritten, do willingly and ex animo subscribe " to the Three Articles above mentioned, and to all things in them con- " tained.*

" Fourthly, because heretofore there hath been great disorder at the times of " subscription by the unruly crowding and striving of those which were to sub- " scribe, whereby the Register attending that service hath been discouraged " and wronged by some unruly persons that were to subscribe, for the better " ordering such persons hereafter, and for the more exact and perfect keeping " of the said book and the names of all persons admitted to any Degree in " this University, we do also order and decree that the Register shall call the " Questionists and Inceptors into the Consistory, upon the days appointed, by " their several Colleges in order as they are placed in the University Statutes; " and when the commencers of one or two Colleges are within the Consistory- " door, he shall suffer no other to enter or stay within the said Consistory, but " shall shut the door, and then distinctly read over all the Articles they are to " subscribe unto, calling them one by one until they have all subscribed, and then " to let those out and to call in those of one or two other Colleges, and to do as " before, and so to observe the same order for those of all the other Colleges " in this University until they have all subscribed. And if any be absent when " their College was called, they shall stay until the last Colleges have done, and " then they are to subscribe their names under the rest of their several Colleges " that attended at the hours appointed.

" Lastly we do Order and Decree, that all persons hereafter to be admitted to " any Degree in this University shall, according to the tenor of His Majesty's " Letters and Directions, subscribe to the Articles of Supremacy and Liturgy of " the Church of England, and the Articles of Religion agreed upon by the " Archbishops and Bishops and whole Clergy in the year 1562, before their " admissions.

" And by virtue of His Majesty's reference and authority, made and given unto " us the Twenty-seventh day of February, Anno Domini 1623, We do order and " decree that all Baccalaurs and Inceptors in Arts, and all Baccalaurs and " Inceptors in Law, Physick and Musick, hereafter to be admitted, at the time " of their several subscriptions, shall pay to the University Register for the time " being, the sum of sixpence for his faithful keeping of the aforesaid book of " subscriptions, and for his daily attendance and labour in that service. And we " also Order that this our Decree shall be entered into the Vice-Chancellor's book " amongst the other Decrees of the said University, and that the same be " duly observed hereafter according to the true intent of His Majesty's order " and direction made unto us."

REPORT.

The practice of Subscription appears to have continued until the end of the year 1640: when a resolution was passed by the House of Commons, (19 January, 164⅛) to the effect, "That the Statute made about Twenty-seven years since, "in the University of Cambridge, imposing upon young scholars a subscription "according to the 36th Article of the Canons made in the year 1603, is against "the law and liberty of the subject, and ought not to be pressed upon any Student "or Graduate whatsoever."

By this measure, the practice of Subscription was interrupted; but it was resumed on the Restoration of King Charles the Second. That Monarch addressed a letter to the University, (6 February, 166⅛,) renewing generally the authority of the directions and orders of his Father and Grandfather.

"CHARLES R.

"*Instructions for the Vice-Chancellor and Heads of our University at Cambridge.*

"First, that all the directions and orders of our Father or Grandfather of "blessed memory, which at any time were sent to our University of Cambridge, "be duly observed and put in execution, especially such as concern obedience and "due respect to be given by all persons of that body to their superiors and "governors, the officers of that our University.

"Also such as concern the restraint of those that hold Lectures or preach "in any parish church in the town of Cambridge without due order therein "which is appointed by the aforesaid directions.

"Furthermore that there be a review made of all the Licenses for University "Preachers which have been granted in these disorderly times, since the beginning "of the year 1645, and that all such Licenses be called in by the Vice-Chancellor, "and the persons so licensed put again to be approved by the vote of the present "University assembled in Congregation, or if rejected, then others to be chosen in "their places.

"Given at our Court at Whitehall, the 6th day of February, in the 13th year "of our reign, 1660.

"By His Majesty's Command,

"EDW. NICHOLAS."

The practice of Subscription, having been renewed, was continued without further change until the year 1772; when the following Grace was passed by the Senate:

Feb. 28, 1772.—"Cum quæstio dudum orta sit utrum Academiæ (si e re "sua visum fuerit) jus competit legem abrogandi qua singuli qui gradum aliquem "scholasticum petunt nomine subscripto articulos fidei comprobare tenentur; "Placeat vobis ut Dominus Procancellarius, Dr. Elliston, Dr. Waring, Mr. "Hughes, Mr. Tyrwhitt, Mr. Whisson, Mr. Farmer, Mr. Postlethwayte, et "Mr. Arnald, vel eorum quinque, quorum semper unus sit dominus procan "cellarius, syndici vestri ad hanc quæstionem eruendam constituantur; ut proinde "omnimodas chartas vestras et acta publica inspiciendi, juris consultos adeundi, "expensasque congruas e cista vestra communi erogandi liberam habeant "potestatem; ita ut vos demum certiores facti quid de hac re compererint publicis "vestris suffragiis id quod melius expedire videbitur statuatis."

This was followed, on the 23rd of June in the same year, by a Grace in these words:

"Placeat vobis ut ii qui gradum baccalaureatus in artibus ambierint pro usitata "subscriptione tribus articulis in canone tricesimo sexto comprehensis in hanc "formam apud registrarium vestrum in posterum subscribant:

"I A. B., do declare that I am *bonâ fide* a Member of the Church of England "as by law established."

A Grace to the like effect was passed by the Senate, on the 26th of March, 1779, for the relief of Bachelors in Civil Law, or in Medicine, and of Bachelors or Doctors in Music.

The Senate appear to have assumed that it was within their own competence to make these relaxations in the law relating to Subscription. Even if there should be thought to be any room for doubt as to the extent of their power, there can be none as to the liberality of their motive. Influenced by a like liberal spirit, the Syndicate for the Revision of the Statutes have recommended "that the subscription "required of persons admitted to Degrees in Theology remaining as at present,

Proposed relaxation of the form of Subscription.

REPORT.

"the subscription required of persons admitted to other Degrees shall be the "same as that required of persons admitted to the Degree of Bachelor of Arts." It will be observed that, as respects Degrees in Theology, which are only conferred on Clergymen of the United Church of England and Ireland, the Subscription required by the existing law of the University amounts in fact to no more than a repetition of that required for Ordination.

We hail with sincere pleasure the proposal now made for a relaxation of the form of Subscription in the case of all other Degrees. Many persons, who are fully prepared to testify their cordial attachment to the Church of England as Members of its communion, may yet feel a conscientious hesitation in expressing their positive assent to every particular contained in its Articles and Formularies. The case of such persons deserves candid consideration, and happily admits of easy relief.

Admission of Dissenters from the Church of England.

Beyond this line there lies another and a larger question on which we do not enter; namely, the expediency of admitting persons to Degrees in Arts and Law and Physic, who are not Members of the Church of England. The subject would present comparatively few difficulties, if it involved only the conferring of a certificate and title of Academical proficiency. But the real difficulty lies in another point; whether the internal system of Collegiate discipline and the course of Academical administration could be so adjusted as to comprehend persons of different religious opinions without the neglect of religious ordinances, the compromise of religious consistency, or the disturbance of religious peace.

Not seeking to disguise our impression of the greatness of the difficulty, we yet desire to express our sense of the importance of the question itself.

The University is a great national institution; invested with important privileges by the favour of the Crown or the authority of the Legislature. It exercises a most extensive influence on the education of the higher and middle classes of the community, and consequently on the intellectual, moral, and social character of the nation. But its capacity of exercising this high prerogative fully and completely must depend on its keeping pace with the progress of enlightened opinion and moving in sympathy and unison with the spirit of the age. It is one of the noblest characteristics of our times that the barriers, which long excluded so many of our fellow subjects from the equal enjoyment of civil rights on account of differences in religious opinion, have happily been removed by the prevalence of a generous and wise policy. The University will be placed, more or less, in a false position, if it estranges itself from this great movement of liberal progress. There is a manifest and intelligible challenge to it to throw open the advantages of its system of education, under proper securities, as widely as the State has thrown open the avenues to civil rights and honours. Undoubtedly, many of the endowments of its Colleges are connected with the Church by links which it would be an injustice to sever. Its school of Theology is identified with the Church, and incapable of a separate existence. But, as a great school of liberal education for the lay professions, for the pursuits of general literature and science, for the business and offices of active and public life, it should seem to be capable of a freer range and a more extended usefulness without any compromise of duty or apostacy of principle. Were it to enter on this more open course in a spirit of generous magnanimity, it might draw to itself a yet larger measure of public sympathy and even find increased safety in thus identifying itself with the liberal policy of the age.

What securities should accompany such a concession to public opinion; what guarantees for internal peace can be provided either by regulations of the University or enactments of the Legislature; how much can be made matter of compact, and how much must be left to mutual confidence between the University and any new classes of Students whom it may eventually be induced to admit; these are questions on which we do not presume to express an opinion. We humbly leave them to the effect of time, to the wisdom of the Legislature, to the gracious consideration of Your Majesty.

Oaths of Allegiance and Supremacy.

In concluding this review of the Academical law relating to Subscription, we should add, that all candidates for Degrees are obliged by Act of Parliament to take the Oaths of Allegiance and Supremacy, before their admission thereto. The acknowledgment therefore of the Royal Supremacy is required, independently of subscription to the 36th Canon.

We cannot close this part of our Report without expressing our obligations to the Reverend Dr. Ainslie, Master of Pembroke College, for his kindness and promptitude in furnishing us with information, which we had sought in vain from

another quarter, on the subject of Academical Studies and Degrees. To his Evidence we beg to refer as containing a most full and accurate account of the proceedings and qualifications for Degrees, with many valuable and judicious remarks upon the more important points of interest. We have also derived material assistance from an Account printed by him some years ago of the Oaths and Subscriptions required for Degrees in Arts. It contains a very careful chronological statement of the successive changes introduced into this part of the University system.

We also beg in connexion with this branch of our subject to refer to the Evidence and to the several Publications of the Reverend Dr. Whewell, Master of Trinity College, on the Studies of the University His opinions are entitled to the most attentive consideration; as well on account of his Academical experience and distinguished name, as of the large and comprehensive views which he takes of the whole subject of liberal education.

REPORT.

PROFESSORSHIPS.

We addressed queries to all the Professors of the University respecting the provisions contained in the deeds of foundation of their Professorships, the statutes or regulations to which they are subject, the various sources of their income, the duties performed by them, the condition of the branches of study with which they are severally connected, and the means which are, in their opinion, best calculated to make them more generally useful. The answers which we have received (and only three of their number have declined or omitted to send them), are, for the most part, very full and satisfactory, and contain, in many instances, suggestions for alterations in the constitution of the Professorial System generally, as well as in their own particular departments, which are entitled, from the character and position of those who make them, to the most respectful consideration. We propose, in this section of our Report, to pass in review the more important facts and observations which are contained in these replies, or derived from other sources, and then to proceed to some general suggestions on the means of giving to the public teaching of the University, as conducted by the Professors, a greater degree of efficiency. We shall take them in the order of their foundation.

THE LADY MARGARET'S READER IN DIVINITY.

Of all the Professorships in the University, the most ancient and the best endowed is the Professorship of Divinity founded by the Lady Margaret, Countess of Richmond, in 1502.

Endowment.

The original endowment was 20 marks per annum, chargeable upon the revenues of the Abbey of Westminster, but now payable, after deducting official and other fees, by the Treasury: to this was added by James the First the impropriated great tithes of Terrington St. John's and Terrington St. Clement's in the county of Norfolk, which have been commuted for a rent-charge of 2,402*l.* together with a small glebe let for 26*l.* per annum. There are also some premises in Cambridge, devised to this Professorship, which are let for 18*l.* per annum. No return has been made to us of the amount of the reduction of the rent-charge for rates, taxes, expenses of collection, and other outgoings.

Duties according to Statute;

The terms of the foundation require the Professor to read such works in Divinity (*leget talia opera in divinis*) as to the Chancellor and Doctors may seem fit: he is to begin his readings in the Michaelmas Term, and to continue them on every "*dies* "*legibilis accustumatus*" (four days in every week) in that and every succeeding Term, unless excused by license, ill health, or other reasonable cause: he is not to be absent more than 14 days in one Term, even with license: he is not to suspend his lectures more than four days in a Term, except during the season of Lent, when he may do so, with proper license, for the purpose of preparing sermons: he is further required to read during the Long Vacation, until the Feast of the Nativity of the Virgin Mary (September 8). At the beginning and end of every Term he is to declare his Foundation, and to say the Psalms and Collects for the Dead; and once a year, in the middle of a Term, he is to read publicly his foundation deed, and in his *missa* say a collect for the Foundress. If he contravenes any of these regulations he is to be admonished for a first offence; for a second he loses his stipend; for a third he is to be removed from his office.

The great changes which have taken place in the habits of society and in the condition of the University have modified the practices prescribed and required by the ordinances of this, as well as of other foundations of ancient date, more especially of those which preceded the reformation of religion. Even without reference to such portions of those regulations as are repealed by the statute against superstitious uses, the remainder will be found to contain much that is either impracticable or inexpedient.

Thus, the *Lector*, whose general duty was to read the MSS. copies of classical or other authors, with or without occasional observations, became a *Lecturer* when the invention of printing had placed the originals in the hands of his hearers. If before that period the *Lector* ceased to read, the student generally also ceased to learn; if he left the University, the Students, who had no other means of instruction, must leave it likewise. Thence the necessity of the apparent severity of the conditions imposed upon such readers in ancient times. They were required to read upon every day to which other duties, more especially public disputations,

were not assigned—to reside as long as the students resided, including the greater part, or the whole, of the Long Vacation, at least in seasons when the plague or pestilence had not emptied the University. The performance, however, of these duties required generally little previous preparation, as even when comments were added to their readings they were probably only such explanations of the text as were required to make it intelligible to their hearers; but when the general possession of books had opened to students other means of acquiring knowledge, there were required increased preparation and higher acquirements in their teachers; and whilst a daily reading would impose upon a Professor, even with occasional comments, a very slight amount of labour, a daily lecture, addressed to more advanced students, who had free access to books, might become an intolerable burden.

It is necessary to keep these circumstances in mind when comparing the provisions of ancient Statutes with modern practice.

According to present practice.

Professor Blunt, the present learned occupier of this Chair, is accustomed to give two lectures weekly during the greater part of the Michaelmas and Lent Terms. On some occasions, when the number of his auditors is greater than the room in which he lectures can conveniently accommodate, he repeats his lecture to successive audiences on successive days. The subjects of his lectures have usually been one or other of the Ante-Nicene Fathers, the use of the study of the Fathers, Liturgies, more especially that of the Church of England, and Pastoral Theology, or the requirements and duties of the Parish Priest.

At the beginning of the October Term he is required, in connection with the Regius Professor of Divinity, to conduct what is now not very correctly called the Voluntary Theological Examination; for though no student is called upon by any academical regulation to undergo it, yet nearly all the Bishops require from candidates for Holy Orders, who are Graduates of Cambridge, a Certificate of having passed it to the satisfaction of the Examiners. The examination is conducted by printed questions, embracing the Greek Testament, some portion of the early Fathers assigned from year to year, Ecclesiastical History, and the Articles and Liturgy of the Church of England; and as the number of candidates usually exceeds 200, the inspection of the vast mass of papers which they produce is sufficient to occupy the almost undivided attention of the Examiners for a considerable portion of the Term. The same Examiners are also required to take a principal part in the examination of the Crosse Theological Scholarship.

By a Grace of the Senate, which was passed on the 31st October 1848, all candidates for the Theological Examination are required to attend, during one Term, the lectures of two, at least, of the three Theological Professors. This regulation, combined with the natural and very proper presumption that the views of the Professors in their lectures will not be lost sight of in the subsequent examination which is conducted by them, has tended greatly to increase the numbers of their auditors; so much so, in fact, that there is no lecture-room in the University which is sufficiently large to afford them convenient accommodation, increased as they have always been by the voluntary attendance of many superior Graduates, as well as other members of the University who are not candidates for Holy Orders.

The duties now discharged by Professor Blunt are exceedingly laborious, requiring, as we have seen, the careful preparation of lectures upon a great variety of subjects; and as long as the existing arrangements of the University with respect to Theological Students continue unaltered, there is probably no form which they could assume which would render them more generally useful. In a subsequent part of this Report we shall venture to suggest the appointment of a larger number of Theological Professors. In the event of the adoption of this proposal, the duties of Professor Blunt, as well as those of his present colleagues, might be materially modified by a more precise distribution amongst them of the various departments of this great department of learning. Without reference however to the adoption of these measures, we think it expedient that the ancient foundation deed of this professorship should be altered, by competent authority, so as not only to sanction the practice which prevails, but also to make provision for such future changes, within reasonable limitations, as the University might be disposed from time to time to make. The history of ancient Statutes sufficiently shows that however carefully they may be framed they will sooner or later become partly or wholly inapplicable: and it is only by reserving and exercising a power of revision and amendment that they can be made permanently operative and efficient.

REPORT.

Lady Margaret's Preacher.

The same illustrious Foundress assigned a stipend of 10*l.* per annum to a University Preacher, who was to be chosen by the Vice-Chancellor and Heads of Colleges from the Doctors, or in default of duly qualified candidates amongst them, from the Inceptors or Bachelors of Divinity. Though the office is filled up, no duties are performed.

THE FOUR LECTORES ORDINARII.

Three Readerships of Philosophy, Rhetoric, and Logic were founded in 1524 by Sir Thomas Rede, Chief Justice of the Court of Common Pleas; in addition to these, a fourth Readership in Mathematics was shortly afterwards endowed by the University. The three first receive stipends of 3*l.* 4*s.* each, derived from a fixed money rent-charge, which are paid by the Bursar of Jesus College. The stipend of 4*l.*, assigned to the last, continues to be paid by the University. These Readers or Professors were formerly called the *Lectores Ordinarii*; but are now better known by the name of Barnaby Lecturers, in consequence of their annual appointment on the Feast of St. Barnabas. They were formerly Officers of great importance in the University, but they have now degenerated into merely nominal appointments; for though statutable duties are assigned to them, and enforced by penalties, they are not attempted to be performed. It would not be possible to make these ancient foundations useful to the University, unless adequate stipends were assigned to them, and new Statutes made for defining their duties and securing their performance.

Only nominal appointments.

LINACRE PROFESSORSHIP OF MEDICINE.

The celebrated Linacre, the Founder of the College of Physicians, established, in the early part of the 16th century, a Professorship of Physic, assigned it a stipend of 12*l.*, and vested the appointment in the Master and Senior Fellows of St. John's College. This endowment, though considerable when first made, is now not adequate to secure the performance of any effective services; but Dr. Paget, who now holds the appointment, has given it a useful application, by delivering a course of Clinical Lectures to Medical Students at Addenbrooke's Hospital.

THE FIVE REGIUS PROFESSORS OF DIVINITY, HEBREW, GREEK, LAW, AND PHYSIC.

Original Endowment.

The five Royal Professorships of Divinity, Hebrew, Greek, Law, and Physic were founded by Henry VIII., in 1540. They were severally endowed with stipends of 40*l.* per annum; the three first were subsequently made payable out of the revenues of Trinity College, when founded by him in 1546; the two last continue to be paid by the Treasury. The former were also, in some degree, attached by the King to the foundation of his new College, where chambers and other contingent privileges were secured to them, including the right of claiming a Fellowship when prevented by age or infirmity from performing the duties of their office. The Statute also which prescribed their duties was made a common Statute of the College and the University, but to the Master and Seniors of the former, in some cases, and to the Vice-Chancellor and Master in others, was reserved the right of enforcing its provisions, and of judging of the circumstances under which they were allowed to be relaxed. To the College was also given a great influence in choosing these Professors, the Master and two senior Fellows being made electors, in conjunction with the Vice-Chancellor, the Provost of King's, and the Masters of St. John's and Christ's Colleges; if any of these was Vice-Chancellor, the President of Queens' became, *pro hac vice*, an official elector also.

The stipend, however, of 40*l.* per annum, which was considered ample when scholars were poorly paid (it was more than four times as much as was assigned by the same Founder to a Fellow of Trinity College, including all his allowances), became insufficient for the proper support of an office of dignity and importance in the following century, when the value of money was greatly depreciated, and when the incomes of Fellowships and benefices derived from lands and tithes had increased greatly.*

* In the letter of Charles II., on the subject of these Professorships, which we have caused to be printed, the depreciation of the value of money, as well as the increased labour of giving lectures, when simple readings were discontinued, are thus spoken of: —"Jam vero ex diversorum et fide dignorum,

REPORT.

Additional Endowment of three of these Professorships.

King James I., at the same time that he augmented the endowment of the Lady Margaret's Professor, assigned the rectory of Somersham to the Regius Professor of Divinity. It is a rectory with cure of souls attached, with a gross income from land and tithes of 2,121*l.* per annum, but reduced by the salaries of three curates, taxes, poor rates, and other outgoings to about 1,300*l.* per annum. Charles II., also, by a Royal Letter, in 1662, gave to the Professors of Hebrew and Greek the privilege of continuing to hold their Fellowships in conjunction with their Professorships, both in Trinity College and elsewhere: a more ample provision was, however, made for the Professors last named by the Ecclesiastical Duties and Revenues Act, 3rd and 4th Vict., c. 113, which gave them the reversion of stalls in the Cathedral church of Ely, of which they are now in possession.

Original Statutable Duties.

The duties prescribed by the original Statute, when interpreted with reference to modern customs, are impracticably severe: the Professors are to read, which now means to lecture, four days in every week of every Term, and also during the whole of the Long Vacation, unless the Students of three of the principal colleges, King's, Trinity, St. John's, and Christ's, should be sent away from the University on account of the plague or pestilence; for every lecture which they omit, they are to forfeit 10*s.* of their stipend; if prevented by illness or any other *gravis causa*, to be approved by the Master and Seniors of Trinity College, from performing their duties, they are to appoint a substitute, subject to the same approval, within three days: in no other case are they to appoint a deputy, on pain of deprivation; each lecture is to continue for one hour, and the authors to be read and the course of reading to be followed are to be determined by the Vice-Chancellor and the Master and Seniors of Trinity College.

Letters of Charles II.

The Royal Letters of Charles II., which have been before referred to, reduced, however, the four weekly lectures to two, authorized their discontinuance during the Long Vacation, and relaxed in some cases the penalties.

Effects of the new Statutes granted to Trinity College.

In the year 1844 your Majesty gave a new body of Statutes to Trinity College, by which all former statutes, ordinances, and decrees were repealed, including therefore, by implication, the Royal Letters of your predecessors, in favour of which no special reservation is made. The 41st Statute, however, of the ancient code *De officio trium lectorum, qui in Scholis Academiæ prælegunt, quorum unus Theologiam, alter linguam Hebraicam, tertius Græcam docet,* was left unaltered, being a common Statute of the College and the University, which could only be altered by the Crown, upon their joint petition, or by their joint acceptance of an amended Statute when offered to them.

The following questions are naturally suggested by the preceding statement:—

What is the present state of the law, as affecting the three Professors, the Master and Fellows of Trinity College, and the University? If the authority of the Royal Letter of the 13th Charles II. is annulled as far as it affects the College, is it also annulled as it affects the University, one body having formally accepted the new code of Statutes, whilst the other has done no public act by which their consent to it could be implied? Would the College, if called upon to enforce the provisions of the original Statute be authorized in recognizing the authority of a Royal Letter, to whose recal they have assented, upon the ground that no similar assent has been given by the University which has a co-ordinate interest with their own? Again, can all the three Professors claim the benefit of the relaxation of the Statute, or is it limited to the Greek Professor only, who alone of the three was appointed before the promulgation of the new Statutes of the College?

New Statutes required.

Difficulties of this nature, as well as other considerations, suggest the expediency of framing a new Statute which would prescribe to these Professors such duties as they might be reasonably expected to perform, and reserving to the official electors or others the power of making, with the sanction of the Senate, such changes in its provisions from time to time as circumstances might appear to require. We should not be disposed to recommend the reservation of a controlling power to the Master and Seniors of Trinity College, as their influence seems to be sufficiently secured by their representatives amongst the Electors, and it seems

---

" quibus dicti Collegii et Academiæ Status satis perspectus et lectionum in scholis habendarum ratio
" probe cognita est, relatione accepimus, dictum stipendium amplum licet et magnificum in primâ fun-
" datione quam sit exile prout nunc dierum fert nummorum æstimatio, labor verò quam sit gravis e
" onus vix ferendum, prout nunc obtinet legendi modus in scholis usitatus, &c."

REPORT.

just and reasonable that the regulation of the duties of these as well as of other Professors should belong to the University, and not to one of the corporations of which it is composed. The large augmentations also, which have been granted to these Professors from the funds of the Church, have materially altered the nature of the claim which Trinity College might formerly have advanced for the possession of this authority from their being attached to the College, and paid entirely from its funds.

In addition to the duties imposed upon these Professors by the Statute, many others, and some of them of a very onerous nature, have been added by other Statutes and Graces of the Senate, as well as by the conditions of some special foundations.

Duties of the Regius Professor of Divinity.

The Regius Professor of Divinity is expected, though not absolutely required, to preside on every alternate Thursday in each academical Term, at the exercises in the Theological Schools, and to deliver a Latin Determination upon one of the subjects of disputation proposed: he presents to all Theological Degrees and takes the chair and makes the requisite addresses at all Creations of Doctors of his Faculty: he is united with the Lady Margaret's Professor in conducting the Voluntary Theological Examinations, with the Hebrew Professor and others in the examination for the Crosse Scholarship, and with all the other Regius Professors, the Vice-Chancellor and Public Orator in the examination of Lord Craven's, Battie's, and Davies's University Scholarships: he is also expected, from the high position he holds in the University, to act as a member of various Syndicates, and to take a leading part in many public transactions. These employments materially interfere with the time at his disposal for the preparation of the Lectures, which even the relaxed provisions of the Statute require, but which no Professor in later times has been able to fulfil. The present learned Bishop of Lincoln, who held this professorship for several years, resumed the lectures which had long been discontinued, and some of them are embodied in his well known publications on Justin Martyr, Clement of Alexandria and Tertullian. The present Professor, also, and his immediate predecessor, the present Bishop of Llandaff, have been accustomed to give a course of Lectures during one or both of the Lent and Michaelmas Terms.

Of the Professor of Greek.

The Professor of Greek is an official Examiner for the Craven, Porson, Pitt, Browne, and Crosse Scholarships, and also for the Chancellor's Classical Medals: his assistance is required in the adjudication of the Porson and some other prizes. We believe that no Lectures had been given during the last century and a half by any of the occupants of this Chair; but Professor Scholefield, who now fills it, has been accustomed to give an extended course of Lectures during the Lent Term of every year, which have been generally well attended, more especially by Students who are candidates for the higher Classical Honours of the University. Their subjects have been the critical exposition of the more important Greek authors, including Pindar, Aristophanes, the Tragedians, Thucydides, and Demosthenes.

Before he succeeded, in right of his office, to a Canonry at Ely, Professor Scholefield received the customary fees from those who attended his lectures: their average amount during a period of 25 years, was 165*l.*; the lectures are now gratuitous. Professor Scholefield is disposed to think that if he should attempt to give Lectures, in conformity with the requirements of the Statute, throughout the academical year, he would fail to secure a sufficient class to attend them; for though the study of Greek is pursued in the University with intense earnestness, he is of opinion that it is too much bounded by an immediate view to prizes and honours, and that young men think it a safer and surer course to avail themselves of a private tutor than to trust to the independent energies of their own minds with the aid of the less regular and less personal assistance which they can receive from the public Lectures of the University and the Colleges.

Of the Professor of Hebrew.

The Professor of Hebrew is an official Examiner of the Craven, Crosse, and Tyrwhitt Scholarships, and likewise of those Candidates in the Voluntary Theological Examinations who offer themselves for examination in the Hebrew language. Dr. Mill, who now fills the Chair, gives two public lectures weekly of a critical and exegetical character to the more advanced Students, as well as two other elementary lectures to those who are less so, during full Term through-

out the academical year; thus endeavouring to comply, as far as is practicable, with the requirements of the original Statute. He receives no fees. Report

The following observations of Dr. Mill on the importance of the study of the Hebrew and its cognate languages, and the best mode of promoting it, are worthy of consideration:—

"The disposition towards the study of the Hebrew language depends mainly in "this University, as in England generally (whatever may be the case in other "countries), on its esteemed connexion with theology. It is of moment that this "connexion should be rightly estimated; neither undervalued on the one hand, "nor exaggerated, as by those (including some popular lexicographers) who would "ascribe to the language itself a prerogative of sanctity which belongs only to its "inspired writings, finding mysteries of science in its elements and its structure. "The application to its study of just and reasonable principles of philology cannot "fail to evince its great importance in sacred learning, to contribute a variety of "illustration to the earliest records of mankind, and more especially to that "system of intellectual and moral discipline by which the ancient possessors of "Divine revelation were trained for a more perfect light hereafter; when this "sublime aphoristic speech was to be succeeded by other more appropriate vehicles "to the world at large. That intelligent interest in the subject, which I believe "to be increasing in the University, needs but a right direction and assistance to "lead to very beneficial results. Evidence, p. 90.

"Of those who attend lectures it is certain that a large proportion will of neces- "sity, and yet more from choice, be content with a very moderate knowledge; "while all should be encouraged to seek the highest attainable proficiency. And "it is more peculiarly necessary to bear this in mind in the case of our present "subject, because there is none among the studies pursued in the University, in "which the mistake of a superficial for an accurate knowledge is so easily made, "or with such difficulty corrected to the many. A learner who should begin his "Greek reading with the New Testament might imagine, after being enabled to "construe the text of some books in it, that he was in a condition to criticize the "accuracy of our own or other versions; but the first other Greek book that he "attempted to read would suffice to undeceive him; to show him probably that his "imagined facility in interpreting the Hellenistic text of the sacred books pro- "ceeded from the unconscious recollection of what he had fancied himself "competent to judge or to correct. But a learner who had made an analogous "study of the original text of the *Old* Testament, and with the same natural "imagination, has no *such* means of correcting his mistake, and perhaps continues "under its influence all his life. And as it is this mistake alone in any case that "verifies the proverbial remark (which were otherwise most untrue) that total "ignorance is preferable to 'a little knowledge,' the effect of such an error cannot "be too carefully guarded against here. It is most desirable that all whose "Hebrew study is thus limited should be made to understand the necessary "imperfection of their grasp of an ancient language, whose extant monuments are "so few compared with what must have been its actual extent and copiousness; "and that without some further means than they now possess of independent "critical knowledge, they are utterly incompetent to review the work of the "Hebraists either of the 5th or the 16th centuries, to correct their real defects or "errors, or to measure their value as interpreters with those who had preceded "or who have followed them. With the notice of these further means of critical "knowledge, and of the opportunities of their cultivation in Cambridge, I will "now conclude my answer to the last question of Her Majesty's Commis- "sioners.

"The study of Rabbinical literature is the most obvious of these means; and as "this involves the actual tradition of those who had the custody of the original "text of the Ancient Scriptures (and till a period subsequent to the Christian "era its *sole* custody), the utility and importance of this study is necessarily very "considerable. Opportunities for its cultivation are never wanting where there "are Jewish teachers, such as have always within my memory existed in Cambridge; "an eminent learning in this department characterizing the individual who has "now for many years received an annual stipend as Hebrew teacher from the "University, and whose instruction to the pupils that engage him I have found "usefully auxiliary to my own. As the tradition, however, to which this study owes "its importance has never since the last great dispersion flowed in a clear unbroken "stream—as it is separated, at the highest point to which we can trace it, by very

REPORT.

" many centuries, from the books whose true critical interpretation is the great " object of our search—as it is in regions and under habits very uncongenial to " those of the ancient inhabitants of Palestine that the tradition has had its course, " before as well as after the highest point of which I speak—its accuracy or purity " can never be implicitly trusted. And it becomes an especial duty of those who " occupy the Professorial chair in the University to guard others against an " overweening or exclusive attachment to a mode of Hebrew study possessing such " a prescription as this. The consequences which I would deprecate are—the hold- " ing of even the ablest Jewish grammarians as of unquestionable philological " authority respecting the ancient language; the disposition to regard superstitiously " as infallible the Masoretic determination (valuable as it is) of the text of the " Old Testament; and in consequence to disregard contemptuously the testimony " which the Alexandrine and other ancient versions often afford to a Hebrew " text, varying from that which the existing Jewish MSS. contain.

" A more important help, in my judgment, and certainly no less indispensable " to a critical mastery of the ancient language of Palestine, is the study of the " other Semitic languages, *i. e.*, not only of the old Biblical Chaldee, which, " after succeeding the Hebrew as the common speech of the Jews, and sur- " viving in many Rabbinical writings, has also become extinct; but of its sister " dialect, the Syriac, of which, though now a dead language, there is a large " body of good ecclesiastical literature extant; and also of the yet living Arabic " and Ethiopic languages. The original sameness in structure in all these forms " of speech, and the preservation of the roots common to them, which, in the " instance of the Bedouin Arabs especially, has been in the very soil and climate " in which they flourished in the ages of the Bible, unmixed from that time to " the present with any foreign language or idiom, mark the great importance " to the Hebraist of this collateral aid, and of none more than that which we " derive from Arabia, and its older ante-Mahometan monuments. The recently " discovered remains of the ancient Assyrian empire have indeed afforded to our " own time an accession, which no preceding age had anticipated, to our means " of exploring the ancient Aramaic language, as it existed prior to its records in " the books of Daniel and Ezra; but were this accession far more abundant than " it can ever prove to be, it would not supersede the larger supplies which we " have from the later Syriac and Arabic literature. The ready access to this " help of sacred philology is the principal advantage of the last century and a " half over the age to which we owe most of our authorized versions of the Scrip- " tures; and notwithstanding the excesses in its application by many of the " Schultensian school, it must ever continue to be the most valuable implement " of Hebrew criticism, without which none can aspire to any eminence in its " pursuit.

" Any means therefore by which the study of Arabic may be promoted, I " should regard as directly conducing to the objects of my Professorship. And " I am the more willing to recommend the claims of a language which, while " ancient and very little changed, yields scarcely to any in the extent of territory " and of population among which it is now spoken and cultivated; because it " does not appear that, in the encouragement recently given in the Universities to " the study of the modern languages of Europe, those of Asia have shared in the " least. Yet even in a political view, our ever increasing relations to the East " bear a sufficient proportion to those with our kindred nations in Europe and " America, to give to the cultivated languages of the Levant, of Persia, of Turkey, " and of our own possessions in India, a great claim on our interest and " attention."

Duties of the Professors of Civil Law and Physic.

There are no special Statutes or Deeds of Foundation defining the duties of the Regius Professors of Civil Law and Physic; but they come under the frequent notice of the Statutes of the 12th year of Elizabeth, which form the governing code of the University. They are required by these Statutes to read or lecture, four times in every week, throughout the academical year, forfeiting 10*s.* for every lecture which they omit: they are to present also to all Degrees, and to occupy the chair on all public Creations, in the respective Faculties over which they preside.

We observe that in the Sketch of the Revised Statutes, those clauses of the ancient Code are left out which relate to the Lectures of the Regius Professors of Civil Law and Physic, without the reservation of any power to the Senate to make

new regulations respecting them. This omission probably originated in an oversight, as it seems highly inexpedient that any Professor or other officer not appointed by, and therefore not subject to, the general authority of the University, should be exempted from the reasonable control of the Statutes.

The Regius Professors of Law and Physic, like the other Regius Professors of Divinity, Greek, and Hebrew, are *ex-officio* Examiners of the Craven University Scholarship.

It would simplify materially the duties of these and other Professors, if they were not required to act as Examiners, whether officially or otherwise, except in those departments of study which come within their respective provinces—thus the Regius Professor of Divinity might be required to take a part in theological examinations only: the Professor of Hebrew might be confined to examinations in the Hebrew language, and also in the theological examinations as far as they bore immediately upon it: the Professor of Greek might properly continue to take a leading part in all examinations, such as those for the Classical Medals and University Scholarships, where Classical attainments of the highest order are required to be estimated. The Regius Professors of Law and Physic would be confined respectively to the examinations which concern their proper Faculties: for though all these Professors, as indeed has been often the case, may be admirably qualified to act as Classical Examiners, yet the occupation thus forced upon them (and it is no slight or trivial duty, but a serious and anxious labour) tends to divert them seriously from their proper occupations.

A reference also to the answers to the questions respecting the classical examinations addressed to those members of the University who have had the greatest experience in conducting them will show that a very general objection is entertained to *ex-officio* Classical Examiners, whose duties do not connect them with the promotion of Classical studies.

Mr. Currey, an experienced Classical Examiner, says—"It seems very desirable Evidence, p. 280.
"that the examinations for those Scholarships which are grouped together in one
"class, as the Craven, Battie, Davies, and Pitt, should be conducted by the
"same Board of Examiners. In all cases, except the Pitt Scholarship, the Exa-
"miners are determined *ex-officio*. In cases where the office does not necessarily
"imply occupation in classical studies, or considerable classical attainments,
"this method of determination of the Examiners is extremely objectionable. The
"Regius Professors of Physic and Law, although they are often admirably fitted
"for the task cannot be supposed necessarily to be the best Classical Examiners,
"and the occupation of the Regius Professor of Divinity in his own depart-
"ment must render the duties of a Classical Examiner burdensome to him.

"The mode of appointing the Proctors, who are Examiners for the Battie's
"Scholarship, renders them still less desirable, as official Examiners. These
"remarks do not apply to the Greek Professor and the Public Orator, both of
"whose offices are necessarily connected with classical attainments, and whose
"province it especially is to watch over and direct the classical studies of the
"University."

Mr. Thompson, Tutor of Trinity College, one of the most distinguished Clas- p. 288.
sical Scholars in the University, says—"The Examinations for the University
"Scholarships and Medals are at present conducted by unpaid *ex-officio* Exa-
"miners. This arrangement is not without its inconveniences. In practice, the
"right result is usually, I may almost say invariably, attained; but the con-
"stitution of the Board of Examiners is open to grave theoretical objections.
"It may, for instance, very well happen, that a Professor of Medicine may be
"but slightly acquainted with the best Greek authors (with the exception, perhaps,
"of Hippocrates), or that a Master of a College may owe his position less to his
"literary than to his scientific reputation. The reason why the arrangements
"work fairly in practice is to be sought for in the fact, that some two or three
"of the *ex-officio* Examiners (*e. g.*, the Professor of Greek, the Public Orator, and
"perhaps, the Regius Professor of Divinity), hold offices for which classical at-
"tainments are a necessary qualification. A simple, though not a complete,
"remedy, would be to allow such official Examiners as Heads of Houses, Pro-
"fessors of Physic, &c., to appoint deputies to be approved by the Senate. This
"change, however, is not always in the power of the University, as the Examiners
"for the Scholarships are fixed by the will of their Founders."

Similar objections are urged to the principle of merely Official Examiners by Mr. France, Tutor of St. John's; Mr. Wratislaw, Tutor of Christ's; and Mr.

REPORT.

Charles Merivale, formerly Tutor of St. John's College—all of them entitled, by their experience and position, to express an opinion on the subject.

Ex-officio Examiners.

We therefore think it desirable, in the case of the Craven and other University Scholarships, that the *ex officio* Examiners, with the exception of the Professor of Greek and the Public Orator, should be relieved by competent authority from the performance of this duty, leaving to the University the appointment of proper Examiners to replace them.

Stipend of the Professor of Civil Law inadequate.

The Professor of Civil Law, in addition to his original stipend of 40*l.*, receives fees for attendance on his Lectures, and for presiding at Acts or Disputations, which amount, on an average, to about 125*l.* per annum. The present Professor has received also a parliamentary grant of 100*l.* per annum: his income, from all sources, does not exceed 260*l.* per annum. This sum does not afford an adequate support to a Professor, whose duties require his nearly constant residence in the University, unless he has other resources at his disposal.

Evidence, p. 78.

"The ordinary candidates for the B.C.L. degree," says Dr. Maine, "may be discriminated into two classes. The first of these, which is chiefly supplied by Trinity "Hall, consists of persons who intend to apply their knowledge hereafter in the "practice of the legal profession. The education which they receive in the Law "Faculty, although doubtless susceptible in some respects of improvement, is "nevertheless of a high order; and the strongest testimonies to its value have been "communicated to me by gentlemen who have profited by it, and whose success "at the English Bar makes their opinion conclusive on the point. The second "class of Students is formed by those who desire to obtain the Baccalaureate in "Law as a substitute or an equivalent for the first degree in Arts, without any "ulterior design of applying professionally the information which they obtain in "the Faculty. Since the Bishops are accustomed to ordain upon it, and since it "is a step to the higher grades of the University, the B.C.L. degree is, in fact, "available for almost as many purposes as the Baccalaureate in Arts. The "motives which induce Undergraduates of this description to prefer the former "degree to the latter, I have ascertained to be various. Some are led by a sup-"posed taste for legal studies, and others are attracted by the shorter period of "residence which is required, ten Terms of actual residence being necessary in Arts, "and only nine in Law. It is very generally supposed that not a few are influenced "by a belief that the tests in Law are more easily satisfied than those in Arts. My "own observation has convinced me that the minimum amount of labour which "a Student must bestow to qualify himself for the Law degree is materially "greater than that demanded for the lower degrees in the Faculty of Arts; and I "should conceive that a more intelligible inducement to the class of Students, "upon which such motives are likely to operate, would be the very inconsiderable "publicity which attends failure in the Law School, as compared with ill success "in the Senate-house. An impression, however, that the inferior degrees in Law "are attainable with undue facility is very widely diffused, and it has tended to "cover the whole Faculty with a discredit which is most assuredly undeserved, "but which it is beyond the power of a Professor to remove by his single-"handed exertions.

"Two methods of rescuing these lower degrees from the discredit which attaches "to them have been more than once suggested. It has been proposed, for in-"stance, to subject all Law Students to the ordinary examination which tests the "qualifications of candidates for the B.A. degree, leaving them to pursue their "legal studies afterwards. The immediate effect of this alteration would be to "extinguish the Law Faculty. The higher class of Students would refuse to "enter it, from unwillingness to prolong their residence beyond the period of "passing the B.A. examination, and through anxiety to begin a course of study "more exclusively professional than can be followed at Cambridge. I should "regard their disappearance as an unmixed evil, since I am convinced that, the "commencement of strictly professional education tending year by year to fix "itself at an earlier period in life, the University will eventually retain its hold on "the English Bar through the Law Faculty alone. Students of a lower descrip-"tion would, of course, cease to present themselves for the Baccalaureate in Law, "their end being gained when the examination in Arts is once passed. I do not "hesitate to admit that the banishment of these last-mentioned persons from the "Law Classes would instantly raise the character of the school, which suffers from "nothing but their presence. But I doubt whether a change, having this effect,

" would be desirable or even defensible, considered in relation to the academical " system at large. I have never seen reason to regret that, for a certain order of " minds, the University should furnish an alternative to its ordinary training by " Classics, Mathematics, and the Moral Philosophy of Paley. Moreover, although " we allow that the principle of the criteria which are adopted in the Arts Faculty " is completely faultless, the same admission cannot be made with reference to its " present application. I do not think it can be reasonably contended that the ap- " pearance of a name in the lower classes of the οἱ πολλοὶ proves a more whole- " some course of intellectual discipline than its appearance at the foot of the Law " lists. Besides, it should be remembered that the obligation under which Law " Students are placed of passing the Previous Examination, *does* necessitate some " amount of familiarity with Classics and Mathematics.

" A much more admissible scheme would retain the existing machinery of the " Faculty, with alterations and additions. The means of giving greater definiteness " to the course of study might be provided by the establishment of a *Board of Legal* " *Studies*, analogous to the *Board of Mathematical Studies*, which has been lately " invested with a measure of control over the mathematical examinations of the " University. Again, it might be deemed expedient to reduce the period of " attendance at the Civil Law Professor's Lectures to one Term, attendance being " demanded at the Lectures of the Professor of English Law during a second " Term, and at those of the Professor of Moral Philosophy during a third. " Lastly, one or two Examiners, appointed by the Senate, might be associated with " the Civil Law Professor in the conduct of the Law Examinations. The appoint- " ment of such Examiners would be an important improvement, since it would " relieve the Professor from the invidious irresponsibility of his present functions, " and would gradually diminish that ignorance of the system pursued in the Law " Schools, which is common in the University, and which has defeated the efforts " of successive Professors to enhance the reputation of the Faculty confided to " their direction.

" To give such a scheme any prospect of success, it would be necessary to " assimilate the Faculty of Law very closely to that of Arts. At present, the " members of the former Faculty are placed under considerable comparative dis- " advantage. They obtain no Degree at all till they are of *six* years standing, and " they are not invested with a Degree which confers a vote in the Senate and the " electoral franchise until they have been enrolled in the books of the University " *eleven* years. On the other hand, the first Degree in Arts is obtained in *three* " *years and some months*, the grade conferring the franchise being reached in less " than *seven* years. In the existing condition of our Law studies, there are per- " haps inducements to enter the Law Faculty which overweigh these academical " disadvantages; but the inducements in question will necessarily be destroyed by " the reforms I have suggested, and then the inferiority of the Law Degree in point " of academical advantage will certainly operate unfairly to discourage persons " from preferring it to a Degree in Arts.

"The assimilation of the two Faculties would be nearly completed by permitting " those Students who are honourably mentioned in the Law Lists—at all times " a most deserving class of young men—to compete for University honours in the " Classical Tripos."

We entirely concur in these recommendations of Dr. Maine for giving to the Faculty of Law a much wider basis, so as to comprehend Students of Common as well as of Civil Law. The number of Advocates in our Civil and Ecclesiastical Courts is not great, and the changes which are in progress for extending the jurisdiction of our Courts of Common Law are not likely to tend to increase them; but it is well known that a very considerable proportion of our Students are destined for practice in the Courts of English, as distinguished from Civil Law, although, under existing arrangements, no part of their professional education is begun at the University. The institution, however, of a Board of Legal Studies, and an organized system of lectures bearing upon them, combined with examinations which would embrace many of those general views of law in its alliance with history and philosophy, such as might properly be considered as an essential part of the preparation not merely of a lawyer, but of a well educated English gentleman, would extend greatly the sphere of influence of the University, and check the tendency (which should be carefully guarded against) to its becoming too exclusively a school for the education of the clergy only.

Report.

We purpose recurring to the further consideration of this important subject in a subsequent part of our Report.

Dr. Maine, as well as the Regius Professor of Physic, Dr. Bond, is one of thirteen Professors included in the arrangements for the new Triposes, and as such will be entitled to his share of the payments made for compulsory Lecture Tickets; the sum hitherto distributed, on account of them, is very small, but its amount hereafter will probably be nearly 60*l.* per annum.

Stipend of the Professor of Physic.

The Regius Professor of Physic receives also, in addition to his original stipend, the rent of premises in Cambridge derived from a bequest of Mr. Crane, and now let for 150*l.* per annum, as well as fees for attendance upon his lectures and for presiding at the Medical Exercises in the Schools, which average about 70*l.* per annum: the whole sum received from these different sources somewhat exceeds 250*l.*; he is much less dependent, however, than many other Professors, upon the income of his Professorship, inasmuch as he is always enabled to augment it by the practice of his profession as a physician.

Sir Thomas Adams' and the Lord Almoner's Professors of Arabic.

In 1632 Sir Thomas Adams founded a Professorship of Arabic, but the Statute for defining its duties was not given before 1666, most probably in consequence of the political troubles which intervened. The original stipend of 40*l.* per annum was augmented in 1841, by a bequest of 1,000*l.* for this purpose by the Rev. J. Palmer, who had held the Professorship, which was invested in Government securities. The electors are the Heads of Colleges.

A second readership in the same language was founded in 1724. The appointment is by the Lord Almoner. The stipend of 50*l.* is paid from the Almonry Bounty. We are not aware of the existence of any Deed of Foundation or Statute to regulate its duties.

These two Professorships, with those of Greek and Hebrew, are the only Foundations in the University devoted to the study of the learned languages.

No returns have been received to the queries addressed by the Commissioners to Professor Jarrett, who holds the first of these Chairs. A triple course of lectures was announced by him for delivery in the Easter Term of the present year; one of them on Arabic, one on Sanscrit, and a third on the Gothic languages.

We believe, however, that it is difficult, if not impracticable to form an adequate class to attend such lectures, so few are the Students who feel an interest or possess a sufficient motive for the study of these languages. The present Lord Almoner's Reader (Archdeacon Robinson) has failed to form a class, and he is disposed to think that the only form in which this endowment can be made available to advance the study of the Arabic language and literature, would be by the preparation and publication of elementary and other books for the assistance of Students.

Remarks.

The value of many establishments for the encouragement of special branches of learning in our Universities and elsewhere, would be very imperfectly estimated, if merely considered with reference to their immediate connexion with education. Some of the higher departments of mathematical and physical science are not easily made attractive or accessible to Students, at least to very few, and the same observation applies to the study of the extinct Semitic languages, the Chaldee, the Syriac, and Ethiopic, the knowledge of which is so important to the critical settlement and correct understanding of the text of the Hebrew Scriptures. The Arabic, the Sanscrit, the Persian, and the Hindostanee, and even the Chinese languages have acquired a special value, in this country at least, from the wide extension of our eastern empire and commerce, and still more so as the main channels by which the knowledge of Christianity can be conveyed to the principal nations of the east; and though few Students now resort to the University for the purpose of preparing themselves either as missionaries or for civil and political employments in the East, yet there can be little doubt that a provision of proper teachers of those languages might tend, under other arrangements, to encourage such studies and open a wide field of competition for those who studied them successfully. In the absence, however, of such motives for the institution of Professorships on these and other subjects, it may be observed that there is no more effectual method of promoting the cultivation of such difficult branches of learning, than by providing an honourable position and competent support to those who are ready to sacrifice other studies and occupations for the purpose of pursuing them.

REPORT.

THE LUCASIAN PROFESSOR OF MATHEMATICS.

Foundation.

The Lucasian Professorship of Mathematics was founded by Mr. Lucas in 1663, and has been rendered illustrious by the names of Barrow, Newton, and other great men, who have successively filled it. The Deed of Foundation, or rather the Royal confirmation of it, excludes the Professor from all College and University offices, and from holding any benefice with cure of souls, or which requires residence contrary to its provisions. These conditions in a Professorship very inadequately endowed (for the net income of the Foundation estate, though estimated as worth 100*l.* per annum in 1666, does not now exceed 126*l.*) are unduly severe, and would generally be found sufficient to exclude from the chair those persons who were best qualified to fill it. It is fortunate for the University that a Professor has been found to hold it, whose investigations in Physical Optics, Hydrodynamics, and other branches of Natural Philosophy, have already earned him a distinguished reputation.

Professor Stokes gives lectures during the Easter Term, illustrating, by experiment, some of the more important and difficult propositions in Optics, Mechanics, Hydrostatics, and Hydrodynamics, having relieved the Plumian Professor of this portion of his duty, which was found to be inconsistent with the almost exclusive attention which he is required to devote to the business of the Observatory.

Statutes.

The Deed of Foundation of this Professorship was drawn up by the Executors of Mr. Lucas, with the consent of the Vice-Chancellor and Heads of Colleges, by whom the Professor is elected. It requires him to lecture for one hour weekly throughout every Term, upon pain of forfeiting 40*s.* for every omission, to be applied to the Public Library or to the purchase of Mathematical Instruments: if prevented performing this duty for three weeks, he is to appoint a deputy to discharge it: he is also required to deposit copies of twelve at least of his Lectures given in every year in the archives of the University—a provision to which we are indebted for the valuable Lectures of Barrow on Geometry, and of Newton on Optics and Algebra or Universal Arithmetic. On two days of every week during Term, and on one day out of Term, if then resident in the University, he is to open his chambers for two hours for the access of those Students who wish to consult him on mathematical difficulties, and for this purpose he is to have Globes and Mathematical Instruments always ready to be referred to. It is proper to mention that Professor Stokes has resumed this practice, which had long been discontinued.

Grant of Charles II.

A Royal Grant of Charles II. confirmed the deed of trust of the Executors, and dispensed with the operation of the College Statutes, which generally prevented the tenure of a Fellowship with a Professorship endowed with an income so considerable as was assigned to it. The same Grant proceeded further to forbid the tenure of the office of Dean, Bursar, Steward, Reader, or Tutor in a College (unless of Noblemen or Fellow-Commoners), or of Proctor, Taxor, or any other Readership in the University.

A subsequent Grant dispensed with the Private Statutes of Colleges which required the Professor, if a Fellow, to take Holy Orders. It was this dispensation which enabled Newton to hold his Fellowship with this Professorship.

Remarks.

So severe is the operation of these disqualifying conditions, that they have been found in later times materially to limit the number of well-qualified candidates, who have applied for this Professorship. There can be no doubt of the justice and expediency of taking measures for relaxing them. The first and principal of these would be the recal or modification of the Royal Letters, by which the more oppressive of the conditions are imposed; the second of less pressing necessity, is the framing of a new Body of Statutes, under the authority of the Heads of Colleges, who were concerned in framing the first, by which such duties may be required to be performed as are consistent with modern practice, subject to any alterations from time to time which to the same parties, with the sanction of the Senate, may seem reasonable and necessary.

THE PROFESSOR OF MORAL PHILOSOPHY.

Foundation.

The Professorship of Moral Theology and Casuistical Divinity, now generally termed that of Moral Philosophy, was founded by Dr. John Knightsbridge in 1667. The original Deed of Foundation requires the Professor to be at least a B.D. and fifty years of age, and to deliver five Lectures in every Term, which

Report.

were to be either printed or kept in the archives of the University. A decree in Chancery, in 1680, reduced the number of Terminal Lectures from five to four, and the inferior limit of the Professor's age from fifty years to forty; in fact, no qualified candidate could, in the first instance, be found who answered the conditions which were required. The present Professor, Dr. Whewell, began by delivering twelve Lectures every year in the same Term, which have since been increased to twenty: he has also printed several of his Lectures, including a History of Moral Philosophy in England, as well as a very important original work on the Elements of Morality, including Polity; and he has established prizes of 15*l.* each, during his tenure of the Professorship, for the best proficients in Moral Philosophy, amongst the *commencing* Bachelors, and one of 20*l.*, for a limited period, for the best Proficient amongst the *middle* Bachelors, at the Examination for the Moral Sciences Tripos. We are desirous of expressing our high sense of the services which Dr. Whewell has rendered the University in this as well as many other departments of learning and science by his encouragement, his lectures, and his writings.

Practice of the present Professor.

Endowment.

The income of this Professorship, arising from a rent charge in Yorkshire, lands in Hertfordshire, and property in the funds, is 132*l.* 16*s.* 3*d.*; there are no fees, but the Professor is entitled to one sixteenth part of the produce of the lecture tickets, under the arrangements of the new Triposes.

The Professor of Chemistry.

Foundation.

The Professorship of Chemistry originated in a Grace of the Senate passed in 1702, which conferred the title of Professor of Chemistry on John Francis Vigani, a native of Verona, who for several years previously had taught that science in the University. This appointment would appear to have been zealously promoted by Dr. Bentley, who assigned a vacant room within the precincts of Trinity College, to be fitted up as a laboratory, where the lectures were given for several years. The subsequent appointments to this Professorship continued to be made by similar Graces until the year 1773, when the difficulties occasioned by the competition of several candidates were obviated by a Special Grace directing the election *pro hac vice* to be made by open poll. The same mode of election was made applicable to all future appointments by a Grace passed in October 1793.

Stipend.

The Professorship of Chemistry has no endowment, but the Professor receives 100*l.* by annual grant of Parliament, upon the production of a Certificate that the Lectures have been delivered. He receives the usual fees for attendance upon his lectures, and is one of the thirteen Professors who are included in the arrangements for the new Triposes, and will be entitled also to two shares of the produce of the Lecture-tickets, instead of one, as a compensation for the great expences which he incurs in purchasing apparatus and preparing his lectures.

Remarks.

The use of the room in Trinity College assigned to the first Professor was not continued to his successors. At a later period a room beneath the Anatomical School near Queens' College was appropriated to his use, which was afterwards replaced by another room adjoining the Lecture Room in the Botanic Garden, which is used in common by him and the Jacksonian and Botanical Professors. The existing apparatus is the private property of the Professor, and there is no provision made or other opportunity afforded for the instruction of students in chemical manipulation and experiments, without which all chemical instruction must be necessarily imperfect. We shall recur to this subject in a subsequent part of our Report.

P. 116.

The Plumian Professor of Astronomy and Experimental Philosophy.

Foundation.

The Plumian Professorship of Astronomy was founded in 1704 by Dr. Plume, Archdeacon of Rochester. The deed regulating its duties was drawn up under the advice of Sir I. Newton, Mr. Flamsteed, the celebrated astronomer, and Sir J. Ellis, Master of Caius College.

Duties.

The Professor was required by it to provide a residence, an observatory, and an assistant, as well as the necessary astronomical instruments; and the series of observations which he was directed to make comprehend the principal points of the solar, lunar, and planetary theories. These observations and two Latin prælections, on astronomy and experimental philosophy, were ordered to be presented to the Vice-Chancellor, and printed or preserved in the archives of the University. He was further required to hold various courses or *Collegia* (for such is the term which

is used) at his residence, in Astronomy, Optics, Trigonometry, Mechanics, Statics, Hydrostatics, Magnetics, Pneumatics, and other subjects of the kind, the Students who attended them being required to pay for the experiments, as well as an adequate reward for the Professor's labours. It was further suggested that the Lucasian Professor should hold such *Collegia* in conjunction with his colleague, they sharing equally in the expenses and rewards of their common labours.

It is extremely interesting to observe in these regulations how much importance Newton, the greatest man of science in that or any age attached to the manipulation of optical and philosophical experiments. There is probably no department in the system of public instruction of our Universities which is so greatly deficient as this.

The celebrated Roger Cotes, though only a Bachelor of Arts, was appointed the first Professor, through the discriminating influence of Dr. Bentley; by whose exertions also an observatory was built over the great gateway of Trinity College, and furnished with the best astronomical and philosophical instruments that the age could produce. The chambers below were assigned to the Professor and his assistant, and that assistant was his near relative, Robert Smith, the well-known author of works on Optics and Harmonics, who succeeded him in the Professorship. Dr. Bentley, always the energetic friend of learning and philosophy, assigned the adjoining chamber, which Newton had occupied, to Whiston, who had recently succeeded to his Professorship; and we afterwards find the latter co-operating with his brother Professor in holding *Collegia* or Courses of Lectures in their chambers, which tended not a little to make the Newtonian Philosophy not only generally intelligible but popular. The observatory, the position of which was unfavourable for accurate observation, fell into neglect, even in the lifetime of Dr. Smith, and the structure, which was then in a state of dangerous disrepair, was pulled down at the latter part of the last century.

The Observatory.

In the year 1823, however, more than a century after the Deed of this Foundation was framed, the Plumian Professor, in conformity with its provisions, became the Director of the noble Observatory which the University, to its lasting honour, had then built and furnished; and upon the death of Professor Woodhouse in 1828, the salary of his successor, Mr. Airy, was augmented by the University to 500*l*., and two assistants provided, so as to bring the establishment into full operation. It is but an act of justice to the merits of this great astronomer, to notice his valuable labours during the eight years that he presided over this Observatory: he brought to bear upon it those rare habits of organization and order for which he is so eminently distinguished: the observations of the stars, sun, moon, planets and other objects were carried on, arranged, reduced, and thoroughly discussed and published with a promptitude and regularity, of which no previous example had been given: and the form which the publications containing them assumed under his hands has become the model for similar publications in every well-ordered Observatory in Europe.

The mounting and adjustment, in 1838, of the Northumberland Equatorial, an instrument of great power, and admirably fitted for the observation of double stars, comets, and the smaller planets (which has been worked with great diligence and success by the present Professor), has greatly increased the labours of the Observatory. The consequence has been, that though the observations of new objects (more especially of the new planets, of which the number is rapidly increasing) which require prompt publication, are immediately reduced and circulated, the ordinary reductions are considerably in arrear, the staff of assistant observers and computers not being sufficient for the purpose. Professor Challis, whose exertions have been unremitted and whose health has suffered from the amount of labour which has thus devolved upon him, suggests the expediency of appointing a Member of the University of superior attainments as Principal Assistant, for whom a residence might be provided, at no great expense, at the Observatory. He observes that if the title and functions of a Professor of the University were likewise accorded to him, it would not only give additional dignity to the office, but would make his services available in giving lectures upon some departments of Mathematics and Natural Philosophy, for which no sufficient provision is now made.

Evidence, p. 106.

Professor Challis in his replies to the queries addressed to him, enters very minutely into the history and operations of this Observatory. It was built and furnished and has been hitherto maintained by funds supplied with great liberality by the University or contributed by her Members; but he is of opinion that a larger stock of observers and computers is required to bring all the resources of the

Report.

Evidence, p. 107.

establishment into full operation. "The Cambridge Observatory," he adds, "is "an institution of public utility, and contributes to the scientific reputation of the "country. The observations here made and reduced have been largely used in "England, on the Continent, and in America, for the determination of geographical "positions and for the advancement of Astronomy theoretically. I beg therefore "to suggest to Her Majesty's Commissioners whether, on this account, as well as "for reasons more immediately relating to the Plumian Professorship, it be not "desirable to increase the efficiency of the Cambridge Observatory, either by a "direct grant from the public funds or by remitting the Government tax on "Degrees, and thus enabling the University to devote to the maintenance of it a "larger annual expenditure."

It is hardly necessary for us to express our entire concurrence with these suggestions, and our earnest hope that means may be found, by the appointment of additional assistants and computers, of relieving Professor Challis from the more oppressive of his present labours, so as to enable him to devote a greater portion of his time to the higher functions of his office.

Professor Challis gives a course of lectures on Practical Astronomy at the Observatory, where Students have the opportunity of becoming acquainted with the more important practical details of the establishment.

The Professorship of Anatomy.

Foundation.

The Professorship of Anatomy originated in a Grace of the Senate in 1707, which conferred the title of Professor on Mr. George Rolfe, who for some years before had taught anatomy in the University. A subsequent Grace in 1728, which declared the Professorship vacant in consequence of Mr. Rolfe's neglect of duty and absence from the University, seemed to recognize the existence of the office, which was filled up accordingly. The appointment would appear to have been generally made by Grace of the Senate, naming the person chosen; but Special Graces were passed from time to time, authorizing the election *more burgensium*, or by open poll, in the mode adopted in the election of Members of Parliament.

Stipend.

There is no permanent endowment, but the Professor receives 100*l.* by an annual vote of Parliament, upon producing a Certificate that the lectures have been delivered.

Duties.

The duties of this Professorship, like others of the same class, which have been instituted by the University, and whose existence depends upon the pleasure of the Senate, are defined by no Statutes; but the Professor is required by Grace of the Senate, to examine candidates for Medical Degrees as well as for the Tripos of the Natural Sciences. He is one of the thirteen Professors who are entitled to share in the produce of the Lecture tickets, of which he receives a double portion, to enable him to meet extraordinary charges connected with the preparation of his lectures.

Museum.

An excellent Anatomical Museum has been formed by the University, chiefly by the exertions and under the auspices of the present Professor, of which a detailed account will be given in a subsequent part of this Report.

The arrangements of the Natural Sciences Tripos comprehend Comparative as well as Human Anatomy, and thus the province of Dr. Clark, to whom both these departments are now confided, has received a large augmentation. In order to meet this new state of things he has lately transferred to an eminent Surgeon the preparation and demonstration of the dissections in human anatomy, to whom he pays half his stipend and all his fees; the remainder he has been accustomed to expend in additions to the Museum.

Recommendations of the Professor.

Dr. Clark strongly recommends the permanent separation of Human and Comparative Anatomy, by confiding the former department to a new Professor to be appointed by the University. He is also of opinion that a third Professor might be advantageously added, who should take the department of Zoology, considered as a branch of Natural History rather than of Comparative Anatomy. The adoption of the first of these plans would require the erection of a new lecture-room, with a dissecting-room attached to it. If a Professor of Zoology is also added, the zoological department of the Museum would require to be greatly extended.

Dr. Clark is not disposed, however, to recommend any great extension of the number of Professorships in departments of study connected with the medical profession, such as Materia Medica and Pharmacy, Medical Jurisprudence, Midwifery, &c. "I can see no good," says he, "in the great increase of minute

Evidence, p. 110.

" teaching in our University. Our great distinction is that we give to all our " Students, according to their capacities, a preliminary education such as long ex- " perience, and careful comparison, often repeated, of our methods with those " pursued in other institutions, have shown to be the best. This preliminary edu- " cation (as I call the collegiate and university system previous to the B.A. de- " gree) cannot, I believe, be much improved in principle, whatever may be " thought of its details. It cultivates the taste and matures the reason, and fits " men to secure for themselves the mastery in every subsequent professional " pursuit. If, after such preliminary education, the object of the Student be " medicine, the University affords him the means of learning the principles of " chemistry, of botany, of physiology, of the practice of medicine, and the details of " anatomy. She requires attendance on the lectures of her Professors of these " branches; but on subjects which are merely the skilful application of the prin- " ciples of some of these combined, she seems to think that a young man requires " not special instruction by means of lectures; or, that the desired information " may be best acquired from books, or from practical men in large hospitals. " Though we have no lectures on such subjects, yet our Cambridge Physicians " still attain to the highest professional distinctions, and still secure the confidence " of the world, and still are ranked amongst the most famous promoters of the " various branches of medical science. I believe that the present high character " of the English physician will greatly fall if ever it should unfortunately hap- " pen that all the members of the medical faculty have attained their professional " knowledge and skill without those previous studies at an English University " which now connect him and his faculty, through its most distinguished members, " with the highest rank of intellectual and moral culture in every walk of life. Report.

Professorship of Modern History.

The Professorship of Modern History was founded by George I. in the year 1724. In a Royal Letter addressed to the University, announcing the proposed foundation, its object was declared to be the instruction of Students in Modern History and Modern Languages, in order to prepare them to act, instead of foreigners, as tutors to young noblemen and others travelling abroad, and to enable the Crown to encourage members of the University by conferring upon them diplomatic or other appointments, for which a competent preparation in writing or speaking the modern languages was an indispensable qualification. It proposed, therefore, to assign to the Professor a stipend of 400*l.* per annum, out of which he should be obliged to maintain, with sufficient salaries, two or more Teachers of Modern Languages, who shall be required to instruct gratuitously 20 Scholars to be nominated by the Crown; every Scholar is to learn two or more of such languages, and the Professor is also required to deliver a Public Lecture, once at least in every Term, explanatory of the method in which, and by the aid of what authors, the study of Modern History may be most advantageously pursued, as well as to make an annual report to one of the Secretaries of State of the progress of each of the 20 Scholars.

Appendix, p. 457

Foundation.

Obligation to maintain two teachers of Modern Languages.

In conformity with this announcement, Letters Patent were passed, embodying these conditions, and nominating Samuel Harris, Professor of Modern History; and we believe that all subsequent appointments to the office have been made in precisely the same terms. On the 25th of February, 1724-25, fifteen scholars, and on the 31st of May following, five more, making twenty in all, were appointed by the King. They would appear to have been the first and last Scholars nominated upon this Foundation. Amongst them we find the names of Walter Titley and William Battie, both of them successively University Scholars on the Foundation of Lord Craven: the first was for many years British Envoy at Copenhagen: the second the founder of the University Scholarship which goes by his name.

Appendix, p. 461.

It was not until the expiration of nearly two years from the date of his appointment that Sir James Stephen became aware of the terms of the original constitution of his Professorship. His attention was first called to it by an application from a Teacher of Foreign Languages to be appointed an instructor with a stipend under the provisions of the Letters Patent. He lost no time, upon making this discovery, in consulting the Vice-Chancellor and others upon the course which he should take, so as best to satisfy the obligations imposed upon him by the terms of his appointment. It appeared to us, when the question was brought under

REPORT.

our consideration, that in the first place the emoluments of the Professorship were not greater than were necessary to secure the services of a Professor of eminent literary attainments, and that it was therefore not expedient to diminish it seriously by the assignment of salaries to such teachers; and that in the second place the obligation of making such appointments could only arise when the Scholars to be taught gratuitously had been nominated by the Crown. It appears that Sir James Stephen has subsequently appointed a Teacher of the German language, and that he proposes to appoint Teachers of other languages hereafter; and whenever Royal Scholars are appointed, it is his intention to assign them such stipends as the Vice-Chancellor may deem sufficient.

Lectures.

Sir James Stephen was appointed to this Professorship in 1849, and has already given three courses of Lectures, two of which have been published. In a prefatory letter to the Master of Trinity College, he has detailed at length the reasons which induced him to enter at once upon the active duties of his office without assuming such a period for preparation as might, under ordinary circumstances, be considered reasonable and necessary. The Lectures were attended by large classes of Students and Graduates of the University, and their publication, equally prompt and rapid with their composition and delivery, as well as their intrinsic merits, cannot fail to add to the high character which previous publications, in the midst of important official duties, had already earned for him.

We have referred in another part of this Report to some very important suggestions made by Sir James Stephen in his answers to the queries which we addressed to him.

PROFESSORSHIP OF BOTANY.

Foundation.

The Professorship of Botany, like those of Chemistry and Anatomy, originated in a Grace of the Senate in 1724, which gave the title of Professor, *honoris ergo*, to Mr. Richard Bradley, a very skilful botanist, who had likewise promised to superintend the formation and arrangement of a Botanic Garden. The subsequent appointments were made nearly in the same manner as those for the Professorships above named. In the year 1762, Dr. Richard Walker, Vice-Master of Trinity College, conveyed to the University the site of the Botanic Garden, to be used as such, appointing the Vice-Chancellor, the Masters of Trinity and St. John's, and the Regius Professor of Physic, perpetual Governors and Trustees of the same; he also appointed and authorized his Trustees, after his decease, to continue to appoint a Reader in Botany and a Curator of the Garden.

Professor Martin, who succeeded to the Professorship on the resignation of his father, in 1762, was subsequently appointed King's Reader in Botany, with a salary of 200*l.* per annum; with these offices was also combined that of Dr. Walker's Reader. Professor Martin died in 1825, when Mr. Henslow having been appointed King's Reader and Dr. Walker's Reader of Botany, the Professorship was discontinued as unnecessary.

Dr. Walker's Readership.

Lectures.

Professor Henslow's Lectures are given in the May Term; a fee of one guinea is charged for each course, and the average receipts from this source have been about 25*l.*

Museum.

There is a Botanical Museum, formed by the present Professor, which is placed in a room adjoining the Lecture Room in the Botanic Garden, communicating by a side door with the Anatomical Museum, through which it is accessible to members of the University; there is, however, no attendant attached to it, either to show it, or superintend it; the Senate has made a grant of 30*l.* per annum to maintain and augment the collections in this Museum.

The Professor of Botany is an Official Examiner for medical degrees as far as his own science is concerned, and is included in the arrangements for the new Triposes.

Remarks and Recommendations.

Professor Henslow is disposed to think that these regulations, as well as the requirements of his science, will render new arrangements necessary in future appointments to this Professorship. He is himself occupied with parochial duties during the greater part of the year, and is only able to reside in the University during the Term that he is engaged in the delivery of his Lectures; but if his income as Professor was sufficient to maintain him, he might properly be required to reside permanently in the University, superintending the Botanic Garden, arranging and enlarging the Botanical Museum, and assisting Botanical Students by his advice, as well as by his Lectures and Demonstrations. It is only by the encouragement which a resident Professor can give to the study of this science,

and by annexing due rewards to its successful cultivation, that it can be expected to make much progress in the University. REPORT.

In the event of these suggestions being carried out, we think that it would be expedient to give to the Botanical Professor, in his capacity of Dr. Walker's Reader, the general superintendence of the Botanic Garden.

WOODWARDIAN PROFESSORSHIP OF GEOLOGY.

This Professorship was founded in 1731–32, in conformity with the will of Dr. Woodward, who left his cabinets of English fossils, with funds for the purchase of an estate of not less annual value than 150*l.*, of which 110*l.* should be paid to a Lecturer, 10*l.* for an audit dinner, 10*l.* for two Inspectors of his fossils, and 20*l.* for contingencies; the rental of the estate which was purchased is now about 350*l.* per annum, of which sum 218*l.* 6*s.* 5*d.* is paid to the Professor, and the rest is applied to the other purposes of the will and the maintenance of the Museum. Foundation.

The founder required his Professor to be unmarried; never to be absent from the University more than two months in the year, and those in the long vacation; to read four Lectures every year, and to print at least one of them, on subjects treated of in *Dr. Woodward's History of the Earth*, and in his defence of it against Dr. Camerarius, in his *Discourse on Vegetation*, and in his *State of Physic:* he was to have the custody of the Fossils, and to reside in an apartment near them, and to attend in the Museum from 9 to 11 A.M., and from 2 to 4 P.M., on three days in every week; to exhibit the fossils gratis, and to take especial care that none of them were either mutilated or lost. Evidence, p. 115. Duties.

Of these stringent conditions, the first and last alone have been observed: the fossils, though now of comparatively little value, have been preserved with scrupulous care; but before the election of the present Professor, in 1818, no regular lectures had been either delivered or published, and the anxious provision of the Founder for the defence and maintenance of his philosophical opinions altogether failed to elicit a word, whether written or spoken, in their favour, with the single exception of an Inaugural Lecture by the celebrated Dr. Conyers Middleton, who first held the professorship. Without attempting to justify the apathy with which the University regarded for nearly a century the entire neglect of the more important parts of Dr. Woodward's will, it is hardly necessary to observe that any attempt in these days to enforce a strict compliance with it would render the Foundation utterly valueless. There can be little doubt, therefore, that a sufficient case has arisen to justify a Court of Equity, or other competent authority, to form a scheme for regulating this professorship, which would satisfy the spirit, though not the letter of his Foundation; and it would probably be difficult to propose any regulations which would be better suited for this purpose than such as would give a legal sanction to the practice followed by the present Professor during the long period that he has held the office. Present practice.

We beg to refer to the replies of Professor Sedgwick to the queries addressed to him for more specific information respecting the mode in which he has discharged his duties, and the circumstances connected with the formation of the Museum, which now constitutes the noblest monument which could be raised to the memory of Dr. Woodward. We shall notice this Museum more fully in a subsequent part of our Report. Evidence, p. 115.

THE LOWNDEAN PROFESSORSHIP OF ASTRONOMY AND GEOMETRY.

The Lowndean Professorship of Astronomy and Geometry was founded by Thomas Lowndes, Esq., of Overton, in the county of Chester, in 1748. The electors named in his will are the Lord High Chancellor, the Lord Keeper of the Great Seal, the Lord President of the Privy Council, the Lord Privy Seal, the First Commissioner of the Treasury, and the Lord Steward of the Household. The endowment consists of two farms at Overton and Smallwood, in the county of Chester, producing an annual income of about 436*l.*: there is no other source of emolument. The founder authorized by his will, the Earl of Macclesfield, Martin Ffolkes, Esq., Dr. Bradley, and William Jones, Esq., to draw up Statutes for the regulation of this Professorship; a draft of such Statutes, purporting to be drawn up by the Earl of Macclesfield, the last survivor of the persons above named, is in existence. It is, however, full of interlineations and corrections, without signature or date, and it does not appear that any Deed founded upon it was ever executed. It prescribes a course of duties very similar to those imposed Foundation.

Report.

upon the Plumian Professor, including a provision of Astronomical instruments for making observations; the subjects of the Lectures were to be Astronomy and Geometry alternately.

Lectures.

It has been found, however, extremely difficult to form a class for courses of Lectures upon these or other subjects to which the almost exclusive labours of a great body of public and private tutors are devoted.

Remarks.

When a course of reading is once marked out by a tutor to whose guidance a student submits himself, he can rarely venture with safety to depart from it; for if the principles of reasoning upon which the fundamental propositions are based or the order of succession in which they are taken be materially different with different teachers, a student who attempts to follow more than one of them, will very generally end in understanding none of them completely. It is for this reason that private tuition in the higher departments of Mathematics and Natural Philosophy has generally been found more or less incompatible with a profitable attendance on the Lectures of public Tutors or Professors. The only exception to the truth of this observation would be found in those departments of Natural Philosophy, such as Optics, Hydrostatics, the Mechanics of Machinery and Engineering, or Practical Astronomy, where the development and illustration of the subject requires, in order to make it intelligible, the use of apparatus and experiments which a private tutor can neither be expected to possess, nor to have the means of exhibiting; such Lectures have always been attended by the majority of those students who are candidates for the higher places in the Mathematical Tripos. The subject, however, of private tuition, and the best means of restraining it within reasonable limits is one of great difficulty and delicacy, and we propose to reserve the fuller consideration of it to another part of our Report.

The Norrisian Professorship of Divinity.

Foundation.

The Norrisian Professorship of Divinity was founded by John Norris, Esq., of Whitton, in the county of Norfolk, in 1760: it has an endowment of 100*l.* per annum, and no other sources of emolument. When the Professorship is vacant, two persons are nominated by the Stewards, who are the Masters of Trinity, King's, and Caius Colleges, one of whom is subsequently chosen by all the Heads of Colleges, the Master of Trinity possessing, in case of an equality of votes, a casting vote in addition to his own. The Professor's appointment is to be renewed every five years, and he is no longer re-eligible if more than 60 years of age. He is re-

Duties.

quired to profess, before his admission, his belief of the Catholic doctrine of the Trinity, and to swear that he will teach no doctrines which may tend to impugn it. He is required to read 50 lectures every year during the Michaelmas and Lent Terms, and to read or cause to be read, in the course of them, certain portions of Bishop Pearson's Exposition of the Creed.

Remarks.

The duties of this Professorship have been very faithfully and effectively performed both by the present Professor and his predecessors. The condition, however, imposed by the Founder of reading a large portion of an author so well known, has been found to be very inconvenient. Such readings weary the attention of the best disposed students, and it is probable that few persons would have been found willing to attend those lectures, of which they formed the whole or a part, if the Bishops, before the institution of the Voluntary Theological Examination and for some years subsequently, had not required, from all candidates for orders, a Certificate of having attended the Norrisian Professor's Course. The Grace of the Senate, passed in 1848, which requires from all candidates for the Theological Examination, a certificate of having attended the Lectures of two at least of the three Professors of Divinity, has continued to give to attendance upon these lectures somewhat of a compulsory character.

A knowledge of the great work of Bishop Pearson must always be considered in a high degree valuable to all Students of Theology; but it appears to us that if they were subjected to an examination in it, a more certain criterion of their possessing this knowledge would be provided than a mere attendance on any such readings could secure.

We have received no returns respecting this Professorship.

JACKSONIAN PROFESSORSHIP OF NATURAL AND EXPERIMENTAL PHILOSOPHY AND CHEMISTRY.

This Professorship was founded in 1783 by the Rev. Richard Jackson. The Society of Trinity College are made Trustees of the Foundation estates, which are said to be worth about 140*l.* per annum: but we have received no returns, or other authentic information, respecting this Professorship. Foundation.

The Professor is to be chosen by the Regent Masters of Arts only, and is to be the person who is, in their judgment, the best qualified by his knowledge of Natural and Experimental Philosophy and Chemistry to instruct the Students of the University.

The two first Professors on this Foundation, Dr. Milner and Archdeacon Wollaston, gave Lectures in Chemistry, one of the two departments of science which the Founder designed to promote. Mr. Farish was elected Professor of Chemistry in 1794, and finding the proper ground of his Professorship pre-occupied, he selected the illustration of the Arts and Manufactures of this kingdom as the subject of a course of Lectures, which afterwards became deservedly celebrated, and long continued to attract very crowded audiences. In 1813 Professor Farish was transferred to this Chair, the double destination of which might be fairly said to include the subject which he had chosen. Professor Willis succeeded him in 1827, and by selecting the science of Mechanics generally, more especially viewed in connection with machinery and engineering, as the principal subject of his Lectures, accompanied by very elaborate models and experimental illustrations, has carried out, with remarkable ability and success, the primary design of this Foundation. Lectures.

Professor Willis has occasionally introduced an additional course of Lectures on the History and Principles of Ecclesiastical Architecture, which has been made not less attractive by the clearness and precision of his style of addressing an audience, than by his extensive knowledge of the subject, and the variety and beauty of the models and drawings by which it is illustrated: he has thus brought his Professorship into alliance with Archæology and the Fine Arts, for the cultivation of which the University has hitherto made very little provision.

Professor Willis has no share in conducting the examinations for either of the New Triposes, though students, holding Lecture Tickets, may select his Lectures as the subject of their compulsory examination. He receives a Parliamentary grant of 100*l.* for his Lectures and also a double share of the produce of the Lecture Tickets as a compensation for the great cost of his models and apparatus. Emoluments.

THE DOWNING PROFESSORSHIP OF THE LAWS OF ENGLAND.

The Charter of Foundation of Downing College gave the first example of the complete incorporation of Professors of the University with the constituent and governing body of a College. Next in order and rank to the Master of this College, succeed two Professors, one of the Laws of England, the other of Domestic Medicine,—the study of Law and Medicine, as well as other useful arts and learning, being the declared objects of the Foundation. They have stipends of 200*l.* per annum each, and excellent houses in the College, as well as some other advantages. They are required to deliver 24 Lectures every year, after the first receipt of salary, and if such Lectures are omitted, there are penalties imposed by the Statutes. They have also collegiate duties as members of the corporation, but their public teaching is altogether academical, and they take rank and precedence in common with the other Professors of the University. Foundation. Duties.

Mr. Amos, who now holds the office of Downing Professor of Laws, gave a course of Lectures, 24 in number, almost immediately after his appointment in 1849, and has since continued them. In a preface to an introductory Lecture, which he has published, he complains of the little attention which is paid to the study of English Law or of the science of Jurisprudence in general; and he is disposed to think that the absorbing interest of classical and mathematical studies to which all the honours and rewards of the University are almost exclusively confined is unfavourable to the systematic pursuit of this and many other branches of learning. He says, "I think there can be little doubt "but that for future lawyers it would be desirable, if they were not induced or "compelled to read so much Classics and Mathematics at the University, as is at Present practice. Evidence, p. 123.

Report.

"present the case, to the exclusion of English Law and other cognate sciences, "such as the Civil Law, Moral Philosophy, and Modern History, for which "Professorships have been established.

"There is no Professorship of Belles Lettres, or English Literature, or of "Medical Jurisprudence, at Cambridge. All these subjects are deserving of "attention from a Student who is desirous of studying Law on a systematic, "literary, historical, and philosophical basis. The inconveniences arising from a "confined system of University education, at least as regards lawyers, are "aggravated by the circumstance that it is the custom of most schools so to "educate youth as to reflect honour on their schoolmasters, by grasping "University prizes and emoluments with the greatest certainty.

"I am persuaded that the present compulsion and encouragement adopted by "the University, in regard to classical and mathematical studies, operates to pre-"vent a great number of future lawyers from entering the colleges, renders the "attainment of academical emoluments and fame every year more incompatible "with success in the legal profession, and operates as a virtual abandonment "of most excellent means and opportunities of laying at the University a solid "foundation for legal eminence and for public services which may command "the admiration of the country and posterity."

Remarks.

The University of Cambridge has been accustomed to refer with pride to the many eminent judges, lawyers, and statesmen, who have attained academical honours and emoluments, and to appeal to this fact as the best vindication of her system of education; the severity and accuracy of her mathematical and classical studies, and the strict justice and impartiality with which her honours and rewards have been distributed, and the influence of those great principles in encouraging competition and thus bringing into active exercise the highest intellectual powers of her students, have been conceived, and we believe justly, to be the best preparation for the formation of those habits of mind which lead to eminence in the law and in public life. The institution of the new Triposes, especially of the Moral Sciences, including History and Law, as well as others which may eventually be added, will open a wide field, however, for more discursive studies, which may occupy many labourers who have hitherto been idle, without materially interfering with those severer studies which form the characteristic boast of the University: it may thus tend to remedy some of the evils in the existing system of which Professor Amos complains.

The Downing Professorship of Medicine.

Foundation.

The second Professorship established in Downing College, that of Medicine, is founded upon the same principles and subject to the same conditions as that of English Law.

Lectures.

The present Professor (Dr. Fisher), during the last academical year, gave a course of Lectures on the Preservation of Health: in the Lent Term on Clinical Medicine, in the Easter Term on Materia Medica and Pharmacy. By a Grace of the Senate passed in 1829, it is compulsory on the part of a Medical Student to attend his Lectures, in case they amount to 50 in one academical year; he is also an *ex-officio* Examiner for Medical Degrees and Licenses, and is one of the Professors included in the arrangements for the Natural Sciences Tripos.

Evidence, p. 125.

The valuable observations which Dr. Fisher has appended to his replies to the queries addressed to him, will come under specific notice hereafter, in connexion with the consideration of the general arrangements which it is desirable to adopt with respect to the Faculty of Medicine.

Professorship of Mineralogy.

Foundation.

The Professorship of Mineralogy originated, like those of Chemistry, Anatomy, and Botany, in a Grace of the Senate passed on the 15th December, 1818, conferring the title of Professor on Dr. Edward Daniel Clarke (the celebrated traveller), whose Lectures were attended during many years by crowded audiences, attracted by his rare eloquence and varied powers of illustration.

At his death, in 1822, Mr. Henslow was elected to succeed him, after a nomination by the Heads of Colleges, in conformity with the 40th chapter of the Statutes of Elizabeth; the legality, however, of this mode of appointment having been disputed the question was referred, with a view to put an end to legal

proceedings, to Sir John Richardson, who decided that as no permanent office had been created by any previous Act of the Senate, the further continuance of the Professorship, as well as the mode of appointment of the Professor depended upon a Grace of the Senate; but that if this or any other office had been created by any Act independent of the appointment of a person to fill it, then the election might take place by nomination, or otherwise, according to the terms of the Grace, or in the absence of any distinct provisions in the Grace itself, then according to the Chapter of the Statutes above mentioned. Dr. Whewell, the present Master of Trinity College, in 1828, and Mr. Miller, in 1832, were appointed by Grace, in conformity with this decision; there were no competitors. There is no endowment, but the Professor receives, by annual grant of Parliament, 100*l.* upon producing a certificate that the Lectures have been delivered. Report. Stipend.

There is a very valuable Museum of Minerals, which is placed in a room adjoining the Museum of Geology. It will be more fully noticed in a subsequent part of this Report. Museum.

Professor Miller, also, in his replies to the queries addressed to him, calls attention to the great want which is felt of a proper Laboratory and Apparatus, not merely for the instruction of Students, but likewise for carrying on original researches. Evidence, p. 134.

Professorship of Political Economy.

The title of Professor of Political Economy was conferred by Grace of the Senate in the year 1828, on Mr. Pryme, who had been accustomed to give Lectures on this science for many years previously. There is no endowment, and no stipend is paid by an annual grant from Parliament. The Professor comes under the new arrangements, both for granting certificates and for examinations in connexion with the Moral Sciences Tripos, and in that capacity he will be entitled to a share of the fees; no other fees are paid, the Lectures being gratuitous, and there are no other sources of emolument. Foundation.

Professor Pryme remarks that the "study of Political Economy has made less "progress, either among the Senior or Junior Members of the University than, "considering the demonstrative nature of most of its propositions, and its great "importance to the community, might reasonably have been expected." He suggests the institution of a Prize for an English Essay on some branch of the science as one of the most effective modes of promoting the study; much also in his opinion may be expected from the further development of the Moral Sciences Tripos. Evidence, p. 135.

There is, of course, no Statute for regulating the duties of an office which at present is merely personal; but Professor Pryme suggests the propriety of forming a scheme for the regulation of the duties of all Professors of this Science who may be appointed hereafter.

The Disney Professorship of Archæology.

The Professorship of Archæology was founded in 1851, by John Disney, Esq., of the Hyde, Ingatestone, the donor of an interesting and valuable collection of ancient marbles to the Fitzwilliam Museum: its present endowment is the interest of 1000*l.* Consolidated Bank Annuities. Foundation.

The appointment of the Professor rests with the Founder during his lifetime, and, afterwards, with the Vice-Chancellor and the Heads of Colleges; the appointment is for five years, but the former holder of it is re-eligible. The Professor is required to deliver six Lectures, at least, during each Academical Year, on subjects of Antiquarian Research and the Fine Arts. The present Professor, Mr. Marsden, though only very recently appointed, has already printed two Lectures on the general objects proposed in this Foundation, which seem well calculated to call attention to subjects which, though connected with the classical studies of the University, have hitherto been too much neglected. It is not easy to give too much encouragement to whatever gives a somewhat practical application, even in matters of taste, to our knowledge of ancient authors. Duties.

There are other subjects, of great interest and importance, connected with the Arts and their relations to history and literature, for the teaching and illustration of which the existing foundations of the University have made no provision: amongst them may be mentioned Mediæval Art, which has of late years attracted so much attention, more especially in connexion with the history and religious

Report.

belief of the middle ages; the history of Modern Art, to which the collections in the Fitzwilliam Museum would be found to be subservient: medals, the most authentic and in some respects the most instructive of all the monuments of history, of which some collections, though very imperfect, exist in the University and the Colleges: the principles and history of Architecture, more especially of ecclesiastical architecture, which has of late years been studied with so much zeal and interest, and which has been occasionally illustrated by the Lectures of Professor Willis.

Professorship of Music.

Foundation.

The Professorship of Music was founded by a Grace in the year 1684, which also nominated Dr. Staggins as the first Professor. There is no endowment. The Professor examines the exercises of candidates for Degrees in Music.

Remarks.

No lectures in music have hitherto been given, but the present Professor, Dr. Walmisley, expresses his intention of giving them hereafter. The science of Music possesses sufficient relations with the Exact Sciences to make its theory a branch of study which the University might very properly encourage; and there are very few subjects which would furnish the materials for a more attractive course of Lectures.

The present Professor is a Member of the Senate, which gives him a position which none of his predecessors have occupied, being thus entitled to take precedence in common with the other Professors of the University.

Sadlerian Lectureships.

Foundation.

These Lectureships were founded in 1710, in pursuance of the will of Lady Sadler, the widow of Dr. William Croone, and in conformity with his wishes. The design of the Lectures which the holders of them were to deliver, are very

Appendix, p. 462.

fully explained in a schedule annexed to her will.—"The true intent and meaning of the said Lectures are the full and clear explication and teaching that part of Mathematical knowledge commonly called Algebra, or the method or rule of contemplating quantities in general, with the particular application and use of it in Arithmetic and Geometry, either according to the method of Des Cartes or any other of those who have best improved it since." The object thus described could comprehend the whole range of analysis, and more especially its application to Geometry.

Endowment.

The endowment of these Lectures consists of lands and tythes in Hampshire and a house in London, vested in the Vice-Chancellor and nine Heads of Colleges, named in the will as Governors or Trustees: and it is ordered that when their number is reduced to *five* or to *three*, they shall fill up the Trust by the election of the successors of former trustees: they are directed to hold their meetings at Emmanuel College, and the Master of that College has usually been appointed Treasurer and Receiver.

The income of the estates is considerable; for we find that 45*l.* per annum is paid to each of 15 lecturers, and 67*l.* 10*s.* to the Lecturer of Emmanuel College, according to a proportion fixed by the Foundress. There is at present no Lecturer in King's College.

Statutes.

The Trust is regulated by a series of orders agreed upon by Mr. Rouse, the executor of Lady Sadler, and the first Trustee named in the will. The Lecturers are directed to be chosen by the Trustees, and are to be examined in their presence, with respect to their skill and sufficiency, by the public Professors of the Mathematics and Astronomy, or by any one of them, or by such other person or persons properly qualified for the task, as they may appoint: they are elected for a period

Duties.

of ten years. They are required to give one public lecture in the Latin language, to continue for one hour, in the Hall of their College every Term, and another explanatory of it on the same day in their own chamber; and they shall also in every week, that of the Public Lecture excepted, of every Term attend twice in their chambers, and receive affably and courteously all students of their College who resort to them for instruction and advice. They are further required to deliver every year two fairly written copies of two of their Lectures to the Vice-Chancellor, one to be deposited in the Public Library, and the other in that of their College: they are also to forfeit 40*s.* for every Lecture which they omit, and 10*s.* for every day that they neglect to give attendance at their chambers: and if they omit the performance of these duties for one whole Term, unless prevented by severe sickness, they are to forfeit their place and salary, and to be for ever incapable of being re-elected.

Report.

The Lecturer of each College is directed by the Will to be chosen by the Master, Vice-Master, Senior Dean and Senior Lecturer; but, in conformity with the Orders referred to above, the selection is made by the Master alone. The general practice has been to nominate one of the Public Tutors or Lecturers, whose ordinary duty as such is to give Lectures on Mathematics and Algebra. The Sadlerian stipend thus lapses into a mere augmentation of his income from other sources, and procures no advantages to the Students which would not equally be secured to them without its aid. We believe that no public Lectures are given in the required form, and that no copies of them are ever deposited in the University or College Libraries.

Recommendations.

It would not be easy, even by a much stricter execution of the Trust, to make these Lectureships of much advantage to the University; for it will be found that the Colleges have generally made a sufficient provision, without their aid, for effecting the object for which they were established.

In another part of this Report we shall recommend the transfer of the instruction of the Students, after their fifth Term of residence, from the separate Colleges to the University; a measure which would require the appointment of a considerable number of Lecturers, more especially in the department of Mathematics, to many, if not to all, of whom stipends would require to be paid. If the Sadlerian Lecturers should occupy the new field of labour thus opened to them, they would be in a position to accomplish much more completely than at present, the real object proposed by their Foundress, which was to encourage the study of Algebra and its applications throughout the University. Such a change of their destination would according to our plan involve the transference of the nomination of them from the several Colleges to the Board of Mathematical Studies; but the trivial sacrifice of patronage which such a transfer would occasion, would be more than compensated by the greater security which it would afford of the appointment of men of superior attainments and ability, and by the benefits which the Students generally would derive from the services of such a body of public instructors.

Mr. Hulse's Foundations.

Christian Preacher and Christian Advocate.

The Rev. John Hulse bequeathed in 1789, his estates in Cheshire of considerable value, for the purpose of endowing, amongst other objects, two offices, one to be called that of Christian Preacher, the other, that of Christian Advocate. The first receives about 320*l.*, and the second about 280*l.* per annum, but these stipends are likely to be increased upon the expiration of certain annuities which are payable under the provisions of the will. The Trustees and electors are the Vice-Chancellor and the Masters of Trinity and St. John's Colleges, and if either of the two latter be Vice-Chancellor, his place is supplied by the Greek Professor; they are elected for one year only, but re-eligible for six years and no longer. The Christian Preacher is required to preach twenty sermons at St. Mary's Church and to print them every year; the Christian Advocate to print and publish annually a defence of the Christian religion against the attacks of infidels or some very notorious error.

Remarks.

A decree in Chancery in 1830 diminished the number of sermons from twenty to eight; but, even upon this reduced scale, the occupation of the University Pulpit by the same Preacher on the same subject for so long a period is occasionally found to be inconvenient. If the Sermons were converted into Lectures, to be addressed by a Professor to a Class, and not by a Preacher to a Congregation, they would assume a form better adapted, than that of sermons, as a vehicle for important trains of enquiry and argument.

Objections have justly been made both to the name and to the office of Christian Advocate; for if the Christian religion requires defence, such defence should be a spontaneous act, not a hired service. The office itself would not appear to be popular; for though it has been very ably filled, very few candidates now apply for it; there are not, in fact, many persons to be found who are willing to incur the responsibility of an annual publication on subjects which cannot usually be safely treated without much careful preparation and study.

General Observations.

It will sufficiently appear from the preceding historical review of the Professorships which have been established in this University, that whenever the Statutes or Regulations of their Founders or of those who represented them, have not been

REPORT.

limited to defining the general objects they had in view, but have extended to the special means of carrying them into effect, they have generally become obsolete or impracticable or extremely inconvenient. The foundations of the 16th century were all of them more or less connected with the ancient system of the schools, and have become inapplicable in their original form in consequence of its almost entire discontinuance. In the first half of the 17th century we find nearly a blank in the institution of new Professorships; but in the century which followed, when the preparation for the exercises of the schools had fallen into desuetude, arrangements of a different nature were made to meet the new state of things which had arisen. Instead of a continuous course of lectures, like the ancient Readings, a much smaller number of them was required; not more than one or two weekly: but at the same time especial precautions were taken that they should be carefully prepared, and if not printed, that manuscript copies of some of them at least should be delivered to the Vice-Chancellor, to be preserved in the archives of the University.

Thus the Lucasian Professor, lest he should perform the duties of his office *perfunctorie*, as expressed by his Deed of Foundation, was directed to deliver to the Vice-Chancellor copies of ten such lectures annually. The annual number required from Dr. Knightsbridge's Professor of Moral Theology was in the first instance fifteen, and in the second twelve. The Plumian Professor, in addition to various and laborious practical duties, was required to print or make a similar deposit of two lectures in the Latin tongue. The same number was required from every one of the Sadlerian Lecturers. Dr. Woodward directed his Professor to print one at least of four annual lectures in defence of his views of the Theory of the Earth. The conditions imposed in all these cases were precise, and apparently such as could not easily be evaded. They will be found however to have experienced nearly the same fate as the provisions of the more ancient Statutes; and it will be necessary to go back to the earliest holders of these offices to find rare or even solitary examples in which they were complied with. In later times the peremptory injunctions of the Founders have usually been replaced by the performance of other duties better adapted to the existing habits and wants of the University.

We have noticed elsewhere the inconvenience occasioned by a special regulation of the Norrisian Professorship, which might be obviated by a simple change which would more effectually accomplish the spirit of the Founder's will, though not accordant with its letter. In a similar manner the object proposed by Mr. Hulse in his foundations, though very clearly expressed in his will, is very imperfectly attained by the form which he has given to them. An alteration in them, which we have hinted at above but which will be more fully explained hereafter, would not only make these foundations more useful to the University, but at the same time better adapted to carry out the views of their Founder.

If the Professors are to continue to form useful and essential members of the University, their duties must be completely assimilated with its system, and be modified therefore from time to time to suit the changes which it undergoes: but if this principle of continued adaptation be not recognized and the specific regulations of their founders be suffered to override or control the legislation of the University, they can no longer form part of the same machinery, without producing the most serious disarrangement. It is chiefly owing to the want of these necessary readjustments to the varying circumstances of the University, that some of them have lost their proper influence in its public teaching. It seems in fact to be just and reasonable to assume it as a condition incident to all such foundations that they should change with the changes of the body of which they form a part, so as to preserve a constant unity of action and secure the precise position in its system which such changes would assign to them. If however the individual wishes of Founders should prove to be irreconcileable with such new and necessary arrangements, they must either be overruled or otherwise the foundation itself be thrown out of the academical constitution as an extraneous element. It will rarely happen, however, when all the circumstances which may have influenced the minds of Founders, both in ancient and modern times, are taken into consideration, that much difficulty will present itself in reconciling the requisite changes to the spirit, if not to the letter, of their Statutes: and whilst a scrupulous regard should be paid to such Statutes whenever their observance is consistent with the existing system of the University, in all other respects they should be freely modified so as to give to the foundations which they regulate the most useful and efficient form which they are capable of receiving.

PRESENT STIPENDS OF PROFESSORS AND LECTURERS.

The following statement of the incomes of the present Professors, is as correct as the information in our possession enables us to make it. There is, however, one source of income which is hardly noticed in the returns made to us, inasmuch as a very small portion of its produce had been distributed at the time they were made ; we mean the sum raised by the *special* and *general* lecture tickets of 3*l.* and 5*l.* each respectively, which all candidates for the Bachelor's degree, whose names do not occur in the Mathematical Tripos, are obliged to procure. The average annual number of such Degrees is about 250, and if we suppose an equal number of the two classes of tickets to be taken, their annual produce would only be 1,000*l.*: this sum is to be divided into 16 parts, two of which are assigned to each of the Professors of Chemistry, Anatomy, and the Jacksonian Professor, in consideration of the special expenses to which they are subjected in preparing their lectures and one part to each of the Professors of Civil Law, Physic, History, Botany, Geology, Mineralogy, Moral Philosophy, Political Economy, and the Downing Professors of Law and Domestic Medicine.

We have arranged the several Professors in the order of the amount of income which they have hitherto received, or to which we conceive they will hereafter be entitled when the system of lecture tickets has produced its full effect.

	£.	*s.*	*d.*
1. The Lady Margaret's Professor of Divinity—			
The stipend of 20 marks reduced by fees to . .	10	17	10
Rent charge at Terrington of 2,402*l.*, probably reduced by outgoings to	1,800	0	0
Rent of glebe at Terrington	26	0	0
Rent of premises in Cambridge	18	0	0
	£1,854	17	10
2. Regius Professor of Divinity—	£.	*s.*	*d.*
Stipend	40	0	0
Rectory of Somersham: present net receipts, but subject to large reductions in future .	1,169	0	0
Fees: their amount not stated, but very small.			
	£1,209	0	0
3. Regius Professor of Greek—	£.	*s.*	*d.*
Stipend	40	0	0
A Canonry in Ely Cathedral, say . . .	600	0	0
No fees are now paid.			
	£640	0	0
4. Regius Professor of Hebrew—	£.	*s.*	*d.*
Stipend	40	0	0
A Canonry in Ely Cathedral, say . . .	600	0	0
No fees are paid.			
	£640	0	0
5. The Plumian Professor—	£.	*s.*	*d.*
A residence at the Observatory, of which all repairs and parochial taxes are paid.			
Stipend	500	0	0
Fees: their average amount	25	0	0
	£525	0	0
6. The Lowndean Professor—	£.	*s.*	*d.*
Average income of estates for seven years . .	436	0	0
There are no fees.			

REPORT.

See Vice-Chancellor's Return, p. 15.

7. The Regius Professor of Modern History—

	£.	s.	d.
Stipend of 400*l.* reduced by fees to	359	6	8
Lecture tickets	62	10	0
There are no fees.			
	£421	16	8

8. The Jacksonian Professor—

	£.	s.	d.
Foundation estate, say	140	0	0
Parliamentary grant	96	16	11
Lecture tickets, two portions	125	0	0
Other fees, say	50	0	0
	£411	16	11

No returns have been made respecting this Professorship.

9. Regius Professor of Civil Law—

	£.	s.	d.
Government stipend of 40*l.*, reduced by fees to	33	15	9
Parliamentary grant	96	16	11
Average of fees	126	0	0
Lecture tickets	62	10	0
	£319	2	8

10. Regius Professor of Medicine—

	£.	s.	d.
Government stipend of 40*l.*, reduced by fees to	33	15	9
Rent of House in Cambridge	150	0	0
Average of fees	69	0	0
Lecture tickets	62	10	0
	£315	5	9

11. Downing Professor of Law—

	£.	s.	d.
An excellent residence.			
Stipend	200	0	0
Other allowances, say	50	0	0
Lecture tickets	62	10	0
	£312	10	0

12. Downing Professor of Medicine—

	£.	s.	d.
An excellent residence.			
Stipend	200	0	0
Other allowances, say	50	0	0
Lecture tickets	62	10	0
	£312	10	0

13. Woodwardian Professor of Geology—

	£.	s.	d.
Stipend	218	6	5
Lecture tickets	62	10	0
There are no other fees.			
	£280	16	5

14. Professor of Botany—

	£	s.	d.
Parliamentary grant of 200*l.* reduced by fees to	176	5	1
Lecture tickets	62	10	0
Other fees, say	20	0	0
	£258	15	1

See Vice-Chancellor's Return, p. 15.

15. Professor of Anatomy—

	£	s.	d.
Parliamentary grant	96	16	11
Lecture ticket, (two portions)	125	0	0
Other fees, say	25	0	0
	£246	16	11

16. Professor of Chemistry—

	£	s.	d.
Parliamentary grant	96	16	11
Lecture tickets (two portions)	125	0	0
Other fees, say	20	0	0
	£241	16	11

17. Professor of Moral Philosophy—

	£	s.	d.
Produce of estates and funds	132	16	3
Lecture tickets	62	10	0
No other fees.			
	£195	6	3

18. Professor of Mineralogy—

	£	s.	d.
Parliamentary grant	96	16	11
Lecture tickets	62	10	0
	£159	6	11

19. Lucasian Professor of Mathematics—

	£	s.	d.
Rent of estates	125	18	7
Fees, about	31	10	0
	£157	8	7

20. Norrisian Professor of Divinity—

	£	s.	d.
Stipend	100	0	0

There are no fees.

No returns have been made.

21. Sir Thomas Adams's Professor of Arabic—

	£	s.	d.
Stipend	40	0	0
From Mr. Palmer's bequest	32	18	2
No returns have been made.	£72	18	2

22. Professor of Political Economy—

	£	s.	d.
Lecture tickets	62	10	0

There is no endowment, and no Parliamentary grant is made to this Professorship.

23. The Lord Almoner's Reader in Arabic—

	£	s.	d.
Stipend 50*l.*, reduced by fees to	40	10	0

There are no fees received by him.

24. The Disney Professor of Archæology—

	£	s.	d.
Stipend	30	0	0

25. The Professor of Music—

There is no endowment, and the only fees received are for musical exercises and degrees, which are of rare occurrence.

26. The Sadlerian Lecturers—

15 Sadlerian Lecturers receive 45*l.* each. The Lecturer of Emmanuel College receives 67*l.* 10*s.*

27. The Lectores Ordinarii or Barnaby Lecturers—

	£	s.	d.
The Lector Philosophicus	3	4	0
The Lector Rhetoricus	3	4	0
The Lector Dialecticus	3	4	0
The Lector Mathematicus	4	0	0

REPORT.

TUITION.

Having now concluded our examination of the actual circumstances of the several Professorships and Lectureships of the University, as respects their endowments and emoluments, the Statutes, Decrees, and Graces of the Senate by which they are regulated, and the duties which are performed, we propose, in the next place, before entering upon the particular recommendations which we shall have to offer upon the best mode of making the Professorial Staff effectual for the special duties which properly belong to it, to review the subject of tuition as it is now carried on in the University whether by the College Tutors and Lecturers or by the Private Tutors. We have received much valuable information from the various gentlemen who have communicated with us on this subject, and we find ourselves compelled to state that there is a very general feeling of dissatisfaction prevalent respecting the present system of instruction. In another part of our Report we shall briefly describe the important change which has been made in the Colleges in regard to tuition, and which, as respects this point, has superseded their ancient statutable or customary regulations in their most essential particulars. Still more recently has grown up a system of private tuition, which has attained such an influence throughout the University, as to cause a serious interference with all other forms of instruction. Although we do not doubt that this prevalent employment of Private Tutors is due to a real want experienced by the Students, which has probably been occasioned in great measure by the increased competition for University honours and prizes, we are very sensible of the weighty objections which have been urged against the system. We purpose, in the first instance, to give a short analysis of the opinions which have been conveyed to us by various gentlemen upon the subject, and then to consider what measures are best calculated in our judgment to remove the evils complained of, and to establish a satisfactory system of instruction in the University.

Present System unsatisfactory.

P. 151.

Among the gentlemen to whose opinions we would refer upon this point, the first place is due to the Master of Trinity College, who, in the numerous communications with which he has favoured us, recurs again and again to the evils of private tuition. He has also made his thoughts public in a very valuable work on "Cambridge Education," where the subject of tuition is elaborately treated, and opinions are expressed which we are informed that the writer has seen no occasion to alter. The evils of the present system appear to Dr. Whewell to be of two kinds: (1). The great expense incurred by the Students; and (2), the enervating effects produced upon the mind by an excessive reliance upon the aids afforded by Private Tutors. "One source of considerable expense," he says, "would be "removed if private tuition were restrained within narrow limits. At present "most of the Students have Private Tutors during the greater part of the time "that they are here, at an expense of from 40 to 60 guineas a year. It would "much improve the influence of our Cambridge education upon the minds of the "Students if they were not commonly allowed to have Private Tutors, especially "during the latter part of their Undergraduateship, for the dependence on Private "Tutors enfeebles the mind, and depraves the habits of study; and the Private "Tutor's instructions having for their object merely the Student's success in a "coming examination, without the more general or dignified tone which public "teaching naturally assumes, lower the character of our teaching; and as the "Examiners, for the most part, alternate the employment of examining with that "of private tuition, this lowered character affects the examinations. The repression "or limitation of private tuition would, therefore, be no necessary loss in the way "of intellectual discipline, but the contrary; but private tuition can only be "repressed by some general measure; for so long as it is permitted Students are "not willing to relinquish it, since to do so would be likely to make them fail when "examined against those who have had Private Tutors. It would not be difficult "for the University to repress private tuition; it has done so in former times, and "even at present there exists an unrepealed 'Grace' prohibiting private tuition in "the last half-year of the Student's Undergraduateship. But this Grace is "ineffective, not having any working clause; such, for instance, as might be "supplied by requiring the Student, or his Tutor, to declare, on his becoming a "candidate for an honour, that he has not had a Private Tutor within the "prohibited time; indeed the existence of this Grace appears to be ignored by the "University.

Evidence, p. 416.

"If, however, it be inquired whether the University is likely to pass an effective "Grace repressing the practice of private tuition, I may say that I do not think that "such a result is probable. A great number of members of the Senate are engaged "in the practice; many others approve of it: probably the sympathy of the Students "themselves, so far as that has any weight, would be against any change which "would require them to exert their own minds more, and depend on others less; "so that I fear we can hardly look for any material improvement in this respect "to proceed from the University itself.

"I must add, that I do not see how any external authority can interfere with "any prospect of advantage in such a matter as this; though I think the result "would be beneficial in the way of improving our education, as well as dimi- "nishing the expenses of our Students, I do not see how it is to be attained.

"Perhaps it may be said that we ought to improve the College lectures, so "that private tuition shall not be needed, or shall be less needed; but to this the "answer is, that it would not be by *improving*, but by *spoiling* College lectures, "that they would tend most to supersede private tuition. It would be by trying, "through College lectures, to enable Students to pass their examinations without "understanding their subjects, by leaving out in the lectures all that interests "active, exact, and comprehensive minds; all that makes the knowledge acquired "at College a matter of common understanding and common interest to those "who have had their education there, and by giving to each person only such "technicalities as he could master with the least effort; and however far we were "to go in making our College lectures approach to private tuition, still so long "as they retained any of the merits of College lectures, they would not content "the ordinary pupil so well as ordinary private tuition; to which must be added, "that the pupil values more what he has to himself, what he pays for himself, "or what is given to him in a familiar and companionable tone, without any "restraint from the presence of others, so that I do not think we can make "College lectures supersede private tuition by attracting the pupils from the "Private Tutors.

"It may be said, perhaps, that we ought to make the Examinations such that "private tuition of the low kind which has been described shall not supply an "adequate preparation for them; but to this we reply, *first*, that if such a modifi- "cation of Examinations as should produce this effect were possible, it is "not likely that the Examinations will, for the present, be so modified, seeing "that a great part of the Examiners are also Private Tutors: and we reply, "*secondly*, that it is not possible so to modify Examinations that it shall not be a "good calculation for a Student who aims merely at success in the Examination, "to prepare himself for it by habitual and constant and servile dependence upon "an experienced Private Tutor, if such a mode of preparation be permitted."

We regret to observe that Dr. Whewell takes so discouraging a view of the present state of private tuition. He sees no remedy for the evils which he dwells upon but a vigorous system of repression, and at the same time he despairs of such a system being adopted by the University itself, and deprecates the interference of any external authority. This view of the subject is repeated in other passages of the letters with which he has favoured us.

The remarks of Dr. Philpott, Master of St. Catharine's Hall, on the subject of private tuition, are, in great measure, similar to those of the Master of Trinity. "The money," he says, "spent by Students in procuring this assistance "adds considerably to the expenses of their residence in the University. I believe," Evidence, p. 264
he also writes, "that the notion prevails extensively among the Students, that "the continued assistance of a Private Tutor is indispensable for the attainment "of high honours; but I think that this notion does not rest on any good "foundation. I am inclined to think, on the contrary, that the continued reliance "on a Private Tutor is, in many cases, of great injury to the Students, and that "much sounder and more knowledge would have been acquired and a higher "honour gained, if the Student could have been persuaded to rely more on his own "strength and resources, and either to depend altogether for guidance and "assistance on his College Tutor, or to have recourse only occasionally, and "towards the end of his course, to the help of private tuition."

We think the following remarks of Dr. Philpott convey a very just view of the subject:—"It cannot be denied," he says, "that private tuition may be "of great advantage in mathematics, as in all other subjects, when both the "Tutor and the Student are disposed to avail themselves of the opportunity

REPORT.

"properly. Private tuition is valuable when the Tutor endeavours to assist the "mind of the Student to exert itself, and points out sources of information and "modes of exercise of mind, and encourages a regular and systematic course "of study, and when, at the same time, the Student avails himself of the "advantage properly. But it cannot fail to be injurious when it attempts to "supply, by ready prepared scraps of information, the pupil's own exertion of "mind, and to prevent him from searching for himself or using his own "faculties in acquiring knowledge. I conceive that good private tuition must "thus always have positive value in education; and while its value is recognised "and felt to be important in securing the rewards of competition, it is difficult "to prevent abuses of it from growing up also side by side with its advan-"tages."

Evidence, p. 180. In noticing the prohibitory Grace, referred to above by Dr. Whewell, the Master of St. Catharine's Hall states his opinion, that means would be found to p. 265. defeat any attempts to put an end to private tuition by prohibition. "The remedy," he says, "to be adopted against *the abuses* of private tuition, seems to me "to be looked for from other sources than from direct prohibition." He then proceeds to indicate three several modes by which he thinks the abuses in question might be sufficiently checked. "One most obvious means," he writes, "of check-"ing such abuse, is to be found in carefully watching and guarding our Examina-"tions by asking the candidates for such kinds of knowledge, and by putting the "questions in such a way, that the difference may be made to appear between "those who have learned by rote and those who have really exercised their own "minds in the acquisition of knowledge; again, the attempts which have been "made of late years, and which are still going on, to make the course of study "for a common degree, and for honours, *definite and well known*, may be "expected to have effect in showing the Students that the assistance of a Private "Tutor may, in many cases, and for the greater part of residence, safely be "dispensed with.

"Another obvious mode of restraining private tuition, is by increasing the "number and value of the public College lectures. The Students in a College "might thus be divided into a greater number of classes, each class containing "persons of nearly the same degree of attainment or capacity, and the super-"intendence of each class by the College Lecturer be thus made more nearly "to approach to the method and give the advantages of private tuition. If the "fee paid for College tuition (10*l.* for a pensioner per annum) were increased, an "arrangement might be made which would enable Tutors of Colleges to secure "the assistance of some of the distinguished members of other Colleges, or of "Graduates living in the town (as is even now the case in some instances), to "aid in conducting the course of education of the Students, and in preparing "them as candidates for mathematical and other honours.

"Another obvious mode of attempting to check the abuses of private tuition "seems to be to open in greater number different courses of study and of compe-"tition for honours (such as those provided by the recently constituted Triposes "for Moral and Natural Sciences), so as to provide scope, according to the tastes "and inclinations of Students, to the free and independent efforts of their own "minds."

In these remarks of Dr. Philpott we find a general concurrence on the part of many experienced College Tutors and Lecturers who have addressed us.

p. 169. Mr. Hughes, for many years Tutor of St. John's College, says, "he does not "think there is any difficulty in the *large* Colleges in finding able men to fill the "offices of Tutor and Lecturer. In *small* Colleges there may be a difficulty. "The only plan I can suggest," he adds, "is to raise the fee for tuition, and "increase the staff, which would be easy enough in large Colleges, and might be "practicable in small Colleges, by enlisting the services of able men in the Uni-"versity who are not employed on the existing staff of any College. This plan "would be really economical, as dispensing, in great measure, with Private "Tutors."

p. 176. Mr. Charles Merivale considers the great object to be attained is *a thoroughly scientific system of Examinations*: he would also increase the staff of Lecturers in large Colleges to some extent, so far as it could be done without increasing the p. 174. charge for tuition; and he thinks that "an arrangement by which three or more "small Colleges could be united for the purposes of tuition, by opening their "emoluments one to the other, and extending the circle from which election to

" Scholarships and Fellowships could be made, would be of immense importance, " as it would allow of a fair competition between the Colleges, which does not " now exist. REPORT.

" Nevertheless," Mr. Merivale adds, " I do not think, even supposing so great " a change as this to be made, that private tuition could be practically forbidden, " or, perhaps, materially checked by any improvement in the tutorial and profes- " sorial systems.

" It has, therefore, been a question with me whether *College tuition* should not " be abolished altogether, and the Students be left to private assistance, guided " by College Examinations, and placed under some College or University regu- " lations. But I feel that the benefits derived by the Student from receiving " instruction, often of the highest quality, from the same persons whom he is " accustomed to respect as the superintendants of his moral conduct, his friends " and advisers, are too great to allow of such a sacrifice."

In another place, Mr. Merivale expresses his desire to urge the principle of Educational Reform which he would advocate.

" I think," he says, " that it is vain to attempt to assign by legislative enact- Evidence, p. 175. " ment the due place and subordination of Professors, College Tutors and private " Assistants. These must and will be regulated by the sense the Students entertain " of their own interests. The only security the University can have for the " efficiency of the instruction imparted through any of these channels is through " its *Examinations*. I would, therefore, leave these modes of instruction to " compete with one another, and regulate themselves; that is, I would not " materially interfere with the existing system, by which the Professors deliver " lectures to as many as choose to attend them, the College Tutors employ a mixed " voluntary and compulsory system, and the Students are free to seek further " assistance from private hands at their own discretion."

There is, perhaps, more coincidence of opinion among the gentlemen who have Remedies proposed. written to us on the subject of improved and extended means of College tuition than on any other mode of meeting the evil which is complained of. Opinions to Evidence, p. 144. this effect are expressed by Mr. Arlett, for many years Tutor of Pembroke College, p. 188. Mr. J. J. Smith, formerly Tutor of Gonville and Caius College, Mr. Swainson of p. 193. Christ's College, and Mr. France and Mr. A. M. Hoare of St. John's College. p. 284. p. 167. Mr. Warter, late President and Tutor of Magdalene College recommends that all the resident Fellows of each College should be employed as a staff of Teachers, distributing the different subjects in such a manner as to secure competent Lec- p. 202. turers in each department, and in order to obtain sufficient means to remunerate so large a body, he would double or treble the present payment for public tuition, as a measure of ultimate economy.

Mr. Rowland Williams, late Tutor of King's College, and now Vice-Principal of St. David's College, Lampeter, writing with more especial reference to instruction in the department of classical literature, suggests the formation of University classes, by Masters of Arts acting as Sub-Professors or Prælectors. " The system p. 295. " of private tuition," he says, " has often been canvassed; and the expense which " it entails upon poor Students is a very serious burthen. If encouragement were " given to the *formation of classes* by Graduates (acting either with the title of " Private Tutors or of Sub-Professors or Prælectors), an equal amount of infor- " mation might be given at a far cheaper rate."

Mr. Blakesley, for several years a Senior Tutor of Trinity College, whose opinion is entitled to much respect, thinks the evils of private tuition are to be met by improvements in the system of Examinations. " The staff," he says, " at Trinity p. 147. " College, at the time I was Tutor, consisted of 12 persons, three Principal " Tutors and nine Assistant Tutors. The number of Students under lecture in " residence might have averaged about 350. I think there was quite sufficient " educational force; certainly there would have been had the standard of admis- " sion to the College been as high as it ought to be in every College of an Univer- " sity. There was excellent instruction in Greek and Latin literature and " philosophy, and in mathematics, both pure and mixed." Mr. Blakesley, however, while he thus expresses his complete satisfaction with the quality and amount of instruction which was placed within the reach of the Students of his College, at the same time acknowledges that there were several causes operating to the disadvantage of the system of College tuition. " There was always," he says, " a p. 148. " great disposition in the Students to resort to Private Tutors, and to plead " attendance upon *them* as a ground for exemption from attendance upon College

REPORT.

"lectures." This depreciation of the College teaching on the part of the Students, Mr. Blakesley ascribes chiefly to a desire on their part for special qualifications for the attainment of University distinctions, "which," he says, "College lectures "neither give nor ought to attempt to give." At the same time, however, that Mr. Blakesley expresses his opinion that the staff of Tutors of Trinity College is in all respects sufficient for its purpose, he seems to think that to attain the same efficiency in smaller Colleges, it would be necessary to resort to an union of three
Evidence, p. 150. or four of such societies for a common system of instruction. "An arrangement," he thinks, "might be made between the Tutors of these as is made between the "Tutors of Trinity College for a classification of their pupils, and for securing the "advantage of the principle of the division of labour in lecturing. I do not see the "impossibility of extending this union even further—to the free election of "Scholars and Fellows indifferently among the Students of the Colleges so "united. And I am disposed to think that such a confederation, if the terms of "the union were framed on a liberal basis, and the arrangement is carried out in "a generous spirit by the individuals who were parties to it, would in some respects "secure the advantages now possessed by the large Colleges, and escape the "drawbacks. For instance, an union of four Colleges, which in the aggregate "mustered as large a number of Students as Trinity, would be able to secure "equally efficient lectures, and at the same time would supply much better accom-"modation both in hall and chapel, and be free from the evils attendant on an "accumulation of very great numbers within the same walls."

Mr. Thompson, Tutor of Trinity College, seems to find less fault than most persons who have communicated with us in the present system of tuition. He speaks, however, only in reference to the members of his own College. From his statement it would appear that private tuition is not carried on to any very excessive
p. 197. extent among the candidates for honours of Trinity College, and Mr. Thompson thinks that, so far as classical Students are concerned, if the University had two or three, instead of one Classical Professor, all would be done which the most exacting Students could require. He is not, however, by any means so well satisfied with the system of private tuition which is carried on for the benefit of those
p. 198. who are only candidates for an ordinary Degree. This class of Tutors, he states, has unhappily become more numerous in the University since the year 1838, when the Senate issued a new programme of studies for Undergraduates not candidates for honours, including a variety of subjects not previously required from such persons. The existence of this class of Tutors Mr. Thompson considers as a nearly unmixed evil.

p. 222. Mr. Cooper, Tutor of Trinity College, states that he "has never known an "instance of a Student taking mathematical honours without the assistance of a "Private Tutor. Students," he says, "who are well prepared in their mathematical "subjects, when they commence residence, sometimes dispense with this assistance "until their second year; but so far as my experience extends, no one, aiming at "high honours, trusts to the public teaching of the College or the University after "his first long vacation." Mr. Cooper adds, that he "believes this system to be a "necessary consequence of our present system of examinations, and on the whole "he considers it advantageous." He is, however, desirous of two alterations in respect to it—(1) that there should be a more free and regular communication between the Private and the College Tutor; and (2) that the charge for private tuition should be reduced, "which," he says, "appears at present to be out of "proportion with the scale of charges for public teaching and the general advan-"tages of the Institution."

p. 153, In another communication Mr. Cooper says, that "the Lecturers' functions are "superseded, to a considerable extent, by the Private Tutors. The competition for "University honours is so great that the Students eagerly seize upon any advan-"tage that can improve their prospect of success; and as the Private Tutor can "devote more of his time to the individual Student, and carry him more rapidly "and with less exertion over his field of study, they lean more upon his assistance "than that of the College Lecturer. In the present state of our mathematical "examinations for honours, I believe that it cannot be otherwise. I do not think "that the higher classes of Students could acquire that readiness in displaying the "knowledge they possess, which the work of the Senate-house demands, with-"out some private assistance in addition to College Lectures. The Lecturers are "both able and willing to give more attention to the wants and difficulties of "individual Students than is at present given or sought for by them; but I do not

"think that any system of public instruction can entirely supersede the use of "Private Tutors. There will always be a class of persons resident in the Univer- "sity, but not officially concerned in its teaching, of great attainments, and well- "earned reputation for skill in imparting instruction, and to these successive "generations of Students will naturally resort as the safest guides to distinction. "There is also a pleasure and an advantage in the more close and confidential "relation which usually subsists between the Pupil and the Private Tutor, as "compared with that which holds of the Lecturer and the members of his class, "which will be appreciated and, where it is possible, obtained; and there is, to "some Students, a satisfaction in selecting their own guide, which will always "interfere with the regular working of a prescribed system."

We have now given a summary of the more important remarks which have been conveyed to us on the subject of tuition. There are, however, other observations expressed in the evidence which we have received deserving of much consideration, and we would refer especially to the statements made by Mr. Hildyard, Mr. Mathison, and Mr. Wratislaw in reply to our inquiries on this point.

Evidence, p. 165. p. 249. p. 213. p. 214.

It will have been seen from the analysis we have given of the replies which we have received, that while there is a very general dissatisfaction with the present state of tuition in the University, no one has attempted to prescribe any very complete and effectual remedy for the evils complained of. The only decisive one, that of prohibiting private tuition, is generally deprecated, and even those who suggest it seem to despair of its being ever adopted, or, if it were, of its being effectual for the objects which it is intended to attain. As we have already expressed an opinion that the practice of private tuition is due to a real want experienced by the Student, it will have been anticipated that we should not deem it satisfactory to resort to measures of repression. To remove the cause, or, in other words, to provide an unobjectionable mode of supplying the real wants which are felt, is, in our judgment, the only proper way in which any evils of the system that admit of a remedy can be properly dealt with.

Prohibition of private tuition unsatisfactory.

It will also have been noticed that one of the chief embarrassments in the way of a satisfactory solution of the question consists in the difficulty which would be generally experienced by the smaller Colleges, if they were to attempt to provide a staff of Tutors competent, both in number and variety of attainments, to afford the requisite amount of instruction and with the requisite classification of the Students, in all the departments of University study. Moreover the difficulties to which we have referred, so far as they may have been already experienced by the smaller Colleges, in providing instruction in sufficient amount and quality for the present University Examinations, must in a short time be greatly aggravated, now that the University has extended its range of honours and afforded to the Student an opportunity to win distinctions in other important departments of human learning. To meet such difficulties it has been proposed to group several such Societies into a confederation for the purpose of giving their instruction in common. But we are inclined to think there would be found in practice objections almost insuperable to such a mode of proceeding, and at best it would require a combination of so many conditions to be satisfied, that we cannot be induced to rely upon it with any confidence of success.

The smaller Colleges.

An objection also of much force has been urged against the present system of College tuition in general;—that it is, for the most part, only a temporary employment during a few years of early life, and not a definite and acknowledged career to which a man of eminence may, if he please, devote himself, as to the business and profession of his life. Mr. Blakesley has made some valuable observations on this point. "I think it quite certain," he says, "that the difficulty of "retaining the best qualified Students in the University, after obtaining Fellow- "ships, has been materially increased of late years by the course of events. It "will be remembered that, practically, there is no obligation to residence attached "to Fellowships. The alternative, therefore, is between a Fellowship with the "prospects of official employment in the University, and the same Fellowship with "prospects of advancement in the world. With the public opinion of the country "so strongly in favour of a practical life as it is, it cannot be a matter of wonder "that the choice of young men should generally be in accordance with it." Mr. Blakesley then enters into a detailed enumeration of the various causes "ope- "rating," as he says, "prejudicially upon the particular object of securing the best "qualified persons for permanent residence in the University, so as to provide a "satisfactory succession of College Tutors and University Professors. The whole

College tuition in general.

Evidence, p. 149.

REPORT.

"question," he adds, "may, in my opinion, be summed up in a very few words, "as follows:—

"The only prospect of securing a regular supply of well-qualified persons to "any employment in the country is to give it the character of a *definite career*. "The anomalies of ecclesiastical preferments did, antecedently to the recent legis- "lation, contribute very considerably to this result. The benefits of the legislation "have therefore been purchased by the sacrifice of it. And on the other hand, "the same effect has been increased by the opening of new lines of employment "of a kind to attract the attention of young men of capacity *at the time when they* "*are making up their minds* as to the course they shall pursue in life.

"From what I have said, it will be seen that I consider the evil in question, "which I regard as one of deep importance to the nation, only susceptible of perfect "cure by measures which would secure an appropriate career to that particular "class who are the depositaries of the civilization of the age, and the principal "agents in its transmission to others. In other words, the pursuit of science should "be sufficiently recognized as a definite calling to warrant those who feel themselves "competent to engage in it in refusing to relinquish it in favour of the ordinary "professions, such as the bar, the church, medicine, and the several branches of "the public service."

Mr. Swainson, for some time Tutor of Christ's College, has also some judicious observations on this point to which we would refer:—

[a]Evidence, p. 195.

"I do not," he says, "consider that the openings alluded to have served so "much to create an inducement to leave the University, as they have furnished "the means of obtaining a livelihood elsewhere to those who have other induce- "ments to leave. For instance, for one anxious to fulfil his duties as a Minister "of Christ there is as great and important a field within the walls of a College "as in the populous districts of a town, and very many of the resident Fellows so "consider it. The difficulty of retaining men of ability in the University in my "opinion lies in this, that the Lecturers and Tutors are underpaid; their offices "lead to nothing; when they cease to hold their Fellowships their employment "is gone; they must begin life afresh. And moreover, this shortness of tenure "of office affects the character of the instruction given. The duty of lecturing "is not the business of life; no one hopes that it will be so, and therefore cannot "enter into it with such energy and devotion as is desirable. The present limited "number of Professorships would not, however well they were endowed, furnish "a remedy to this defect, which seems to me to be owing rather to the uncer- "tainty of tenure, than to any other cause."

Mr. Swainson confines his observations to the state of the smaller Colleges: but it appears to us that there are also serious objections to the mode in which the tuition of the larger Colleges is provided for. The practice for the most part is, that the emoluments of the tuition should be devoted chiefly to the creation of a very lucrative office in the person of the Senior Tutor. The Assistant Tutors or Lecturers are generally very inadequately remunerated; and as their inducements to continue to occupy their posts depend greatly upon the prospect of a vacancy in the office of Senior Tutor, frequently a remote contingency, there is naturally a strong tendency to regard the duties of a Lecturer as one only of a temporary character.

Motives to the employment of private tutors.

We are of opinion that one of the chief motives to the employment of Private Tutors is to be found in the free exercise of the power of selection which the Student enjoys. Nor can we see any objection to such a power, provided it do not lead the Student to the choice of unsuitable persons to instruct him, or tempt the teacher to accommodate himself unduly to the wants of his pupil. Such evils as these we agree with Dr. Philpott in thinking must be provided against by proper attention to the style of examination pursued in the University. On the other hand, it cannot be doubted that there are great practical benefits resulting from such a power of choice, inasmuch as it must necessarily stimulate the Tutors to greater exertions for the advancement of their pupils, and also lead the latter to work with confidence and pleasure under the conduct of a guide for whose selection themselves only are accountable.

Conditions required in any plan of instruction.

From the observations which we have premised we arrive at this conclusion, that in any plan which may be devised for ameliorating the state of University tuition, the two principal conditions to be satisfied are, (1) that there shall be a definite and permanent career provided for the teachers, and (2) that a reasonable latitude of choice shall be allowed to the pupils as to what teachers they will

select for their guidance. Two other conditions of a secondary character, and closely connected with each other are, (1) that there shall be adequate facilities for the classification of pupils, and (2) due economy in the administration of the system.

P. 27, 28.

In another part of our Report we have expressed an opinion that it would be very desirable that a general examination should be passed by all Students in the course of their second year; after which it should be competent for those who had satisfied the tests of such examination, either to pursue the mathematical or classical studies for the two older Triposes, or to select some science or study different to that which had previously engaged their attention as the complement of the course to be passed through prior to admission to the B. A. Degree.

Preliminary Examination.

The University has recently relaxed the stringency of its rule regarding the necessary connexion between the examinations for mathematical and classical honours. We see no advantage in the maintenance of such necessary connexion between any examinations for academical honours, and we are disposed to think that the greatest encouragement to habits of diligent study would be found in offering to the voluntary selection of the Student, at an early period of his career, a variety of modes of winning distinction according to the bent of his own inclination and talents.

Many Students coming up to the University well prepared would require little assistance to pass satisfactorily such a general examination as that we have referred to; and such persons would doubtless, as at present, be looking forward to, and preparing themselves for, the severer tests to be satisfied in the various examinations for honours. On the other hand there would certainly be a large body of Students who would require careful preparation to undergo an examination even of moderate difficulty. The requisite provision for preparing Students for this preliminary examination we are disposed to leave in the hands of the several Colleges. No Society would be without the means of supplying the wants of such Students, and no one could discharge this part of academical duties so appropriately as the Collegiate bodies themselves. But for the higher duty of instructing those who had passed the preliminary examination, and whom, as we have said, we should be glad to see left free to select any department of study which might be deemed worthy to be admitted within the system of the University, we are desirous of creating a numerous staff of Public Lecturers. We should prefer the title of Lecturer to that of Professor or Sub-Professor, mainly because we think the teaching of such persons must be for the most part catechetical, and therefore different from that of the Professors. A new title will also be desirable on other accounts, inasmuch as we shall propose that both the mode of appointment, the functions and the remuneration of these Instructors shall be different from those of any now known to the University. Among such Public Lecturers we should leave great freedom of choice to the Student as to whose lectures he should attend. For we should propose that the remuneration of these Teachers should be partly a fixed stipend dependent on continued residence within the University, and on compliance with such regulations as may be framed for their guidance, and partly the fees paid by the particular Pupils attending their respective classes. We are of opinion that it would not be difficult to provide an adequate fund for the supply of such permanent stipends. Residence in the University unfettered by the ties of celibacy and Holy Orders would offer great attractions to many persons of high attainments, even without the temptation of large fixed emoluments. Mr. Swainson remarks, "that the Lecturer's office might be deemed permanent, "and even if the salary were continued small, still as being permanent it "would attract and retain gentlemen of the highest qualification." And in another place he says, "I believe that it would be more easy to work the smaller "Colleges if there were a prospect held forward to those who are employed "in the tuition that they need not expect to resign all connexion with it when "they cease to be Fellows. Good Lecturers would be gained and retained, "under such circumstances, who now never become connected with the College "duties, or if they do so, are soon again dissociated and their places supplied "with fresh hands. The position of such men would be good, and they would "therefore be secured even at a comparatively low salary."

A new body of Public Lecturers.

How to be remunerated.

Evidence, p. 195.

p. 196.

There are some anomalies in the present system of fees for College tuition. These fees are uniform throughout the seventeen Colleges, although we apprehend it is within the competence of any College to vary them at pleasure. They have been settled at various times by a common agreement among the Tutors on a

Fees for College Tuition.

Report.

friendly reference to the Heads of Colleges, and the result of such references has been recorded among the Decreta Præfectorum.

The following scales of quarterly payment have been agreed on at the several dates mentioned:—

		£	s.	d.
27 Feb., 1721, for a	Fellow Commoner	3	0	0
,,	Pensioner	1	10	0
,,	Sizar	0	15	0
,,	Bachelor of Arts	0	10	0
14 Nov., 1767, for a	Nobleman	8	0	0
,,	Fellow Commoner	4	0	0
,,	Pensioner	2	0	0
,,	Sizar	0	15	0
,,	Bachelor of Arts	0	15	0
28 June, 1802, for a	Nobleman	10	0	0
,,	Fellower Commoner	5	0	0
,,	Pensioner	2	10	0
,,	Sizar	0	15	0
,,	Bachelor of Arts, Fellow Commoner	2	0	0
,,	Ordinary B. A.	1	0	0

and this last scale still continues in force.

Recommendations.

It appears to us that, although the amount is inconsiderable, it would be difficult to defend on adequate grounds the charges made for tuition prior to residence and subsequent to the B. A. Degree, and we should think it an advantage if they were discontinued. In our opinion it would be a satisfactory system if the payment, whatever might be its amount, which we think must be left to be determined by the University from time to time, were divided into two parts, according to such a proportion as might be deemed fitting, one of which should be devoted to the remuneration of the College Tutor acting in the capacity of sponsor or guardian of the Student's conduct, and the other should be appropriated to defray the cost of his instruction, being paid to the College up to the time of passing the general preliminary examination, and afterwards to the University for the maintenance of the staff of Public Lecturers. The separation of the payment into two parts will be convenient even while the Student depends upon the College for his instruction, as it will enable the Sponsor to unite the office of instructor with his other duties, or to confine himself to his own special province, according as his own inclination or the judgment of the collegiate authorities may deem it expedient.

Public Lecturers; how to be paid.

We are further of opinion that both these staffs of Instructors, as well the College as the Public Lecturer, should be subsidised by payments out of the corporate funds of the several Colleges. But as we shall have occasion to treat of the obligation devolving upon the Colleges to contribute from their corporate revenues towards the maintenance of the Educational Staff of the University, with whose prosperity and interests their own are indissolubly connected, we reserve for the present the statement of the reasons which have induced us to come to this conclusion.

P. 85.

How to be appointed.

Another important question is the mode in which the Public Lecturers should be appointed, and the constitution of the authority by which their several duties should be assigned from time to time.

These functions we are disposed to leave in great measure in the hands of the several Boards of Studies mentioned in other parts of our Report, the number of which will correspond to the various departments of learning for which it is proposed that Academical honours should be awarded. It would seem that these Boards would be the proper authority for selecting and nominating the persons fit to hold the office of Public Lecturers in the particular branches of study confided to their several superintendence. No other persons could be better expected to possess the requisite information as to the qualifications of Candidates and the wants experienced by Students in their respective departments. Such nominations would of course require confirmation by Grace of the Senate, and therefore be made subject to the controlling supervision of the Council of Legislation which is proposed to be created. In making their nominations these Boards would, as we have every reason to hope, be guided by no consideration but the suitableness of the Candidates for the discharge of the particular duties belonging to the Lecturer's office. Neither celibacy nor Holy Orders would be a necessary

P. 14.

condition for any man's promotion. No doubt the most suitable candidate would often be found among the Fellows of a College, but the relinquishment of his Fellowship would not interfere with the tenure of his Lectureship. He would have every stimulus to exertion. His emoluments and his standing in the University would depend in a great measure upon the number of his Class. It would probably be necessary that, if the fund for the payment of the fixed stipends were exhausted by previous appointments, additional Lecturers should be appointed depending entirely upon the fees received from their Classes, and looking forward to the advantages of a settled stipend only upon the occasion of a vacancy among the Senior Lecturers.

A code of Bye-laws to be carefully framed by the authority of the Senate would be requisite to apportion among the different departments of study the fund which it is proposed to raise as well out of the quarterly payments of the Students for tuition as by subsidies from the corporate funds of the several Colleges.

A code of Bye-Laws.

P. 81.

We think it right to say, that we do not expect that the institution of this office of Public Lecturer would entirely do away with the employment of Private Tutors. But we are of opinion that the system which we recommend may be made so elastic as to supersede, in great measure, the necessity for their employment. Those who would be most likely to become eminent as Private Tutors would naturally from time to time be incorporated among the Public Lecturers. A means would thus be afforded not only of providing all that was necessary in the way of teaching for the Student, but also of absorbing in a recognised and satisfactory service all who would be desirous of the employment of Teachers. Indeed, we are disposed to think that the existence of Private Tutors in any considerable number in conjunction with such a body of Public Lecturers as we have described, might be taken as a measure of the inefficiency of the working of the system, and so become the means of leading to its improvement and extension in proportion to the wants which were actually seen to exist.

Beneficial results from a good system of Public Lecturers.

It appears also that another advantage will be derived from the institution of the office referred to. It will be the means of retaining in the immediate service of the University a body of men of high character for learning and science.

Formerly the provision of cathedral or other preferments, without cure of souls, served in some degree to effect this object; but the number and value of such preferments has of late years been greatly reduced, and the public opinion, both of the clergy and laity, seems to tend to the still further diminution of all such preferments, unless connected with important diocesan or other duties. The Fellowships and Tutorships of our Colleges, much as they may contribute to the encouragement and reward of young men of learning and ability, are subject to the condition of celibacy, and therefore cannot be considered as affording a permanent provision or a *definite career* in life; and it is rarely, if ever, in the contemplation of those who gain them to make them more than stepping stones to professional or other employments elsewhere. The changes, therefore, which have been produced by recent Acts of the Legislature in the value and character of the preferments which are open either in the law or the church, have materially modified the various motives, frequently very slight and evenly balanced, which determine the choice of a profession; and whilst under the former state of things a distinguished young man, at the conclusion of the first stage of his academical life, would have devoted himself to the duties of public tuition in the University, with some view to cathedral or other preferment which might at some period afford a permanent resting place and provision for life, he would now probably be disposed, when nearly all such prospects have disappeared, either to select the much more lucrative profession of the law, or at once enter upon the performance of parochial duties, with a view to a permanent settlement in life as a parochial minister. We are inclined to attribute to the influence of such causes the somewhat less firm hold with which men of the highest attainments and character have been retained of late years by the prospect of filling the offices of the University and Colleges, so few of which are of a permanent character.

See Mr. Blakesley's Evidence, p. 149.

We find the same opinion more or less strongly expressed in many of the answers which have been addressed to us in reply to one of our queries with respect to the effect produced by recent legislation, both in the law and in the church, upon the prolonged residence of distinguished men in the University. Mr. Thompson, Tutor of Trinity College says, "The changes enumerated in this question have "undoubtedly been injurious to the University. Able men are driven from us

Evidence, p. 199.

REPORT.

"not so much in consequence of the inadequacy of the remuneration received "by Tutors and other College officers, as by the absence of any outward induce- "ment to devote themselves to literary or scientific pursuits as the business of "their lives. Many would be retained if there were a prospect of obtaining "*permanent* offices in the University, Professorships for instance, unclogged with "the conditions of remaining celibate and entering into Holy Orders. The "natural substitute for the ecclesiastical preferments, the prospect of which in "former times kept many able men among us, would be the creation of additional "Professorships. An increase in the proportion of lay to clerical Fellowships "would be a natural corollary to this proceeding (it being provided that such "lay Fellows should lose their Fellowships in case of non-residence).

"The creation of such a body of Professors may seem a visionary scheme, "and it is with some hesitation I propound it. The only chance I see of its "realization is this; let powers be given to every College to convert a certain "number of its Fellowships into Professorships, a number proportionate to "the amount of its resources, or let it have power, without diminishing the "number of Fellows, to institute well paid Professorships, reserving to itself a "voice in the nomination of the Professor. A precedent exists in this College "which, shortly after its foundation was called upon to pay an annual stipend of "40*l.* to the Professors of Divinity, Hebrew, and Greek, in addition to main- "tenance and chambers in College."

We have already referred to the opinions of Mr. Blakesley and Mr. Swainson upon this point.

Evidence, p. 210. The Master of Downing College says, "I think the causes here enumerated "have tended materially to engage the abler University men in the practice of "professions more generally and earlier than heretofore.

"They are thus themselves prematurely withdrawn from those larger and "more exact studies, in Theology, *e. g.*, or in the history and philosophy of Law, "which are essential to solid and dignified professional eminence; and on the "other hand, the Faculties and the study of Theology, Law, &c., are weakened "and discouraged in the Universities. And even though the Professors in these "Faculties may be quite competent to their position, such additional inducements "to an immediate entrance into professional life tend materially to weaken and "diminish their classes. The abler Students, whose intelligence and sympathy "would have encouraged the Professor in larger historical research, and a "more thorough investigation and exposition of principles, are, by such induce- "ments, withdrawn from the University very soon after their first degree."

Mr. Wratislaw, Tutor of Christ's College, concurs in this opinion:—

p. 215. "As far as my observation has extended, the effect of the great increase of "the emoluments, offices, and civil honours of the law, and of the recent legisla- "tion with respect to cathedral and other preferments in the Church, as well as "the very general prevalence of higher views with respect to the obligations of the "Christian ministry in inducing the more distinguished Students after attaining "Fellowships to quit the University, and engage at once in professional studies, or "in the active duties of a parish, has been most prejudicial to the University. "And a similar, or even more prejudicial effect has been produced by the "improvement, both in social position and emolument, of the Masterships at "the public and other schools in various parts of the country. These changes have "undoubtedly tended to increase the difficulty of retaining the best qualified "persons to fill the more important offices in the Colleges and the University."

Dr. Philpott, the Master of Catharine, expresses the same opinion, though

p. 183. less strongly: "I am disposed to think that, from the causes mentioned in "this question, a greater number of persons, who have gained distinction in the "University, leave College and enter upon active professional duties at an earlier "period than formerly. Many who thus quit the University, would have filled "important offices in the Colleges and in the University (if they could have been "retained in it) with great advantage to our institutions and course of education, "and the loss of them is felt and regretted accordingly. But I am not aware "that, with such emoluments and such prospects of useful and honourable occu- "pation as the University is able to afford, any great difficulty has been found in "securing the services of well-qualified men for University and College offices."

P. 172. In treating of the Statutes of Colleges we shall have occasion to express our opinion that the condition of celibacy at present attached to all Fellowships cannot conveniently be relaxed. The existence, however, of this and other restric-

tions as well, no doubt, as the changes which are due to Acts of the Legislature, and the increased number of scholastic appointments in the country, have a tendency to impair the character of the University as a seat of learning, by withdrawing many of her ablest sons at an early period of their career. The institution of a body of Public Lecturers freed from the restriction of celibacy and Holy Orders, and holding permanent, though perhaps poorly endowed appointments, will probably be an efficient means to counteract this tendency; and it seems to us to be the most appropriate mode of raising the character of the University as a seat of learning, as well as a place for the instruction of youth, to make the discharge of the various academic duties, and the proper reward of such services, conduce to so desirable an end.

ADDITIONAL STIPENDS FOR PROFESSORS AND PUBLIC LECTURERS.

Each College to contribute funds.

In describing the new office of Public Lecturer, which we are desirous of seeing instituted in the University, we have stated our opinion that a portion of the fixed stipends of these Instructors should be derived from a contribution, to be made by each of the Colleges. To the same source we must also look for additional stipends in aid of the existing Staff of Professors, and to endow such new Chairs as may appear to be necessary.

The necessity for resorting to the College Foundations for the means of providing an adequate staff of Teachers appears to have suggested itself to the Master of Trinity College. "The new studies," he says, "which have been introduced or Evidence, p. 207.
"encouraged of late by the Universities, may be thought to require the esta-
"blishment of some corresponding studies in the Colleges, and thus we may need
"a new class of teachers. I do not think that any external power can guide the
"Colleges through difficulties of this kind, but it appears very likely that the
"independent action which is necessary to their life, and which generally finds a
"way out of their difficulties, might be aided by giving them some additional
"powers of the same kind as those which several of the Colleges have obtained on
"particular occasions, by special application to Government. Suppose, for
"instance, merely for the sake of illustration, it were made practicable for them to
"alter the conditions of tenure of some of their Fellowships, adding to the conditions
"certain duties of residence and instruction, and in return relaxing certain obli-
"gations, as Holy Orders and celibacy. By such a change the commuted Fellows
"might really acquire the position of Professors, and even of University Professors,
"for there is no reason why their instruction should be confined to the members
"of their own College. And there would be a great advantage in providing in
"this manner a class of College Professors, who might give instruction in the
"subjects of the New Triposes, since such instruction is needed in order that
"the Triposes and the other measures for encouraging the Moral and Natural
"Sciences, may produce their effect."

A similar opinion has been conveyed to us still more distinctly by other gentlemen.

Mr. Blakesley writes—"Such a fund [for endowing existing Professorships or p. 150.
"erecting new ones] might, in my opinion, be advantageously augmented by
"the suppression of some of the Fellowships in the different Colleges. This
"object I should pursue until about 20 per cent. of the number had been sup-
"pressed, or in other words, until each College was burdened with the payment
"of a contribution (equivalent to the amount of dividend on 20 per cent. of its
"Fellowships) to the Professorial Fund. Provisions might, in my judgment, be
"framed without difficulty which would bring this state of things about gradually,
"and prevent any vested interest from suffering hardship."

We have already quoted the observations of Mr. Thompson, Tutor of Trinity College, upon this subject. Mr. Merivale, formerly Tutor of St. John's College, says, "The College funds ought, in my judgment, to be assessed for the purposes p. 176.
"of the University." And in another place he writes, "The fees which Students
"pay to University officers, Professors, the Public Library, &c., are small; p. 173.
"nevertheless, if means could be found to make the College property assessable
"for University purposes, I should be glad to see the Students still further
"relieved from such burdens."

Mr. Rowland Williams, Fellow of King's College, writes to the same effect: "It p. 296.
"may be suggested that, while the University is poor, the Colleges are compar-

REPORT.

"atively rich; and although any measure involving the principle of confiscation "would inspire natural aversion and alarm, there appears no just reason why the "element of property, which in ordinary cases is made to enhance the payment "of fees for graduating, should, in the case of *Fellows of Colleges*, be altogether "overlooked. Perhaps the payment at present required of *Grand Compounders* "is excessive; but, in any reconsideration of the scheme, an arrangement might "probably be made by which the various Colleges should contribute to the "University chest, either in proportion *to the number of Degrees conferred on their* "*Fellows during the year*, or perhaps to the number of their Fellows possessing "the franchise, or on some other equitable scale."

Evidence, p. 215. Mr. Wratislaw "suggests the attachment of several Fellowships (or their "incomes) from each College, in proportion, free from all College duties and "restrictions, to permanent Professorships in the University."

p. 164. Mr. Gunson, Fellow and Tutor of Christ's College, says, "The plan of "compulsory attendance upon the Lectures of some one or more of the Professors "in operation with respect to candidates for ordinary degrees, seems to work "well, and might, I think, be usefully extended to all Students. If the University "Examinations were so arranged, that the subjects on which the Professors are "lecturing should form part of such Examination, little compulsion would be "required, as Students would find it their interest to attend the Lectures, and "would cheerfully pay a small sum for so doing. Suppose each Student paid "5*l.* during his course, I apprehend that a sum of 2,500*l.* might thus be annually "raised. To augment this, the Colleges should be taxed either in proportion to "their respective revenues, or the number of Students in each. If the sums set "apart for the ordinary maintenance of the Colleges should be insufficient to "meet this additional payment, (as in most Colleges, I believe, would be the "case), then the non-resident Fellows might fairly be called upon to surrender part "of the emoluments which they receive for the supposed performance of duties "which they do not perform, especially as many of them are engaged in duties "or professions elsewhere for which they receive proportionate recompense. I "believe a sum of 2,500*l.* might easily be raised in this way."

It thus appears that the principle of a contribution levied upon each of the Colleges for the maintenance of a competent staff of public Instructors is already entertained in several quarters within the University. For our part, we are inclined to think that justice would not be done to the intentions of the Founders of Colleges if the foundation revenues were entirely withheld from such purposes. In all the Colleges it would appear that the education of the Scholars of the House was intended to be gratuitous. In the larger foundations of King's, St. John's, and Trinity it was directed that a staff of Lecturers, Moderators, and Examiners should be maintained out of the revenues of the Colleges. Such intentions cannot be deemed to be satisfied by the nominal existence of such officers receiving the small ancient stipends and performing no duties: nor can it be thought reasonable that the Scholars of the Foundation should pay for their instruction on the same scale as pensioners or persons for whom no pecuniary benefits were designed by the Founders of Colleges.

These considerations seem to establish conclusively the obligation of the Colleges to contribute substantially towards the maintenance of an adequate staff of public Instructors.

Scale of contribution from the several Colleges.

It remains, then, to determine on what scale such contributions should be made by each of the Colleges. We have neither the information which is necessary to settle this point, nor does it appear to us to be desirable at present that we should go further than to indicate the principle which may fairly be acted upon. When we come to the consideration of the Statutes and Constitution of the several Colleges, we purpose to recommend a plan by which the appropriated Fellowships and Scholarships connected with Schools may be commuted for Exhibitions, and an adequate number of open Scholarships provided in every College. A joint consideration of the number of open Scholarships so constituted, and of the amount of the Corporate revenues themselves, would appear to be the most reasonable and equitable criterion to determine the proportion in which the contribution should be levied.

P. 184.

We have now indicated, with as much definiteness as appears to be desirable in this Report, the general sources from whence for the most part funds necessary to augment the endowments of the existing Professors, and to create new Chairs,

as well as to provide sufficient means for the fixed payments to the Public Lecturers, may be derived, and have defined the principle which may fairly determine the proportion of contribution from each College.

Special sources of income available.

We will, in the next place, enumerate one or two special sources of income belonging to the University, which as it seems to us, may advantageously be made available for the object we have in view.

P. 71, 72, 73.

Of the Professors above described it will have been seen that there are only two whose incomes exceed the amounts which can be considered necessary and reasonable for the proper and dignified support of men of eminent learning and ability: and even these are less than what is paid to the majority of those who hold the subordinate judicial and other offices at the Bar. The progressive depreciation of the value of the rent-charges, will probably diminish the amount of both these incomes considerably in the course of a few years,—say to 1,500*l.* and 1,000*l.* respectively. The second of these sums is not greater than is due to the position of a Professor who takes the first rank amongst his colleagues; and no one to whom Professor Blunt's writings are known, or who has attended his lectures, will think the remuneration which he receives more than adequate to his merits. We are of opinion, however, that whenever a vacancy in the Lady Margaret's Professorship shall occur, a portion of its funds, say 500*l.* per annum, might be advantageously reserved for the endowment of a new Theological Professorship.

Lady Margaret's Professorship.

In reviewing the resources at the disposal of the University for the purpose of promoting theological instruction and study, it may probably appear expedient to give a new direction to the funds at present applied under Mr. Hulse's will to the maintenance of the two offices of Christian Preacher and Christian Advocate. The incomes of these two officers are at present as follow:—

Mr. Hulse's Foundation.

	£.	s.	d.
Christian Preacher . . .	318	12	4
Christian Advocate . . .	241	10	6

Vice-Chancellor's Evidence, p. 15.

and it is believed that they will be further augmented on the falling in of certain annuities which now continue to be paid out of the estates left by the testator.

We are disposed to think that few persons would consider it an improper deviation from the testator's intentions, or otherwise than an improvement upon the present practice in regard to this Foundation, if the income of the two offices of Preacher and Advocate were applied to the establishment of one of the new chairs of Theology, which now appear to be wanting to complete the teaching of the University in this department.

Lectores Ordinarii and Lady Margaret's Preachership.

We may also observe that, whenever the resources of the University available for the purposes of public teaching are brought under review in the manner which we have suggested, it will be proper to suppress the inconsiderable payments at present attached to the offices of *Lectores Ordinarii* and Lady Margaret's Preacher. These have ceased to be of any practical service, and therefore may be regarded as lapsed Foundations.

Mr. Worts' Foundation.

Moreover, as it may reasonably be expected that before application is made to the Colleges for additional funds for these purposes, it should be made manifest that all the resources of the University itself, properly available for this end, had been exhausted, we think it deserving of consideration whether the sum which is annually paid by the Vice-Chancellor under Mr. Worts' will, for the maintenance of two Travelling Bachelors, might not be more usefully applied. We shall notice this subject, however, at greater length in another place.

P. 100.

Suppressed Canonries in Ely Cathedral.

We have before ventured to state our opinion that an extended system of professorial theological education would be honourable to the University and advantageous to the Established Church. The funds of some of the Canonries in our Cathedrals which it is designed to suppress, would not, as it appears to us, be diverted from their proper object, if applied to endow additional Professorships in our Universities. It is believed that very few enactments in the Ecclesiastical Duties and Revenues Act, 3rd and 4th Vict., cap. 113, were more generally approved than the annexation of three Canonries of Christ Church to Professorships of Divinity in the University of Oxford, and of two Canonries in the Cathedral of Ely to the poorly-endowed Professorships of Greek and Hebrew in that of Cambridge; and we are persuaded that if the same principle was carried further, and the two Canonries which it is proposed to suspend in that Cathedral when vacancies in them next occur, were made the endowment of two new theological Professorships,

REPORT.

they would afford a very material aid to the University in completing her arrangements for forming a theological school upon a comprehensive and efficient system.

We now propose to consider how far the existing Foundations of the University or any modifications of them may afford sufficient means for teaching and superintending the several branches of learning and science, which ought to find a distinct place within the Academical system.

We have recommended, generally, that the staff of Instructors who are to conduct the public teaching of the University should be composed of two classes—Professors and Public Lecturers. The first class would consist of men whose character for learning and ability is fully established, holding permanent appointments, whose income should be mainly at least provided by the endowment of their Chairs: the second would be formed of men of less assured eminence, many of them just entering upon public life, and looking for much of their remuneration from their popularity as teachers, at least in those departments of study where the students are numerous, and where it is desirable or practicable to keep in full activity the principle of competition, without which their functions would sooner or later be usurped by other parties. But even as respects this second class, there are many departments of study where the number of Students is necessarily small, and where the principle of competition would either cease to operate or involve a needless multiplication of teachers. In such cases it will rest with those in whom the appointment of such Professors or Lecturers is vested to select those who are known from their previous character and reputation to be fully competent for the duties which they are required to discharge.

Classification of existing Professorships for the formation of Boards of Studies.

The existing Professorships, so far as they may be made serviceable for the formation of the several Boards of Studies, to the superintendence of which each branch of the Academical system should, according to our recommendations, be confided, may be classified as follows:—

1. Board of Theological Studies—
   - The Regius Professor of Divinity.
   - The Lady Margaret's Professor of Divinity.
   - The Norrisian Professor of Divinity.
   - The Regius Professor of Hebrew.
2. Board of Legal Studies—
   - The Regius Professor of Civil Law.
   - The Downing Professor of the Laws of England.
   - The Professor of Moral Philosophy.
3. Board of Medical Studies.
   - The Regius Professor of Medicine.
   - The Professor of Anatomy.
   - The Downing Professor of Medicine.
   - The Professor of Chemistry.
   - The Regius Professor of Botany.
4. Board of Mathematical Studies—
   - The Lucasian Professor of Mathematics.
   - The Plumian Professor of Astronomy and Natural Philosophy.
   - The Lowndean Professor of Geometry and Astronomy.
   - The Jacksonian Professor of Natural and Experimental Philosophy and Chemistry.
5. Board of Classical Studies—
   - The Regius Professor of Greek.
6. Board of Natural Science Studies—
   - The Professor of Chemistry.
   - The Regius Professor and Dr. Walker's Reader of Botany.
   - The Woodwardian Professor of Geology.
   - The Professor of Mineralogy.
7. Board of Moral Science Studies—
   - The Regius Professor of Modern History.
   - The Professor of Moral Philosophy.
   - The Professor of Political Economy.

To the Board of Mathematical Studies, the branch of Engineering Studies, and to the Board of Moral Science Studies, the Modern Language Studies would become subordinate. In the event, however, of these new branches of study receiving a distinct place in the system of the University, and that full develop-

ment which we trust they may attain, it will probably be deemed expedient to confide them to separate Boards of their own.

It will be observed, that in constructing the several Boards some of the Professorships are named in more than one. To this we see no objection, and, indeed, the connexion between the particular branches of study appears to render such a recurrence unavoidable.

We shall now proceed to consider the several branches of study separately, with a view to determining what additions to the Professorial staff of the University are necessary.

1. BOARD OF THEOLOGICAL STUDIES.

Present Professorships inadequate.

There are only three Professors of Divinity in the University, a number which is altogether inadequate either to teach or to represent this most important department of human knowledge. Of this number the first in our list is much occupied with various extraneous duties, and the efficiency of the third is diminished by the condition of his Deed of Foundation, which requires him to interpolate readings with his Lectures. The lectures of these Professors also are regulated by no common Statute or other authority of the University, by which the subjects which they treat or the order of succession in which they are given, are determined in accordance with an organized and well understood system of public instruction; and even the special Statutes to which some of them are subject, and by which their lectures and teaching are directed to be controlled, are either no longer applicable, or have ceased to be enforced; and although we have reason to believe that there exists a private arrangement amongst them by which the subjects of their lectures are made subservient to the Voluntary Theological Examination, in all other respects they would appear to be nearly, if not altogether, uncontrolled and independent.

Consequences of this inadequacy.

It is almost a necessary consequence of these defective arrangements, as well as of the want of a sufficient lecturing force, that no proper school for professional instruction in Theology has been hitherto formed in the University. When such systematic instruction is sought for, Students are accustomed to avail themselves of the assistance of a Private Tutor, or to resort to some of the diocesan institutions which have been recently formed for this purpose.

Provision made by the University for Theological Study.

We should be guilty, however, of great injustice to the Authorities of the University if we should leave it to be inferred that instruction in Theology is unduly neglected in the general education of her Students. There are lectures and examinations in nearly all the Colleges on parts or the whole of the Greek Testament, the Evidences of Christianity, and the early History of the Church, and in parts of the works of Bishop Butler and other divines, which are selected for that purpose. Prizes are also very generally given for distinguished excellence in the Theological Examinations: and it is well known that regard is paid to such distinctions in the appointment to Fellowships. The same, as well as other Theological subjects, are included in the Previous Examination at the end of the fifth Term of academical residence, and also in that for the ordinary B.A. Degree; comprising altogether an amount of theological knowledge which is quite as great as can be reasonably required from Students generally, without any reference to their future destination in life: but it is one of the unhappy results of the great length of time that is devoted to the preparation for the first Degree, and the absorbing influence of the studies and occupations of a great part of the more distinguished Students which immediately succeed it, that little or no attention is paid to professional education, or to any other preparation for many of the more important employments in after life.

Voluntary Theological Examination.

It is true that the University has instituted a Theological Examination, and has required from all persons who offer themselves for it a Certificate of attendance during one Term upon the lectures of two, at least, of the Professors of Divinity: but the obligation to attend this Examination is imposed by the Bishops, and not by the University, and the Examination itself is one for *passing* only, where there is no classification or public certificate of honour; and though the preparation for it requires no small amount of time and labour from young men of slender capacity, or whose previous education has been neglected, it is not calculated to exert a very stimulating effect upon the studies of those who are in a condition to regard it without apprehension of failure. Small, however, as is the amount of theological knowledge which it absolutely requires, we have reason to believe that it has produced a considerable effect upon the state of preparation of the great body of Students who present themselves for Holy Orders.

REPORT.

Recommendations.

If to this *pass* Examination were superadded an Examination with classes, or certificates of honour, and embracing a sufficiently comprehensive range of subjects, the effect would probably be to secure the careful preparation of a large body of the candidates for Holy Orders; for it may safely be concluded that very few of their number would treat with indifference an Examination, the result of which would affect so seriously the estimation in which they would be held in their future profession. So great, indeed, would be the competition for such an Examination that there would be good reason to apprehend, unless great precautions were taken, that a body of Private Tutors would rapidly spring up to take the position thus opened for them, and a serious additional expense would thus be imposed upon a class of students who are not in general in a condition of life which would enable them to bear it without inconvenience.

There appears to be only one method by which evils of this nature could be effectually guarded against, which is, to increase considerably the number of Theological Teachers, and to give them such a share in conducting the Examinations as would secure a just influence to their teaching. We are very far, however, from recommending that the proposed Examinations should be placed entirely in their hands, but that they should be combined with such a proportion of independent examiners as may be sufficient to guard against or counteract, when necessary, the personal views and peculiar tendencies of those who teach as well as examine.

A system of theological lectures, which would be adequate for effecting this object, must comprehend every branch of theological instruction which is required to be made the subject of examination. They should follow a prescribed order, and be given at such hours that the same Student should be enabled, if so disposed, to attend the whole of them. The cycle, also, which they form should be included within a limited period, say of one academical year, so that attendance upon them would not impose the necessity of any great extension, if any, of the ordinary length of residence in the University. A course of lectures, however carefully prepared, can serve no proper purpose of instruction if it take several years to complete them, inasmuch as they cannot be addressed to the same class of students.

It is not our intention to attempt to particularize the new foundations which would be necessary to carry out a complete scheme of theological instruction such as we have suggested above. It must, however, comprehend the critical exposition of the Holy Scriptures, both Hebrew and Greek; selected portions of the Greek and Latin fathers; the history of the Christian Church; the Articles and Liturgy of the Church of England; Pastoral Theology. Any one of these subjects, or even branches of them, would furnish sufficient occupation for a Professor; and if the professioual education of the clergy of the Church of England is to be seriously carried on by the University, it is only by a sufficient staff of teachers of eminent learning and ability that such an education can be fully and satisfactorily conducted.

The critical exposition of the New Testament and the wide province of Ecclesiastical History, which are not at present undertaken by any of the three existing Professors, would alone require the addition of two new Theological Chairs. We are disposed to think that adequate assistance might be obtained for supplying the further wants which would still remain, by the appointment of a sufficient number of well qualified Public Lecturers in the several subjects.

We are satisfied that the best interests of the Church are closely allied with those of the University in effecting an adequate augmentation of the staff of Teachers in Theology. If the permanent residence of a body of learned theologians could be secured, whether engaged in the prosecution of their own studies, or directing and encouraging the studies of the great body of young men who are preparing for the Church, there would be no place where professional theological education could be more effectually carried on, or where Students would be less liable to that danger of having peculiar and somewhat personal views impressed upon them, to which those who resort to smaller theological institutions are sometimes exposed. The University would thus in reality become the nursing mother of the Church.

We regard it as an additional recommendation of this plan for the professional education of the clergy at the University that it would not necessarily extend the time of residence, nor add to the expenses of their education. For if the preliminary Examination were adopted in the way we have recommended in a former part of this Report, and if it were open to the Students to devote themselves to a

professional course of study so soon as they had passed it, then this professional education would begin with a great body of the Students, at the end of the fifth instead of the tenth Term, and might thus be completed in three years from the beginning of their academical life.

2. BOARD OF LEGAL STUDIES.

We have before intimated our concurrence in the opinion expressed by Dr. Maine in favour of establishing the Faculty of Law in the University upon a wider basis, so as to comprehend English and International as well as Civil Law. In accordance with his views we have proposed the establishment of a Board of Legal Studies, whose duty it would be to arrange the system of lectures and examination for the Law Tripos. To the same Board might also be entrusted the details of a plan for making it subsidiary to the professional education of Civilians and Lawyers, by defining, with the necessary precision, the character and the extent of the knowledge that would suffice for this object. The adoption of such a plan would completely obviate the objections stated by Dr. Maine to the existing regulations respecting degrees in Civil Law.

There are, however, two distinct classes of candidates for Degrees in Civil Law, for whom different arrangements may be necessary. The first are those who take that Degree with a view to practice as Advocates in Doctors' Commons; the second those who are induced to do so from various motives, but with no professional views. Students of the first class, who chiefly belong to the Society of Trinity Hall, have been hitherto accustomed to prepare themselves with great diligence for the exercises in the Law Schools, and for the examinations which were instituted by the late, and continued by the present, Professor. Those of the second have most commonly contented themselves with such a preparation as was requisite to pass the Examinations, and no more. The merits and professional acquirements of Students of the first class would hardly be sufficiently tested by the general examination for the Law Tripos, to which they would be subjected in common with candidates who present themselves with very different views; and it would seem to be desirable to retain a specific examination as well as specific exercises, before they are admitted to their Degree: if those of the second class are subjected to a similar trial,—and it might not be expedient to separate them openly from the first—the distinction between them would be sufficiently marked by their final classification, as the result of the Examinations.

If the Examinations and Studies for the Law Tripos and the Law Degree were established on the wide basis which we propose to give to them, the Inns of Court would possibly think it reasonable to confer some privileges upon those who had passed the Law Examinations of the University with credit.

The foundations of professional education should be laid at the University.

We have before expressed the opinion that it is desirable, in all cases where a Student is designed for a learned profession, that the foundations of his professional education should be laid at the University. It may be quite true that such persons may be compelled in many cases to seek elsewhere for much of that minute and technical knowledge which the practice of a profession requires; but there are many general principles, even in subjects which are almost exclusively professional in their application, the just appreciation and correct knowledge of which will always distinguish a lawyer, a physician, or a divine, who has been liberally and philosophically educated, from one who has not enjoyed such advantages. With a view to attain this end, we are of opinion that the instruction provided by the Faculty of Law should not be confined to the laws of this country or to any particular code, but that, in addition to the study of English, Civil and International Law, it should embrace an examination of the principles on which existing systems of law are founded, and that it should be extended to an investigation of the principles on which all laws ought to be founded; in other words, that the study of General Jurisprudence, and of the science of Legislation, and of morals in connexion therewith, ought to be encouraged. To carry out this object it might probably be deemed expedient to establish an additional Professorship of General Jurisprudence.

3. BOARD OF MEDICAL STUDIES.

The existing organization of the studies of Medical Students in the University is almost entirely due, as we have before observed, to the exertions of the late

REPORT.

Changes in the Course of Medical Studies.

Dr. Haviland. Before his appointment to the Professorship, the Professor who held it was nearly the sole judge of the qualification of candidates for Medical Degrees, provided that they had kept the Terms and satisfied the formal requirements, with respect to Acts and Exercises, of the Elizabethan Statutes. But this state of things was entirely altered by a series of reforms which the Senate adopted, chiefly upon Dr. Haviland's recommendation. Candidates for the Degree of Bachelor of Medicine were thus required to attend the lectures of the Professors of Anatomy, Chemistry, Botany, and the Downing Professor of Medicine, and to pass an examination conducted by them on the subjects of their lectures, as well as by the Regius Professor himself, not merely on the subject of his own lectures on Pathology and the Practice of Medicine, but also in Hippocrates and Celsus, with a view to ascertain the sufficiency of their classical as well as medical education: in addition to these examinations and the exercises prescribed by the old Statutes, they were required to produce a certificate of having attended Hospital practice in some acknowledged School of Medicine, in case they had been absent from the University, as was usually the case, during part of the interval which elapsed between their admission as students and their B. M. Degree.

Further examinations and exercises were also required before obtaining a Licence to practice or admission to the degree of M.D. Besides producing certificates of attendance at an extensive course of Medical Lectures in the great Medical Schools of the metropolis or elsewhere, the candidate was required to pass a general examination in the subjects which they embraced, conducted by the Regius Professor, the Professor of Anatomy, the Downing Professor, and a Doctor of Physic named by the Vice-Chancellor; so as to test satisfactorily his knowledge of every subject which was judged essential to the practice of his profession. There is probably no existing Medical School where the qualifications of a Graduate of Medicine are scrutinized with greater severity.

Cambridge as a Medical School.

These regulations, though more than sufficient to maintain the high standard and estimation of Cambridge Medical Degrees, have failed altogether in increasing the number of Medical Students; for the number of M. B. Degrees during the last ten years has not averaged more than four annually, whilst that of Licentiates and Doctors is still smaller. There are many causes which have contributed to this failure. Some of them must be sought for in the institution of the London University, in the increased efficiency of the London Medical Schools, and the relaxation of the restrictive regulations of the College of Physicians respecting admissions to their Fellowships; others are referable to the number of the Examinations to be passed, and of Exercises to be performed in order to attain a Cambridge Degree, as well as its great expense, and the long period which must elapse before it can be conferred; for if we suppose a Student to commence his residence, as is most commonly the case at the age of 19, he will not be able to attain the Degree of Doctor before the age of 29, and two years later if he proceeds through Arts. This is in the one case three, in the other five years later than is required by the regulations of the University of London.

Scheme of the revised Statutes.

The scheme of the revised Statutes of the University proposes to reduce the period which elapses between the beginning of residence and the B. M. Degree, as well as of that between the B. M. and M. D. Degree from five years to three. This reduction of the periods required for graduation was approved by Dr. Haviland, though he further proposed to compel Medical Students to proceed to the Degree of B. A., and of course also to pass the examinations required for it, at least one year before they were allowed to proceed to that of B. M. His successor, Dr. Bond, whilst he approves of the reduced periods of study and preparation for the two Degrees of Bachelor and Doctor in Medicine as sufficient, and not more than sufficient for the completion of a proper medical education, yet is disposed to think that the enforcement of the studies and the sacrifice of the time required for a B. A. Degree as a preliminary condition to that of B. M. would prove an intolerable burden, and would amount in effect to the virtual suppression of the Faculty of Medicine in the University; and in this opinion the Members of the Syndicate who drew up the scheme of the revised Statutes appear finally to have concurred.

A suggestion of Dr. Fisher with respect to the members of this Faculty is, almost precisely, similar to that made by Sir James Stephen, to which reference has been made elsewhere in this Report. He proposes that the public education of the Medical Student shall be the same with that of other Students until the Previous or some corresponding Examination at the end of his fifth, or, as

proposed by him, his sixth Term of residence. The six Terms succeeding, which intervene between this Examination and the M. B. Degree, are proposed to be devoted to an *elementary* course of medical study, comprehending Human Anatomy, Materia Medica and Pharmacy, Pathology, and some other subjects, together with those branches of the Natural Sciences Tripos, such as Botany and Chemistry, which bear upon his future profession. A second or *complementary* course would occupy the two years which succeed the first Degree, which might be prosecuted either in Cambridge or in any other recognized Medical School, the proficiency of the candidate in the subjects embraced in it being sufficiently ascertainable by the final examination in the Term preceding his M.D. Degree, which would thus be conferred at the beginning of the seventh year from his admission to the University. This scheme would suppress also the grant of the License to practise, which would become, under the proposed arrangements, nearly, if not altogether, unnecessary. REPORT.

Dr. Fisher agrees with Dr. Clark in recommending the permanent separation of the departments of Human and Comparative Anatomy, a separation which has in fact already taken place, though no provision has been made for maintaining it hereafter. He is also disposed to recommend the appointment of a Lecturer on the Practice of Medicine, as well as of a Professor of Surgery, a branch of the Profession recognized in the ancient and Elizabethan Statutes of the University as a liberal study in which Licenses were conferred, and without systematic instruction in which no course of medical education can be considered to be complete.

We wish to express our concurrence in these views so far as to say that one additional Professorship of Anatomy is at all events necessary to give completeness to the Medical Staff already existing in the University. Recommendations.

The following remarks afford a satisfactory reply to an objection which has frequently been urged against Cambridge as a Medical School.

Dr. Fisher's Evidence, p. 129.

"I am aware that there is an opinion prevailing not only in the University but "elsewhere, that Cambridge, considered in its double capacity as a University "and as a Town, does not offer wherewith to form a Medical School; but before "we admit the correctness of this opinion, let us see on what grounds it rests. No "one will be disposed, I think, to assert, that the University is not able to "provide efficient teachers for that purpose; no: the opinion rests on the "impression that the town of Cambridge is not sufficiently large to afford, espe-"cially as regards the hospital, suitable opportunities for study. The town of "Cambridge contains about 25,000 inhabitants; but the hospital extends its "sphere beyond the town, it takes the county within its range. Now let us see if "there be not towns containing a population less than 30,000 which have been or "are celebrated for their medical schools. In bringing some of them forward, I "will, at the same time, mention the names of those persons who have been or "are connected with those schools, and who have contributed to the advancement "of medical knowledge. I shall distinguish by italics the names of those who "were dead previously to the year 1842:—

"Göttingen, under 10,000 inhabitants. *Haller*, *Blumenbach*, *Soemering*, Lan-"genbeck, Wagner, Kraus.

"Heidelberg, under 12,000. Tiedeman, Gmelin, Naglé, Chelius.

"Halle, under 30,000. The two *Meckels*.

"Pavia, under 29,000. *Scarpa*, *Spalanzani*, *P. Frank*, *Razori*, Panizza.

"I think that any one who is conversant with the history of medicine will "admit that some of the names of the persons I have brought forward are not, in "reputation and as regards their particular pursuits, second to any of those who "have, during the last hundred years, contributed to the progress of medicine, "and of the sciences associated with it.

"In judging of the opportunities for the study of medicine offered by Cam-"bridge, we are apt to be influenced by the consideration of those offered by the "metropolis; but let us take the measure of the latter in their practical dimen-"sions. The medical schools in London are, with the exception of those of King's "College and University College, associated essentially with hospitals, and they "are all independent of each other. Thus the member of King's College cannot "as such attend the lectures of Dr. Williams, nor can the member of University "College attend those of Dr. Budd. The Student of Bartholomew's Hospital "cannot follow the instructions given by Sir Benjamin Brodie, nor can the Student "at St. George's attend the anatomical lectures of Mr. Paget.

REPORT.

"If there existed a National Institute of Medicine which gathered into one "professional body the original and distinguished talent which is congregated in "London, then a field of instruction, rich in its kind, and great in its extent, "would be opened to the medical student; but as that talent is scattered over a "great many institutions, several of which may be regarded as being of a private "rather than of a public character, the Student can derive but a partial advantage "from it at the best. We ought not to speak of any medical faculty in compa- "rison with the Medical School of London, but only in comparison with one of "its particular schools, and that mode of viewing the case offers limitations which "would not appear on a cursory glance. I think it right to remark also that "there is no medical institution in England which, with the exception of the "medical faculties belonging to the Universities of Oxford and Cambridge, "directs the course of education on the one hand and confers the right to practise "on the other. The University of London, the College of Physicians, the College "of Surgeons, and the Company of Apothecaries grant either Degrees, Licenses "to Practise, or Diplomas, but they do not take directly a part in the education of "those whom they examine; whilst King's College, University College, and "the schools associated with the hospitals, afford opportunities for study, but they "do not enjoy the privilege of granting the power to practise. Moreover, the "majority of Medical Students who resort to London have been previously engaged "in medical studies, so that there scarcely exists a system of early training for the "medical profession in England, a circumstance which is not in my opinion "without its peculiar consequences.

"To return to Cambridge—its University is not wanting in opportunities for "the study of medicine. The Anatomical Museum, recent as its institution com- "paratively speaking is, affords means of instruction in Physiology and Pathology "such as few Museums I am acquainted with do. If the opportunity for dissection "be limited, the deficiency might be remedied, should the Government be pleased "to give orders to that effect. On the other hand, Addenbrooke's Hospital offers "a field for clinical observation remarkably well suited for the purposes of ele- "mentary education. The number of patients is large enough to occupy fully "the attention of the Student, but not so large as to perplex it. He is not "exposed to hindrance by a crowd of fellow-students, so that his attendance at "the Hospital need not become an act of seeing instead of observing. The greater "part of the medical officers attached to the Hospital give courses of clinical in- "struction both in Medicine and Surgery."

Encouragement of the lay element in the constitution of the University.

We believe it to be important to the best interests of the University, that the lay element in its constitution should be at all times encouraged and maintained. The great preponderance of Students designed for Holy Orders, and the almost exclusively theological character of the foundations of the greatest part of the Colleges, creates a disposition both within and without the University, to regard it as a theological institution. Whilst admitting to the fullest extent the important, and in some respects essential connexion which exists between the University and the Established Church, we are persuaded that the permanent interests of both of them is promoted by a mixture of theological with other Students: for not only does this common education, with all the associations connected with it, tend to keep up the equality of the social rank of the Members of the three learned professions, but the University is protected by this union of objects and of Students from the attacks of those without its walls, who regard the Established Church with no favour, and still more from the dangers which may originate within them, from the narrow views which are apt to be engendered in a body composed exclusively of the members of one class, however numerous and important they may be.

Means to encourage the resort of Medical Students to the University.

With a view to encourage the resort of Medical Students to the University, it seems to us desirable not merely that the period of graduation should be shortened to the full extent that is proposed, but also that the examinations which they are required to undergo should be very clearly defined, and not unduly multiplied: that they should not range over every department of medical knowledge, but embrace such only as every diligent and well educated Student may be expected to be thoroughly acquainted with: that the harassing exercises in the schools should be abolished or greatly modified; and lastly, that the College and University Fees for Medical Degrees should be materially reduced. For it is well known that candidates for the medical profession are rarely able to meet the demands made upon their resources by a very expensive education.

We have already observed that the sketch of the revised Statutes proposes to retain

the exercises for the M.B. Degree, but omits one of the two Acts which are now required for that of M.D. We have also expressed an opinion that it is not expedient to include in a Statute which cannot be altered without the authority of the Crown, any provision, like the one in question, of a not very important character, which may be safely left to the ordinary legislation of the University: still less so, when its utility is even now seriously doubted by many persons who are well qualified to judge of it. Dr. Bond, the present Regius Professor of Medicine, in speaking of these exercises, says, that "they might "be usefully modified so as to constitute the *viva voce* part of a medical examina- "tion, which would be in conformity with the usage practised elsewhere, and "would be peculiarly appropriate to a profession in which readiness in the pro- "duction and application of knowledge is so essential." "The propriety," says Dr. Fisher, "of retaining the exercises in the schools in their present form appears "to me to be very questionable. I do not wish to speak disparagingly of exercises "which, when the two parties engaged are not only conversant with the "syllogistic mode of disputation adopted, but also accustomed colloquially to "the language employed, afford a good test of general proficiency, but it must "be admitted, that the syllogistic form of argument has fallen so much into disuse, "that it no longer answers the end it formerly did. Indeed, the dissertation "itself has become merely formal as regards the details it embodies, so that "its composition offers scarcely any interest to the Student, whilst the defence of "the thesis is in general too embarrassing to be instructive." Whatever may have been the interest attached to such public disputations in former times, and however much they may have tended to stimulate the faculties and to display the readiness and skill of the disputant, the period seems now past for reviving them.

Exercises for the Medical Degrees.

In addition to other causes, which have operated to the discouragement of Cambridge as a Medical School, it may be observed that the University offers no marks of honour to those Medical Students who pass their Examinations or perform their Exercises with distinguished credit. Where the number of candidates is so small, there can be no effective classification in the order of merit as in the examinations for mathematical or classical honours; and it is only by a public declaration of the examiners, whether associated or not with pecuniary or other prizes, that the credit of the possession of superior attainments, a precious advantage in a profession so crowded as that of Medicine, can be made known to the public at large.

No marks of Honour offered to Medical Students.

Again, with the exception of the four well endowed Tancred studentships, and two or three others of smaller value at Caius College, there is no provision to assist Medical Students, as such, in their progress through the University. We have collected the documents relating to Mr. Tancred's Benefaction, and have caused them to be printed in the Appendix. The Students are elected for the most part before the commencement of their residence by the Master of Christ's College, the Master of Gonville and Caius College, the President of the College of Physicians, the Treasurer of the Society of Lincoln's Inn, the Master of the Charterhouse, and the Governors of Chelsea and Greenwich Hospitals. They now receive an income of 113*l.* per annum each for six years. We have no reason to think that the appointments to these Studentships have not been most conscientiously made, but as they are not given as the result of an examination before admission, and are subject to no trial after it, they are found to be, like all similarly bestowed benefactions in public schools and elsewhere, of little benefit for the promotion of diligent and persevering study. We are of opinion that if the appointment to these Studentships were deferred to the second or third year after the beginning of residence, and if they were given as the rewards of a professional examination, they would tend not a little to encourage the resort of Medical Students to the University; if the duration of their tenure were also reduced from six years to four, there would be at least one vacancy every year, and the most distinguished Medical Student of every successive year would thus be put in possession of a most valuable aid towards the completion of his professional education.

Want of provision to assist Medical Students in the University.

There are also two Fellowships at Caius College, which are reserved for physicians, but they have been hitherto restricted to natives of the county of Norfolk. At many other Colleges, there is a provision for one, in some cases two Medical Fellows; but they are not originally elected as such, and in former times the Fellowships often became in fact little more than places of refuge to other Fellows who were enabled by declaring for Medicine and proceeding by

Inefficiency of the Medical Fellowships in certain Colleges.

REPORT.

the easiest methods to attain Degrees in that Faculty, to escape the necessity of taking Holy Orders, which the Statutes had otherwise made compulsory upon pain of forfeiture. A considerable remedy has been recently provided by the higher standard of proficiency required for Medical Degrees. A still further security against the possibility of abuse would be the limitation of the tenure of such Fellowships to seven years after the M.D. Degree

Dr. Bond, in speaking of the encouragement given to the formation of an effective school of Medicine in Cambridge by the high standard of instruction which is now offered to Students in the preliminary branches of medical education, adds, "That unquestionably the invitation thus addressed to them would
Evidence, p. 84. "be much more effectual if some share of the emoluments of the University "and Colleges were assigned as the reward of a Student's having distinguished "himself by his acquirements in the medical sciences; for which the additional "distinction of a place in the first class in the Natural Sciences Tripos might be "a requisite condition. At present no inducements in the way of distinction or "reward are offered for the Student to acquire a proficiency in the medical "sciences. In Caius College, it is true, there are three small Scholarships given "to proficients in Anatomy and Chemistry; but with this meagre exception, no "one of those premiums with which the University, or rather the Colleges, are so "richly endowed, is awarded for success in the study of Medicine. Though "certain Fellowships are appropriated to those who are intending to proceed "to medical degrees, they have been conferred exclusively upon proficients in "other sciences or in classical literature; and formerly have even not uncommonly "been held by persons who have received no medical education at all. But were "it known that but a few even of these sources of emolument would be open "for such as distinguished themselves in the medical studies and examinations of "the University, there can be no doubt that this inducement, in connexion with "the opportunities offered of acquiring such proficiency as has been insisted on, "would insure and would maintain a medical school of reputation in the Univer-"sity. It would not be advisable that these emoluments should be of such value, "or so long retained, as to render the fortunate possessor of them too independent "of future exertions; but if held for a term of years only, they would be of "timely assistance to the young physician during the first years of practice, enable "him to maintain his grade in the profession, and encourage him to devote "his leisure to the further prosecution of the more scientific branches of "medicine."

p. 110. Dr. Clark fully concurs in this opinion: "Doubtless the connection," says he, "of Medical Students with our University will be preserved and extended if "due rewards for distinguished merit be offered. There are in some of our Col-"leges Fellowships appropriated to Medical Students; in many there are Fellow-"ships for the holding of which no proceeding in any special Faculty is pre-"scribed. Some of these might, perhaps, be made the reward of excellence in some "branch or branches of science connected with medicine: but no persons should "be admitted as candidates for them who have not proved that they have appro-"priated the advantages of the previous education in literature and arts."

Medical Scholarships recommended.

The institution of Medical Scholarships of such a value as would afford an effective assistance towards defraying the expenses of medical education in all Colleges where Medical Fellowships exist or are recognized, even if the endowment of them were obtained by the sacrifice of the emoluments of the whole or a considerable part of the Fellowship itself, would be now the most effectual mode of establishing a Medical School on a secure and permanent basis: for it would be found that such Scholarships conferred as rewards for superior merit would operate more powerfully than Fellowships, to which the condition of celibacy is attached—a condition, as is well known, not generally reconcileable with extensive medical practice.

We are disposed to think that this is the best destination which could be given to the Linacre Professorship at St. John's College.

4. BOARD OF MATHEMATICAL STUDIES.

It is this department of study which is pursued in the University with the greatest earnestness, and which occupies the greatest number of teachers, comprehending a very great majority of the College and Private Tutors; and as long

as success in the Mathematical Tripos continues to be a main avenue to Fellowships, its supremacy amongst other branches of academical study is not likely to be disturbed.

We have before referred to the constitution of the Board of Mathematical Studies and to the effects which it has already produced in giving greater definiteness to the course of mathematical study which is pursued in the University, as well as in somewhat narrowing the very wide field over which it had begun to range, and repressing the tendency occasionally shown by young and ardent examiners to extend it unduly.

Beneficial influence of the present Board of Mathematical Studies.

In reply to the Queries on the Mathematical Studies and Examinations we find a pretty uniform testimony borne to the beneficial influence which the operations of this Board have already exercised, and are likely hereafter to exercise, upon the mathematical studies of the University. Mr. Hopkins, the most distinguished and the most experienced of the Mathematical Tutors in the University, says—"The recommendations of this Board have been, on the whole, "in my opinion, extremely judicious; and I consider their general superintend- "ence of our mathematical studies to afford an excellent means of regulating and "modifying them from time to time as circumstances may require." Dr. Philpott, Master of Catharine Hall, after observing that the Board possesses the power of recommending and suggesting changes, but no authority to make positive laws without reference to the Senate, adds that "it is difficult to conceive that the "recommendations by such a body of persons as constitute the Board, as far as "they do not interfere with any positive recommendations of the Senate, should "not be readily adopted and carried into effect by the Moderators and Ex- "aminers." Dr. Phelps, the Master of Sidney College, Mr. Mathison, Tutor of Trinity, and others, concur generally in this opinion.

Evidence, p. 243.

p. 262.

Proposed enlargement of the powers of this Board.

This Board, according to the constitution which we propose in other parts of our Report to give to it, would be called upon to exercise larger regulating powers extending as well to lectures, and the cycle which they should follow, as to examinations. Questions of no small difficulty and delicacy would present themselves in the distribution and organization of the lectures. These lectures must be adapted also to the wants of students of various capacities and very different states of preparation: they must recognize and provide for such an amount of competition as will allow a sufficient freedom of choice to the Student and stimulate the exertions of the Lecturer; above all, such a Board must have the power, subject to due regulation and control, of recruiting the body of Lecturers from time to time by the addition of young men of distinguished promise and ability.

We do not conceal from ourselves the difficulties which would attend the successful working out of this or any other system for conducting the studies of the University, designed to supersede another which has been so long in operation, connected with so many interests, and supported, as it undoubtedly would be, by all those who are adverse from principle or habit to all considerable changes; but we have ventured to propose it as being, in our opinion, calculated to remove some evils and anomalies which are of a very serious nature, and also to restore to the public teaching of the University its just influence and authority.

Neglect of the Science of Civil Engineering.

There is one department of study, leading to one of the most lucrative and important professional employments in this country, which is now quite neglected in the University, but which seems to us to come strictly within her province; we mean the science of Civil Engineering. It may be quite true that many of its practical and technical details may be best learned in the offices of engineers engaged in the execution of important works; but the knowledge of mathematics and mechanical principles as involved in the estimate of the strength and distribution of materials, the effects of elasticity, and generally of the operation of forces and pressures, is so necessary in all the more important and difficult applications of this science, that no amount of practical skill and experience can ever replace the want of this theoretical knowledge.

The lectures which have been given for many years by Professor Willis, touch upon some of the principal questions of the mechanics of engineering, and present admirable exemplifications of the union of theoretical and practical science, without a thorough knowledge of which no Engineer can be qualified for the higher branches of his profession: and, if a School of Engineering were recognized in the University, he would probably be disposed to give to this department of his lectures a much larger range than he has hitherto felt safe to venture upon when addressing Students who have no such professional views. To other Professors or Lecturers might be entrusted under his superintendence, and the authority of the

REPORT.

Board of Mathematical Studies, the instruction of Students in drawing, in descriptive geometry, in the principles of construction, and in such other subjects as were necessary to the preparatory education of a Student before he was transferred to the office of a practical engineer.

Cambridge well fitted for a School of Civil Engineering.

Attempts have been made of late years to establish Schools of Engineering in other places, without success: the preeminent character of Cambridge as a school of Mathematics, and the earnestness and determination which which the study of them is pursued there, would probably preclude a principal cause of such failures. Others are referable to the opposition which has been made to such Schools by many practical engineers, who were not disposed to recognize the value of knowledge which they themselves had never acquired: we feel satisfied, however, that the really eminent and well-educated members of that important profession are too well aware of the paramount importance of a scientific knowledge of mechanical principles and their application, in the practice of their art, not to co-operate in the promotion of any attempt to give a proper preparatory education to those who propose pursuing it.

Recommendations.

From a conviction of the growing importance of this branch of knowledge we have ventured to recommend that a course of study and examination in it should hereafter form one of the avenues to the B. A. Degree coupled with the test of proficiency supplied by passing the Preliminary Examination in the second year. The recognition and development of this branch of study would require the addition of two Professorships to the present number, namely, one of Practical Engineering, and one of Descriptive Geometry.

5 BOARD OF CLASSICAL STUDIES.

There is only one Professor, that of Greek, who belongs to this department of academical study; but the deficiency is in some respects supplied by very able Classical Tutors in several of the Colleges.

A Professorship of Latin recommended.

We are of opinion, however, that the addition of a Professorship of Latin is necessary.

If arrangements should be made by which the public instruction of the Students should be transferred, after the Preliminary Examination in the second year, from the Colleges to the University, it would probably be expedient to assign to some of the more distinguished public as well as private Tutors the functions of Public Lecturers in this particular branch of study.

There can be little doubt that a well-organized and continuous system of classical lectures upon some of the principal authors of Greece and Rome, with more or less special reference to the history and archæology of those ancient nations, their systems of philosophy, their fine arts, and other subjects, would attract the attendance of the great majority of those who were candidates for honours in the classical examinations, provided that such examinations were carried on sufficiently in accordance with the lectures to encourage and reward an attendance upon them: such an accordance could only be permanently secured either by giving to the Public Lecturers a considerable control over the examinations, or by making some of them members of a Board of Classical Studies, by whom the lectures and examinations might be regulated.

Advantages of a Board of Classical Studies.

Evidence, p. 292.

The establishment of such a Board, even under the existing system of classical study in the University, would probably be attended with many advantages. Dr. Whewell, in answer to a query respecting it, says, "I think there would be "many advantages in such a Board, constituted like that of Mathematical studies, "partly of permanent and partly of changeable members. Such a Board might "direct the course of the examinations, and of the reading of the Students, in a "far more consistent, authoritative, and comprehensive manner than can be done "by a succession of detached Examiners drawn from various classes, with no "habits of conference or permanent co-operation, each following his own notions." The Rev. Rowland Williams, Fellow of King's College, Vice-Principal of Lampeter College, and a distinguished classical scholar, when speaking of the undue length of the passages proposed in the classical examinations, as well as of the wide range of their subjects, adds, "However desirable it may be "to limit the length of passages to be proposed in examinations, such an object, "singly, would scarcely require the establishment of a Classical Board. There "are, however, other purposes which such a Board as has been suggested might "conveniently fulfil. It would furnish a common ground on which the more dignified "authorities, who are *ex-officio* Examiners, might come in contact with the

p. 234.

"younger members of the Senate who receive their powers by annual election. "By such communication perhaps both parties would gain, and their several tastes "might lead to a sound balance instead of a capricious oscillation. The Board "need not prevent the various examinations from differing, but it might subject the "difference to useful regulations; and, in short, might constitute a *standing* "*Syndicate*, by which new books of sterling value might be recommended, and "such improvements introduced by 'Grace,' or otherwise, as experience might "from time to time suggest. Possibly even a *veto* on measures or appointments, "affecting classical studies, might be intrusted to *the majority* of such a Board, "analogous to that which is not very happily vested in each separate member "of the *Caput*. One of the greatest practical evils in an University is the bias "apt to be given to appointments, such as those of Examiners, or of Preachers, "&c., by *Collegiate* interests or egotisms. Notions of patronage prevail, by which "perhaps the Colleges which have the greatest affluence of talent principally "suffer, but by which the character of the University is also in some measure "compromised. It might enter into the province of a Classical Board to check "the sway of such feelings, and to consult for the permanent advantage and "reputation of the academic body. It may be said that, where Boards exist, the "vicious habit of considering appointments as a species of patronage to be "exercised by each member in rotation, may prevent the proper object of their "constitution from being attained; still such abuse might be guarded against, either "in the case of Examiners or of Preachers, by a distinct assertion of a more "correct principle. The united wisdom ought to be exercised as far as possible "in each appointment.

"It would probably not be expedient to fetter the discretion of Examiners by "very narrow restrictions; and perhaps a Classical Board might preclude the ne- "cessity for minute legislation, by recommending a particular usage, or by keeping "alive a right tone of opinion. One benefit which it might confer upon the Uni- "versity would be the observance of some gradation in the subjects proposed at "several periods. The Examiners for Scholarships, without being reduced to a "mere puerile range, might find sufficient scope in the purest classical historians "and poets, with some limitation on the use of the Greek Orators, and possibly "even on that of Thucydides and Tacitus; and certainly introducing only the "simpler (such as the Socratic Trilogy), if any, of the works of Plato. The "Tripos, without essentially losing its present character, might have a philoso- "phical paper; while the *Medal* Examination, being for the chosen few, might not "improperly require more critical refinement; and *here, if anywhere*, comparative "philology, or metrical and emendatory niceties might be dwelt upon."

Evidence, p. 298. p. 289. p. 283. p. 291 p. 288.

Mr. Worsley, the Master of Downing College, Mr. Thring, Fellow of Magdalene College, Mr. France, Tutor of St. John's College, Mr. Warter, late Tutor of Magdalene College, and others, express likewise opinions favourable to the institution of such a Board. Mr. Thompson, however, of Trinity College, whose opinion is entitled to great consideration, confining his observations to the Classical Tripos, is disposed to think that the provisions of the Grace of the Senate passed in 1849, by which the four Examiners are required to consult together with respect to the papers to be set, are sufficient for all the purposes required.

Powers of such a Board.

With an extended staff of Classical Professors and Public Lecturers, to whom would be entrusted the instruction of the Students who were candidates for classical honours, the institution of such a Board with powers to regulate, with the approbation of the Senate, the subjects of the lectures and the cycle of their order, would be found to be essential to the successful working of the system: for it is obvious that without a very strict and well regulated co-operation, by which provision would be made to meet the wants of every Student, it would be impossible to prevent the prevalence of private tuition, by which the beneficial influence of the system might be frustrated. Its successful working also would require, in this department of study as well as in others, a liberty of choice on the part of the Student with respect to the Lecturer whom he would attend; and if the remuneration of the Professors, or Lecturers, were made to a great extent dependent upon the number of Students who attended their lectures, they would possess a motive for exertion of never failing operation. By such an arrangement also those who had not the art of teaching, however great their learning or ability, would soon abandon their Lectureships for other employments, unless provision could be made for them in other capacities, not as teachers of their department of learning, but as representing it, and extending it by their researches and publications.

It is, however, manifestly essential to the success of such a system of Lectures

REPORT.

Provinces of University and Collegiate Instruction must be strictly defined.

in this or in any other department of learning or science, that the attendance of Students on the University Lecturers should not be obstructed by an unnecessary concurrence of Lectures on the same subjects in the Colleges; for it is obvious from the relation which exists between a Student and his College, that in a competition for attendance upon University or College Lectures, where it can be enforced in one case, and not in the other, the compulsory lectures will always prevail. It is only by strictly defining the respective provinces of the University and the Colleges in the education of Students, and by preventing irregular intrusions upon them, either on the one part or the other, that they can be made to work harmoniously together. To secure this end, it appears to us to be necessary that every Candidate for a Degree in Arts, or for Honours in any Tripos, should be required to produce a Certificate of his having attended, during the last four Terms of his residence, such a Course of Public University Lectures as might be thought to be an appropriate and adequate preparation in his particular line of study.

6. BOARD OF MORAL SCIENCE STUDIES.

Recommendation.

According to the present arrangement of the Moral Sciences Tripos, the studies of the Law are incorporated with those of Moral Philosophy, History, and Political Economy. We are disposed to think that if increased activity were imparted to the system of Legal Studies and Examinations, it would be found convenient to have a distinct career for Students of Law in the Law Faculty, and to separate them from the department of Moral Sciences.

So long, however, as subjects are embraced, whether in the Examination for this Tripos or that of the Natural Sciences Tripos, which, though grouped together for that purpose, are not dependent upon, or very closely connected with each other, it would seem to be desirable to allow candidates to select such portions of them as they may have made the object of special study and preparation, without requiring them to submit to the form of examination in others which they are not qualified to pass with credit or with satisfaction to themselves. It has always been a leading principle in the Classical and Mathematical studies of the University to discourage vague and inaccurate knowledge, as fatal to the formation of those habits of strict observation and reasoning without which no fruits can be brought to maturity. We hold it to be of the utmost importance to the character of the University that the maintenance of this great principle should never be abandoned or even endangered. It is for this reason that we think it expedient that the classes of honour, in connexion with these Triposes, should be rather framed with reference to specific than to general acquirements, and we observe with pleasure that this principle has been already recognised, and acted upon, in the classification of the candidates for those Triposes in the past and present years, by the addition of special marks of commendation corresponding to the particular branch of study in which the candidate has excelled.

Professorship of Modern History.

Appendix, p. 456.

We have already pointed out the connexion which was intended to be established between the Professorship of Modern History and the study of Modern Languages. The studies which this Chair was designed to promote seem to have had reference to the preparation necessary for diplomatic and other foreign appointments.

Mr. Worts' Foundation

We have also alluded to a foundation for the maintenance of two Travelling Bachelors. By the will of Mr. William Worts, two incepting Bachelors receive 100*l.* per annum each for three years. They were directed by the Will to visit foreign countries, to take different routes, and each of them to write once in a month a letter in Latin to the Vice-Chancellor of the University to be communicated by him to the Regent House and to be deposited in the Public Library. In those letters they were to give an account to the University of the religion, learning, laws, politics, customs, manners, and rarities, natural and artificial, which they should find worth observing in the countries through which they passed. In modern practice this foundation has been so far modified that the Latin letters are required to be sent by the travellers to the Vice-Chancellor only once a year. But at the present day it may reasonably be doubted whether any important purpose can be served by the maintenance of such a foundation. There is no lack of travellers among our countrymen: no want of information from books on the state of foreign countries: and it may be added that although the foundation of Mr. Worts is not more ancient than the beginning of the last century yet the changes which have recently taken place in regard to the facilities and the

desire for travel have produced a greater effect in reference to the particular objects which he desired to promote than several centuries have done in regard to other foundations. On the other hand wants of an analogous character have been produced by the state of modern society and the extension of international relations.

Among such wants may be particularly mentioned a special education for Students destined to fill Diplomatic and Consular appointments. We have said that the stipend of the Professor of Modern History is not greater than is necessary to secure the services of a person of eminent literary attainments, and we think he should be relieved from the obligation imposed by his Charter of Foundation to find out of his salary adequate stipends for two teachers of Modern Languages. We have also recommended that a knowledge of Modern Languages, with which might be united some acquaintance with Modern History, should form one of the passports to the B. A. Degree, after the test of the Preliminary Examination in the second year had been satisfied. But if a special education for the class of Students to whom we have referred were undertaken by the University, the subjects of study, which it would be necessary for them to pursue, would be of sufficient magnitude and importance to justify the institution of a Tripos of Honour for distinguished proficients. For if to the knowledge of languages were superadded an acquaintance with the History of Treaties, with Political Geography, with the principles of International Law, the laws relating to aliens, to commerce and to shipping, and perhaps other kindred subjects, a field of study would be described sufficiently ample and important to warrant its introduction and encouragement within the system of the University. If such ideas ever attained distinctness and coherence, it might be worthy of consideration whether the Foundation of Mr. Worts might not, with such addition as might be deemed fitting, be converted into a Professorship to be called that of the Law of Nations and Diplomacy. Such a commutation under the altered circumstances of modern times might not involve any injustice to the intentions of Mr. Worts, and would materially strengthen the effective staff of Public Teachers in the University.

There is generally no want in Cambridge of teachers of the principal European languages. Some of their number have generally been men of considerable literary attainments, and they have occasionally received a formal appointment as authorised teachers of those languages from the Regius Professor of Modern History. In the event of such a Professorship as we have described being instituted, the occupier of the new Chair might, with the Professor of Modern History and such members of the Senate as might be deemed fitting, be united to form a Board to preside over and direct the Studies and Examinations belonging to this department.

7. Board of Natural Science Studies.

The sciences included in this group, which are represented by Professors in the University, are Chemistry, Botany, Mineralogy, and Geology. There are no representatives of Zoology, considered apart from Comparative Anatomy, and as a branch of Natural History; nor of Meteorology, a science of rapidly-increasing importance, of which the chief generalizations have only recently been established; nor of Electricity and Magnetism, unless considered as departments of the vast science of Chemistry, or connected by other relations with Natural Philosophy. In our classification we have considered the more exact Natural Sciences as included in the application of Mathematics; but in foreign Universities they are considered, under the name of Physics, as a branch of experimental rather than of mathematical science, though there are very few departments of them where the aid of a mathematical treatment of most of the questions involved is not indispensably necessary.

The arrangements of the Natural Sciences Tripos, adopted in 1848, include Human and Comparative Anatomy and Physiology, which are essential branches of medical instruction, and are more properly referred, therefore, to the group of Medical Sciences.

There have been two examinations for the Natural, as well as the Moral, Sciences Tripos in the past and the present year. The number of candidates for both of them was small, but much more so in the former than in the latter; a result which might naturally have been expected as these studies have been only recently encouraged. It is obvious also that there cannot be continuous instruction given to Students engaged in learning those sciences which are dependent

REPORT.

upon the exhibition or manipulation of experiments, or in the examination of specimens, unless the Professors or well-qualified assistants are present to direct or advise them.

Chemistry.

The science of Chemistry is rapidly extending its ramifications into all the arts of life, and a knowledge not merely of its principles, but also the practical power of applying them, is becoming daily more and more important as a part of general as well as professional education. The present venerable Professor of this science has lived to see the day, after many years of comparative indifference and neglect, when his lecture-room is again well attended by students; an effect partly produced by the recent legislation in the University, and partly by the interest which the results of chemistry have created amongst all classes of the community. But the science is much too extensive for the teaching of one Professor: and we venture to hope that the University will eventually add a second who may divide with the present Professor the vast range of subjects contained in this extensive science.

Recommendations.

We are also of opinion that a new Professorship will be required in the science of Zoology.

The provision of adequate lecture-rooms for a greatly enlarged system of lectures, and also of collections of apparatus and laboratories, to which Students may have access, as well as the support and extension of the scientific Museums —all subjects of great importance to the University, will be specially considered in a subsequent part of our Report.

P. 116—127.

Ten new Professorships recommended.

We will now recapitulate the new Professorships that we think it would be necessary to establish in the University. They are,—

Two of Theology,
One of General Jurisprudence,
One of the Law of Nations and Diplomacy,
One of Anatomy,
One of Chemistry,
One of Latin,
One of Zoology,
One of Practical Engineering,
One of Descriptive Geometry.

Endowment of new and additional endowment for existing Professorships.

But besides the new Chairs which we have indicated, it is clear that before new obligations and duties can be imposed upon those existing Professors, whose lectures are subservient to the obtaining of a Degree, additional means of endowment, where requisite, must be supplied for their adequate maintenance. We do not think it necessary to enter into detail, but we are of opinion that sufficient means may be found for all purposes without imposing upon the Colleges the burden of contributing from their corporate revenues a larger annual sum than under all circumstances may be reasonably expected from them.

The principles upon which the emoluments of Professors in the University should be regulated, have been expressed with such singular wisdom, and we may add, foresight, in some passages from different works of Lord Bacon, which have been collected and somewhat condensed by Sir William Hamilton, of Edinburgh,* that we make no apology for quoting them.

"And because Founders of Colleges do plant, and founders of lectures do "water, it followeth well, in order to speak of the defect which is in public "lectures, namely, in the smallness and meanness of the salary, which, in most "places (especially among us) is assigned unto them, whether they be Lecturers "of (the liberal) arts or of professions. It hath been my ancient opinion and "observation that the Universities of this realm, which I take to be the best "endowed Universities of Europe, there is nothing more wanting towards the "flourishing state of learning than the plentiful and honourable salaries of such "Readers; for it is necessary to the progression of the sciences that Readers be "chosen of the most able and sufficient men, as those which are ordained for "the generating and propagating for ever of the sciences, and not for transitory "use. This cannot be except their condition and endowment be such as may con-"tent the ablest man to appropriate his whole labour, and continue his whole "age in that function, and therefore must have a proportion answerable to that "competency of advancement which may be expected from the practice of a pro-"fession; so as, if you will have sciences flourish, you must observe David's "military law, which was, 'that those which tarried with the baggage should

* "Discussions on Philosophy, Literature, and University Reform," p. 693.

" have equal part with those that went down into the battle,' else will the baggage " be ill attended. So Readers in sciences are indeed the guardians of the stores " and provisions of science, whence men in active courses are furnished, and there- " fore ought to have equal entertainment with them; for surely Readers in the " chair are as parents in the sciences, and deserve to enjoy a condition not inferior " to their children that embrace the practical part, else no man will sit longer " in the chair than till he can walk to a better preferment; and if the fathers " in sciences be of the weakest sort, or through the meanness of their entertain- " ment, be but men of superficial learning, it will come to pass, as Virgil " saith—

" 'Invalidique patrum referent jejunia nati.'"

Amount of income requisite.

It is difficult to determine the bases upon which should be fixed the amount of the incomes to be assigned to Professors in the University, which would be sufficient to secure generally the services of the ablest men in the different departments of academical study, either permanently or until they were advanced to other preferments of greater value or dignity in the Church or in the State. Much would in all cases depend upon the nature of such ultimate prospects, as affected by the course of public legislation; still more upon the advantages offered elsewhere by professional employment. The temptations, however, to the adoption of a life of literary or scientific labour, such as the Professorships in our Universities, if adequately endowed, would afford, from the gratification of a deeply-rooted taste and the prospects of distinction and fame, are always powerful, and would be found very generally to prevail, if combined with the certain attainment of a reasonable and independent support. We should be induced by such considerations, not to fix the incomes of such Professors as high as that which other professional employments would generally secure for them; and in mentioning incomes varying from 400*l.* to 800*l.* per annum, attainable at a moderately early period of life, we indicate a scale by which the University would probably be able to command the services of men of the highest order in every department of learning and science.

Mode of Appointment.

If we assume that the appointment to Professorships which have been created by special Founders should continue to be regulated by the special provisions of their deeds of foundation, it becomes a question of no small difficulty, but of paramount importance, to determine the best and safest modes in which elections should be made to the Professorships already founded or to be hereafter founded by the University itself. Objections might be urged against a nomination by the Heads of Colleges, as provided by the 40th Chapter of the Elizabethan Statutes, as it would exclude the great body of the Professors from the share which is properly due to them in the selection of the candidates; whilst an uncontrolled election by the whole body of the Senate would give too free a course to the predominant influence of the larger Colleges in favour of candidates connected with them. We should be disposed to recommend a middle course, entrusting to a General Board or Council of Studies, constituted as hereafter described, the selection of one or more candidates to be by them nominated to the whole body of the Senate, for final confirmation or election. The Statute, however, which should embody the conditions of all such elections, and provide against the difficulties which might arise in connexion with them would require to be very carefully considered.

Conditions of tenure.

In the framing of the Statutes for regulating the Professorships or Lectureships to be hereafter founded, or those already in existence, which receive an augmentation of income, there are some conditions which should be rigorously enforced: the first is, a residence in the University of at least six months in the year; the second, that the whole or at least a considerable part of their salary should not be paid, unless the lectures required by the Statute or Grace of the Senate had been delivered. These conditions should not be relaxed, unless for a *gravis causa* to be approved by a competent authority, and even then only for a limited period. If however the approach of old age or continued illness should render the effective performance of a Professor's duties no longer possible, or no longer profitable to the University, then some part of his stipend in proportion to the length of service should be assigned to him by way of pension, with the title of *emeritus*. Such a reservation of an honourable support for old age or infirmity would in fact be considered as a valuable part of the remuneration of those who were engaged in the active performance of their duties.

Composition of the Boards of Study, and their functions.

We have sufficiently enlarged upon the importance of instituting Boards of Study, corresponding to the several courses by which the B. A. or the Professional Degrees may be attainable. The several Boards would be composed of Professors

Report.

belonging to each particular branch of study, together with such other Members of the Senate as it might be thought expedient to unite with them. To these Boards we would confide the regulation of their several departments; their proceedings, when not merely administrative, being subject to the approbation of the Senate, and consequently to the revision of the Council of Legislation. We think that it should also be the province of each Board as well to select and nominate the Public Lecturers of their several branches of study, as also to secure in each branch due organization of the teaching of the Public Lecturers and the Professors, to prescribe the cycle of subjects to be taught, the order in which they are to be taken, and to suggest and propose the arrangements and changes required from time to time to maintain the constant efficiency of the system of instruction.

But there are many questions which may arise affecting the relations of these Boards to each other as well as to the whole body of the Professors, which will require from time to time to be considered and determined by some superior authority, such as a

General Council of Studies.

We have recommended that a Council should be instituted, which should possess the power of nominating, for the sanction of the Senate, the candidates to fill vacant Professorships, when their election is not provided for by special Statutes; and it might be expedient to constitute the same body as a General Council of Studies, who should be authorized to meet from time to time, and to deliberate, and, when necessary, to report to the Senate upon all matters which relate to the public instruction of the University, and to give unity of action to the Boards who preside over its several departments. In this Council all Professors would naturally be included. It might, however, be objected that if it were composed of Professors only, its members would be disposed to view the questions submitted to them rather with reference to the interests of the class to which they belonged than to those of the University at large; that in elections and the distribution of funds entrusted to them, a spirit of exclusion and favoritism might sometimes manifest itself, which would tend to provoke feelings of jealousy and distrust in other members of the University, and thus expose their recommendations to much opposition. In order to guard against the formation of such an exclusive spirit and to give to the constitution of this Board a more comprehensive and popular character, it would seem to be expedient to add a certain proportion of other members of the Senate. Thus the Vice-Chancellors of the current and past year, the Public Orator, the Registrary, the two Proctors, and the two Moderators of the current year, might be *ex officio* members of it. And if with them were combined a certain number of other persons, as for instance, two Heads of Colleges, appointed by their body, and eight members of the Senate, appointed by the Colleges according to a specified cycle, a body would be formed which would be little likely to be influenced by the personal interests and feelings of any predominant class of its members to such an extent as seriously to compromise its usefulness and impartiality.

To the Vice-Chancellor might be given, as the right of his office, the power of summoning the meetings of this Board, either at his own pleasure or upon the requisition of three or more of its members. But when the multifarious duties of that officer are considered, it seems expedient in this case and in all other Boards and Syndicates, that a Chairman should be appointed, who might act for him when other engagements prevented his being present. The Vice-Chancellor is not a member of the Board of Mathematical Studies, as at present constituted, but its members (who appoint their own Chairman) make their reports to him, by whom also they are published to the University. But it seems to us to be a proper incident to the first administrative officer of the University, that he should be officially the head of every Syndicate or similar body, by whatever name it may be designated, and should possess the right of calling them together whenever he is disposed to do so; but it is well known that inconveniences have resulted unavoidably, and must result from making it necessary that the Vice-Chancellor should personally preside at all meetings of such bodies, and from not appointing, in every instance, a Deputy Chairman, who should be authorized to act in his place whenever he is prevented attending by other engagements.

In closing this review of the general range of studies, we think it desirable, from the great importance of the particular subject, to add an account of the recent progress and present state of Mathematical Study in the University.

MATHEMATICAL STUDIES.

The actual state of Mathematical studies as pursued in the University of Cambridge is undoubtedly a state of progress, and one in which, since the commencement of the present century, great and signal improvement has taken place; insomuch that the want which of late years appears to have been most pressingly felt is that of limiting by general understanding among the Examiners, or by some definite rules imposed by the authority of the Senate, the exuberance of the course of reading followed and the variety of the subjects both of pure and applied Mathematics required, and the extent of detail into which they are pursued. Present state of these studies.

Cambridge has always maintained a high reputation as a Mathematical University. Since the days of Barrow, Newton, and Cotes, that University has been looked to as more eminently the seat of abstract science in this country, and the chief centre from which it has been diffused. On the importance of such studies it is impossible to dwell too strongly, whether we look to their educational effect as a discipline of the mind, or to the magnificent results to which their pursuit has led, and which have influenced the whole character of modern civilization. While, however, it is impossible not to feel that the glory of the country itself is intimately bound up with our national progress in this direction, it is equally certain that Mathematical science, as such, is not that department of human pursuit which has ever claimed a large share of human sympathy when placed in competition with those in which excellence is more easily appreciated. What the vulgar does not accord it is necessary that the more enlightened should supply in the way of motive for entering on pursuits which have apparently little attraction in themselves. There were danger that Mathematics might perish from the face of the earth if not made an especial part of a liberal education, and that at all events their higher forms would never arise unless their attainment were cherished and fostered by high rewards,—such at least as in early life are esteemed high rewards,—honorary distinction, and an advantageous start in the career of practical life, and unless some powerful encouragement were afforded for a continuance in pursuits of all others the least lucrative in themselves. We cannot then participate in the sentiments of those who are disposed to deny and undervalue the decidedly Mathematical tendency of the Cambridge system. On the contrary we regard it with peculiar complacency, and earnestly desire its perpetuation. Their importance.

That the study of Mathematics has been greatly progressive in the University is apparent from two features established by the Evidence before us, viz.:—

1st. That the Examinations in that science are far more searching and severe than heretofore; that they embrace a wider range of subjects, and those less elementary than formerly; and that the tendency until the last few years (when it came to be considered that enough had been done in that direction) has been to raise the standard of qualification, not only in the Examination for Honours, but for the ordinary degree of B.A. If there be any difference of opinion on this head, it is referable rather to the fluctuations which have taken place since the subject has largely engaged the attention of the University (*i. e.* since 1827) in respect of the changes introduced into the mode of Examination, and of the regulations respecting the admission of Candidates for distinction in the Classical Tripos, than to the general progress during the longer interval here contemplated.

Dr. Philpott, p. 258. Mr. Gaskin, p. 226. Mr. Hopkins, p. 239. Professor Stokes, p. 267*a*.

Mr. Peill, p. 254. Mr. Gaskin, p. 227. Mr. Hind, p. 238.

2nd. That, in spite of this increased severity of Examination and of the increased range of subjects and their less elementary mode of treatment, the number of honours taken has steadily increased not only absolutely in the simple ratio of the increased number of Degrees taken, but relatively in a higher ratio; the percentage on the total number of Questionists, which in the interval from 1808 to 1832 averaged 28, having risen to 40 in 1848, while the total number of Honours taken per annum has risen from 43 in 1801 to 116 in 1851: a fact which goes to prove at once the prevalent sense of the importance attached to these studies, and the absence of any severe and exhausting labour necessary for

Evid., p. 233, note. Mr. Gaskin, p. 227

REPORT.

attaining at least some moderate and respectable proficiency in them by men of average capacity. Indeed the evidence of one excellently qualified to form an opinion on this point shews that owing to a better mode of communicating knowledge than the slow and laborious method formerly in use, the labour of the average Student is really lightened while the standard attained is higher. Mr. Hind is of opinion that in spite of the praiseworthy endeavours which he admits to have been made of late to raise the standard of qualification for an ordinary Degree, it is still too low, and though absolutely on the rise, yet relatively, in comparison with what prevails in other Academic institutions, lowering If, however, as stated by Professor Stokes, the proportion of those Candidates for the Degree of B. A., who fail in their Examination be so high as one sixth of the total number, we can hardly regard the standard of qualifications which leads to such a result as unduly lowered. So again it would appear that during the continuance of those regulations which made the privilege of competing for Classical honours dependent on the attainment of a certain Mathematical honour, some degree of relaxation in the qualification for the attainment of the rank of a Junior Optime took place, out of consideration of the hardship of excluding from opportunities of high distinction men whose turn of mind unfitted them for mathematical pursuits. The abrogation of this restrictive condition has destroyed the ground for such relaxations and restored the tendency to an elevation of the standard of qualification.

Mr. Hopkins' reply to Q. ii, iii. p. 241.

Evidence, p. 239.

Ans. to Q. 4, p. 267*b*.

Prof. Stokes, ans. to Q. 3, p. 267*a*.

The list of books which a Student aiming at high honours is expected to consult and master, as stated in the evidence of the Rev. T. Gaskin, may certainly be considered to comprise a course sufficiently continuous and comprehensive to form the ground-work of the highest proficiency in this branch of science. The book questions and problems proposed at the Examinations, both which since 1827 have been printed *in extenso*, show that this list is not one of mere display, and "it would surprise many," says Dr. Philpott, "who complain of the length "and hardness of the problem papers to learn how many and how satisfactory "are the solutions given by ready and well prepared Students." At present then, a Student passing his B.A. examination among the two or three first of his year may be regarded as fully prepared, should his tastes and circumstances lead him to do so, to win his way onwards from an advantageous point attained to high distinction as a Mathematician.

Evidence p. 228. Books in use.

Evidence, p. 261.

The general view thus taken of the state of Mathematical learning in the University, though no doubt encouraging, by no means precludes the existence of abundant room for possible ameliorations—

Heads of Inquiry.

1st, in respect of the selection of the portions of the general body of that science to be more especially taught and the rejection of superfluities; 2nd, in the mode of communicating the knowledge to be acquired; and 3rd, in the application of tests for ascertaining what has been effectively communicated.

These form the chief heads of inquiry as to the efficient teaching of Mathematics as a department of science. The important question whether they are so taught in the University as to secure to the general Student the full amount of their beneficial influence in the education and discipline of his intellect, will be considered subsequently.

Selection of subjects.

In reference to the first of these points, the University has shown no backwardness in adopting ameliorations recommended by experience, and called for by the public feeling of its members, including the Students themselves, who are keenly alive to what regards their interests on this and every other question of general progress. It has already been observed that a great range of new mathematical subjects has been introduced into the course of the University reading since the early part of the present century. "The responsibility of introducing "these alterations" up to the appointment of the Board of Mathematical studies in 1848 however, "rested with the Moderators and Examiners, no "regulations having been provided by the University to which they could refer for "authority or guidance." It is owing probably to this absence of regulation under the circumstances that so much was effected; but while in progress, the rapid introduction of so much new matter had the necessary effect further adverted to by the Board in their first Report—"The uncertainty as to the subjects the "Examinations would embrace, and the want of due notice of any extension "being given to them, have been felt as a serious inconvenience by the higher "class of Students." It was with a view to remedy the evils attaching to this

Report of Board, Appendix to the Rev. T. Gaskin's Evidence, p. 233.

First Report, Evidence, p. 233.

somewhat paroxysmal state of progress—to "encourage attendance on the Lectures "of the Mathematical Professors, and to ensure a correspondence between those "Lectures and the Mathematical Examinations of the University—and also as a "means of communicating to the Students themselves from a body of experienced "Examiners and Lecturers correct views of the nature and objects of our Mathe-'matical Examinations," that a Syndicate appointed by Grace of the Senate to consider the subject, recommended the formation of a Board of Mathematical Studies, "to communicate together from time to time on all matters relating "to the actual state of Mathematical Study in the University, and to prepare "annually and lay before the Vice-Chancellor a Report to be by him published "to the University in the Lent or Easter Term of each year."

REPORT.

Dr. Philpott, p. 262.

Such was the origin of the present permanent "Board of Mathematical "Studies," two of whose Reports have been laid before us, to which we shall presently refer more particularly. On many previous occasions, special Syndicates, having for their object to effect improvements in the mode of conducting and duration of the Examinations and the classsification of the Students for Examination, under the altering state of the University as to the number of candidates for Degrees, had been appointed; but then, for the first time, we find a permanent body appointed and recognized as the legitimate organ of the University, in watching over the general course of study, and regulating, at least by its recommendations (though without direct authority to carry those recommendations into effect), the further changes and modifications to be from time to time introduced, as well into the course of study itself, as into the system of Examinations.

The two Reports, of which mention has been above made, are documents of much interest. The first (bearing date May 19, 1849), after giving a *resumé* of the history of the changes which had taken place under the recommendations of special Syndicates in the mode of Examination in the interval from 1808 to the appointment of the Board, to which we shall advert under its proper head, describes in detail the steps by which the newer and higher Mathematical subjects obtained a footing in the University, and the extension given to the courses of Lectures of the several Mathematical Professors; recommends more equal distribution of their several subjects among them, and (as bearing upon the point with which we are more immediately concerned) recommends also that certain Mathematico-physical theories, which had obtained a temporary and questionable footing in the Examinations, and which were felt to be in a state of considerable obscurity, involving great Mathematical difficulties, and rather marking the frontier of science, than coming as yet fully within its ascertained range (those, namely, of Electricity, Magnetism, and Heat), should not be admitted as subjects of Examination. In their second Report, the Board goes farther, and with a view chiefly to limiting the luxuriance of symbolic application, and the exclusion of laborious analytical processes from the subjects which Students might expect to be called on to produce at their Examinations, they recommend the abridgement of several of the higher subjects, and the omission of one or two short but difficult theories which had hitherto been considered part of the course, such as those of Elliptic Integrals, and of Laplace's Coefficients in Pure Mathematics, and of Capillary Attraction in Mixed.

Reports of the Board of Mathematical Studies.

The general principles of rejection laid down, embrace, 1st, Investigations of not much interest, or which relate to methods become obsolete. 2nd, Investigations which are imperfect or unsatisfactory, or which involve questions about which Mathematicians are not sufficiently agreed; and 3rd, Investigations which lead to long analytical processes (such, for instance, as determining the orbit of a comet), respecting which they remark, that "Investigations of this class are "frequently of great importance, and it is in some cases essential to a complete "mastery of the subject that they should be gone through at leisure by the Stu-"dents. It does not, however, appear desirable to induce Students to spend much "time in rendering themselves so familiar with particular Algebraical calculations "as to make sure of being ready when called upon to write them down with "rapidity . . . . . The Board are of opinion that the time thus spent would be "much better employed in working examples and problems calculated to eluci-"date the principles of the several subjects, and thinking over the elementary prin-"ciples themselves, in order, by regarding them in different points of view, to "obtain a mastery over them."

Second Report, p. 234.

Subjects thus excluded—those at least whose ground of exclusion is their incom-

REPORT.

pleteness, obscurity, and want of general reception as integrant parts of the body of ascertained science, may be taken in again at some future epoch, when the progress of knowledge has fitted them into their proper places, dissipated their obscurity or given them a claim to admission as striking exemplifications of some new and considerable application of general principles. Thus already Mr. Ellis has pointed out certain propositions and lines of theory among these rejected portions; such as Abel's Theorem in the Elliptic Integrals, and Thomson's Theory of "Electrical Images," in the Physical Theory of Electricity, which he considers to possess those redeeming characters.

Evidence, p. 225.

In all matters of this nature, and in all that concerns the practical working out of the general principles of mathematical education, we are of opinion that it may very safely be left to the good sense of the University itself, acting through the medium either of the Board of Mathematical Studies, or of some more generally organized supervising body, to adopt from time to time such improvements; to take into the course of study such ascertained additions of a definite character; and to reject such objectionable superfluities, as the exigencies of the passing time may suggest. In their acceptance or rejection of subjects in the Mixed Mathematics, and in their recommendation of methods of treatment, and of the course to be followed in examining Students in them, their views will doubtless be directed quite as strongly to rendering the studies of this class subservient to the great end of a University education—mental cultivation and discipline, as to drawing forth the greatest possible evidence of simple technical proficiency, a subject to which we shall recur further on.

Possible improvements in the mode of instruction.

We come next to consider the question of improvements which may be practicable in the mode of communicating the knowledge it is considered ought to be imparted.

College Lectures defective.

The system of College lecturing at present followed, in which, after the first year, any effective classification of the Students attending, according to their capacity for benefiting by them, is impracticable, must be admitted upon all the evidence before us, to be completely at fault as far as the highest training for mathematical honours is concerned. Hence has arisen, in great measure, the system of Private Tuition with its attendant evils—expense and "cramming," *i. e.*, misdirection of the Student's attention to the possession of a certain amount of readily producible and easily forgotten knowledge at the examination for the sake of distinction, rather than to its entire and permanent possession for its own sake; and the production, in inferior men, of an apparent higher level of acquirement than is justly their due. That the necessity of this system, or some one of the kind (which in its present overgrown state is "an encroachment on the "tutorial as that was on the professorial system") is at least in some measure due to the numerical inadequacy of the College staff of Tutors to do the task of carrying on *all* the Students to their final examinations with equal justice done to every grade of ability; is a sentiment so prevalent among those who have recorded their opinion in the evidence before us that it would be wearisome to recite it.

Mr. France, p. 284.
Mr. Hoare, p. 168.
Mr. Hughes, p. 169.
Mr. Warter, p. 202.
Dr. Philpott, p. 265.
Mr. Swainson, p. 193.
Mr. Gaskin, p. 229.

The subject of College Private Tuition, however, with a full exposition of the views of those authorities which are embodied in the evidence before us, and of our own impression, as to the nature of the evils complained of and their remedies, has already been discussed, and need not here be further referred to.

P. 74.

Improvement of Examinations.

In order to forming any right estimate of the amount of improvement of which the system of Examinations may still be susceptible, it is necessary to pass in review what has already been done in that direction, and to trace the history of the changes which have been introduced in this system by successive Syndicates. We take for our guide in this the elaborate exposition of those changes given by Dr. Whewell, in the work referred to by him in his evidence.

Outline of changes which have taken place.

In the ancient system of University learning and discipline, almost everything hinged on the public Exercises and Disputations in the schools, the greater or less degree of success in which formed the only, or at least the chief criterion of proficiency. For a very long period, however, antecedent to the more recent changes, the disputations in the schools had become merely ancillary to a mode of Examination carried on by written papers in the Senate house so as to serve as a mode of preliminary classification by which to determine the extent, variety, and difficulty of the subsequent and decisive Examinations on paper. When this mode of procedure had obtained its full development (about 1772) it resulted in a list of twenty-four Wranglers, and senior Optimes, to whom alone the privilege

of competing for the Chancellor's classical Medals was accorded, and a further list of twelve junior Optimes, arranged in order of merit; the remainder of the Questionists passing, if they passed at all, without distinction. REPORT.

"In this stage of the history of the University," says Dr. Whewell, "the Disputations ..... formed a prominent *viva voce* element in the system, and undoubtedly produced much of the beneficial effect which we have noticed as belonging to that element, viz., the sympathy of the Students in a common subject; the fixation of their attention on difficulties and their solution; the discipline of promptness and clearness in the disputants as well as of knowledge, and also, as we have stated, the public evidence of the fitness of the Moderator for his important office." Whewell on Liberal Education, art. 205 and 206.

From this time until the year 1808 neither the mode nor the subjects of the Examinations appear to have undergone any considerable change. From that period, however, in consequence of the changes then progressively taking place in the course of the University reading, matter gradually crept into the Disputations of a kind more and more difficult to express orally by reason of its symbolic form. The Disputations thus became daily less intelligible and interesting, and an increased importance was given to the paper Examinations. These at length became the only portion of the University Exercises in which any interest was taken, the Disputations fell into neglect, and it began to be felt that the nature and form of the system must be changed to meet the altered state of reading and to repress the tendency so natural and so ready to reappear at every epoch of our unsettled course of study, that, namely, to neglect the elements or to master them superficially, and to obtain distinction by lucky hits in the higher subjects. The increasing number of Students also aided in affording a motive for change. The Disputations grew inconvenient, the preliminary classifications more difficult and less important, and the whole time devoted to the paper Examinations much too short to elicit the relative merits of the candidates.

From the concurrence of these causes, taken in conjunction with the intense interest excited in the bosom of the University itself as to the success of the new studies and the wider and higher career, not only in respect of Mathematics but of knowledge generally, into which it was felt that an entry was commencing, originated a series of Graces in the Senate for the appointment of Syndicates, in the years 1827, 1831, 1836, 1838, followed by corresponding changes in the system of Examination recommended in their Reports, the chief features of which may best be summed up in the words of Dr. Whewell, who thus reports them:—

"It will be seen that from 1827 to 1838 these Acts of the University made a series of changes, all in the same direction. The previous classes which had been formed merely upon the performances of the disputants in the schools and which were subject to different Examinations, were abolished. In 1827 these classes were reduced from six to four; and the Examiners were enabled, when they thought fit, to give the same Examination to all. In 1828 the Examination of the first four days was ordered to be the same for all, and the classes were divided only on the fifth day. In 1838 the classes were discontinued, and the same questions were to be proposed to all the candidates. Lib. Educ. § 225.

"Another series of changes which took place was that the length of the Examination was gradually increased. In 1779 a fourth day was added to the Examinations. In 1808 a fifth. In 1827 two days more were added..... In 1832 five days instead of four were appointed for the Mathematical Examinations, and in 1838 a sixth."..... Finally, "while more time was given to the candidates to write, more time was also required for the Examiners to read what was written"—their labours having become very severe, so as rarely to be got through without devoting to it many hours of the night. Whewell, Lib. Educ. § 227.

A very important element in these changes remains to be spoken of—the proportion in which in the Examinations so extended, mere book-work was held to bear to the solution of problems and questions calling for something more than simple industry and "getting up" of the subject. This proportion had varied as follows:—In 1827 ten hours were given to "questions" and eight to "problems." —In 1829 twenty-four and a half were given to "questions" and only eight and a half to the solution of problems. The Board of Mathematical Studies, in their first Report in 1849, express themselves dissatisfied with the results of this distribution. They observe that "having had before them an analysis of the answers

Report.

"to the questions proposed in 1846–7–8–9, they find that the number of answers "to the examples and deductions has fallen below what is desirable to secure. "They are of opinion that such a result may in great measure be prevented by "diminishing the number of questions, and they have agreed to recommend that "the papers containing the questions from books be shortened in order to enable "the candidates to give more time to examples and deductions."

It can hardly be denied that an excess of book-work called for in Examinations has a decided tendency to give industry an advantage over innate talent, or at least to place them more nearly on a level; and not merely industry (which if well directed and sanctioned by high motives, merits every recognition), but that perverse and obnoxious form of it, which looking to the result of Examinations only as a stepping-stone to worldly progress, is content thenceforward to throw overboard as an incumbrance, or to forget as utterly uninteresting, the acquirements of months or years of painful and grudgingly given toil.

This is in fact the great vice of the Examination system, or rather a perversion of it from its legitimate use (that of ascertaining that sanctioned studies have been effectually pursued) to which the University as an educating rather than a prize-bestowing body, ought to lend itself as little as possible. To determine between the real and the apparent proficients, where great numbers have to be examined in a short time, will always be difficult; but we consider that where the distinction is not broad and salient, the Examiners would do well to ignore it and to recognize the difficulty of discrimination, by a free use of the bracket—placing one candidate above the other only where a broad and decided line of demarcation should separate their degrees of merit. Where College emolument is the direct object and avowed end of an Examination, as in that for Fellowships, Scholarships, &c., the ready production of knowledge, however incoherent, will always offer a temptation difficult to resist—but in the University Examinations those who have not this stimulus and who resort to the University for education, and for education only, should be protected from its injurious influence, and taught to rely rather on a moderate amount of knowledge, soundly and honestly possessed, than on a larger amount got up for the purpose of exhibition with little comprehension of its real bearings and connections.

Recommendations.

Evils of cramming.

The evil of "cramming" is so great, and its influence on the character, both intellectual and moral, so fatal, that we may be excused for dwelling on it somewhat at large. It originates, as already stated, in a misdirection of industry to the apparently honourable, and certainly advantageous, result of passing a good Examination, rather than to the acquirement of sound knowledge for its own sake; and will never be eradicated, but continue to reappear in some form or other, while the results of Examinations have the direct influence which they actually have on the prospects of those who undergo them. The causes of this influence are beyond the control of the University, and lie deep-seated in our social system, where they are daily acquiring new power. The only remedy which exists against an evil so rooted is to diminish its influence on the results of Examinations, by such a mode of conducting them as to detect and expose it. Of the means of doing this two are especially available—problems in writing, testing the ready application of principles, of which sufficient has been said; and oral Examination searching into the coherence, and full mental possession of the Student's knowledge of his subject.

Vivâ voce examination.

And this leads us to observe that not only Dr. Whewell but several other of those considerable authorities to whom we have applied for information, express some degree of regret at the entire abandonment of every form of oral or *vivâ voce* Examination. Thus Dr. Philpott:—

Evidence, p. 261, answer to Q. 5.

"My experience as Moderator in the years 1833, 1834, and 1836, when the "Exercises in the schools were still kept up led me to attach great value to the "Examinations *vivâ voce* which those Exercises gave the means of holding, and "I think that a test may be thus applied to the accuracy of many parts of a "Student's knowledge which would be more efficient and trustworthy than that "which is given out by written answers to questions proposed all at one time."

See also Dr. Philpott, p. 260. Mr. Mould, Q. 5, p. 251.

Mr. Hopkins—an authority entitled to every consideration—entertains a very decided opinion on the utility of some system of *vivâ voce* Examinations superadded to the paper system. The difficulty (which however he considers would be by no means insuperable) being that of examining *vivâ voce* so large a number of candidates for honours as present themselves.—Another is that of duly combining the

results of this with that of the paper Examinations, which he considers might be obviated by "making the final place of each candidate on the Tripos depend on the "aggregate marks obtained in both Examinations." REPORT. Evidence, p. 242.

Whether the simple aggregation of marks would be preferable to some different mode of judgement we will not stop to consider; but the objection arising from the great number to be examined might, we conceive, be obviated by applying the *vivâ voce* test, not generally, but only in those cases where a near equality of apparent merit in the written Examination should call for the application of some powerful discriminating principle. Recommendation.

We come now to the other and very important subject of inquiry indicated above viz:—In what manner and to what extent is the beneficial influence of Mathematical study in the education and discipline of the mind secured by the system of Mathematical training adopted in the University. P. 106. Present system of Mathematical Training as a discipline of the mind.

A far less knowledge of Mathematics than suffices to make an accomplished or even a respectable Mathematician (as the term is now understood), if rightly imparted and rightly received, has always, and justly, been regarded as exercising a powerful influence in invigorating and chastising the intellect; and it is not so much the quantity as the quality of the teaching which is here of importance.

The mental discipline resulting from Mathematical study, is of two very distinct kinds, of which one only is commonly apprehended and dwelt upon. Geometry and the Pure Mathematics afford perfect illustrations and examples of deductive reasoning, in which the conclusion is connected with the premises by links of argument, each susceptible of direct and absolute verification by the application of simple and easily remembered tests. If fallacy creep in, it is the Student's own fault. A given amount of steady thought will always enable him to detect and expose it. Those who have once learned what demonstrative argument really is in this school, will never feel satisfied or secure in accepting as proof any kind of general likelihood, or any arguments drawn from passion, prejudice, or interest. They have learned to break up an argument into its elementary steps, and to apply, if not those exact tests which Mathematicians apply, at least *some* tests, founded on the true relations of the subject, to each of them. And if they find, as they will find, in all the complicated questions of human interest to which reasoning is applied, that these tests fall far short in respect of their applicability and decisive character of what they have been accustomed to see in exact science—they will learn caution and diffidence in adhering to the conclusions. Join to this the length to which the chain of reasoning is carried—the remarkable conclusion to which it leads—the sentiment of unity and coherence in a well-constructed body of knowledge, and the habit of regular study and consecutive thought requisite to impart that sentiment, and we have an account of all that is really beneficial in the deductive Mathematics in the way of mental training.

"I have noticed," says Mr. Hopkins, "the great definiteness which characterises "our Examination. A similar character distinguishes our elementary books. "Every subject is divided into as many propositions, formally enunciated, as it "will admit of. Great perspicuity in details is thus secured, but generally at "the expense in a greater or less degree, of a comprehensive exposition of "general views and principles. This arrangement contributes to the distinct-"ness of the Student's knowledge in detail, but it renders more difficult the per-"ception of the logical connexion of one part of a subject with another, and "impedes more or less his general views. Its advantages and disadvantages "exactly correspond to those which belong to the extreme definiteness of our "Examinations..... The character of the French elementary works, "usually written by the most eminent Mathematcians, is exactly the reverse of "our own in the points above mentioned as is also their system and plan of "examination which I believe is entirely *vivâ voce*. It has always appeared to "me that something intermediate would be preferable to either of these systems." Evidence, p. 244.

It appears to us that this extreme definiteness in detail is the one and only means by which the full benefit of Mathematical discipline, as such, can be secured. "The talent of generalization," says Dr. Whewell in his work on the principles of English University Education, "is the last which is developed in the "Mathematical Student, and if he attempt the process while his possession of "particulars is still obscure and wavering, he cannot fail to reduce his knowledge "to a state of confusion and worthlessness." p. 72.

REPORT.

In proportion as this faculty developes itself, the general views taken in the other class of elementary works to which Mr. Hopkins alludes, become easily assimilated, and absorb the particulars without sacrificing their distinctness.

But preparatory to, or pending, the study of such works, and while yet contending with the apparent confusion of proposition heaped upon proposition, we should attach great value to the oral exposition of general principles from the Lecturer or Professor—supposing that he should accommodate his steps to the capacity of his class, that the subdivision of classes were such as to make this possible, and that he should adopt the necessary means of ascertaining when they go along with him and when he is overleaping them. Courses of explanatory lectures in Geometry, in the theory of Curves and Surfaces, and in the Pure Mathematics, conceived in this spirit of gradually unfolding general views to Students who are compelled by the exigencies of University study to apply themselves steadily and unceasingly to particulars, would appear to us most fit to supply that intermediate feature which Mr. Hopkins regards as wanting in the present system. Should a system of University lectures with open classes come to be adopted, there can be no doubt of the beneficial effect which would attend its working in this direction. An opportunity would moreover then be afforded of placing before the minds of Students in a different light from that in which they are invariably and prescriptively brought before them at present, the elementary truths of Geometry itself.

Recommendation.

The intellectual discipline imparted by the study of the Mixed Mathematics, and of the Mathematico-Physical Sciences is different in character from that conveyed by the Pure. The latter exercise no faculties but those of close attention and strict interpretation. The former call into action inductive observation and reasoning on the effect of external conditions. In all their more difficult applications, moreover, approximate conclusions only can be arrived at, and a perpetual exercise of judgment is required as to the extent of deviation from the abstract standard of absolute truth which the nature of their solutions admits. Principles as well as reasonings come to be tested by the results, and the practical as well as the discriminative faculty is called into action. Hence a larger scope and a wider discipline and one more adapted to the future exigencies of life.

To secure to the Student of the Mixed Mathematics all the advantages which their pursuit, so considered, can afford, it is quite necessary that the natural or elementary relations of the subject should throughout be kept steadily in view and pointedly and fixedly dwelt upon—that all unnecessary exuberance of an analytical calculation be repressed, and that among methods of connecting assumed principles with their remote consequences the more lucid should be preferred to the more powerful, and the subject matter pressed on the attention, and not suffered to become overlaid and lost in symbolic detail. There can be no mental discipline where there is no clearness of conception, and there can be no clearness of conception where there is no apprehension of the mode and sequence of action by which the acting powers and the conditions under which they act bring about the result; none in which explanation does not march *pari passu* with calculation.

On this head we find much conformity of opinion among the authorities which we have consulted, which leads us to conclude that the inconvenience of an undue tendency to analytical processes and the dexterous use of symbols to the neglect of natural relations has been perceived and is in course of correction.

Evidence, p. 229.

Thus Mr. Gaskin, "From 1832 to 1847 the tendency was to become more "and more symbolic and analytical. Within that period pure geometrical "reasoning was altogether abandoned and the attention of the Students, by the "questions proposed, was unduly fixed upon the dexterous use of symbols, to the "neglect of natural relations in the application of Mathematics to physical subjects..... The regulations which came into action in 1848 effectually "checked this tendency, and I do not think any alterations in the kind of "questions desireable."

p. 239.

And again—Mr. Hind, "Till of late years the tendency to become more "analytical was decidedly on the increase, but I am glad to think that it has "now received a salutary check and is little or nothing beyond its beneficial "limits."

Mr. Swainson's reply to our query on this subject is more explicit as to the effect of analytical method, imperfectly understood and used only as a kind of

p. 269.

mechanism for reaching results on the minds of Students. "I rejoice to say "that I consider the tendency during the last four or five years has been

"to diminish the advantages gained by a mere readiness in the management of "symbols. But I do not consider that the higher class of the candidates for "Honours have ever suffered from the preference given to analytical methods so "much as the lower classes. I have repeatedly known instances of men who could "without committing any error, write out the proofs of the chief properties of "the conic sections, but who were ignorant of the most elementary considerations "as to the equations they used. They were employing a machine the construction "of which they had never attempted to understand."

Dr. Whewell expresses himself on this subject as follows,—"As to the relative "prevalence of analytical, and of what in the way of antithesis I may call *Geome-* "*trical* Mathematics, I think there was a very mischievous tendency of the former "kind in the University *till lately*. Several of the changes recently made in the "University Examinations were intended to check this tendency, and I hope have "been to a great extent successful. I hope too that the establishment of such "regulations shews that there is in the University at present a disposition to resist "the tendency, and that if further steps be required for this purpose they will be "taken." Evidence, p. 273.

As to the distinction here and elsewhere taken between the analytic and geometric methods of handling Mathematical subjects a few words appear to be necessary. Analytical and Geometrical methods compared.

"It seems to be considered," says Mr. Ellis, "that if a Mathematician treat "a subject geometrically he has to think about it, whereas if he treat it sym- "bolically, the symbols think for him." The fact is that where relations other than those of space are concerned, what is commonly understood by the geometrical mode of treatment is hardly less symbolic than Algebra itself; and it is not the sort of symbols employed, so much as the mode of handling them and the greater or less readiness of their interpretation which makes the difference in point of instructiveness between the one and the other. The confessedly superior power of the modern analytical methods makes it indispensable to teach them in their applications to physical subjects, but their tendency undoubtedly is to bridge over the interval between the axiomatic principle and its remote conclusions by processes *sui generis* and which have, or at least appear to have, no relation, or (studiously) as little relation as possible to the subject matter, The evil effect of this in giving rise to vagueness of conception in the mind of the Student is obvious—and can only be counteracted by insisting on (what is always possible) their continual interpretation, and translation into the language of the subject. Evidence, p. 224. See Mr. Mould, Evidence, p. 251.

"Without pretending," says Dr. Whewell, "to decide between the rival claim "of analytical and geometrical modes of reasoning in cases where either may "be used, we may require that the mode which is selected be so presented as to "shew that the meaning of the expressions employed is distinctly understood by "the Student." To do this and do it effectually requires much and earnest thought —but as the same eminent authority remarks a little further on—"A scheme of "study which escapes, or tries to escape the labour of thinking, will answer "none of the purposes at which we ought to aim." That the candidate for Mathematical distinction who uses symbolical processes should be called on to interpret his equations at each point of his progress—to state what they express when translated into the peculiar language of the subject, and to what his transformations, or transitions from equation to equation are equivalent when so interpreted, according to the physical conceptions involved—seems to be the only corrective which can be applied to the evil complained of. Principles of English University Education, p. 178.

It ought, however, to be observed, that the evil in question is one which has a continual tendency to reproduce itself from time to time; as a growing sense of the power of the analytical methods and the facility of wielding them with success naturally leads those who are in full possession of them to undervalue the advantages of another kind which other methods present. Hence, occasionally, will always occur as it were out-breaks of analytical power and skill as exhibited in the Examination papers, and an undue prevalence of the pure analysis, over which it is desirable that a strict watch should be maintained.

Among Physico-Mathematical subjects occurs every variety of establishment of first principles—from those in which, as in Mechanics, the axioms are indisputable, and almost as evident as in pure Geometry, to those in which, as in Electricity and Magnetism, there can hardly be said to have yet arisen any axiomatic principles whatsoever. Between these limits, those which offer the best field for the exercise of the faculties of the higher classes of Students (and it is only

REPORT.

to these classes that this part of our remarks apply) are those where, as in the theories of Sound and Light, certain general modes of conception have been arrived at with a high approach to certainty, while the details of their applicability to several classes of phenomena have yet to be made out, and the conceptions themselves more or less modified to suit them. Whatever may be said of the rejection of the more indefinite sciences from the list of Academic studies we would retain these, and all such as have this character, as most valuable for the discipline they afford of that peculiar kind which we are at present considering.

Mathematical Prizes.

On the subject of Mathematical prizes we have but few remarks to make. As existing at present they exercise no disturbing influence on the Mathematical reading of the Student. The Smith's prize can only be obtained by such whose knowledge qualifies them for a place among the two or three highest Wranglers.—The Adams' prize only by Mathematicians of a high order. They cannot therefore much influence the reading of Students, or divert it from the great highway of study into byepaths.

Smith's Prizes.,

A question has been raised whether the Examination for the Smith's prize might not be advantageously postponed for one or two years, or until the taking of the Master of Arts Degree, with a view to keeping up the inducement to Mathematical study beyond the period at which many now lay it aside. The preponderance of opinion as expressed in the replies to our query on the subject is decidedly adverse to any such postponement, on the general ground that such postponement would probably exclude from competition many of the best men taking Honours, who leave the University for professional pursuits, and to whom it would not hold out a sufficient inducement to keep up and extend their Mathematical reading in the midst of other calls upon their time and attention. To this Mr. Hopkins adds a further and we think a very cogent reason. "I "believe," he says, "that reading for an Examination after the age at which "young men take their Degrees, and after having acquired the knowledge "which our best Students possess, is far from being the most profitable occupa- "tion for those who may still be disposed to apply themselves to scientific studies. "On the same ground, I should be opposed to the establishment of any prizes to "be gained by Examinations; prizes for Essays would in my opinion be far pre- "ferable."

Dr. Philpott, p. 265.
Dr. Whewell, p. 273.
Mr. Hopkins, p. 247.
Mr. Gaskin, p. 230.
Professor Stokes, p. 267*e*.

Evidence, p. 247.

This change in the character of the Smith's prize Examination is open to the consideration of the Examiners, and might be a proper subject for consideration by the Board of Mathematical Studies. It is advocated by Mr. Gaskin, and the reasons adduced by Dr. Philpott for desiring the institution of prize Essays in general would apply to this case. Such moderate postponement of the award as would allow a reasonable time for the composition of the Essays would probably not prevent professional men from entering into competition while yet full of their subjects, and might powerfully tend to fix them in their minds and prevent their being overlaid and utterly forgotten.

LECTURE-ROOMS.

REPORT.

Present provision inadequate.

The provision of Lecture-rooms belonging to the University is insufficient, even for the existing staff of Professors, there being at present, in fact, not more than three or four lecture-rooms which are properly fitted up for that purpose. These are an Anatomical lecture-room adjoining the Anatomical Museum; a commodious room next it, where the Jacksonian, Botanical, and sometimes the Chemical Lectures are given; and a good lecture-room under the Public Library, which is chiefly used by the Norrisian and Lucasian Professors.

The Schools of Law and Arts, and three unoccupied rooms in the Pitt Press are used by some other Professors; but they are badly lighted, and ill suited for the purpose. The Woodwardian Professor lectures in a large room, not designed for such a purpose, adjoining his Museum. The Professor of Modern History, by permission of the Society of Trinity Hall, makes use of the Hall of the College. The Professors of Greek and Moral Philosophy give their lectures in the very convenient suite of lecture-rooms belonging to Trinity College. Other Professors, whose classes are small, make use of chambers in the Colleges with which they are connected, or any other rooms which may be disposable for that purpose, including occasionally the meeting-room of the Philosophical Society.

The Vice-Chancellor, as the supreme administrative officer of the University, has the power of assigning the public rooms, which are unappropriated or unoccupied, to the Professors for their lectures; but his authority is rarely appealed to, and the Professors are usually left to themselves to select such rooms as best suit their purpose. The Professors, in fact, are never called together, or cooperate as a body, and are subject to no authority or control beyond the special provisions of their several foundations; and if these are neglected, or have become inapplicable, there are no readily available means to enforce them in one case, or modify them in the other. As a natural consequence of this want of organization, there exists no arrangement by which the order of succession of the lectures is regulated and adjusted to the wants of the Students, or by which a continuous system of public instruction, in any considerable department of study, can be properly carried out; and though the Vice-Chancellor, since the institution of the new Triposes in 1848, has been accustomed to issue, in the month of October, a programme of the lectures to be given by the Professors in the ensuing academical year, it is not formed as the result of a conference amongst them, but merely records their separate answers to a circular letter addressed to them with a blank column, which they are requested to fill up with the term, place, hour, and subject of their lecture.

As the present lecture and other public rooms are insufficient for the existing Professors and the lectures which they give, it is obvious that any considerable increase of their number, with a view of carrying into effect a well-organized and complete system of public instruction in the University, would render necessary a much larger provision of lecture-rooms. Such lecture rooms should be suited to the purposes for which they are to be used, those for scientific lectures being adapted for the exhibition of experiments, instruments, or specimens, according to the particular subject of the lecture, and placed as near as possible to their museums or collections. They should also be of various sizes, according to the number of students who may be expected or required to attend. Those which are appropriated to Professors connected with the same department of study should if possible be placed near each other, so as to prevent any unnecessary waste of time in passing from one lecture-room to another; and with similar views all of them should be placed generally as near as is practicable to the great masses of the academical population, as determined by the position of the principal Colleges.

In the plans which were prepared for the New Library to be built upon the site purchased by the University from King's College, provision was made for a series of lecture-rooms, which were designed to occupy the greatest part of the ground floor of the building: the Woodwardian and Mineralogical Museums occupy the whole of this lower story in the part of it which is already built. A wish has been expressed by the Professor of Geology, that the Museum of Comparative Anatomy should be placed, when the design is carried out, *en suite* with the Geological Museum, with a view of affording a ready means of comparing fossil remains with existing animals. We are of opinion, however, that Comparative Anatomy is as closely connected with Human Anatomy as with Geology, and on this and other accounts we think that the adoption of the Professor's recommendation would be attended with inconvenience.

Report.

If funds are required for an increase of the professorial staff, they are not less so for building and maintaining lecture-rooms, collections of apparatus, and museums: in fact, any very considerable addition to the former would be premature, unless provision is also made for the latter. Were a site for lecture-rooms and Museums selected, such as the Old Botanic Garden, which is not connected with the great public buildings of the University, and therefore not requiring much architectural decoration, they would admit of being constructed upon a simple plan, where convenience and economy alone might be consulted. By such a plan a sufficient provision for these purposes might probably be secured, without the necessity of a very great expenditure.

Laboratories and Apparatus.

That a system of teaching the physical sciences, should not remain barren of application to useful purposes, and indeed that it should exercise any beneficial influence whatever on the mind, it ought to be such as to ensure to the student an immediate, familiar, and, as it were, personal acquaintance with the facts and laws of nature, and with the manner in which they arise under our hands and eyes in scientific processes. The importance of this principle is recognized in the first Report of the Board of Mathematical Studies, where we find it observed, that "In the branches of natural philosophy the importance of experimental "and illustrative lectures . . . . as supplementary to other modes of instruc- "tion, cannot be too much insisted on, not only on account of the greater "distinctness of conception which is acquired by visible representation of what is "read in books, but because such lectures can hardly fail to increase the Student's "interest in what he reads, ... but because they afford the opportunity "of leading him on to the practical bearings and applications of the subjects of "his study."

Appendix to the Rev. T. Gaskin's Evidence, p. 233.

A deficiency, however, in the University of Cambridge of any considerable and extensively organized system of practical instruction, as distinguished from the mere verbal description of processes, in any but the medical branches of Natural Science (where dissections, hospital attendance, and clinical lectures form an essential part of the instruction communicated) is apparent in many parts of the evidence before us. The absence of means and appliances for such instruction in the nature of apparatus, adapted not merely for illustrative exhibition and inspection at lectures, but for the actual use and manipulation of Students, is made matter of representation and suggestion by more than one Professor. Besides museums containing collections of natural objects, or of such objects prepared for exhibition, and in addition to the apparatus provided for the material illustration of physical subjects in the way of experiments performed before a class, something further is requisite to enable the Student in his hours of private study to digest and utilize the knowledge he has gained at lectures and in reading. Nothing can be suggested having a more immediate tendency in this direction than that he should have access (of course under fitting regulations) 1st. To a museum of philosophical instruments, in which their construction may be contemplated and studied, and their peculiar contrivances and adaptations examined at leisure, and not under the pressure of a lecture in progress. The few moments which can be devoted to such a purpose at the conclusion of a lecture, are far too brief for this purpose, yet are felt to be most precious, and not unfrequently become the chief means of fixing the substance of the lecture in the memory. 2ndly. To a collection of instruments, special to each subject lectured on, not of a refined and costly description, but good and useful working tools, brought up to the actual state of articles of their description which are in daily use in the hands of working men of science; which instruments also, under appropriate regulations, might be intrusted to him for private use, either in his own rooms, or in buildings expressly constructed for the purpose by the University, and supplied with such "plant" or scientific utensils as may be in each case suitable for rendering manipulation convenient. And 3rdly. To a stock of materials to work upon—whether of chemical ingredients and tests—minerals for analysis or other examination—crystals for measurement and optical examination—and, generally, specimens of little value of natural objects of every description, set aside from museums for the purpose of being used up by Students in the prosecution of their studies.

Dr. Haviland, p. 80.
Dr. Bond, p. 82.
Dr. Clark, p. 109.

Deficiency of practical instruction.

A sense of this deficiency is more or less distinctly indicated in several parts of the evidence before us. Professor Stokes observes, "There are very good Mu- "seums of Mineralogy, Geology, and Anatomy . . . . . There, is, however,

Evidence, p. 97.

" no Museum of Physical Instruments. The want of such a collection is strangely " inconsistent with the high character which Cambridge maintains for the study of " the Exact Sciences, and astonishes foreigners who visit the University. Another " great want of a similar nature is that of a Chemical Laboratory. At present " nothing of the kind exists, with the exception of a small room used by the Pro- " fessor of Chemistry as a laboratory for the purposes of lectures, but it would " be essential to the vigorous prosecution of the study in the University of a " science in which so much depends on manipulation that there should be a " complete and thoroughly equipped laboratory for the use, not only of the Pro- " fessor, but also of such other members of the University as might engage specially " in the study of that science." REPORT.

The evidence of Professor Cumming goes to the same point. " There is neither " residence," he says, " museum, collection, nor apparatus attached to the Professor- " ship of Chemistry. The apparatus is the private property of the Professor, " and there are no funds available for this purpose. There are no opportunities " afforded to the Students for instruction in the actual manipulation of instru- " ments, and there is no apparatus for the use of Students." Evidence, p. 102.

In strong and unfavourable contrast with such a statement stand the provisions made for the manipulative instruction of Students in King's College, London, where there is also a Museum of Philosophical Instruments, and in the Birkbeck Laboratory of University College in that metropolis; not to speak of foreign institutions, or of those which among ourselves are devoted specially (as the Royal College of Chemistry) to the raising in the Metropolis a school of Chemical Science, or as the Royal Institution, which, though more extensive in its scope than the latter, and embracing every branch of Physical Science, has nothing in common with a University.

But although Chemistry is doubtless that branch of Physical Science in which the actual practice of experiment and the handling of tests and implements is most important, so much so indeed as that it cannot be duly studied without it, it is far from the only one in which the actual use of instruments, both for quantitative and qualitative examination of natural objects is desirable. Wherever it can be introduced it gives an interest and reality to the study of such branches which no extent of reading, no simple attendance on lectures can be expected to impart.

The microscope in the hands of the young Botanist or Physiologst—the goniometer or blowpipe in those of the Mineralogical Student—the various contrivances for reflecting, refracting, polarizing and depolarizing light, and for the optical examination of crystals—all such implements, placed in the hands of willing learners for free use on objects as they occur, and so, for self-instruction, can hardly be overrated as means of profoundly attaching them to their several branches of inquiry, and of laying the foundation, among the higher classes of intellect, of an accomplished scientific character.

The optical, chemical, and crystallographical characters of minerals are eminently matters of a practical nature, since without them the science of mineralogy is one of lifeless forms, and of mere recognition of objects by the hand and eye; yet we find the Professor of Mineralogy complaining, that " on account of the want " of apparatus attached to the Museum—of a convenient Laboratory—and a col- " lection of minerals expressly destined to be submitted to experiments, Students " have no opportunities, except immediately after each lecture, of learning the " actual manipulation of each instrument, and the conduct of processes of experi- " mental research." Evidence, p. 134.

The Professor of Botany has converted a single private room attached to his lecture-room, into " an apology for a museum." But there would appear to be no apparatus attached to the Professorship, nor any means (other than what the Professor himself may be enabled to supply from his private resources) of exhibiting to his assembled class, by aids at the disposal even of itinerant lecturers, the structural arrangements of vegetable organization, still less for placing in the hands of enquiring students microscopes and dissecting apparatus for home use. Evidence, p. 114.

In the department of astronomy we find no reason to complain either of the want of apparatus or of instruction for its use. The Plumian Professor lectures on practical astronomy, and explains the construction and manipulation of the instruments, as well those of a fixed nature as of portable instruments for local determinations. Still there is no provision for the supply of the latter description of instruments to the Student out of lecture hours, or for his in- Plumian Professorship.

REPORT.

struction in the use of them in the field, in geodetical measurements or observations, such as travellers may be called on to perform in their journeys across unknown countries.

Cambridge has since the remodelling of the Plumian Professorship and the foundation of the Observatory, assumed a conspicuous position as a centre of both theoretical and practical astronomical instruction. The present Astronomer Royal may be said to have rehearsed on a small scale, as Plumian Professor, the perfect system of astronomical observation and reduction which is now in operation at Greenwich. The evidence of his successor may be referred to as showing the spirit in which that part of the University system continues to be carried out. In Physical Optics too, though there be no Professorship specially consecrated to this important branch of science, yet there is perhaps no public institution in which it is better represented or prosecuted with more zeal and success in the way of original research; the effect of which cannot but be to give a powerful stimulus to its pursuit among that class of Students who have a turn for physical science, and so to ensure a succession of followers, and constitute, in the best sense of the word, a Cambridge School of Photology. Nor can any reason be assigned why other great branches of natural science should not become equally objects of attention, or why Cambridge should not become as great a school of physical and experimental as it is already of mathematical and classical instruction, with the encouragements held out by the Natural Sciences Tripos and the recognition of its awards as one of the passports to University position; with the leisure afforded by a non-insistence on uncongenial pursuits after the attainment of a certain proficiency, tested by the Preliminary Examination; with the aid of access to instruments and manipulative instruction, and of a system of lecturing carried on by Public Lecturers going more into practical details, and devoted more to practical objects than the more abstract and general prelections of the Professors.

Objections to an extensive encouragement of Experimental Science answered.

It may be urged that so extensive an encouragement of the experimental sciences, especially of chemistry, as this supposes, would have the evil consequence of detaching Students from severer pursuits by the greater attractions of the former class of studies and the less contention of mind requisite for attaining a certain proficiency in them. So long, however, as the Mathematical Tripos continues to be the field on which the highest trophies of University distinction are to be won, it must be that to which the best abilities will be directed. By keeping the standard of the Preliminary Examination sufficiently high it will always be possible to secure that amount of general attention to Mathematics which their importance requires to be maintained. And it will always remain in the power of those in whom the election to Fellowships rests to assign such a relative value to the various lines of acquirement as shall repress an undue propensity (at least among the candidates for Collegiate emoluments) to divaricate from the more arduous into the pleasanter paths of knowledge.

On the other hand, moreover, it is not undeserving of consideration that physical and mathematical studies exercise a powerful and most beneficial reaction on each other. The published volumes of the Cambridge University Philosophical Society and of the Cambridge Mathematical Journal, show what a very powerful influence the direction taken by physical inquiry exerts in turning the thoughts of the higher class of mathematical Graduates resident in and out of the University to mathematico-physical inquiries; and under the peculiar circumstances of the case, and in a University so thoroughly imbued with the mathematical spirit, physical study might be expected to assume within its precincts its highest and severest tone, be studied under more abstract forms, with more continual reference to mathematical laws, and therefore with better hope of bringing them one by one under the domain of mathematical investigation than elsewhere.

Again, there is a very important class of Students who resort to the Universities with no professional views, and who, from their expectations in life, have no motive for prosecuting the severer studies beyond the prescribed minimum, other than natural bent, honourable emulation, or a sense of what the public sentiment may fix as the standard of a well-informed and educated gentleman. This is a class which it is every way desirable both to induce to resort to the University, and to influence for good when there; while yet, owing to a variety of obvious causes, it constitutes, in the way of example, essentially the "dangerous" class in the social system of the place. It is impossible to pay too much regard in the provisions of a University system of education to furnishing this class of Students with worthy, useful, and elevating lines of occupation, sufficiently varied to give

scope to differences of mental constitution, and sufficiently attractive to interest for their own sake. To improve the tastes of those who on emerging from its precincts, pass into the aristocracy of the country and give a bias to its sentiment, is no small part of the duty of a University. If there be mean and frivolous ways in which wealth may be squandered and leisure abused, there are also great and noble objects to which they may be applied. No one who looks to the actual state of knowledge can fail to perceive what immensely important objects might be accomplished by the diffusion of a taste for its pursuits among the wealthier classes.

Many of this class of Students become travellers, to whom a knowledge of natural science, and a familiarity with many scientific processes and the handling of a great variety of instruments are likely to be of eminent use, and whom the example of a Humboldt may stimulate to bring home records of more importance than the usual reminiscences of travellers for pleasure. The theory, handling, and systematic use of meteorological and magnetic instruments are an element of the scientific education of a traveller of the last importance; a practical acquaintance with photography not less so.

Generally speaking, much more than material aid is requisite for conveying to Students a practical training in the handling of scientific apparatus and the mode of conducting experiments to a satisfactory conclusion. Personal instruction is essential; and the Professor, who ought to be at least partly occupied in original research, and whose attention must at all events be sufficiently occupied in preparing himself to impart and in actually imparting in the most luminous manner the scientific principles of his subject, is not likely to have much time at his disposal for the instruction of tyros in the use of their tools. But the Public Lecturers may here come in aid in the most efficient manner. Occupied in teaching in detail and in the way of practical application that which the Professor chalks out in outline of a higher and more abstract character, he may propagate onward the training he has himself received while continuing to fit himself for becoming in his turn a leading authority in the science he has chosen.

MUSEUMS.

We have already described, in chronological order, the foundations of the several scientific Professorships, and pointed out the importance of giving them more complete effect on the course of academical study, by the help of Museums of Natural History and collections of philosophical apparatus to which the Student might have liberal access. We believe, as before stated, that the combination of a theoretical with a practical course of study would give fresh life to the University, and would add greatly to its honour. Acting on this belief, we have again consulted several of the Professors respecting the wants of our Museums and public collections, and asked them for such specifications as might give a definite meaning to this part of our Report.

The specifications we have obtained from Dr. Clark, the Anatomical Professor, are as follows:

Anatomical Museum.

"In the Anatomical Museum are preserved collections which are illustrative of "distinct branches of science, viz., of Normal Human Anatomy, of Pathological "Anatomy, and of Comparative Anatomy. They are all kept in the same room. "The floor of the room and the first gallery are dedicated to Normal Human and "to Comparative Anatomy; whilst the second, or upper gallery, holds the "valuable series of Pathological specimens. But whilst this last series is thus "kept distinct from the others, the shelves are inconveniently crowded, and there "will be no proper space for the specimens that will hereafter be added to it. "With respect to the Comparative and Human Anatomy, the form of the room "and the shallowness of the shelves have in many instances forced deviations "from the general rule of arrangement—the large skeletons being placed where "they could stand most conveniently: but these last are now so closely packed "that the careful study of them is rendered difficult, and no room is left for "adding to their number.

Lecture-room.

"The Lecture-room is capable of holding about sixty persons, and there is a "convenient space for the exhibition of drawings; but the lighting is indifferent.

"The Professor's private room is very ill-lighted, and, for want of other

Report.

"accommodation, is crowded with objects in course of preparation for the "Museum.

"There are two small dissecting-rooms—one contiguous to the Lecture-room, "the other for the use of the Pupils. They are both badly lighted. That for the "Pupils is moreover so small, and so badly ventilated, that they use the other "whenever they can, though designed exclusively for the preparation of the subject "of the Lecture; or they even seek to carry on their operations in the Lecture-"room, on account of its larger size and better convenience of light.

"Thus the Museum is a room not well adapted for the reception and display of "the aggregate number of preparations which it contains at present, and can with "difficulty admit of additions to them; whilst the rooms peculiarly designed for "teaching are quite inadequate for that object.

Lectures.

"Here there are now delivered distinct courses of Human Anatomy and of "Comparative Anatomy. The Human Anatomy extends over the October and "the Lent Terms; the Comparative Anatomy is conducted in the October Term. "Thus there are two courses of Lectures going on at the same hour of alternate "days in the October Term, each requiring and receiving large illustration from "specimens and drawings. If these two courses were not delivered by the same "person, it may be supposed that the trouble and confusion of removing every-"thing, as soon as the Lecture is over on the one subject, to prepare the way for the "Lecture on the other, now sufficiently great, would be much increased: but it "cannot be expected that the two courses will be thus delivered by the same "person for any long continuance. If, then, the Lectures on Human Anatomy "and those on Comparative Anatomy should hereafter, as has been recommended, "be delivered by different persons, then some more commodious arrangement of "the different collections, and also of the Lecture-room and its appendages, must, "of necessity, be effected.*

Zoology.

"It ought not to be overlooked, that there has never been any course of "Zoology, however short, provided in the University; yet some knowledge of "this kind is necessary, as preliminary to the pursuit of Comparative Anatomy: "and the time for supplying it ought not to be taken, as it now is, from the time "dedicated to the last subject, which by the University regulations is necessarily "short, comprising only twenty-five Lectures at most. There is within the

Evidence, p. 450.

"University a good collection of Insects, and of Birds. It is scarcely to be "doubted that these might be rendered available, at once, for the illustration of "Lectures; and if so, that, in no long time, a sufficient collection from the "other Classes of the Animal Kingdom would be made, a proper room having been "prepared to receive it."

"Thus to the courses on Human Anatomy and Physiology, and on Compara-"tive Anatomy and Physiology, there might well be added a course of Lectures "on Zoology.

"The several Museums illustrative of these courses, ought to be distinct "from, though contiguous to, each other. Perhaps one lecture-room might be "sufficient for them all, provided it were built, with this view, in convenient rela-"tion to the three Museums; and provided also the plan for the whole were made "to include sufficient room-accommodation for the preparation of objects, for the "Museums, for the Lectures, and also for the practical operations of the Students. "Or the present building might, for some years to come, be sufficient for the "Museum of Comparative Anatomy and for the lectures thereon if the series of "Pathological specimens and that of Normal Human Anatomy were removed to "some other neighbouring locality.

"If the cost were not too great, the whole of the Museums, illustrative of the "organic kingdoms, ought to be erected contiguous to each other. The Geo-"logical Museum would then be connected by its fossil specimens with the "Botanical Museum, with the Zoological Museum, and with the Museum of "Comparative Anatomy."

The building, in the corner of the old Botanic Garden, containing the whole Anatomical Collection, was voted in 1832, and finished within two years at a cost to the University of 3,220*l.* In it are arranged (in the manner above described by Dr. Clark) the following collections purchased at different times, out of the Academic funds, by votes of the Senate,

* "The Professor of Physic uses the same lecture-room, and the same pathological specimens, for his lectures."

		£	s.	d.
May 1815.	Sir B. Harwood's Collection . . .	367	10	0
Dec. 1819.	Wax Models purchased under the direction of Dr. Clark, ...	200	0	0
Mar. 1830.	Preparations purchased at the sale of Brooks' Museum, ...	250	0	0
Feb. 1832.	Foreign Anatomical preparations . .	100	15	0
	Dr. M'Cartney's collection, purchased for annuity of 100*l.* to be continued for ten years, the first commencing May 1836.	1,000	0	0
	Total . . .	£1,918	5	0

Upon the Anatomical Museum and its Collection the University has therefore expended more than 5,000*l.*; and it incurs, also, a cost of about 130*l.* a year for a Curator's salary, repairs, and various contingent expenses.

The above statements would, however, convey an inadequate conception of the value of the whole collection. The Museum owes many beautiful specimens to the generosity of scientific members of the University: and very fine skeletons of the Cape Buffalo, and of the great Ant-eater, and the skeleton, as well as the preparations of the softer parts, of the *Balæna rostrata*, were purchased by private subscriptions.

Lastly, we should do injustice to Dr. Clark, did we not state that the whole collection is greatly enhanced in value by the long-continued, personal labour which he has bestowed upon it—that many of the finest skeletons in the Museum were purchased at his own cost, and presented by him to the collection,—such as the skeletons of the Hippopotamus, Indian Elephant, Rhinoceros, Giraffe, Horse, Ostrich, Boa-constrictor, &c., &c.,—and that the greatest number of them have been set up by the labour of his own hands. During the thirty-five years that he has held the Anatomical Chair, it has not been to him at any time, a source of pecuniary profit; but on the contrary, of a pecuniary loss, which he could not have encountered had he not possessed a private fortune, a part of which he has very nobly devoted to the public good of the University. Under all these circumstances, the suggestions he has thrown out are deserving of the serious and grateful attention of the Senate. But to a consideration of these suggestions we shall return, before we conclude our Report on the Academical Museums.

For obvious reasons the galleries of this collection are entirely unfit for public exhibition; but Medical Students have access to all parts of it, and to the collection of Comparative Anatomy on the ground-floor there is free access, so far as is consistent with the security of the collection.

Botanic Garden and Museum.

The old Botanic Garden, conveyed in 1762, to the University by Dr. Walker, Vice-Master of Trinity College, was long considered inadequate to the wants of Botanical science. It was, moreover, in later years, injured by the increased buildings of Cambridge, and other causes we need not enumerate. The Senate, therefore, under the authority of an Act of Parliament, obtained from Trinity Hall, partly by purchase, and partly by the exchange of some of its own lands, the present excellent site of 38 acres. This was effected in 1829 at a cost to the University of 3,441*l.*; but in consequence of the ground being under lease for a term of years, a considerable time elapsed before the Trustees had legal possession of the ground, so as to be enabled to prepare it for its destined use. By repeated grants from the University, 21 acres of the ground have now been brought into cultivation. A noble Arboretum has been planted, walks have been laid out, and the collection of the old Botanic Garden (excepting the hot-house plants) has been removed to the new site, and re-arranged, along with numerous additions, in conformity to the Natural System.

Purchase of a new Garden.

According to the statements of Professor Henslow the present garden, so far as regards trees, shrubs, and herbaceous plants, is excellent and available to the public; but it is without a Curator's house, without a Museum, and other requisite buildings. The stoves and hot-houses are still in the old Garden; and as their final removal is contemplated, no cost has of late years been bestowed upon them; and they are, as a necessary consequence, not merely inadequate to the present needs of science, but gradually falling into decay. The statement given in the

REPORT.

evidence of Mr. C. C. Babington, a gentleman to whom the University is greatly indebted, are to the same effect.

Evidence, p. 114.

There is a small room contiguous to the Lecture-room in the old Botanic Garden, of which the Botanical Professor has the use; and he states that he has "converted it into an apology for a museum." It contains an *Herbarium* of considerable extent, and many valuable specimens (some of which are elaborately dissected), chiefly arranged and prepared by himself during the years that he was a permanent resident at Cambridge. But as there is at present no Assistant Curator of this Museum, and the Professor is now resident only during one Term, the Collection during the greater part of the year is not easily accessible to the botanical student, and is therefore of comparatively small use.

It follows, from what is above stated, that the University has now provided a good site for a Botanic Garden, with ample room for its future expansion and that great progress has been made in the arrangement of an important part of the existing collection. On the other hand it appears that there is a pressing want of a Curator's house, of a Museum, of glass-houses, stoves, and other artificial means of rearing and preserving the Flora of a warmer climate: and to erect these buildings, even upon an economical plan, would, according to the statement of Mr. Babington, require an outlay of 5,000*l.* or 6,000*l.*

p. 114.

Professor Henslow states his conviction, "that the University will never raise "sufficient funds (even if she possessed the power of doing so) for procuring the "requisite accommodation, and the necessary apparatus for rendering the Pro- "fessorial system effective, without the interference of Government. Some make- "shift (as hitherto) may be contrived, which will postpone indefinitely what is "needed immediately."

Efforts made by the University.

Our sentiments are not in unison with the desponding tone in which this opinion has been given. We know that the University stands in need of help: but confining our views to the Botanical Collection, we have, from the experience of the past, good hopes for the future. During the past century large sums have been voted for the service of the old Botanic Garden: and since the conveyance of the present site to the University (spite of the great depression of its corporate funds and the numerous demands upon them) it has, from time to time, voted large sums for the purpose of bringing the new Garden into order. Thus it appears, from the Vice-Chancellor's return, that within the last seven years, the amount of the sums thus voted (quite independent of annual fixed payments) has exceeded 3,000*l.* Guided by these facts, and bearing in mind the large sum previously paid for the site, we cannot believe that the University would *willingly* leave short what she has so well begun. She will soon, we trust, have a more free and expansive power of internal legislation: the Natural Sciences are now, by her own act, incorporated into her system of teaching; and no corporate body, she is well assured, can exist in safety without strenuous efforts to give full life to its institutions. Not, however, from this motive only, but from higher motives arising out of a conscientious view of what is due to her own honour, we believe that she will leave no effort untried to give full efficiency to this and all her other scientific establishments.

Woodwardian Museum of Geology.

Evidence, p. 115.

The reply of the Woodwardian Professor, given in our Evidence, is so ample and specific on all points connected with the formation and present arrangement of this Museum, that we have little to add to his statements. The Palæontological Collection there deposited is of great extent and of great pecuniary value; and its scientific value has been much increased by the labour bestowed upon it by Professor M'Coy, whose services in the arrangement of this part of the collection have been secured during several past years by Professor Sedgwick, who acknowledges them in the following terms:—"The arrangement of the pa- "læontological part of the collection (remarks Professor Sedgwick) is now "nearly complete; and the self-devotion and untired zeal with which Professor "M'Coy has given himself to the task, and the consummate skill with which he "has carried out its details, are far above all common praise, and entitle him to "the lasting gratitude of the University. Some notion may be formed of the "greatness of his task when it is stated that Count Münster's duplicates amount "to more in number than 20,000; and that they form but a minute fraction of "the great palæontological series ProfessorM'Coy has now arranged strati- "graphically in the Museum."

All Count Münster's duplicates are arranged systematically with the names affixed to them by himself and Professor Goldfuss. Parallel to them, in contiguous cabinets, are arranged stratigraphically the fossils of the whole British series—fully named as to the palæozoic series; and named also as to the secondary and tertiary series so far as good scientific names have been given to the species in published works of authority. Thus the Student, by a comparison of these two collections, is enabled to separate many species which have been identified, and to identify others which have been separated, both in foreign and British catalogues. This is a very great advantage, not found to the same extent in any other Museum in the kingdom, and not sufficiently alluded to in the Evidence; and it greatly enhances the practical value of the collection. Report.

The following hints thrown out by the Woodwardian Professor are deserving of attention, viz.—The importance of before long adding a new Lecture-room; of making repeated additions to the Museum, so as to enable it to keep its grade among the corresponding collections of Britain; of establishing an annual inspection of the new cabinets, like that which for 130 years has preserved the old Woodwardian collection in its integrity; of employing a good Assistant-Curator; of continuing a series of annual geological surveys, such as those which have been carried on by the present Professor for the last 34 years, and to which the University owes, in fact, the greater part of its existing collection. Recommendations.

Of the economical importance of Geology we need not speak; the subject is too obvious to require illustration. Its scientific importance is the more special ground of its rank as a subject of academic study. It is not merely connected with, but now forms an integral part of Comparative Anatomy; and in a language of its own, it tells us of the historical development of organic life. It links itself to every department of physical science; and it is suggestive, in every step of its progress, of complicated, and hitherto imperfectly solved physical problems which, for centuries to come, may require for their more perfect solution the combined powers of continued observation and experiment, and the utmost refinements of analytical skill.

Mineralogical Museum.

The Mineralogical collection is deposited in a room contiguous to the Woodwardian Museum, under the new wing of the Public Library. It is well arranged, is generally placed under glass, and, at fixed hours, is accessible to the public. It consists of the collection of the late Dr. E. D. Clarke (purchased by the University of his Executors, in 1822, for 1,500*l.*); of some valuable specimens presented by the Executors of the Reverend Clement Francis, Tutor of Caius College; of a small but well-selected series of specimens presented by Professor Whewell (now Master of Trinity College); and of the great collection of the late Sir Abraham Hume, presented to the University by the late Viscount Alford. Description.

By these united collections, Mineralogy (with the exception of recently discovered species, many of which might be procured at a moderate cost) is well represented; and a very scientific course of Lectures is yearly given by Professor Miller, in the Museum. He is not, however, well satisfied with the room in which the collection is deposited. As a lecture-room it is very inconvenient; and it contains not any place for a course of physical experiments, such as he considers of first-rate importance towards making the subject one of true interest and scientific value in the course of academical study. He therefore recommends that the collection be removed, and the present room given to the Woodwardian collection; which must soon expand beyond the capacity of the rooms in which it has been arranged under the direction of the Geological Professor. Professor Miller concludes his last communication to us with an important list of *desiderata*, and several scientific suggestions, which we forbear to print in detail as they have been in a great measure anticipated in the previous pages of our Report. We think all his suggestions important; and that, if a convenient room for a philosophical apparatus were attached to the Museum, it would greatly add to the scientific value of a very fine collection, and to the good effects on the physical studies of Cambridge, arising out of the Mineralogical course of Lectures. Recommendations.

Recommendations.

Having thus laid before Your Majesty the present condition of our Scientific Museums, we think it our duty respectfully to offer the following suggestions:—

REPORT.

It appears that the University contains some noble collections, and that courses of lectures are given in Anatomy, Botany, Geology, and Mineralogy. These lectures have been, during past years, comparatively ineffective from two causes; 1st. The several subjects formed no regular and acknowledged part of the academic course. 2ndly. The Student had not sufficient facilities for making observations, or carrying on a course of direct experiments. The first of these impediments has been removed by the institution of the new Natural Sciences Tripos. The second can only be removed entirely by the erection of several new buildings, such as those suggested by Dr. Clark and Professor Miller, as well as in various other statements of our Report and Evidence.

New Buildings required.

Appropriate buildings will, we hope, soon be erected in the new Botanic Garden, and when finished, the whole site of the old Garden will be available for other Academical purposes; and would afford a very appropriate site for Museums and Lecture Rooms. We recommend that measures should be taken for the purpose of obtaining a site for the erection of an ample series of buildings which are greatly needed; such as Museums of Comparative Anatomy and Zoology, with convenient contiguous rooms for dissections, experiments, and books of reference, a Museum of Mineralogy, with requisite rooms for experiments; and a Museum, for the deposit of physical and chemical apparatus, with all possible conveniences for their ready use by Students.

For such buildings as these the University has a pressing want; and it is very fortunate that an ample site may be found for the whole of them. The cost of their erection need not be very great. They ought to be erected for use, and not for ornament. The University has not funds for costly architectural decorations; which, besides, are often injurious to the scientific ends of a building.

A new Museum of Comparative Anatomy and Zoology we think of great and immediate importance. The present Museum might then be appropriated to Human Anatomy, and to Pathology. Should the fossils of the Woodwardian Museum increase beyond the capacity of the whole floor on which they are now arranged, including therein the present Mineralogical Museum; some of the larger fossils might, from time to time, find a place in the new Museum of Comparative Anatomy, which ought to be a building of ample dimensions. The two Collections would thus become interlaced; and, in the way of exchange, this might be a great advantage to both of them.

Fitzwilliam Museum.

Historical Account.

This building, which now forms one of the great architectural decorations of Cambridge, was founded by Richard Viscount Fitzwilliam, (M. A. of Trinity Hall), who died February 5th, 1816, and bequeathed to the University his paintings, drawings, prints, books, and works of art; together with 100,000*l.* South Sea Stock, the dividends of which were to be expended in the erection of a Museum for the reception of his whole collection. The Stock was in due time, and after the deduction of ten per cent. legacy duty, transferred to the University, and all the other directions of the Will having been complied with, a Syndicate was immediately appointed to assist in giving effect to the bequest. Before long the collection was arranged in a suite of ancient, and partly dilapidated, rooms, connected with the Free School on the south side of the old Botanic Garden, which were repaired and fitted up, so as to become a safe and convenient temporary Museum. Cases and cabinets were constructed for the books, prints and drawings; the paintings were well exhibited; and the whole collection thus became, without any needless delay, available to the public.

In these rooms it remained for a quarter of a century: but not long after the completion of the new wing of the Public Library in 1842, a place was found for it on the north side of the old Library: where it remained for a few years in perfect security, but in a room ill fitted for its exhibition;—lastly it was transferred to the present Museum, in 1849.

Soon after the first arrangement of the collection in the above-mentioned rooms on the south side of the old Botanic Garden, the Syndicate were employed in attempting to secure a site for the intended Museum; and after some fruitless negotiations with different parties, the University at length purchased of St. Peter's College (for the sum of 9,645*l.*) the reversion of the present excellent site—then occupied by many mean buildings, let upon lease. The delay involved in this arrangement was no real misfortune to the University, which had no redundant

sum in its corporate chest to expend on a Museum of Art; and, for building purposes, had no right over more than the dividends on the Stock bequeathed by Viscount Fitzwilliam. But the Collection was secure and accessible, and was maintained with all convenient economy; so that the funds from the accumulated dividends were rapidly increasing year by year. REPORT.

At length, in 1837, Mr. Basevi (the architect whose designs had carried off the prize in open competition) commenced the present building—all the leases above named being then run out, and the University (after the original cost of the site and all other subsequent necessary expenses) having a clear balance in hand, from the accumulation of the Fitzwilliam dividends, of more than 40,000*l.*—Under his direction the work was gradually carried on for more than seven years; during which time all the outer portions of the building, together with the interior picture galleries, and a large room on the ground floor (now devoted to Sculpture and Classical Antiquities) were finished, with their costly decorations.

After the melancholy death of Mr. Basevi in 1845, Mr. Cockerell (who had been employed by the University as the architect of the Public Library) was appointed to succeed him; and to this gentleman the Senate owes the design and execution of the present cupola and many other beautiful decorations of the Entrance Hall, and also the excellent fittings of the new Library on the ground floor. The plans of Mr. Cockerell involved, however, some costly changes in the designs of Mr. Basevi; and in 1847 it was found, that all the available funds, including therein 12,000*l.* borrowed on the capital, were exhausted. The architectural decorations of the unfinished Entrance Hall have been consequently suspended, till the accumulated dividends of the Fitzwilliam fund shall have become sufficient for the entire completion of the Museum, and we believe also for the construction of an architectural wall which appears to be necessary to its exterior effect, its security, and its insulation from all the grounds that are contiguous to it.

It appears from the Vice-Chancellor's return, that the building of the new Fitzwilliam Museum (in addition to the sum of 9,645*l.* originally paid for the reversion of the site, as well as the annual cost of maintaining the establishment, of which we have no exact return), has already cost 91,550*l.*: and it will require a considerable additional sum before the interior decorations and the outer boundary wall are finished. Spite of this prospective outlay, we are assured that by a continuance of the present wise economy in the ordinary administration of the Museum, the Fitzwilliam Fund will, before many years are over, not only be redeemed from debt but be adequate to the ultimate completion of the architect's designs: after which, the annual proceeds will become available for the purchase and addition of such works of the fine arts as may seem necessary to maintain the character of the collection. Evidence, p. 17.

To the construction of this Museum costly architectural decoration was appropriate, and we might almost say essential. It was a work of refinement and luxury rather than of necessity; and the building is a noble monument to the Founder's memory. The collection, very soon after it reached Cambridge, was placed in security and became accessible to study. The University, as before stated, had nothing more than the dividends of the stock for a building fund. The site was purchased as a reversion, and a delay of many years became absolutely necessary, that the building might satisfy the taste and reasonable wishes of the Senate. The whole cost of the building has, however, extended far beyond what was at first contemplated by any resident member of the University.

The new Museums alluded to above, have little in common with our Museum of Art. They are not works of luxury, but works of necessity to the true scientific life of the University. Their want is pressing and immediate. There is no special fund available for their construction and decoration. If, however, as we hope, means should be obtained for this purpose, we are desirous of expressing our opinion that care should be taken to avoid any great expenditure for mere architectural decoration on buildings for which it is neither necessary nor appropriate. RECOMMENDATION.

The Fitzwilliam collection is too well known to need any description here. Its best paintings are arranged in the great central upper gallery. Its books, prints, and manuscripts, are arranged (as above described). in the new Library on the ground floor, and on the left side of the Entrance Hall. A corresponding room on the other side of the hall will admit of large future additions. So soon as the building is complete and the funds are clear, a great outlay will be needed to bring the collection of prints into a proper condition. It contained, at the time of Lord

REPORT.

Fitzwilliam's death, an excellent series of prints of many of the more celebrated masters, from the most ancient to the most modern; but since it came into the possession of the University (with one exception, when a costly purchase was made of a series of the rare prints of Marco Antonio) no additions, for obvious reasons, have been made to it from the funds at the disposal of the Senate. There are some valuable presents recorded in the Book of Donations, to the collection of the Library, which we cannot pretend to enumerate; but we may point out one, which has a special interest:—viz., A large folio of original drawings and sketches by the celebrated painter Romney, presented by his Son, the Rev. J. Romney, of St. John's College.

Donations and additions.

Mesman Collection.

In the year 1834 a collection of 248 paintings and 33 drawings and prints (bequeathed by the late Daniel Mesman Esq.) came into the possession of the University. For about fourteen years it was exhibited in the great room over the gateway of the Pitt Press (now the Office of the Registrary), and was finally arranged in the left gallery of the upper floor of the Fitzwilliam Museum. It contains some paintings which are valuable as illustrations of the early condition and progress of art, and several which are real ornaments to the Museum as works of art: but many of its paintings are of doubtful authority, so as to encumber, rather than decorate, the walls of the splendid gallery in which they are now suspended. No principle seems more safe and practically important than this, viz., that the University should place in its great collection such works of art only, as are either of historical interest, or of first rate excellence.

There have been several valuable additions to the gallery of paintings, and one which has been especially grateful to the feelings of the University—the portrait of her Chancellor, Prince Albert, presented by His Royal Highness.

The large central gallery, on the ground floor is devoted chiefly to antique statuary, and to ancient monumental marbles. It already possesses the following collections:—

1. A valuable series of ancient Marbles; chiefly collected in Italy, by John Disney, Esq., formerly of St. Peter's College, and described by him, with illustrations, in a work entitled 'Museum Disneianum;' and presented by him to the Museum (April 16, 1850).

2. Thirty-four excellent casts of some of the finest works of ancient art—such as the Laocoon, the Dying Gladiator, the Farnese Hercules, the Theseus of the Elgin Marbles, &c., &c, presented by John Kirkpatrick, M. A., of Trinity College.

We cannot here enumerate the valuable antiquities and works of art arranged chiefly in the open galleries of the entrance hall; but they are recorded in a public catalogue of donations wherein the managing Syndicate endeavours to give due honour to the benefactors of the Museum.

From a review of the facts above stated, we are assured that the Museum has been administered with great general economy, and with a constant view to the final objects of its foundation. We rejoice also to state, that it is conducted with all the liberality that is compatible with the safety of the collection.

Terms of Admission.

With the exceptions of Sundays and eleven specified festivals of the Church, with the exception also of a few days set apart, each year, for cleaning, dusting, and inspecting the contents of the Museum, the picture and sculpture galleries are open every day for six hours. Three Curators are in attendance. Every Graduate under the condition of appearing in his academic dress, has access to these collections at all hours when the Museum is open. Undergraduates, under a like condition, have access to them each day after twelve o'clock. Graduates may introduce strangers. Every Undergraduate may do the same, on producing a ticket, countersigned by the Tutor or Head of his College; and such tickets would never be refused without some special reason. On each Wednesday and Saturday (the latter being the market-day of Cambridge), the public is freely admitted between the hours of twelve and four; and we understand that, of the thousands who have availed themselves of this valued privilege, no one has inflicted the least injury on the collection.

To the books, prints, and manuscripts, there are not two weekly days of free public admission. But Graduates and Undergraduates are admitted, under the limitation above specified: and any Graduate has the power of admitting strangers to examine the prints and manuscripts; provided he remain present during the whole time the persons so admitted are in the apartment. This last privilege does not extend to Undergraduates. But any person, whether member of the

University or stranger, can, on proper recommendation, obtain a ticket from the Vice-Chancellor, giving him permission to copy any picture, print, or manuscript, under some limitation of time, and also in subordination to the regulations of the managing Syndicate. REPORT.

We mention the above particulars, because we look upon them as satisfactory and gratifying proofs, that the Fitzwilliam Museum is liberally administered.

After all we have now stated respecting the existing Cambridge Museums, we cannot believe that the University will be backward in putting forth her moral strength, so as to bring into good effect such parts of her scientific mechanism as are still defective. From the experience of the last thirty years, she has learnt, that all the new academic institutions that have risen up, and been fostered under her influence, have become her efficient servants, and have contributed to her honour.—Her Observatory is a place of appeal among the astronomers of Europe and America.—Her Museums of Anatomy, Geology, and Mineralogy, are not silent and empty walls; but are schools of natural science, and are already filled with collections of great practical value.—Her Museum of Art is adding to its original treasures; and a new Professorship is (by the generosity of Mr. Disney) now founded to give these treasures their true meaning, as the exponents and correctives of taste, and as fixed monuments marking the progress of the mind of man, during successive periods of history, in his conception of what is great and beautiful in art. Remarks.

In like manner if all the other Museums, to which we have alluded, as essential to the more perfect action of the Cambridge course of study, were set about, as we trust they soon will be, in good heart and hope, and carried on as to their details in a wise economy; we doubt not, that they would all be soon finished, and soon filled with natural treasures. Nor can we doubt, if an ample Museum of physical apparatus were provided by the University, that good men would instantly be found to do its work—sustained by mutual help, urged on, perhaps, by generous rivalry, by the fascinations of experimental study, and the hopes of discovery. The severe mathematical studies of Cambridge would then become something more than lessons of sound logic and intellectual training. They would be brought to bear with their proper strength, in giving a more exact interpretation to observed phenomena, in pointing out new tracks of experimental discovery, in drawing from facts of observation, consequences inaccessible through any other method of approach, and in giving to apparently dissevered truths, that philosophical connexion which makes their greatest glory, and ministers to their widest practical application. We do not then believe that the mathematical studies would lose, on the contrary, we believe that they would continually gain, among the more advanced students (the only persons whose labours can tell on the progress of science), by the erection of new museums and by greater facilities of experimental investigations.

The Public and other Libraries.

The Public Library of the University, according to the statement of Mr. Power, the Librarian, contains about 170,000 volumes of books, and more than 3,000 manuscripts. The precise date of its origin cannot be ascertained, but Archbishop Rotheram may be regarded as its principal founder who soon after the invention of printing, erected a building in which some part of it is placed. Many gifts of valuable manuscripts and books were subsequently made to it by Archbishop Parker, Bishop Hacket, and others; but by far the most considerable benefaction which it ever received was the library of Dr. Moore, Bishop of Ely, which was purchased from his executors by George I. for 6,000*l.*, and presented by him to the University. It consisted of more than 30,000 books and manuscripts, many of them of great value. Other gifts have since been made to it by various benefactors, including amongst them Dr. Buchanan, and Burckhardt, the celebrated traveller, both of whom presented valuable collections of Oriental manuscripts. Evidence, p. 50.

Very considerable bequests, have been made to the funds for supporting it.

Mr. Tobias Rustat, Yeoman of the Robes to Charles II., and a munificent benefactor to Jesus College, left an estate, the present rental of which is 186*l.* per annum, for the purchase of books, which are directed not to be removed from the Library.

Mr. Worts, who was one of the Esquire Bedells, about the beginning of

REPORT.

the last century, left an estate at Landbeach, near Cambridge, the residue of whose rental, after providing for other objects, are directed to be applied to the purchase of books for the Public Library. This residue now produces 684*l.* per annum.

More recently the Rev. John Manistre, formerly Fellow of King's College, left 5,000*l.* for the same purpose. This sum has been invested in the public funds, and produces 150*l.* per annum.

In addition to the funds arising from these benefactions there is also that produced by a tax of 6*s.* annually upon every member of the University, Sizars only excepted. Its produce, in 1851, was about 2,100*l.*, and it is increasing at the present time by about 40*l.* annually, with the annual increase of members on the Boards of the different Colleges. To this must be added a sum of about 25*l.* per annum, arising from a portion of the fines imposed for not returning books to the library on the appointed days.

The University pays from her general funds the salaries of the Librarian, 210*l.*, and of the two Senior Assistants 300*l.*, together with the charges for insurance, repairs, &c., amounting altogether to about 811*l.* annually.

The Library fund itself is charged with the salaries of the two Junior Assistants (146*l.*), and with the payment of the interest and a portion of the principal of a debt, originally of 8,000*l.*, but now reduced to 3,000*l.*, which was incurred for the fittings of the new Library. This debt will be entirely liquidated in 1860.

The sum, therefore, which remains applicable, after the payment of these charges, to the binding and purchase of books is about 2,500*l.* The average cost of the former is about 550*l.*

Privilege under the Copyright Act.

This Library is also entitled under the Copyright Act (5 & 6 Vict. c. 45) to a copy of every new book published in Great Britain, as well as of every old book republished with new matter. It appears from a statement carefully prepared by Mr. Power that there are received, in virtue of this privilege, about 3,000 volumes, 4,000 pamphlets and periodical publications, and 500 pieces of music annually, and that their money value, calculated from their selling prices in the London catalogues, is about 1,350*l.* per annum.

Value of this privilege.

It is not easy, however, to estimate correctly the real value of this privilege. Of the books which are received, the greatest part are of little worth, or are better suited for a popular circulating library than for one which is designed for a repository of the permanent literature and science of all nations. The cost also incurred for binding this vast multitude of books, for arranging and collecting pamphlets and periodicals, for entering them in the catalogues, and for payment of the expenses of the agent for collecting them at Stationers' Hall, is probably not much less than 600*l.* per annum; and inasmuch as the books which are derived from this source are received very soon after publication, they form a principal attraction of those who use the library less for literary objects than for amusement, and thus increase unduly the labours of the Librarians. Of the books which are removed from the Library, under the privilege conceded to every member of the Senate, a great majority belong to this class.

Again, the cost of providing space and fittings for the reception of books supplies another argument against the accumulation of such as possess a temporary interest only. The portion of the New Library, with its fittings, but exclusive of the Geological and Mineralogical Museum beneath it, was completed about fifteen years ago, at an expense of about 20,000*l*; it was designed to afford space for about 80,000 volumes, and the accumulation of books which has taken place since that time have already nearly sufficed to fill the space which it provided. If future additions to the building are to be made in the same style (and the locality is one which demands no small amount of architectural decoration), it would involve an expenditure at a rate of nearly 250*l.* for every 1000 volumes. This consideration alone renders necessary the exercise of great vigilance and caution in the selection and purchase of books, in order to see that their intrinsic value, whether for purposes of reference or study, is sufficient to justify the large expenditure required for their reception and preservation.

We are quite aware that it is not very easy to define the circumstances which are likely to determine the future, as well as the present value of many new publications; for it is well known, in the history of literature that books and pamphlets which were disregarded when first published, have in many cases acquired, in the course of time, a very considerable literary or documentary value. If, however, the Public Library of the University is designed to be made, like the British Museum, a permanent record of the national literature, it should be not only secured

in the possession of every work that issues from the press, but should be furnished, likewise, with adequate funds for binding, cataloguing, and preserving them, as well as for providing a proper building for receiving them. But none of these conditions are fulfilled; for new works, which this Library is entitled to claim, are not required by the Act of 5 and 6 Vict. c. 45, like those for the British Museum, to be delivered at Stationers' Hall, unless a demand for them in writing is made upon the publisher within one year of the date of publication. It thus happens that works which are not much advertised, and which do not pass through the hands of the great London publishers, are frequently unnoticed by the agents of the University, and are never received.

Recommendation.

We are induced by these considerations to think that the privilege which the Copyright Act gives to the University might be advantageously commuted for a money payment, to be expended in the purchase and binding of such works recently published as might be deemed to be worth preserving. Of this kind would be scientific and literary journals, and other serial publications containing original articles, which are useful for purposes of reference, and which large libraries alone can be expected to contain: pamphlets and occasional publications relating to topics of public and general interest which, when well arranged and complete (and under existing arrangements they rarely are so), may possess considerable value as historical records: original works and republications with original matter which are likely to possess some permanent interest, whether for study or reference. The same principles would exclude works of a frivolous nature, and a vast multitude of mere compilations which furnish the chief materials for popular reading. The exclusion of books of this class from the Library would tend not a little to confine its use to those who require it, not as a substitute for an ordinary book-club, but for real aid in literary and scientific inquiries.

The estimate, however, of the value of this privilege which is formed by Mr. Power, is very different from that to which we have arrived. "I am "strongly of opinion," says he, "that this privilege could not be commuted with "advantage to the University and to the interests of literature for a money pay- "ment when applied generally to the purchase of new publications. There is no "calculating how much we might lose in future years by such commutation, in "an age when the human intellect is making such rapid strides in every depart- "ment, and when the progress of education, by increasing the demand for valu- "able works, at the same time encourages their production. Our agent is "instructed to exercise the privilege in all cases, except that I have taken "upon myself to deprecate the sending of infantine publications, of which we used "to receive a great number, and which served only to swell out the lists incon- "veniently, and to embarrass us at the Library. The Commissioners may be "aware that we are placed at a disadvantage compared with the British Museum, "in being obliged to make a written demand upon the publishers within one "year of the date of the publications, whereas the publishers are obliged to "deliver at Stationers' Hall the copies destined for the British Museum, without "any demand on the part of the latter. In consequence of this disadvantage, "it cannot be but valuable publications will escape the vigilance of the most "active agent; and such, without doubt, is frequently the case. It would be no "injury to the authors if we were put on the same footing as the British "Museum in this matter, as it is well known that the booksellers, in making their "agreements with the authors, invariably take into account the full number of "copies which may be claimed under the Copyright Act, just in the same "manner as they would do if such copies were invariably delivered at Stationers' "Hall without any demand made."

We quite concur with Mr. Power in thinking that an alteration of the law which would place the other four Libraries, in possession of this privilege, upon the same footing with the British Museum, would add greatly to its value, without imposing any appreciable additional burden upon literature; still less so if, assuming the books to be deposited at Stationers' Hall, all those were returned or returnable which were not claimed within a limited period. Such an arrangement, besides the relief it would afford to the publishers, would free those libraries from all trivial or worthless publications and from the serious expenses which they entail; and would further tend to confine the circulation of the books which are received into them to a class of readers who have a real interest in literature as a dignified and important occupation.

Report.

The books in this library may be divided into two great classes—those which are not removable from it, and those which are. To the first class belong all the manuscripts; all early printed and other very rare books; richly illustrated works on architecture, natural history and art; lexicons and encyclopædias, when not in duplicate, which are required for frequent reference by readers in the library; and also the whole of the books which have been purchased upon the Rustat fund. All the others may be taken from the Library upon a ticket signed by a member of the Senate, so that not more than ten of them are taken by one person. Half that number may be taken by a Bachelor of Arts, if his ticket is backed by his Tutor. All books thus taken out are required to be returned on the 29th of December, the 25th of March, the 25th of June, and the 29th of September, and fines are imposed and rigorously enforced upon those who retain them beyond the appointed time. After the last of those days the Library is closed for fourteen days, in order to see that all the books are in their places.

It is stated by Mr. Power that the number of volumes which were removed upon tickets on the 4th March, 1851, was 3,809. As this day was in the middle of Term, the number in question was probably not far from the average. The total number of all the books removed in the course of the year 1847 was 25,530, or 6,382 per quarter; a very great proportion, however, of the same books are taken out in successive quarters, so that, if such repetitions were excluded, the number of *different* books removed during that period would probably not exceed 10,000. There can be no doubt of the great advantages which members of the University derive from the use of this privilege. There are not many hours of the day during which a library is commonly accessible to Students, and generally very few which their other engagements will allow them to devote to consulting the books which it contains. It is in their own chambers that they can avail themselves of the information which they furnish with the most effect and with the least sacrifice of time.

It has been very commonly urged as an objection to this liberal management of a great public library, that, in the first place, it exposed the books to the danger of being lost or injured; and in the second, that the abstraction of books for long periods tends very materially to diminish its value for the purposes of reference or study.

The information furnished by Mr. Power gives a very satisfactory answer to the first of those objections. "I consider," says he, "very few books are lost in conse-
"quence of the privileges of members of the University, but they not unfrequently
"sustain injury beyond the fair proportion of wear and tear, partly from careless
"packing, partly from exposure to rain, partly from the indolent habit of bending
"back the binding whilst reading the volume.

"The volumes are usually returned so large a number together at the end of
"each quarter, that it is impossible to examine each volume; nor would it be of
"much use, on account of the difficulty of proving that any observed injury was
"inflicted by the last borrower. It is impossible to estimate nearer than by a very
"rough guess the annual amount of damage which the library thus sustains, but
"I am not disposed to estimate it at more than 40*l.* or 50*l.*"

If a book is lost, which is very rarely the case, the party who loses it (and he is always known) is compelled to replace it. Very valuable books are either not removable, or, if removed, are usually treated with great care. The damage which is done to books from careless handling or other causes is nearly confined to books which are in very great demand, and on that account generally of no great pecuniary value.

The importance of the second of the objections above stated must be in a great measure estimated with reference to the value of the privilege which gives rise to it. The pressure of the inconvenience is diminished by retaining the books or duplicates of them, which are frequently consulted but seldom continuously read. It would be still more effectually met by occasionally recalling such books as persons engaged in works of research expressed a desire of referring to. Manuscripts are only removable from the Library by special Grace of the Senate, and upon giving a bond at least equal to their value, which is forfeited if they are lost or damaged. We believe there is no case upon record where manuscripts, thus removed, have been lost or seriously damaged.

Administration.

The administration of the Library is vested by a Grace of the Senate, passed in 1751, in a Syndicate, composed of the Vice-Chancellor, the Heads of Colleges, all Doctors of every Faculty, the Public Orator, all the Professors of the Uni-

versity, with the Proctors, Taxors, and Scrutators of the current year. In subordination to this body is placed the Librarian, who is a member of the Senate, and four Assistants.

Constitution of the Syndicate objectionable.

There are many objections to the constitution of this Syndicate: its members are not selected for their special fitness for the duty; they are not elected or changed periodically; they are much too numerous, if any considerable portion of them should attend for the transaction of business. As it is, though the number of them usually resident in the University exceeds 70, not more than 20 have ever attended at one time, and generally not more than half that number. The consequence is, that the continuity of their proceedings is chiefly dependent upon the prevalent influence of the Librarian, who, though not officially a member of the Syndicate, is always in attendance upon it. There can be no doubt that a small Syndicate, composed of those who really felt an interest in the concerns of the Library, and acting under a more direct sense of responsibility, such as a special appointment would give, would not only afford a more efficient support to the Librarian, but tend to keep all the officers of the establishment in more complete subordination and activity.

The four Assistants have hitherto been appointed by the Senate, after a nomination of two candidates by the Heads of Houses: a method of appointing inferior officers, who should always be removable by the Vice-Chancellor or the Syndicate, for inefficiency or misconduct, which is very objectionable, inasmuch as it is generally considered to confer an appointment for life. We are glad to observe, that in the revised code of Statutes, it is proposed not only to alter the constitution of the Library Syndicate, whose members are to be appointed by the Senate for a period of four years only, but also to entrust to the same body the appointment and removal of the Library Assistants.

Mr. Power recommends the appointment of one or two clerks to assist him in registering and distributing the books when received, and in keeping more accurate accounts of all the business transactions of the Library than has hitherto been practicable with the force of assistants at his command. Their duties, as at present regulated, would appear to be confined to the hours during which the Library is open, when most of their attention is occupied with members of the Senate and others who are engaged in consulting or removing books. It would seem to be a better arrangement to require their services during the whole of the ordinary working day, under the orders of the Librarian or the Principal Assistant. Mr. Power also complains of the want of adequate business and other subsidiary rooms, more especially of store rooms, where unbound and imperfect works may be arranged and safely deposited.

Library Tax.

In the year 1825, the Library Syndicate, upon the earnest representations of the late excellent Librarian, Mr. Lodge, addressed a Report to the Senate in favour of the imposition of a quarterly tax of 1*s.* 6*d.* upon every member of the University, Sizars only excepted, to be devoted exclusively to the purchase of books; the public chest continuing to defray, as it had hitherto done, the entire cost of salaries, repairs, and insurance. Though serious doubts were entertained at the time of the authority of the University to impose taxes upon Graduates, yet so strong was the impression of the importance of the object proposed to be attained, that the Grace was passed with very general approbation, and after a little opposition from some of the Colleges, its legality, if not fully recognized, ceased to be disputed. The effect produced by this very considerable accession of funds, was a rapid accumulation of books in every department of literature, under the active and intelligent superintendence of Mr. Lodge; so much so, that after the lapse of a few years, the space in the old Library which was available for the reception of books, was filled to repletion; and though the University had purchased in the year 1829 the ancient quadrangle of King's College for 12,000*l.*, with a view of providing the space necessary for new museums, lecture-rooms, and additions to the Library, it was found that the funds in the public chest were nearly exhausted by the effort, and that no means were available for carrying this great project into execution. It was in order to meet this difficulty, that a public subscription was commenced in the year 1833 amongst the members of the University, and nobly responded to. In a short time upwards of 21,000*l.* was collected; and shortly afterwards a new building, a portion only of a very magnificent and comprehensive scheme, was erected, after the designs of Mr. Cockerell, containing the Woodwardian and Mineralogical Museums below, and a noble fire-proof Library above, capable of containing 80,000 volumes.

REPORT.

It was to provide the requisite fittings for this Library that 8,000*l.* was borrowed in 1841 upon bonds repayable in 20 years from the proceeds of the Library tax. The imposition of this, as well as other charges upon this fund, for the purpose of engaging additional assistants, as well as the deduction of income-tax, which was very unexpected, considering the source from which this income arises, have materially reduced the funds which were formerly disposable for the purchase of books.

New Library.

The new Library is again nearly filled, and the necessity of providing large additions to it, as well as for the completion of other parts of the original design, is becoming every day more and more urgent. The basis of a fund for this purpose was laid about ten years ago by a noble donation of 2,000*l.* by the Rev. T. Halford, of Jesus College, to which the Bishop of Durham has added 100*l.*, and Dr. Chapman, the present Master of Caius College, 50*l.* A Syndicate also was not long since appointed with a view of suggesting means for raising the necessary funds; but the scheme of taxation which was proposed by them, was rejected by the Senate. Attention has under these circumstances been very strongly called to the possible remission of the Government tax on Degrees, exceeding 3,000*l.* per annum, which, if allowed to be transferred to the University chest, upon condition of being applied in aid of the fund applicable to this and other objects, would be found to be eminently beneficial to the University.

Reading-room recommended.

If additions should be hereafter made to the Library it seems desirable that a Reading-room should be provided, where not only Undergraduates, but also other persons, not members of the University, might be allowed to consult books, under proper regulations. Formerly, the privilege of using the Library was strictly confined to Members of the Senate, and Bachelors of Law and Medicine. A subsequent Grace of the Senate conferred this right in a somewhat modified form, and under the responsibility of their Tutors, to Bachelors of Arts. Undergraduates have hitherto been excluded from access to the Library, or receiving books from it, from an unwillingness to introduce into it a greater number of persons than the Library Assistants could attend to. The addition, however, of the proposed Reading-room, with a small increase of the staff of officers, would enable large numbers of them to consult books in the Library with ease and comfort, without the necessity of removing them to their chambers; it would thus not only make the Library accessible to large classes of persons who are now excluded from it, but by checking the abstraction of books, would make it more useful for purposes of reference. The proposition to admit strangers also to the use of this room would be in accordance with the liberal principle, which has been so generally acted upon by the University of late years, of throwing open their collections of every kind as widely as was deemed consistent with their safety and with the special objects which they were required to answer.

Fitzwilliam Library.

There is another Public Library of no great extent, but of very choice character, at the Fitzwilliam Museum; it contains about 6000 volumes, including some splendidly illustrated works, and a very fine collection of Missals. This library is placed in the same room with the noble collection of prints which formed part of the same bequest, and the fittings of the room are admirably adapted for consulting books and works of art without injuring them. A very free and liberal access is given to strangers, as well as members of the University, to every part of this museum; and the precautions which are taken to protect the several collections from injury are worthy of the greatest commendation.

Whenever the time shall arrive, upon the completion of the internal decoration of this museum, that the ample funds bequeathed by Lord Fitzwilliam shall be applicable to the increase of the collections it contains, it might be desirable to devote some considerable portion of them to the purchase of richly illustrated works, which require delicate handling and treatment; for such books are not only better preserved and more advantageously consulted in a museum, built and fitted up expressly for their reception, than in a library which does not possess at present, nor is likely to possess hereafter, the same conveniences at its disposal. Such an application also of its funds would relieve those of the Public Library from the serious expenditure incurred in the purchase of books, such as Botta's Nineveh, and other costly works published under the auspices of the French and other foreign governments, which are in many cases more intimately connected with art than with literature, and which properly belong, therefore, to a collection specially designed for the illustration of art. So strongly do we feel the

superior adaptation of this museum as the receptacle of all works of this nature that we should be disposed to recommend the transfer to it hereafter of all such works now in the Public Library, unless they have been purchased by special funds with a fixed and unalterable destination. Mr. Power, however, with a very commendable zeal for the establishment over which he presides, is opposed to this view, and for the following reasons:—

1. "The Fitzwilliam Library contains very little room for fresh accessions, no "more than is necessary to accommodate the presents of books which are made to it "from time to time."

2. "It seems hardly advisable to break up a more complete library to enrich one "which is less complete."

3. "Most of the works of this class in the University Library are purchased "from funds bequeathed by individuals with the express intention of enriching the "University Library, and to remove them elsewhere would be a violation of the "conditions under which the University received them."

Admitting, as we have already done, the force of the third of these objections, as far as it is applicable, we may remark, with respect to the first, that there is a room in the Fitzwilliam Museum, not yet fitted up, reserved for the reception of books, which is of the same dimensions as the one already occupied for the same purpose, and capable, therefore, of holding from 8,000 to 10,000 volumes; and that with respect to the second objection, the Public Library, though it contains many very costly and valuable books is not rich as a library of art, and is inferior in this particular department to the collection contained in the Fitzwilliam Museum.

We think it an act of justice to Mr. Power to acknowledge our obligations to him for the full and satisfactory replies which he has furnished to the questions we addressed to him on the subject of the Library over which he presides with so much benefit to the University.

THE COLLEGE LIBRARIES.

We have received replies from the greater part of the Colleges, though not always very full and satisfactory, to the enquiries which we addressed to them respecting the administration of their Libraries, the funds provided for their support, and other particulars connected with their past history and present condition. We found that in every instance, the Libraries of Archbishop Parker at Corpus Christi College and of Mr. Pepys at Magdalene College excepted, the Fellows had free access to their respective Libraries and were allowed to remove books from them to their own chambers; that the Undergraduates were generally allowed to make use of them through the agency of their Tutors; and that the Members of other Colleges as well as literary strangers experienced no difficulty in making use of them for purposes of special research and inquiry.

Nearly all these Libraries contain more or less valuable collections of ancient books, particularly in theology, which have been bequeathed to them by former benefactors; but the funds which appear to be provided for their support and progressive augmentation are usually small, and there is generally therefore a considerable deficiency of modern books for the use of Students.

Trinity College.

The Library of Trinity College takes the first rank among the College Libraries, not merely from the architectural magnificence of the room in which it is contained, but likewise for its careful management and comparatively liberal support. It is placed under a Librarian who is a Member of the Senate, who has a competent endowment, whose sole business it is to superintend it, assisted by an Under-Librarian, who is in attendance during four hours daily throughout the year. All members of the College have free access to it, and the Undergraduates, under the authority and responsibility of their Tutors, are allowed to take as many as six books at the same time to their own chambers; a privilege which is found to be eminently advantageous to them in the prosecution of their studies. As a proof of the great use which is made of the Library, it is stated that in the course of the year 1850, 5,000 books were thus removed. There is an annual inspection of the whole Library, and the average loss of books is not more than three annually, which, if not subsequently returned, as is usually the case, are always replaced by other copies. As these books are rarely sent to a distance from the University, or circulated like novels amongst the different members of a family, they are said to be seldom damaged. It is difficult to produce a more striking proof of the safety,

Report.

under the requisite precautions, of allowing the most liberal use of a great public Library.

The funds arising from rents of rooms and small annual contributions from resident members, which are appropriated to the support of this Library, exceed 500*l.* per annum; part of this sum is expended in paying the salary of the Under-Librarian, and in internal fittings and decorations of the building; the rest in the purchase and binding of books, which are very carefully selected, and many of them with special reference to the wants of the Students.

Of the books in the Library, which are about 35,000 in number, four out of five are either classical or historical. It is well supplied with books on general literature, theology, and mathematics, but is very deficient in those relating to law, physics, and the natural sciences. The Library contains many collections of rare and valuable books, which have been acquired by gift or bequest, including many very fine copies of early printed classics and the Shakesperian collection of Mr. Capell. The collection of manuscripts also is extensive and valuable; though very carefully preserved, and not easily accessible, a small number of them were purloined a few years ago; we believe, however, that such precautions have since been taken as to render such an occurrence extremely improbable.

We have been thus minute in our account of this Library as it appears to us to present a good example of the compatibility of a very liberal administration with nearly perfect security against serious loss or damage, provided the books are of a character adapted for real and serious study; the losses which such a system entails appear to be absolutely trifling compared with the advantages which it secures.

St. John's College.

The College Library which is next to this in extent and value, is that of St. John's College. The collection of books is very considerable, containing more than 26,000 volumes, and is extremely rich in theology, early printed books, rare historical tracts, and other departments of literature; though deficient in modern books, it is well supplied with those relating to the usual branches of academical instruction, and as such is extremely useful to students. It has received many very considerable gifts, both in money and books, including the libraries of Bishop Gunning and the late Master and eminent Benefactor of the College, Dr. Wood, the latter containing 4,400 volumes. A good catalogue of the MSS. and some of the rare books which it contains, has been lately published by the Rev. Morgan Cowie, one of the Fellows of the College. The privileges conceded to Students for removing books from this Library are much the same as those adopted for the Library of Trinity College.

Queens' College.

The Library of Queens' College is of considerable extent and value. A good catalogue of its contents, drawn up by the Rev. Hartwell Horne, was printed about 25 years ago; it has since received a bequest of more than 3,000 books, chiefly theological and mathematical, from the late President, Dr. Milner, Dean of Carlisle; it contains nearly 25,000 volumes.

Caius College.

The Library of Caius College contains more than 14,000 volumes and about 700 manuscripts; a good catalogue of the latter was drawn up by the Rev. John James Smith, late Tutor of the College, and the Rev. W. R. Collett, the present Librarian; it is particularly rich in heraldic visitations and manuscripts relating to Civil Law. Mr. Collett has subsequently printed a catalogue of the rare and early printed books which are contained in it.

Catalogues.

We have great pleasure in noticing the efforts which have been made of late years in this and other Colleges, to publish catalogues of the manuscript and other treasures which their libraries contain: it is the best proof that can be furnished that they are duly appreciated and valued. If similar catalogues were printed and published of whatsoever is remarkable in the Libraries of every College, they would be found to be eminently serviceable in directing the inquiries of those who are engaged in works of research. Such catalogues prepared and placed side by side with the catalogues in the Public Library, would exhibit at one view the full extent of the literary treasures which the University possessed.

Corpus Christi College.

The well-known Manuscript Library of Archbishop Parker, so full of important historical documents relating to the era of the Reformation, is deposited at Corpus Christi College, and is only accessible, in conformity with the peremptory injunctions of the Founder, upon very onerous conditions: its contents, however, are well-known, through the excellent catalogue of Mr. Nasmyth.

Magdalene College.

The case is not very different with the Pepysian Library at Magdalene College, which has been removed from the building originally appropriated to it, and deposited in a

room expressly prepared for it in the new Master's Lodge. It is justly celebrated for its unique collection of English ballads; for its early printed books, and various other literary and historical treasures. Report.

The Library of King's College contains about 10,000 volumes, including, amongst many other rare and valuable books, the fine collection which was formed by the well-known Jacob Bryant. King's College.

The Library of Emmanuel College contains about 17,000 volumes, including the library of Archbishop Sancroft: that of Pembroke about 10,000 volumes; that of Peter's College about 6,300 volumes, and that of Trinity Hall contains an excellent classical Library bequeathed to it by Sir William Wynne, who was formerly Master, as well as a large collection of books relating to Civil Law. To the Library of Catharine Hall, Bishop Sherlock, who was formerly Master, bequeathed a valuable collection of theological and other books. The Library of Clare Hall contains many valuable theological and classical works; and a large collection of Italian books, which was formed by Ruggle the author of the play entitled Ignoramus, which was acted with great effect before James I. when he visited the University. That of Christ's College has a good collection of theology. We have received no information respecting the Library of Jesus College; and that of Downing College is only now in the course of formation. Other Colleges.

The University Press.

The University Press is a very large and complete establishment: the Vice-Chancellor and Syndics, in reply to the inquiries which we addressed to them, describe it as containing "frames, fittings, and appurtenances for 70 compositors; "presses and appurtenances for 56 pressmen; eight printing-machines, which "require about 50 men and boys to manage, work, and supply them. A ten-horse "steam-engine; two boilers, turning lathe, forge, and circular saw, occupying, at "present, four hands; one (steam power) milling machine, hydraulic and screw hot "presses, at which, together, 100 men and boys might be employed if necessary. Evidence, p. 19. Description.

"There are also closets and other places, with the needful fittings and appur-"tenances, for any number of readers, overseers, warehousemen and boys, "necessary to carry on, get up, complete, and deliver the greatest amount of work "which could, at any time, be done by the greatest number of compositors, press-"men, and machinists that could be employed at the before named number of "frames, presses, and machines.

"The steam and other machinery is good of its kind, and adapted to the purposes "for which it is used; but, as in similar cases, practice and experience are con-"stantly suggesting improvements which may, from time to time, be adopted, as "circumstances permit.

"The number of inferior officers actually employed is reduced or enlarged "according to the state of trade. The continuance of their engagements depends "on their own will, their good conduct, and the quantity of work on hand. "The establishment being assimilated, as nearly as possible, in its interior economy "and management to ordinary printing-offices, the inferior officers are engaged "upon the usual trade terms and conditions. By these conditions they may be "discharged at a week's, a fortnight's, or a month's notice, according to their "several grades."

This ample provision of buildings and machinery was made to meet the great demand for Bibles and Prayer-books, which the operations of the Bible Society and the Society for Promoting Christian Knowledge had occasioned, before the changes took place which were consequent upon the expiration of the patent of the King's printer for Scotland, when that office was put into commission, and licences to print the Bible were granted in Scotland. "This virtually," say the Syndics, "threw open the trade in the north of England, and mainly contributed "to force upon societies and others not only large reductions in the prices of edi-"tions then generally in use, but also the introduction of small copies of the Bible "of a much lower class of production as to paper and print. The larger, finer, "and more costly editions were thus to a considerable extent superseded, and the "standard of value lowered."

The following schedule of the prices of the cheapest Bibles and Prayer-books printed, as well as those of a medium size and price, at different epochs since the year 1810, will show the extent to which this depreciation has proceeded:— Prices of Bibles and Prayer-books.

REPORT.

Year.	Bibles.		Prayer Books.	
	Cheapest.	Medium.	Cheapest.	Medium.
	s. *d.*	*s.* *d.*	*s.* *d.*	*s.* *d.*
1810	3 3½	9 3	1 2½	1 10¾
1820	2 10	9 10½	0 7½	1 10¾
1830	2 5	7 2½	0 6½	1 7½
1840	2 3	5 8½	0 6½	1 3
1842	1 0	5 8½	0 6½	1 3
1843-4	0 10	3 7½	0 4½	1 3
1843 to 1850	0 10	3 7½	0 2¾	1 3

Causes of the reduction in price.

Much of this great reduction of price is attributable to improved machinery and to better arrangements in the establishment; much of it is more apparent than real, arising from the inferiority in paper and execution; the rest from a reduction of profits, which, in the case of the Cambridge Press, has not been compensated, as has been usual in similar cases, by a very great increase of production. On the contrary, the number of Bibles and Prayer-books produced, has rapidly diminished, and the profits of the establishment derived from this source, which were formerly very considerable, have now become extremely small: much less in fact than can be considered as a reasonable return for the very large amount of capital invested in the Press.

Whatever may have been the causes which have produced this result, it is impossible to express regret at any extension of the privilege of printing Bibles, which, whilst it guarantees the correctness of the text, promotes their circulation amongst all classes of the community. The principles of free trade, when once in operation, are not capable of being materially checked or limited; and every trading establishment must sooner or later give way, if there does not exist a sufficient elasticity in its constitution to adapt its arrangements to the new circumstances in which it is thus placed.

Business of the Press.

The Cambridge Press is also largely employed in printing Examination Papers and other documents for the University and the different Colleges; in miscellaneous printing of various kinds; in printing books for members of the University and other parties who may choose to employ it: the only condition being that no book can be printed without the *Imprimatur* of the Vice-Chancellor. The publications of the Parker Society and of the Ecclesiastical History Society have also been printed at this Press.

It is also stated that "for several years past arrangements have been made by "the Syndics for reprinting, as circumstances might warrant, works in Theology "and Literature, in order to provide against the loss which the want of full "employment of their workmen would otherwise occasion, and the services of "distinguished members of the University have been, from time to time, engaged "for the purpose of preparing and superintending their publications." The number of such publications, however, which have hitherto appeared, is small.

The affairs of the Press are managed by a Syndicate at present consisting of eighteen persons. They are appointed by Grace of the Senate. They meet once every fortnight during Term, and oftener when occasion requires. About eight or nine of their number usually attend, and they are generally the same persons. The working of the establishment is entirely entrusted to the superintendence of the University Printer, Mr. John William Parker, the eminent publisher in the Strand.

Recommendation.

As long as the restriction of the privilege of printing Bibles operated to secure the extensive employment of the establishment with prices above the regular commercial cost of production, the profits which resulted from it were very considerable: but after these profits were reduced by a virtual abolition of the monopoly to the ordinary commercial standard, and in some respects even below it (for private subscriptions were brought in aid of the production of cheap Bibles in Scotland), the want of the commercial element in the administration of the Press immediately became manifest. It is only by associating printers or publishers in some species of copartnership with the University, or by leasing the Press to them, that any considerable return can hereafter be expected from the capital which has been invested in it.

There is an objection, however, to the principle of such a co-partnership, that

it would involve the University in an indefinite responsibility which it might not be prudent or becoming to incur. It is no sufficient answer to this objection to appeal to a case where it has been tried with eminent success, inasmuch as this arrangement was made at the time when the share of the privilege conferred a monopoly upon the King's Printer and the two Universities, which would have secured large profits to their Presses even under defective management: but under existing circumstances, there would hardly be a sufficient security of a profitable return to justify the risk, however small it might be, of the serious effects of possible mismanagement and failure.

Similar objections would not apply to the concession of a lease of the premises and fittings, which are of first-rate character, and sufficient for carrying on a very extensive trade: the University might retain its control over the exercise of its privilege, so far as it was required to secure it from abuse, as well as the command of a private and secret Press, when necessary, for printing its notices, documents, and examination papers; and though the Vice-Chancellor's *imprimatur* should only be attached to publications, which the University was understood to sanction, yet provision should be made that the name of the University should not be connected with any work of an objectionable description. We venture rather to suggest this scheme than to recommend it, for we are fully aware of the difficulties which must attend any plan for the satisfactory arrangement of this establishment; but we are satisfied that no Syndicate, however active and well chosen, can replace the intelligent and vigilant superintendence of those whose fortune in life is dependent upon its success; and that in the absence of this essential element of vitality, it will not be long able to maintain its ground against other establishments which possess similar privileges, without labouring under similar defects of administration.

Payment by Government.

The annual sum paid to the University by the Government consequent on the loss of the privilege of printing almanacs, is 500*l.* a-year. The Act of Parliament directs that this sum shall be paid to the Vice-Chancellor to and for the sole use of the University. A Grace of the Senate, however, which was passed in 1782, directs that this sum shall not be applied to the ordinary uses of the University, but expended under the authority of the Press Syndicate: "Vel in "novas veterum scriptorum editiones apparandas vel in recentiorum opera "divulganda." The application of this fund to the objects provided by this Grace has been eminently beneficial. It has assisted young authors in the publication of many valuable works, such as critical editions of portions of ancient authors and mathematical works connected with the studies of the University, the sale of which was not likely to prove remunerative: it has furnished the means of printing and circulating the Astronomical Observations of the Cambridge Observatory, and its assistance enabled the Philosophical Society to publish twelve volumes of its Transactions, which take a high rank amongst the productions of the most learned societies in Europe.

REPORT.

UNIVERSITY REVENUES.

Vice-Chancellor's Evidence, p. 15.

The annual income of the University, available for general purposes, which passes through the hands of the Vice-Chancellor, arising from rents, tithe rent charges, Government annuities and dividends on stock, profits of the Press, wine licenses, Matriculation and Degree fees, and other fees and fines, has amounted, on an average of the seven years ended at Michaelmas, 1851, to the sum of 7,966*l.* 3*s.* 1*d.*

p. 16. The annual expenditure for general purposes charged against this income on the same average of years has amounted to 6,843*l.* 14*s.*

p. 15. In addition to this income there have passed through the hands of the Vice-Chancellor on the same average of years, sums appropriated to specific objects, to the amount of 10,219*l.* 12*s.* 11*d.*

Thus the whole amount of income passing through the hands of the Vice-Chancellor, both for general purposes and specific objects, is 18,185*l.* 16*s.*

Full information respecting the sources of both these classes of income will be found in the answer which we have received from the Vice-Chancellor in reply to our inquiries.

p. 64 But beyond this a large amount passes annually through the hands of other officers, distributed in the following manner:

	£.	*s.*	*d.*
The two Proctors receive annually on an average between them	668	14	4
And for their attendants	113	0	0
The two Pro-Proctors	236	0	0
And for their attendants	56	10	0
The two Moderators	243	10	9
The two Scrutators	98	2	6
The Public Orator	124	10	0
The three Bedells	794	15	6
The Schoolkeeper, Marshall, &c.	42	0	0
The Registrary	397	8	0
	£2,774	11	0

This amount, raised by fees on Matriculations and Degrees, is to be added to the sum mentioned above as passing through the hands of the Vice-Chancellor.

The particulars of it are derived from a return made to us by Mr. Romilly, the Registrary of the University, who has made his calculation on an average of the receipts for eight years.

Of the sum of 7,966*l.* 3*s.* 1*d.*, being the amount of income available for general purposes, the following is the portion derived from land, houses, and tithe rent charges:

	£.	*s.*	*d.*
Land	484	0	0
Houses	148	0	0
Burwell Manor	6	14	4
Burwell tithe rent charge	1,660	0	0
	£2,298	14	4

From which must be deducted the following payments, viz.:—

	£.	*s.*	*d.*			
Vicar of Burwell	300	0	0			
Rates and taxes on this estate	387	7	1			
Expense of collection and repair	70	8	4			
Expense of visitation and gifts	12	3	4			
				770	0	9
Leaving only a net revenue of				£1,528	13	7

arising from endowment estates, and applicable to the general purposes of the University.

p. 15. The funded property of the University produces an annual income of only 187*l.*

The chief source of income is the fees charged upon Matriculations and Degrees. REPORT.

The septennial average of this description of income has been as follows:— Evidence, p. 15.

	£.	s.	d.
From Matriculation fees	1,874	7	1
From fees on B.A. Degrees . . .	914	1	7
„ other Degrees . .	921	8	5
Total	£3,709	17	1

It thus appears that the greater part of the available income of the University is derived from fees on Matriculations and Degrees.

Great expenses having been incurred by the University in the purchase of sites and the erection of buildings for various academical purposes, enumerated in the reply of the Vice-Chancellor to our inquiries, it became necessary at successive times to raise the fees charged on Students at Matriculation and Degrees on several occasions. p. 16.

On the 1st of June, 1825, the fees on Matriculation were raised thus:— p. 71.

	£.	s.	d.		£.	s.	d.
For a Nobleman . . . . from	5	0	0	to	10	0	0
„ Fellow Commoner . „	3	0	0	„	5	0	0
„ Pensioner . . . . „	1	10	0	„	2	10	0
„ Sizar . . . . . „	0	15	0	„	1	5	0

At the same time one guinea additional was laid on the Ad Baptistam B.A. Degree, *i. e.*, upon all B.A. Degrees taken at any other time than between the beginning of the Lent Term and Ash Wednesday.

On the 2nd November, 1842, the Fees for Matriculation were again raised thus:—

	£.	s.	d.		£.	s.	d.
For a Nobleman, . . . from	10	0	0	to	16	0	0
„ Fellow Commoner . „	5	0	0	„	11	0	0
„ Pensioner . . . . „	2	10	0	„	5	10	0

And at the same time an additional fee of 1*l.* 10*s.* was laid upon all Degrees except Honorary Degrees.

In 1848 a Syndicate, duly appointed to consider and report how an additional income might be raised to enable the University to complete such works of a useful and ornamental character as seemed to be required for various academical purposes, reported that it was advisable to charge an additional fee of 1*l.* 10*s.* on all Degrees, and also a new tax of 1*l.* 10*s.* at the Previous Examination. This Report was rejected by the Senate on several grounds, but especially because these fees had been so recently and so considerably augmented.

The amount of all University Fees and their distribution being stated in the communication received from the Rev. Dr. Ainslie, Master of Pembroke College, it is not thought necessary to insert that statement in this Report. A similar statement has for many years past been published in the "Cambridge Calendar." pp. 33, 34.

The Syndicate, which has been appointed by the University for the revision of its Statutes, has reported that it would be desirable to discontinue the exaction of Compounders' Fees. By the Statutes of Queen Elizabeth, it is enacted that all persons whose annual income amounts to forty marks (26*l.* 13*s.* 4*d.*) beyond any collegiate or academical income which they may receive, shall, on taking any Degree, give to the Chancellor, the Proctors, and other officers, the customary robes, or come to a reasonable composition with them. This composition has been fixed at 8*l.* 6*s.* 4*d.*, which is paid in addition to the usual fees by every person proceeding to any Degree who holds any living rated at more than 26*l.* 13*s.* 4*d.* in the King's Book, or possesses any certain income for life of more than that value. Endowed chapels or other preferment not in the King's Book are rated for this purpose, according to their *real* value. Compounders.

It is manifest that this rule for determining both clerical and lay incomes must, in the language of the Syndicate's Report, be productive "of inequality and "oppressiveness" in its results, and for this as well as for other reasons we gladly concur in their recommendation that the fees in question should no longer be exacted.

REPORT.

It is, moreover, proposed by the Syndicate that the whole subject of Fees should be reviewed by the University. In so doing it will probably be thought expedient to reduce the sums charged upon some of the higher Degrees, more particularly when the Candidate, instead of proceeding directly to the professional Degree, has passed through, and therefore paid the fees for, the B.A. and M.A. Degrees.

It must be borne in mind that these alterations in the fees for Degrees and also the proposal to abolish the practice of paying fines (called Cautions) for statutable exercises not performed, will involve a considerable pecuniary loss to the University.

Taxes paid to Government.

We therefore humbly venture to submit whether the remission of the tax now paid in the form of Stamp Duty upon Matriculations and Degrees and the official Certificates of Degrees may not be deserving of the favourable consideration of the Legislature. The stamps upon Matriculations and Degrees have on an average of the last eight years produced a net annual income to Your Majesty's Government of 3,016*l.* The duty for the stamped Certificate of a B. A. degree is 3*l.*; the Certificates for all other Degrees are drawn upon 10*l.* stamps. We are informed by the Registrary that formal Certificates are hardly ever applied for, the academical standing of persons being indicated by letters testimonial from the College Tutors, by the University Calendar, or by other means. The average number of stamped Certificates furnished by the Registrary is only 2½ per annum, so that the revenue derived from this source is quite inconsiderable.

Evidence, p. 63.

These taxes on Degrees and Matriculations are levied only upon the Students and Graduates of Oxford, Cambridge, and Dublin, and with the single exception of the M. D. Degree at the Scotch Universities, upon which we are informed there is a stamp duty of 10*l.*, there is, we believe, no similar tax upon Students in any other University in the United Kingdom.

The remission of this tax would enable the University by the Fees, which it might still continue to charge upon its Students and Graduates, to raise a fund adequate for the erection and maintenance of suitable Lecture-rooms, Museums, and Laboratories.

In the event of the Legislature entertaining the proposal to remit the stamp duties which we have described, it would probably be deemed necessary to review the grants voted annually by Parliament in aid of the stipends of certain Professors.

p. 15.

The amount of these grants is 1,022*l.* 5*s.* 9*d.*, and is distributed as follows:

Distribution of Parliamentary Grant.

	£.	s.	d.
The Regius Professor of Civil Law	96	16	11
The Professor of Chemistry	96	16	11
The Professor of Anatomy	96	16	11
The Regius Professor of Modern History	359	6	8
The Queen's Reader in Botany	176	5	1
The Jacksonian Professor	96	16	11
The Professor of Mineralogy	96	16	11
Banker's Commission and Stamps	2	9	5
	£1,022	5	9

Recommendations.

If the proposed remission should be made, we should deem it reasonable that with two exceptions, the University should be called upon to provide for the foregoing stipends out of its own resources. The two exceptions which we venture to suggest are the cases of the Regius Professor of Modern History and the Queen's Reader of Botany. These two seem to stand upon a different ground from the others. The Professorship of Modern History was created by Letters Patent of King George the First, and a stipend of 400*l.* per annum was annexed to it, chargeable upon the hereditary revenues of the Crown. The appointment of the Professor is vested in Your Majesty. On the 29th September, 1832, Mr. Spring Rice, then Chancellor of the Exchequer, communicated to the University the opinion of the Government of that day in reference to this stipend. It was admitted to be chargeable upon the hereditary revenues of the Crown, and it was stated that it would be paid from the 5th April then last past, from the hereditary land revenue of the Crown under the management of the Commissioners of Woods, Forests, and Land Revenues.

Appendix, p. 457.

REPORT.

The stipend of the Queen's Reader in Botany was not recognized at that time as chargeable on the Hereditary Revenues of the Crown. But as the office is of Royal origin, and the appointment to it, as well as to the Professorship of Modern History, vested in the Crown, we think that both of them might on these grounds be entitled to a more favourable consideration from Parliament than the case of the other five Professors included in the foregoing list.

Grants of Money for Non-academical purposes.

In former times it was not uncommon for the Senate to vote grants of money for public purposes not of an academic character. Several years have now elapsed since any grant of this nature has been made, the discontinuance of the practice being due in part to a strong expression of opinion among members of the Senate unfavourable to it, and no doubt also in great measure to the difficulty experienced by the University in providing the requisite funds for wants peculiarly its own. As we have seen, the available resources of the University are not adequate to the exigencies of its position. Much the larger portion of its revenue is raised by taxes on Students and Graduates. It is, as we have seen, but scantily supplied with lecture rooms, museums, and laboratories. The professorial body are for the most part inadequately endowed, and still require some accessions to their number. We are therefore of opinion that it would be highly expedient that the present practice of confining University income to strictly University purposes should be continued, and we think it would be the means of protecting the University from applications, which in times of excitement it is difficult to refuse, if it were declared that votes of money for other than academical objects could not be entertained by the Senate. Such claims and appeals seem to us to address themselves more properly to the private benevolence and bounty of Members of the University than to the University in its corporate character as intrusted with the distribution of public funds.

Publication of accounts to members of the University.

For some time complaints were common in the University that the state of its finances was not made known to its members. This grievance has, however, now been redressed. For the last five years it has been the practice of the Vice-Chancellor, in compliance with a memorial from several members of the Senate, to print and circulate among the residents, a summary of the accounts, and on May 14, 1851, a Grace was passed providing that the annual audit should commence every year not later than the 1st of February; and that a summary of the accounts should be annually printed, subscribed with the names of the Auditors, for the purpose of circulation among the resident Members of the Senate. By this means the previous practice of the Vice-Chancellor slightly modified has received the sanction of a Bye-Law of the University.

Evidence, p. 17.

Custody of University Money.

The following is the provision of the statutes of Queen Elizabeth for the custody of the money belonging to the University. Two Non-Regents, to be elected annually on the 10th October, were, with the Chancellor and the two Proctors, to be the guardians of the public treasury. These five were to hold each a key of one of the five locks of the public chest in which the seal of the University, the money, plate, and ornaments were to be preserved. Nothing was to be taken out of this chest without the privity and consent of these five persons. On the same day three other persons, either Regents or Non-Regents, were to be elected, who, with the Vice-Chancellor, were to audit the accounts of the Proctors and other officers who had any concern in the University finances, which audit was to be begun and completed within twelve days after the election of the new Proctors (the 10th October), under a penalty of ten pounds, to be paid to the University by any one causing default.

Auditors.

Present practice.

The first part of this Statute has long been obsolete, and the Vice-Chancellor has, in practice, become the sole guardian of the public money of the University, except only so far as the Proctors and the Registrary have been the recipients and distributors of certain sums for particular purposes.

Vice-Chancellor's Allowance.

The Vice-Chancellor receives from the University funds an annual sum of 400*l.*, not so much as a stipend in return for the discharge of the duties of his office, as to enable him to exercise hospitality, in a manner suited to his station, both to strangers visiting the University and to the resident Members of the Senate. He also receives some small fees of an inconsiderable amount. But he derives no emolument from the temporary investment of balances in his hands. When these are at all considerable, which during recent years has rarely happened in consequence of the large outlay incurred on various public buildings, the profits of such temporary investments have been carried to the credit of the University.

P. 138.

We have seen that the Vice-Chancellor has the receipt and disbursement on

REPORT.

general and special accounts of the annual sum of 18,185*l.* 16*s.* To this must be added the whole amount of the trading operations of the Press. The extenion of public museums, lecture-rooms, and laboratories must greatly increase the labour of superintending the repairs and maintenance of the various University buildings. Another of our recommendations, the institution of Public Lecturers, will, if carried into execution, add another large branch of financial management to the present system of the University. It appears to us that these duties, so important to the welfare of the University, are at the same time too onerous to be discharged easily or satisfactorily by a single person, already burdened with numerous functions of a very responsible and laborious character. We are of opinion that it would tend to relieve the Vice-Chancellor in the discharge of his multifarious duties, as well as to promote continuity in the system of financial management, if he were assisted by an officer in the character of Clerk of Accounts, to be elected periodically by the Senate.

Recommendation.

Provision for an effective Audit.

The latter portion of the Statute referred to continues to be acted upon at the present time, but it will be observed that no provision is made for the nomination of the three Auditors, and accordingly a practice has prevailed that one of the three persons should be the Vice-Chancellor of the previous year, a second should be nominated by the Vice-Chancellor then in office, and the third by the person who it is expected will fill the office of Vice-Chancellor for the year ensuing. Some exception might naturally be taken to this practice, as by it the Vice-Chancellor in effect nominates one of his own Auditors. The 10th of October also does not appear to be the most suitable time for the election, as the usual residents of the University are rarely assembled on the first day of the Michaelmas Term. The Syndicate for the revision of the University Statutes propose to remove both these objections by the following recommendation of their Report:—

"That the three Auditors of Accounts shall be appointed in the following "manner:—The Chancellor shall nominate one, who, two or more years before, "filled the office of Vice-Chancellor; some College in turn, according to a "prescribed cycle, shall nominate another; and the Auditor, so nominated by a "College the year before, shall be nominated again for the third. In case of "any one declining or vacating the office, then, if he was nominated by a College, "that College shall nominate again, otherwise the Chancellor shall nominate. "The three persons thus nominated shall be separately proposed to the Senate for "election at some Congregation between the fifth and thirtieth day of November."

We think that the adoption of this recommendation of the Syndicate will be a satisfactory mode of securing an effective audit of the public accounts of the University.

Power of the University to tax its Members.

Before quitting the subject of revenues, we are desirous of noticing the power possessed by the University of levying taxes upon its members. We believe that this power is at present involved in some degree of doubt. The University, however, does raise by a tax of six shillings a-head an annual sum amounting on an average of seven years to 1,957*l.* 5*s.* 8*d.*, for the maintenance and extension of the Library. At the time when this tax was imposed we believe that some difficulty was experienced in inducing all the members of the University to comply with the demand, and it is probable that the difficulty would not have been overcome if the amount of the tax had not been inconsiderable, the necessity for its imposition urgent, and the expediency of the object upon which it was to be expended beyond all question. We are glad to notice in the draft of the proposed new Statutes a clause introduced to legalise the exaction of such contributions to the Library, and we are disposed to think it would be advantageous if the University had also the power to impose contributions upon its members for general purposes of a strictly academical character.

Evidence, p. 15.

Recommendation.

THE COLLEGES.

The principal motive for the endowment of the more ancient Colleges appears to have been the wish to combine the system of scholastic teaching with the rules of a conventual life. The earliest foundation, that of St. Peter, was occasioned by the liberality of Hugo de Balsham, Bishop of Ely, who, under the sanction of a letter patent from Edward the First, in the ninth year of his reign, placed in the Hospital of St. John in Cambridge certain endowed Scholars, and directed them to live and study therein, according to the rule of the Scholars of Merton in Oxford. The Students not being able to agree with the religious brethren of the Hospital, the Bishop, four years later, obtained a second letter patent from the King permitting him to remove the Students to a separate habitation near the Church of St. Peter without Trumpington Gate; and so the first College of the University was established. It may be observed that the Statutes of Merton College bear date A. D. 1270, or ten years prior to the Charter for the Foundation of the College of St. Peter. Origin of Colleges.

In the earliest times and for several centuries the University conducted its teaching by means of its Masters of Arts and superior Graduates; and the chief object of the Founders of Colleges appears to have been not only to provide some pecuniary support to assist Students in the prosecution of their studies, but also to aid the public teaching of the University schools by a domestic system of scholastic exercises. The teachers in the Colleges were the Fellows who were Masters of Arts or of superior Degrees; and we find in the oldest foundations no mention made of any educational officers, who were sometimes added by the aid of supplemental benefactors, or formed part of the original scheme only in the later and more amply endowed foundations. The modern practice of admitting other students in addition to those on the foundation, although in some measure contemplated by the Founders, was still viewed by them with little favour, and the greatest care was directed to be taken in admitting only the best qualified applicants. The great body of the Students resided in lodging-houses in the town, called Hostels, supported by their own means, and acquiring their instruction either by attendance on the exercises in the schools or from such assistance as their own resources enabled them to obtain. The growth of the Colleges gradually displaced the Hostels, which probably disappeared altogether on the foundation of Trinity College in the year 1546, although even the Elizabethan Statutes of that College limited the number of Students, extraneous to the foundation to four under the Master and one under each Fellow above the degree of B.A. It has now long been the custom, although there is no express law to that effect, that every Student shall be admitted within some College before he can become a matriculated member of the University; and it may be added, that the spirit of the Elizabethan code of University Statutes is in complete accordance with this usage. Hostels superseded. Stat. Coll. Trin., cap. 14.

It has been contended that it would be desirable to modify this usage, and to revert to the ancient practice so far as to allow of matriculated Students of the University, not attached to any College or Hall. This question has received our careful consideration, and we are of opinion that it would not be expedient to adopt any change of that nature in the present system of the University. It appears to us that one of the most striking and valuable characteristics of our English Universities is to be found in the domestic system of their education, by which habits of order and moral control are most satisfactorily obtained. Dr. Philpott, Master of St. Catharine's Hall, remarks, "It seems to be one of the "advantages of the present system of admission and residence in Colleges, that "students of different classes of society and of different means and circumstances are "brought to associate together during their residence at the University, and the "good effect of this arrangement upon both the higher and lower classes of stu-"dents is very obvious, and produces permanent results." The two systems of Collegiate and Unattached Students seem to us to be hardly compatible with one another; at least we cannot doubt that great difficulties would be experienced in blending them harmoniously together, if the class of Students not affiliated to some collegiate body were recognised, and afterwards received any considerable accession of numbers. We come, therefore, to the conclusion that the extension of the benefits of the University, so as to embrace a larger number of Students than at present exists, and more proportionate to the great increase of our population Admission of Students not attached to any College. Evidence, p. 181. University extension.

REPORT.

and national wealth, must be sought in a corresponding growth of our collegiate system, and in such improvements of the existing foundations as may render them more generally accessible and more practically useful.

Lodgings in the Town.

It has long been the practice of the University to allow Students belonging to the Colleges to reside in lodgings in the town. By this means great facility has been given for the accommodation of an increased number of Students inasmuch as the power of Colleges to accept admissions has thus been limited only by the extent of their halls and chapels, and their own sense of what was due to a proper provision for the instruction and superintendence of the members admitted. Great care has been taken by the University Authorities to place proper checks upon the keepers of such lodging-houses. No Student is allowed to

Evidence, p. 184.

reside in any lodging-house which is not licensed by the Vice-Chancellor, and the two Proctors, upon the recommendation of the Master and Tutor of some College; and the price of each set of lodgings is also determined by the same authority. Every person to whom a license is granted is required to promise in writing that he will observe the following regulations:—

Regulations.

1. That he will not let his lodgings to any Student without express permission signed by his College Tutor.

2. That he will lock the door of his house at ten o'clock at night, and note down the hour after ten o'clock at which any lodger enters or leaves his lodgings.

3. That he will deliver or send a list every morning to the porter of the College to which any lodger belongs, to be by him inserted in his gate-bill for the inspection of the College officers; and also will deliver or send a weekly statement of the above particulars to the respective Tutors of the Colleges to which any lodgers belong.

4. That he will report to the Tutor the next morning if any lodger shall come into his lodgings after 12 o'clock at night, or shall pass the night out of his lodgings.

5. That he will not allow on any account a key of any outer door of his house to any lodger.

6. That he will not supply or receive into his house a dinner or a supper for any lodger without a note being previously obtained from the Tutor.

7. That the house for which he applies for a license is in his own occupation, and that he has no connexion with any other.

The number of Students residing in lodgings in November 1850, was 757, and in November 1851, 736, at which time of the year it will be remembered, that the Questionists, or Students of the fourth year are in residence, in addition to those of the three first years.

We have made particular inquiries as to the operation of the lodging-house system, and the replies which we have received are of a very mixed character. Several persons of great experience are of opinion that a Student in lodgings is under a stricter surveillance than one residing within the walls of a College: others, on the contrary, express much suspicion as to the honesty with which the rules of the University are observed by the lodging-house keepers. Dr. Philpott

Evidence, p. 185.

says, "Students residing in lodgings are not unfrequently exposed to tempta-
"tions from the character of the servants employed in them, more than Students
"in College; for the same control cannot be exercised over the appointment of
"servants in lodging-houses which can be held over College servants."

For our own part, although we are not disposed to underrate the force of the objections to which we have referred, and which may possibly have become of more importance owing to the great extension of the town during recent years, yet we should be unwilling to interfere materially with the liberty at present enjoyed by the Colleges of admitting a greater number of Students than they can accom-

Recommendation.

modate within their walls. We think, however, that it would be very advantageous if buildings were erected for the reception of Students in immediate connexion with, and under the direct control of, the Collegiate bodies. For such Affiliated Halls we apprehend that no fresh powers are required. They appear to have existed in ancient times: sometimes under the name of Pensionaries; in other cases particular Hostels were attached to Colleges, an instance of which is furnished by Physwick Hostel, belonging to Gonville Hall, which was included in the site of Trinity College on its foundation in 1546.

It may also be noticed, that if the time required for the B.A. degree be reduced to nine Terms, as has been proposed by the Syndicate for the revision of the Uni-

versity Statutes, the Students of the fourth year, who at present make an inconvenient addition to the ordinary number in the Michaelmas Term, will for the most part cease to be resident. In addition to this relief, if the Colleges could be induced to erect sets of chambers, either within their own walls, or detached, but capable of being superintended by their own officers, we believe enough would be accomplished to reduce the system of lodging-houses within very manageable limits. This mode of affording further accommodation for Students, under the immediate control of the Colleges, has been much discussed within the University; and when we call to mind the efforts which have been made by several Societies, frequently at a great sacrifice of income to the existing body, to make their collegiate buildings more commensurate with the wants of modern times, we are willing to hope that the means for rendering the advantages of the University available to greater numbers, and under adequate superintendence, will not be wanting.

Numerical condition of the several Colleges.

The following tables will show the numerical condition of the several Colleges:—

The first is taken from a Return made to an order of the House of Commons by the Vice-Chancellor of the University on the 1st November, 1849. In this it will be observed that St. Catharine's Hall is omitted.

The second is taken from the Cambridge University Calendar for the year 1851.

The third is taken from a statement circulated annually in the University after the Matriculation in the Michaelmas Term.

Evidence, pp. 66-70.

Fuller information respecting the comparative numbers in each of the Colleges at different periods will be found on reference to the evidence of Mr. Romilly, the Registrary of the University, to whom our best thanks are due for the valuable assistance we have received from him on all points on which we had occasion to consult him.

College Discipline and Expenses.

Discipline is maintained in the Colleges, as distinguished from the University, in various ways. The superintendence of the moral and general conduct of the Students is more immediately intrusted to the Tutors and Deans. We will briefly describe the modes in which these officers are enabled to inform themselves as to the degree of regularity of conduct, and the more or less satisfactory progress of the several Students committed to their care.

College Chapel.

In the first place it is required, as an ordinary rule, that every Undergraduate shall attend the service in the College Chapel once on week-days, and twice on Sundays. There is some slight variation in the practice of particular Colleges in this respect, but it is not sufficiently important to deserve especial comment. The services performed in the several Chapels, are in accordance with the directions of the Book of Common Prayer of the Church of England. The Holy Communion

REPORT.

is administered on the three greater festivals of Christmas, Easter and Whitsunday, and on one day at least during each of the three Terms. With respect to

Religious Services.

the religious services of the several Colleges, we have reason to think that persons acquainted with the state of things in the University fifteen or twenty years ago, must observe a great improvement, both in the regularity of attendance and the more reverent and devotional conduct of the majority of the Students. Attendance on the Chapel Service is in no case imposed as a punishment; at least such we believe to be the practice in all the Colleges at the present time: a certain amount of regularity is alone required. Participation in the Holy Communion is in all cases, we believe, entirely voluntary.

Hall-dinner.

The officers of the Colleges have, further, the means of informing themselves whether the Students attend the dinner in the College Hall. A certain regularity is required in this respect also, it being for the most part the formal mode of computing residence in the University as one of the necessary qualifications for a Degree.

Gates of the College.

Again, at a certain hour of the evening, in some Colleges at nine o'clock, in none later than ten, the College gates are closed, after which time no Student can leave the College without express permission, and none enter without having their name and the precise time of their return reported to an officer of the College. We have already explained the provisions adopted for ascertaining the

P. 144.

regularity of such Students as reside in lodgings in the town.

Lectures.

The Lectures of the Tutors and Assistant Tutors are another mode of discipline. These are for the most part twice a-day, for an hour each, upon some subject bearing more or less directly upon the College or University Examinations. We have elsewhere stated at length our opinions upon the best mode of improving the system of instruction, and it is not necessary in this place to do more than

P. 74, &c.

make reference to them.

Punishments.

Offences against the rules of the College, such as keeping late hours, irregularities in attending the College Chapel, the Dinner in Hall, or the Tutor's Lecture, are punished for the most part by literary impositions, by prohibitions against leaving the College after a certain hour, or by entire confinement to the precincts of the College. Graver offences are visited by admonitions from the superior authorities of the College, by rustication or temporary banishment from the University, or by expulsion, according to the measure of the offence.

But it is also deserving of notice, that the definite rules above described, are by no means the only modes of influencing the conduct and character of the Students. There are other modes, which though they do not admit of very accurate description, are too important to be omitted in the consideration of the subject of discipline. Frequent personal intercourse between the Tutor and the Pupil, the consciousness of the Student that he is living under the immediate observation of many persons senior to himself, who have successfully passed the same period of academical probation before him, membership of one common society, association together at the hours of meals, of instruction and of prayer, are beyond doubt most effective instruments for good in the discipline of an University Education conducted on the Collegiate system.

Remarks.

It will readily be seen, that the above-mentioned regulations, however satisfactory so far as they extend, must leave a very wide latitude for the indulgence of idleness, extravagance or vice, wherever young men are disposed to make an improper use of the liberty conceded to them. And yet so far as positive and strict rules are concerned, it does not appear to us that the Colleges can go further

P. 27.

with advantage than they have already done in this respect. We have elsewhere stated the measures which we are disposed to recommend for giving greater facilities to the Students to select such studies as are most suited to their tastes, talents, or future prospects in life. We do not doubt that such facilities will operate to the growth of habits of diligent study, and so diminish the temptations to idleness or extravagance. It is also possible that more vigilant superintendence on the part of particular College officers would be conducive to the encouragement of study and the diminution of expense. But we are unwilling to trench upon that reasonable degree of liberty which experience has shown to be most consonant with the probationary state of College life. We agree with the Master of Sidney-Sussex College in thinking that cases of glaring extravagance in Cambridge have

Evidence, p. 433.

of late years become rare; "so rare," he says, "that upon the whole, I confess, "I should be sorry to see any greater degree of restraint attempted than that "which is already exercised; for I am of opinion that one of the most important

"lessons which a man has to learn, is self-reliance, and that the development of "this quality demands, at least, the gradual and judicious relaxation of certain "kinds of restraint, as he passes through the successive stages of his educational "career."

Parents and Guardians.

But in making this declaration of our opinion, we feel it our duty to add, that we have received from many gentlemen of high position in the University, having excellent means for forming an opinion upon the point, assurances of the strongest character, that enough is not done by the parents and friends of Students in checking habits of extravagance and dissipation among them. Upon this point it will be sufficient to quote the observations of the Master of Trinity College.

Evidence, p. 204.

"The expensiveness of Students at the University is in a great measure the "act of the Students themselves, not in consequence of, but in spite of the "measures taken by the University and by Colleges. The necessary College bills "are everywhere small. The additional expenses incurred by Students, for dress, "luxuries, entertainments and amusements, may be very large and are very "difficult to control.

"The amount of such expenses depends very much upon the previous habits "of the Students, as formed in their own families, and at the schools where they "have been; and upon the conduct of their parents and friends. When a "Student has been accustomed to expensive habits at home, and at school, as is "very often the case, it is very difficult to prevent such habits at College, where "he is necessarily less closely and constantly subjected to control.

"Nor can it be proper to conceal the fact, that the conduct of parents and "friends very often greatly increases the difficulty of controlling the expenses of "Students disposed to be extravagant. Such guardians of our young men, often, "though loud in their complaints of their extravagance, and of the College and "University authorities for not preventing it, are not ready to aid the authorities "in enforcing measures really effectual for that purpose, either by making the "payment of tradesmen's bills dependent upon there being a proper reserve in the "credit given, or by removing from the University a Student when he shows a "disposition to be extravagant, or by pleading his minority in cases where this "may be reasonable, or by assisting the authorities in other measures for control-"ling extravagant expense."

The reluctance on the part of parents and friends to check expensive habits in the Students under their control, is forcibly dwelt upon by Dr. Whewell in other parts of the communications which he has addressed to us, and we cannot doubt that there must be too much ground for complaint of the want of co-operation with the University authorities, on the part of those from whom it might most reasonably be expected. It must be borne in mind that the chief power of influencing the conduct of the Students for good resides in the authority of the Tutor. For the exercise and extension of this influence great facilities are given by the means possessed by the Tutor of acquainting himself with the general conduct, and particularly the expenditure of all his Pupils. No course of glaring extravagance on the part of any one of them can long escape his notice. By a regulation already referred to, which appears to us to be of the most satisfactory character, every tradesman in Cambridge is compelled at the end of each quarter of the year, to notify to the College Tutor the amount of any bill due to him exceeding 5*l*. The highest judicial authority has recently declared the penalty by which it is sought to enforce the execution of this rule on the part of the Cambridge tradesman to be both legal and proper; and it is not doubted that the penalty is an adequate one. Regulations of this kind bringing under the immediate notice of the College Authorities, and, therefore, in case of need, of the parent or guardian also, the actual conduct and expenditure of the Students, seem only to require the co-operation of parental control, and the influence of public opinion among the Students themselves, to produce their proper fruits in a more steady, serious, and earnest deportment of our academical population.

P. 17.

Expensiveness at Public Schools.

In concluding our remarks upon the subject of discipline, we cannot forbear to mention that great difficulty is experienced in the University in checking extravagance, in consequence (among other causes) of the expensive habits which Students frequently bring with them to College from the public schools. This obstacle to the growth of carefulness and frugality among the Undergraduates is much dwelt upon by several persons who have communicated with us. Here also it will be sufficient to quote the remarks of the Master of Trinity College;

Evidence, p. 206.

REPORT.

"Expensive habits," he says, "begin at school; if boys cost 200*l.* or 300*l.* "a-year at Eton or Harrow, they are not likely to live on less at Cambridge."

Actual Expenses of Students.

This appears to be the most appropriate place for noticing the results of our inquiries as to the actual expenses of Students, and the best means of diminishing them. In so doing we beg to state that the evidence we have received contains much valuable information, which may be consulted with advantage by any person who is about to send a young man to the University. The gentlemen who have replied to our inquiries, (and our questions on this point were extensively circulated among the large class of persons who either are or have been Tutors of Colleges), concur in opinion, without any exception, that the *necessary* expenses of an University Education cannot be materially reduced. For some years past a table of such expenses has been published in the University Calendar, by which it appears that the amount of annual expense regularly incurred by a

Evidence, p. 179. p. 170. p. 384. p. 418. p. 426.

Student in one of the Colleges is 61*l.* 2*s.* 10*d.* This appears to be a low estimate, though Dr. Philpott observes, that it is not far from the actual expense incurred at his College. At Trinity Hall, it is stated to be 68*l.*; at Christ's 80*l.* 3*s.* 9*d.*; at Trinity 73*l.* 18*s.* 4*d.*; at Emmanuel from 65*l.* to 90*l.*

At Pembroke College, it is stated by Mr. Arlett, that the actual average expenses of between 40 to 50 Students during a year's residence has been

p. 143.

85*l.* 9*s.* 2½*d.* Mr. Arlett adds, that this amount includes everything necessary, and is much above the minimum expense, as certain items which he specifies might have been in great part omitted. Dr. Ainslie on behalf of the College replies to our inquiry, that independently of any payment for Private Tuition,

p. 319.

the *actual* average expenses of a Pensioner from his first admission to the time of taking his B. A. Degree, are 305*l.* The *necessary* expenses for the same time he puts at 258*l.*

But the difficulty of giving even an approximate estimate of the actual expenses of a Student is well illustrated by the statement of the Master of Christ's College. In reply to our inquiries, he has, instead of answering our

p. 388.

questions directly, drawn out from the Tutor's Books the total expenses of each of 104 Students of Christ's College, from their first admission until proceeding to their first Degree; *i. e.* for 3½ years. It appears that for a pensioner residing eleven Terms in the College, the sum actually paid through the Tutor from first to last, varied from 155*l.* 11*s.* 6*d.* to 1,015*l.* 12*s.* 6*d.* It is probable that in the former of the two instances the Student himself paid for many things, which in the latter case were defrayed by the Tutor.

Mr. Thompson, Tutor of Trinity College, writes, "It is very difficult for me to

p. 198.

"estimate the average actual expenditure of a Pensioner even at this College, "much more throughout the University. Speaking generally, I should say, that "at Trinity it varied from 150*l.* to 250*l.* per annum. Some spend less than 150*l.*, "others more than 250*l.*" We should add that Mr. Thompson considers some, though not very material, diminution in the necessary expenses of a residence in his College to be practicable.

The Master of St. John's says:—

p. 398.

"The necessary expenses of the several classes of Students, from the time of "entrance to that of taking the first Degree, may be estimated as follows:

"Noblemen 650*l.*; Fellow Commoner 485*l.*;

"Pensioner 355*l.*; Sizar 220*l.*

"It is difficult," he says, "to give an accurate answer to the inquiry respecting "the *actual* expenses. The actual expenses of a diligent and prudent Student in "each of the same classes need not exceed the following estimates:

"Nobleman 1400*l.*; Fellow Commoner 1,050*l.*;

"Pensioner 630*l.*; Sizar 280*l.*

"The actual expenses of many persons in each of these classes fall considerably "below this estimate.

"No allowance for private tuition is included in this estimate."

Dr. Chapman, the Master of Gonville and Caius College, writes thus:—

p. 327.

"The Tutor informs me, that many Students go through their whole College "course for 300*l.* or 400*l.*, including every expense except that for private "tuition."

Remarks.

It is unnecessary to add further extracts from the evidence we have received on the subject of expenses. It will be seen how widely the estimates which have been given to us vary from each other. This may be taken as an indication how

much the vigilance of College Officers, the control of parents and friends, and the frugality of Students may do to promote the curtailment of extravagant expenditure, and the consequent extension of the benefits of University education to an increased number.

Recommendations.

We are unable to offer any practical recommendations upon this subject, further than that we think it desirable that College servants should be paid by fixed stipends, and not by perquisites, and in particular that the system of profits on the sale of commodities, wherever it prevails, should, as far as practicable, be discontinued. Care also should be taken, that the prices of all articles supplied for the use of Students, should be frequently revised and made known in the College, and provision made for the frequent information of the Student, as to the amount, and the several particulars, of the liabilities he has incurred.

P. 74, &c.

In another part of our Report, we have stated our views on the subject of private tuition. We trust the recommendations we have made on this head may be the means of diminishing the cost of an University Education to a considerable extent.

COLLEGE CHARTERS AND STATUTES.

Charters.

The mode in which Colleges were founded was for the most part as follows:—A charter was granted by the Crown, stating the objects of the foundation, and conferring certain powers upon the Founder. In the case of the more early Colleges these charters seldom exceeded the usual form of licenses in mortmain, empowering certain persons to hold the site of the College; and in these cases it is presumed that corporate rights were acquired by usage, followed by gradual recognition by the Crown in subsequent Letters Patent. Such is the case with Clare Hall, Pembroke, Gonville Hall, Trinity Hall, and Corpus Christi. In the later foundations the more detailed form of charter by which corporations are usually established, and the several rights incidental to the corporate character conferred, has been observed. We have made a careful selection of the more important Charters relating to every College, which we have caused to be printed. These documents we have obtained either from the College itself, from the Public Record Office, or from the collections in the British Museum. They furnish important evidence as to the designs of the several Founders, and especially with reference to the particular number of persons to be admitted on the foundation either as Fellows or Scholars. They also convey instructive information as to the frequent changes which were effected in the early collegiate foundations by the sole power of the Crown, showing how some were completely reconstructed, and others merged in larger foundations, whenever public utility seemed to recommend the change which was adopted.

P. 143.
Statutes.

We have seen that it was provided by the Royal Charter, in the earliest collegiate foundation, that the Society should be governed by the laws of Merton College in Oxford; subsequently the charters granted by the Crown for the erection and foundation of the several Colleges were followed in due time by the constitution of a body of Statutes for their permanent government; in later cases, in accordance with distinct directions to that effect contained in the charter itself, and in the cases of the more ancient foundations, by virtue of the authority which was supposed to reside in the Founder or his representatives. The Statutes of Michael House, a foundation which was merged in Trinity College by King Henry VIII., are said to be the first given to any College in Cambridge. They are still preserved in the curious collection made by the antiquary, Thomas Baker.

We have made a careful compilation of all the codes of Statutes by which the several Colleges now existing are, or until a very recent period were, governed, which we have caused to be printed. These copies have been received from the Colleges themselves in the following instances:—St. Peter's, Pembroke, Corpus Christi, Trinity Hall, Queens', St. Catharine's Hall, Christ's, St. John's, Magdalene, Trinity, Sidney, and Downing. From the Public Library of the University we obtained copies of the second Code of Statutes belonging to Clare Hall, as they were revised by the Visitors of King Edward the Sixth, and also of Bishop Bateman's Statutes of Gonville Hall. By the kindness of the Archbishop of Canterbury we were permitted to have a copy made of the Statutes given by Dr. Caius to his College, together with his Will and the Determination of certain doubts made by Archbishop Parker in pursuance of the testamentary directions of Dr. Caius. These documents are preserved in a MS. volume belonging to the Library at Lambeth. From the British Museum we obtained copies of the Statutes of the remaining Colleges, viz.:—King's, Jesus, and Emmanuel. We have reason to know, that in the two last-mentioned Colleges certain modifications of the original codes have been recently obtained. By what authority or to what extent these changes have been effected, in the absence of authentic information, we are unable to state, but it is probable that they do not go beyond an adaptation of the ancient law of the foundation to modern practice. A revision, upon a similar principle, has in very recent years been effected in the Statutes of Pembroke, St. John's, and Trinity, and some important modifications as to particular chapters of the Statutes have been made, with the sanction of the Crown, by the Societies of St. Peter's, Clare Hall, and Queens'. Two distinct codes are still in force in St. Peter's, Clare Hall, and Gonville and Caius. In the first two the earlier code is valid only so far as it is not over-ridden by the later. We have obtained copies of these more ancient Statutes from the British Museum, and we have caused them to be printed in conjunction with the more recent codes. In the case of Gonville and Caius College the Statutes of Dr. Caius are binding only so far as

they are not repugnant to the earlier code of Bishop Bateman. In Magdalene College the Statutes which were given by the Founder's executors were largely interpolated at a very early period. It is stated to us by the President of the College, that "the object of these additions would seem in almost every case to "be to strengthen the hands of the Master." We are not informed whether the interpolation can in all cases be satisfactorily distinguished from the original, but it is clear from the evidence that the extent to which interpolation has been carried throughout the code might involve the College in serious embarrassments.

Evidence, p. 403.

Revision of College Statutes necessary.

But besides these instances of particular difficulties, the Colleges have generally, under the influence of time and circumstances, so far varied from their original condition, that a revision of their Statutes has long been considered a matter of urgent importance. For not to mention the minute particularity with which it was the practice of those early times to legislate for the smallest details of daily life and conduct, other causes have arisen of much greater influence, which have occasioned a wide departure from the observance of these ancient laws. Of these causes the earliest was the reformation of the national religion. The gradual desuetude into which the system of scholastic exercises and the exclusive study of Aristotelian Philosophy have fallen, has made also an extensive inroad upon our ancient codes of collegiate government. Another important alteration has been produced by the change in the system of collegiate tuition, which is comparatively of recent date. The ancient usage was, as we have seen, that all the Fellows of the Society should take a regular part in conducting and moderating the exercises of the Students. In some Colleges a staff of Lecturers, Moderators, and Examiners, appointed periodically and deriving their authority from the body in which the government of the College was vested, was specially appointed for conducting the educational business of the Society. To these persons stipends payable out of the general funds of the College were specially assigned, and their duties were prescribed and specified with the usual minuteness of those early codes. All this is now changed: the offices, indeed, still continue, Fellows are still appointed to fill them, and the statutable stipends continue to be paid; but the active duties are transferred to others. In what manner and from what causes this important change in the educational system of the Colleges was introduced, we have not been able to ascertain with precision. But it is believed that about one hundred and fifty years ago the practice now prevalent throughout the University was first commenced. It is thus described by Dr. Phelps, Master of Sidney College:—

P. 143.

The office of Tutor.

"The present practice in this College, as regards the relation of Tutor and "Pupil, is in accordance with that which has been adopted throughout the "University. The Master appoints one of the Fellows (in large Colleges more "than one) to be the Tutor, and one or more others to be Assistant Tutors. "The former, besides taking a prominent part in the daily lectures, gives especial "attention to the expenses of the Students. From him they receive all their "College bills, and generally also those of such tradesmen as supply them with "articles of necessary use. The duty of the Assistant Tutor is to take part in the "daily lectures given to the Students. The Tutor receives from each Student "(Pensioner) 10*l.* a-year, and he pays to the Assistant Tutor a suitable stipend."

Evidence, p. 429.

It may be observed that the office of Tutor, having the duties assigned in the foregoing description, is unknown to the ancient Statutes of any College. What the Statutes provided was this, that each Student on his admission to the College, or within a few days afterwards, should find some one of its Fellows willing to undertake the responsibility of paying whatever debts he might incur to the College during his residence within its walls. To this Fellow, the selection of whom was left to the discretion of the Student or his friends, was also confided the general direction of his studies and conduct. Such a Fellow was, in relation to the Student whose solvency he guaranteed, called *Tutor;* and it was generally provided, that no Student should remain within the College beyond a certain number of days without having some one of its Fellows acting for him in that capacity. The duty of finding such a Tutor was thrown as an onus upon the Student, and, so far as the Statutes were concerned, no liability was imposed upon the authorities of the College, except to take care that the Society was indemnified from pecuniary loss by the provision referred to.

Two important consequences are involved in the change which has been described. In the first place, the power of appointing the Tutors and Assistant Tutors is transferred from the general governing body of the College to the

REPORT.

Master only; and, secondly, only a small part of the whole number of Fellows is employed in discharging the educational functions of the Society.

Non-residence of the Fellows.

Closely connected with this change respecting the system of tuition, is the practice of non-residence on the part of a large number of the Fellows. The ancient Statutes clearly contemplated the constant residence of the greater portion of the several Societies, and provided for it accordingly with more or less strictness. It can hardly be said that the ancient statutable regulations, in this particular, are carried into execution in any of the Colleges; and considering that what might be regarded as the duties of all are deputed to a few only of the several bodies, it cannot be said that the presence of a large number of Fellows, without any active employments to engage their attention, is to be desired.

Alteration in the value of Money.

Again, the great alteration which has taken place during three hundred years, in the value of money and the improved value of landed property, have also been the occasion of important changes in the observance and effects of many statutable regulations. The stipends assigned and the fines imposed have become merely nominal. The limits to the possession of property, with which the tenure of Fellowships or Scholarships was made incompatible, have become inapplicable under the altered circumstances of modern times. Consequently, wherever specific sums are named, either those portions of the Statutes have practically fallen into desuetude, or other pecuniary arrangements have been rendered necessary.

We have thus briefly adverted to the principal causes of change which have rendered a revision of the ancient Statutes of the Colleges a matter of urgent importance. We believe there is no exception to the rule that all persons who become members of the Foundations, as distinguished from those who are only entered on the Boards of any of the Colleges, shall swear to observe the Statutes. To the continuance of this practice we think there are serious objections. We presume that few would be found willing to maintain the present system, by which persons are obliged to take an oath that they will observe codes of laws, large portions of which either are not or cannot practically be enforced. Nor do we think that the evil would be removed by adapting the codes to the usages of modern times, so that there should be a greater correspondence between law and practice than at present exists. The lapse of time and altered circumstances would still, doubtless, create a gradual succession of similar embarrassments. Nor do we think that any adequate motive can be found to attempt the exaction of obedience to Collegiate laws by means of the obligation of an oath. Notwithstanding the solemnity of the sanction, the laws themselves still provide their own remedies in case of disobedience. We are glad to find in the Report of the Syndicate which has been appointed by the University for the revision of its Statutes, a recommendation to the following effect:—

Oaths to observe College Statutes.

"That no Academical Oath shall in future be required of any person upon "admission to a Degree; nor any affirmation of his having performed what the "Statutes require him to have done, of which the University receives sufficient "testimony from others; but that a solemn promise shall be required of obedience "to the laws and executive authority of the University, and also of using the "privileges granted to him upon admission without abusing them."

Recommendation.

We are of opinion that an alteration of a similar character might be adopted with advantage in the collegiate Statutes, and that such a change would be attended with no diminution in the practical observance of their regulations.

ELECTIONS OF HEADS OF COLLEGES,

The election to the Headships of the several Colleges is variously provided for by the Statutes. In Clare Hall, Pembroke, Trinity Hall, Corpus Christi, King's, Queens', St. Catharine's Hall, Christ's, St. John's, Sidney, and Emmanuel, the power of choosing their Head is vested in the Fellows of the foundation, with this exception that in the case of Clare Hall the right is confined to the ten senior Fellows, and in St. John's to those who are at least Masters of Arts. In St. Peter's College, the election of Master is thus provided for: two persons, one of the northern and the other of the southern part of England, are nominated and presented by the Fellows to the Bishop of Ely, who selects and appoints as Master one of the two so chosen. In Gonville and Caius College, the election is in the twelve senior Fellows, with this important limitation, that first a native of the county of Norfolk shall have the preference, and next a native of the county of Suffolk. Another Statute of Dr. Caius (Chapter 4) would seem to

restrict the election altogether to the diocese of Norwich. In Jesus College, the election of a Master is absolutely in the Bishop of Ely. In Magdalene College, this right is vested in the Owner for the time being of the House at Audley End, under the following terms of the Charter of Foundation:—"Concedimus etiam "præfato Domino Cancellario (*i. e.* Lord Chancellor Audeley) quod toties quoties "officium Magistri dicti Collegii per mortem, cessionem, resignationem, vel "alia quacunque de causa vacaverit, quod tunc prædictus Cancellarius, hæredes "et assignati sui, Domini nuper Monasterii de Walden in comitatu Essex "alium Magistrum nominabit vel nominabunt per literas sub Sigillo eorum "conficiendas." The Crown appoints to the Mastership of Trinity College. In Downing College, this power is lodged with the Archbishops of Canterbury and York, and the Masters of Clare Hall and St. John's. We are of opinion that these arrangements *generally* should not be disturbed. No doubt objections may be found of greater or less weight against some of the modes of election which we have described, but we think that they are not of sufficient force to induce us to recommend a departure from the declared will of the several Founders in so important a particular.

There are, however, two points of minor importance which we wish to notice. In St. Peter's College, as we have seen, it is the rule that the Fellows shall nominate two persons, one of the northern and the other of the southern part of England, which is divided into two parts according to a well-known distribution of counties; and that the Bishop of Ely shall appoint one of these two to the office of Master of the College. With scarcely any exception, we believe it has been the practice of the Bishop of Ely to select the first of the two names submitted to him by the College. We think, however, that it would be an improvement in the mode of election, if the Fellows were allowed to choose their own Master, in accordance with the general rule observed in most of the other Colleges of the University.

St. Peter's College.

Recommendation.

The second point to which we would refer is the alteration introduced by Dr. Caius, in the statutable regulations relating to the Mastership of Gonville and Caius College. The Charter of the 4th and 5th of Philip and Mary gave Dr. Caius power to draw up and enact a code of laws for the government of the College in such manner that the statutes, rules, and ordinances, so constituted, should not be in anywise contrary or repugnant to the rules and ordinances made by Bishop Bateman. The provision made by the Bishop respecting the local qualifications of the Candidates for the Mastership is contained in these words:—"Proviso tamen semper quod in omnibus electionibus custodis Collegii predicti "socius ejusdem Collegii, si ad hoc reperiatur idoneus, aut alius nostræ Diocæseos "famosus, et in electione sociorum Scholares nostræ Dioceseos non beneficiati "beneficiatis, ac pauperiores ditioribus ceteris paribus aliis omnibus præferantur." By this we see that the restriction did not exist in the older code. There was merely a preference, in case of equality, to natives of the diocese of Norwich. The words, too, which we have quoted, immediately follow this clause: "Volumus "insuper quod in omni electione præfectione et ordinatione custodis et sociorum "in posterum facienda omnis affectio singularis conspiratio et partialitas excludatur, "ut sic simpliciter melior et pro Collegio utilior, quantum eis Deus in conscientia "ministraverit, eligatur." So that, if the two clauses are viewed in close connexion with one another the local preference for the particular diocese is reduced to something very different from the positive restriction which we find in the code of Dr. Caius. We are further confirmed in this view of the subject by the fact that although the same Statute of Bishop Bateman formed part of the law of the foundation of Trinity Hall, from which, indeed, it is borrowed; yet no such interpretation has ever been put upon the words of the Statute in the latter Society as that which Dr. Caius was desirous should be adopted in his own. We are, therefore, of opinion that the restriction should be removed; partly, as never having been of more than doubtful authority, and still more from the prejudicial consequences which are entailed upon the Society by so far narrowing the field of choice in the election of its most important officer.

Caius College.

Recommendation.

Emoluments of Heads of Colleges.

The emoluments of the Masters of the several Colleges, so far as we are enabled to state them from the information which we have received, besides a Residence, in each case, free of taxes and repairs, are of the following nature and amount:—

REPORT.

Evidence, p. 313.

St. Peter's College.—From the College itself the Master has received, on an average of the seven years ending at Michaelmas 1851, 430*l.* 9*s.* 3*d.* per annum. He holds also the Rectory of Glaston in Rutlandshire, the net value of which is returned at 200*l.* per annum. This living is attached to the office of Master by Act of Parliament. The Master also receives the proceeds of certain property which has been bequeathed by various benefactors, and of which in practice he has the exclusive management. The value of this latter description of income has not been stated to us.

p. 321. Pembroke College—The Master received in the distribution of the net income for the

	£.	*s.*	*d.*
Year ending Michaelmas, 1851 . .	940	9	0
Official Stipend	41	15	0
	£982	4	0

p. 341. There is no additional office or special emolument attached to this Mastership beyond that which is stated above.

Trinity Hall.—The emoluments of the Mastership of this College do not exceed those of a Fellow, whose dividend has been for some years past, 150*l.* per annum, with 2*s.* per diem during residence for Commons.

There is no additional source of emolument.

King's College—.The emoluments of the Provost have been on an average of the seven years ending with 1851 inclusive:—

	£	*s.*	*d.*
8½ Dividends of 90*l.* . . .	765	0	0
4 Quarterages	367	0	8
Other customary payments . .	57	19	7
	£1,190	0	3

p. 352.

Queens' College.—The President of this College has received an average yearly p. 357. income of 608*l.* 13*s.* 4*d.* No other emolument is attached to the office.

St. Catharine's Hall.—The Master of this College receives as—

	£	*s.*	*d.*
Statutable Stipend	6	0	0
From Mrs. Ramsden's Estates . .	5	0	0
pp. 360, pp. 361. For his Servant	45	0	0
	£56	0	0

He has also the net profit of a leasehold estate at Guilden Morden, held under the See of Ely, after defraying certain special charges and providing for the customary renewal fine. He has also a small yearly allowance out of the surplus income of the Ramsden estates. Of the income of the Fellowship estates he receives a share which bears to the share of each of the six Fellows the proportion of 6 to 5. He also holds a Canonry in the cathedral church of Norwich, which has been annexed to the office of Master by Act of Parliament. The amount of these several branches of income has not been stated to us.

Christ's College.—On an average of the last seven years, the Master's yearly income has been:—

	£	*s.*	*d.*
From the Foundation Revenues .	667	15	7
From the Finch and Baines Foundation	41	17	9
From the Tancred Benefaction . .	10	0	0
p. 391. From the weekly allowance of 1*l.* 11*s.* during residence	73	10	3
	£793	3	7

St. John's College.—On an average of the last seven years, the Master's income has been—

REPORT.

	£	s.	d.
From the Foundation about	960	0	0
From the Benefactions of former Masters, about	200	0	0
	£1,160	0	0

Evidence, p. 397.

By the foundation of Lord-Keeper Williams, the Master is entitled, if he please, to the option of one of the four livings given by him to the Society, and by the Will of Sir Isaac Pennington, the Master is further entitled to an income of 200*l.* per annum, with the interest upon the accumulations, provided he be in possession of a particular one of the said four livings, viz., the Rectory of Freshwater. The annual income arising from this bequest is now 328*l.* 0*s.* 2*d.*, and as the present Master does not hold the Rectory in question, the accumulations continue.

Magdalene College.—The emoluments of this Mastership are stated to be:—

	£	s.	d.
A double dividend or about . .	560	0	0
From the Peckard Fund . . .	100	0	0
	£660	0	0

p. 405.

In addition to this income, the Master receives the interest of a sum of money derived from the sale of the advowson of a living formerly attached to the office of Master, and other emoluments which have not been stated to us in detail.

Trinity College.—The Master of this College receives the following emoluments:—

	£.	s.	d.
Pro Stipendio et Commeatu . .	100	0	0
Pro Liberatura	4	0	0
Rent of certain rooms . . .	64	0	0
Dividend 75*l.* × 18	1,350	0	0
	£1,518	0	0

p. 422.

Besides the above there are a variety of allowances made by the College to the Master for the furniture and support of the Lodge, his household expenses, and stable equipage. We believe that these items involve a charge upon the College revenues of not less than 1,200*l.* per annum. We have not, however, been furnished with the particulars of these last-mentioned emoluments.

Emmanuel College.—The emoluments of the Master, on an average of the last seven years, have amounted to 955*l.* 6*s.* 1*d.* p. 427.

By the Statutes of this College, the Master is appointed to be the Bursar, with liberty, if he please, to nominate one of the Fellows, with the consent of a majority of the Society, to act in his stead. No additional emoluments are attached to the office of Master.

Sidney Sussex College.—The Master receives— p. 430.

	£	s.	d.
As Master and Bursar, about . . .	440	0	0
With 2*s.* per diem for Commons; and a double dividend, averaging for the last 20 years .	356	0	0
	£796	0	0

There are no other emoluments attached to the office.

Downing College,—The Master by the Charter of Foundation receives p. 445.

	£	s.	d.
A Stipend of	600	0	0
Also as Chaplain	50	0	0
	£650	0	0

Together with 5*s.* per diem for Commons.

Report.

From Clare Hall, Gonville and Caius, Corpus Christi, and Jesus Colleges, we have received no information on this branch of our inquiry.

Recommendations.

From the description we have given above, it will be seen that the emoluments of the Master of Trinity Hall are quite inadequate to the position which the Head of a College should occupy. An objection may also be made to the union of benefices in the church with the office of Master of a College, such as is actually the case at St. Peter's College, and may be at St. John's. It appears to us that it would be advantageous in any revision of the Statutes and Foundations of Colleges, such as we shall recommend in a subsequent part of this Report, if an income were secured to the Heads of the several Colleges from the resources of the Society itself, which should render them independent of other offices and emoluments. If this were done, arrangements might be made by which the livings, that are or may be held with the Mastership, might fall into the ordinary channel of the ecclesiastical patronage of the College. It seems also that a sum of money, not necessarily fixed, but varying with the financial prosperity of the College, would be preferable to emoluments in kind, which can rarely produce advantages to the receiver equal to the cost which has been incurred to provide them.

Fellowships.

We next proceed to consider the Fellowships in the several Colleges, which cannot but be regarded as the chief source of life and vigour to the whole academical system. However valuable may be the various honours which the University bestows on the successful candidates for its numerous prizes, and however stimulating the competition for honourable places in the different Triposes, it is after all the College Fellowship which must be regarded as the chief motive to exertion, and the great reward of successful industry and talent. The perfect integrity and impartiality with which these prizes are for the most part awarded is in our opinion one of the most valuable features of the Cambridge system. A Student, however friendless and unknown, provided he have the requisite qualifications of character and ability, is as sure of obtaining his Fellowship as another of better family or wealthier connexions. This purity of election, is comparatively of modern growth. The annals of the University, and the Statutes of the realm, indicate a different state of things in earlier times. Down to the time of the Revolution it was the practice of many of the Colleges to resort to pre-elections in order that they might the better be enabled to resist the importunities of the great and powerful.

The controlling influence of public opinion, and the free spirit of inquiry, for which Cambridge has long been honourably distinguished, are in our opinion the chief causes of the excellence of its modern practice; and we deem it of the highest moment that any alterations which may be adopted for the improvement and extension of the Collegiate System should proceed upon the principle of giving, where it is practicable, freer scope to the exercise of this generous spirit, which laws, while they are powerless to create, may very readily impair or destroy.

The total number of Fellowships in all the Colleges, not including the 70 Fellows or Scholars of King's, is 356, of which 281 are upon the foundations of their respective Colleges, and 75 are bye, or unincorporated. The following schedule will show how these foundations are distributed in the several Colleges.

COLLEGE.	FOUNDATION FELLOWSHIPS.		BYE FELLOWSHIPS.	
	Open.	Restricted.	Open.	Restricted.
St. Peter's	14		2 Gisborne	2 Perne. 2 Ramsey. 4 Parke.
Clare Hall	10 Senior 9 Junior			2 Philpot. 1 Borage.
Pembroke	13	1 St. Begh's	1 Lany	1 Smart.
Caius	7	5 Norfolk	1 Wendy 6 Frankland 1 Stokys.	6 Perse. 3 Wortley.
Trinity Hall	12		1 Goodbehere.	
Corpus Christi	8	2 Norfolk. 2 Norwich Scholars.		
Queens'	19		1 Edwards.	
Catharine Hall	5		1 Holway	1 Frankland. 6 Ramsden.
Jesus	16		3 Ley.

Sidney Sussex	9 1 Fishmonger.	2 Blundell.		1 Freeston. 4 Clark.
Downing	3.			
Total	236	45	36	39

Restrictions on Fellowshtps.

Without taking into account the limitations as to the selection of a profession, to which most of the Fellows are subject, there are other restrictions which we proceed to particularize. At Christ's and St. John's the election is confined to candidates born in England and Wales; at St. Catharine's Hall and Emmanuel, to persons born in England only. Of the 281 foundation Fellowships, 45 are limited as follows:—

Pembroke College.

ONE at Pembroke College founded by Archbishop Grindal, July 1, 1583, strictly confined to persons born in Cumberland or Westmorland, and educated in the grammar school of St. Begh's. Those who have been, or are, Scholars on the Archbishop's foundation have a preference; and in the event of there being no candidates from the school, the claim of birth in one of the two counties mentioned shall suffice.

Evidence, p. 320.

Dr. Ainslie, the Master of the College, whose opinion is entitled to the highest respect, states that "it would be highly expedient to relieve the College from "several endowments, which, though intended for its advantage, are very much "the contrary. The Grindal Fellowship, founded by Archbishop Grindal, himself "Master of the College, is a great grievance to it. The Foundress of the College "gave the Master and Fellows a free, clear, and uncontrolled choice in the "election of Fellows, but the Archbishop has bound them to elect a native of "Cumberland or Westmoreland, educated in St. Begh's School in Cumberland. "The consequence is, that the College cannot reject a candidate of very ordinary "talents and acquirements, whom they might and would reject if he were a can-"didate for a Foundation Fellowship." Dr. Ainslie states that the opinions he

REPORT.

expresses on this subject have the concurrence of the whole number of resident Fellows. They think an equitable arrangement might be effected between the College and the Governors of the School in consistence with the intention of the Founder to benefit both parties.

Caius College.

Blomefield's Annals.

FIVE at Gonville and Caius College, the particulars of which are as follow:—

One founded by the Lady Ann Scroope, 17 Hen. VII., A.D., 1502, "for a "Fellow to be a priest, and of the diocese of Norwich."

One founded by Elizabeth Clere, "for the subsistence of a Fellow to be actually "a priest or at least a student in divinity, and to be a priest within one year after "his admittance: to be out of the diocese of Norwich: to preach once a year where "she was buried, besides the performance of many other things."

Dr. Caius, A.D. 1558, founded three Fellowships, and by his Statutes, dated January 1, 1572, he directed that the persons to be elected to them should be natives of Norwich or Norfolk. It is further to be observed, that Dr. Caius in these Statutes directed a preference to be given in the election of all Fellows and Scholars to natives of Norfolk, and after them to natives of Suffolk. The legality of this last restriction, by which Dr. Caius sought to control the foundations of other benefactors prior to himself, may be questioned; and it is doubtful whether the terms of the charter of 4 and 5 Philip and Mary, by which Dr. Caius was empowered to grant fresh Statutes to the College, with the proviso that they should not be contrary or repugnant to those given by Bishop Bateman, extended so far as to enable him to modify the then existing Statutes in so important a particular. It is to be observed that Bateman's code provides for no preference except *cæteris paribus*, the general direction being expressed in these terms, "Volumus insuper quod in omni electione præfectione et ordinatione custodis et "sociorum in posterum facienda omnis affectio singularis conspiratio et partialitas "excludatur, ut sic simpliciter melior et pro Collegio utilior, quantum eis Deus "in conscientia ministraverit, eligatur."

We have received a Memorial from three of the Senior Fellows of this College, to which we are desirous of calling attention. In respect to the five Fellowships

Evidence, p. 448.

above described, they say:—"Of the twelve Senior Fellowships, three are confined "to men born in the county of Norfolk, and two others to men born in the "Norwich diocese, and these five Fellowships are still further restricted, three to "divinity, and two to physic.

"The evils resulting from these restrictions are very great. In consequence of "the Divinity Fellowships being restricted one to Norfolk, and two others to "the diocese of Norwich, young men from these localities are often advanced into "the seniority over the heads of men who have obtained higher University honours, "and are many years senior to them in the College, and by reason of this earlier "admission into the list of Seniors, they have been hitherto considered to have a "prior claim to College and University offices, and to College livings.

"As these favoured Fellows obtain College livings, other Norfolk men succeed "them in the list of Seniors, so that Fellows from other counties have sometimes "a series of men of less standing than themselves passed over their heads.

"It will thus be seen that the Norfolk Divinity Fellows not only get the Fel-"lowships restricted to them, but also an undue share of College and University "offices and of the College livings.

"These evils have been introduced subsequently to the time of Dr. Caius, and "do not appear to have been in any way contemplated by him.

"With respect to the two Senior Fellowships restricted to Norfolk, and also to "physic, there are evils of a different kind.

"Few men now graduate in physic in Cambridge; the number of Norfolk men "who so graduate is consequently very small, and it is very seldom that one of "these obtains a University distinction that would entitle him to an open Fellow-"ship in the College.

"The restriction therefore must sometimes compel the College to elect into the "body of Senior Fellows (which body, with the Master, has the sole management "of the College) young men who otherwise would not be entitled to a Fellowship "at all, while at the same time, men of other counties who have taken most "distinguished honours have commonly to wait ten or twelve years after their "election as Fellows before they have any voice or authority whatever in College "matters. It will easily be seen that the direct tendency of this restriction is to "lower the general character of the Fellowships, and to entrust the management

"of the College to men, who neither by their standing nor degree have obtained "the confidence of the College. REPORT.

"We are desirous therefore that all these injurious restrictions should be "abolished."

FOUR at Corpus Christi College described as follows, in Masters' History of that Society, p. 87:— Corpus Christi College.

"He (Archbishop Parker) bought likewise of the same (the Corporation of "Norwich) two years after (*i. e.*, in 1569) another annuity of 18*l.* issuing out of "all the estates belonging to the Corporation, for the founding two Fellowships "and two more Scholarships; the former of which are to be styled Norwich "Fellows, and to be elected by the Society out of the five Scholars above-"mentioned, within two months after a vacancy; in default of which they "are to pay into the hands of the Vice-Chancellor 6*s.* 8*d.* per week, to be dis-"tributed among the prisoners in the Tolbooth, till such election and admission "shall be completed. Each of them is to have six pounds per annum for "his stipend, with chambers on the east side of the quadrangle for their habita-"tion; and to take upon them the instruction of the Norwich Scholars. It "was likewise covenanted and agreed at the same time that two other Fellowships "(to be called the Ninth and Tenth) should be founded out of the College "Revenue with a like stipend: and that four of the Fellows, besides those of "Norwich, should always (if possible) be Norfolk men; by reason that the most "part of the former benefactors had been of that county, and he himself had a "particular affection for it, as being the place of his nativity."

In the year 1829, an appeal was made by certain Fellows of the College to the Vice-Chancellor and two senior Doctors of Divinity, the authorized interpreters of doubts on the meaning of the Statutes, complaining that the Master of the College had refused to admit a candidate for whom the complainants had voted into the Ninth Fellowship on the ground that the Ninth and Tenth Fellowships were restricted to persons born within the county of Norfolk. The Fellows appealing argued that the College had no right to restrict these two Fellowships to the county of Norfolk, such restriction being contrary to the spirit and intent of the College Statutes; particularly as in the Deed, by which the limitation was provided for, the Ninth and Tenth Fellows are directed to be paid out of the revenues of the College. The Vice-Chancellor and two senior Doctors determined that those only who have been, or may hereafter be, born in the county of Norfolk, are eligible into the said Ninth and Tenth Fellowships.

The following are the limitations, to which the TWELVE foundation Fellows of Christ's College are subject:— Christ's College.

"There shall not be two natives of the same county Fellows at the same "time; and there shall be *six*, and only *six*, of the following nine counties, viz.; "Northumberland, Cumberland, Durham, Westmoreland, Lancashire, Derby-"shire, Nottinghamshire, Yorkshire, and Richmond (this *cum adjacentibus* the "Foundress calls a county)."

It thus appears that, on the vacancy of any one of the *six* Fellowships above referred to, no candidate would be eligible who was not born in one of four particular counties.

The date of the College Statutes by which these restrictions were enacted is A.D. 1506.

The Master of Christ's College (Dr. Cartmell) makes the following recommendation, with reference to this point:—

"It may fairly be assumed that the restriction allowing only one Fellow of the "same county at the same time, was imposed that persons of any one particular "locality might never obtain predominance in the College, or be enabled con-"tinually to elect their kindred, friends, and neighbours; and that the object of "giving six Fellows to the nine northern counties, was to secure to a part of "the kingdom, at the time of the foundation the poorest and most thinly popu-"lated, a due share of advantage. Evidence, p. 387.

"The elections being now made under the control of public opinion, and "governed by the attainments and academical distinctions of the candidates, "there does not seem to be any sufficient reason for continuing thus to narrow "the range of choice; and I think, therefore, that the means of usefulness or "the College would be very largely increased if the restrictions as to counties

REPORT.

" were entirely removed, and if any one of the Queen's subjects, possessing the " other qualifications, were capable of being elected."

To the twelve Fellowships founded by Lady Margaret Countess of Richmond, King Edward the Sixth added one. It has the same rights and emoluments as a Fellowship of the original Foundation, and is unrestricted.

Two other Fellowships were founded by Sir John Finch and Sir Thomas Barnes, with preference to the kindred of the founders; but in other respects unrestricted. These two Fellows have separate revenues distinct from the original Foundation. They have no share in the management and disposal of the property and revenues of the original Foundation; but in other respects have equal privileges with the other thirteen Fellows.

St. John's College.

The TWENTY-ONE appropriated foundation Fellowships at St. John's College were founded by the fourteen following benefactors :—

(1.) Two were founded by the Rev. James Beresford, a Canon of the cathedral church of Lichfield and Vicar of Chesterfield and Worksworth, in the 11th year of the reign of Henry VIII. The limitations of candidates for these Fellowships are :—1st. They shall be of the name and kindred of the said James Beresford 2ndly. In default of the former class, persons born in the parishes of Chesterfield, Worksworth, and Ashborne, in the county of Derby, or Alconsfield, in the county of Stafford. 3rdly. In default of these, persons born within the counties of Derby and Stafford; or, for default of such, to choose the most able and apt within the said University of Cambridge, after the form of the Statutes of the said College.

With reference to the claim of kindred, it may be presumed, that the founder, being a Roman Catholic priest, had no legitimate children; the persons therefore intended to enjoy the privileges he appoints would be his collateral relations, *i. e.*, such as are the lineal descendants from some one of his lineal ancestors. It has been stated by Blackstone that all laws, when collateral consanguinity in general is the object of their contemplation, and the persons who possess it are to be distinguished from the rest of mankind, have avoided extending it *in infinitum*, and the express boundary is declared by most of them. It seems, therefore, a fair subject of consideration whether a distance of about four hundred years from a common ancestor constitutes such a claim of kindred as to be any longer recognisable in these elections.

Essay on Collateral Consanguinity.

(2.) Sir Marmaduke Constable, about the time of the foundation of the College (A. D. 1511), endowed a Fellowship for a person in priest's orders, and a native of the county of York. It is probable, from the use of the term *sacerdos* in this foundation, that the Fellow was intended to say masses for the soul of his Founder.

(3.) Lady Jane Rokeby, in the 17th of Henry VIII., founded one Fellowship, the election to which was to be regulated by the following proviso in the deed :—

" Provided always that the said Fellow be chosen of such persons as be naturally " born within the town of Beverley, if any such there shall be found able within " the said University at the time of the said election; and for lack of such a " person, to choose one naturally born within the county of York. And if there " shall be no such person found able within the said University at the time of " the election to be had as aforesaid, then the Master, Fellows, and Scholars of " St. John's College, and their successors, shall elect the said Fellow born elsewhere, as they shall think convenient, after their discretions. And the said " Fellow shall be a priest at the time of his election, or within six months next " ensuing after the same at the farthest."*

This Fellowship was the subject of an appeal to the Visitor in the year 1808, Dr. Dampier being at that time Bishop of Ely. The Bishop was assisted in disposing of the Appeal by his brother, Mr. Justice Dampier, a Judge of eminent learning, especially in this branch of law. A note of the Visitor's judgment was communicated to the parties in a reported case, by Lord Chancellor Brougham, who referred to the decision in terms of high commendation. We have thought it expedient to reprint the judgment, as enunciating, in a very clear manner, the present law as it affects the election to appropriated Foundations.

Ex parte Inge, 2 Russell and Mylne, 603.

* These extracts relating to the Foundations in St. John's College are taken from a printed book, furnished to us by the Society, being a part of the Fifth Report of the Select Committee on Education, printed in 1818 by order of the House of Commons.

Ex parte *in the matter of Saint John's College, Cambridge.*

Bishop Dampier's Judgment.

"The appeal of Clerk, a member of your College, has been laid "before me, in which he complains to me, as your Visitor, of a wrongful exclusion "of himself from a Beverley Fellowship, to which, by virtue of a certain inden- "ture, bearing date the 11th of July, in the 17th Hen. VIII., and made between "Nicholas Metcalf, then Master of the College, and the Fellows of the same, "of the one part, and Dame Johan Rokeby, and others, of the other part (a copy "of which indenture was sent with the Appeal), he presumes that he was of right "entitled. The answer of the Senior Fellows, given with the consent of the "Master, under their common seal, together with certain exercises composed by "the Appellant while under examination, as to his ability for the said Fellow- "ship, and the reply on the part of the Appellant, in which, by my permission, "he was indulged, have all and each of them been considered by me with that "earnest and most impartial attention, which was demanded from me in a ques- "tion, in which I feel that the interests, as well of the College as of the "members of it who claim admission into the Propriety Fellowships, are ma- "terially concerned. The opinion which I have formed on these documents, and "which I am about to declare, is founded on the fullest conviction of my own "mind, and the most strict and impartial regard to the question itself, and the "interests involved in it.

"I begin by observing that the question is not as to comparative merit, because "the Appellant, supposing him to be 'able,' could claim to be elected as of right. "If he is 'able,' he ought to have been elected, though there might have been "twenty other persons, not born in Beverley, of better parts, and of superior "attainments.

"It is my further opinion that the Statutes of the College, even had Dame "Rokeby been wholly silent upon them, must be taken into consideration; "because whoever is adding one member to a Society, must be supposed to con- "template the nature of that Society, the purpose for which it was erected and the "order and discipline established there to effect that purpose. But they are so far "referred to as to show that they were in the mind of both the parties to the "contract, and therefore the consideration of these Statutes cannot be excluded "from the interpretation of the word 'able' in the deed.

"The Foundress Dame Rokeby, must be supposed to have intended to confer "a benefit on the town of Beverley, by encouraging its inhabitants to bring up "their sons to useful learning, otherwise she might have granted an annuity, "instead of founding a Fellowship. The Appellant's argument contradicts this, "and says that she founded a Fellowship, to attain which, no exertion, no "industry, no learning is required. A Degree, however disgracefully acquired, "and a capacity of getting into orders, is all that, according to his argument, "can be exacted of a native of Beverley.

"Is this any good to the town? Is it any good to the College? Could "the College be supposed to have accepted the grant on such terms as would "disgrace them by the incapacity of Dame Rokeby's Fellow, and plant a licensed "example of idleness before those who aspire to the Fellowship?

"The Appellant and those who have claims to Propriety Fellowships are much "mistaken when they suppose their 'ability,' or any similar qualification ex- "pressed in their respective deeds of foundation, is not to be estimated by the "public Examinations of the College, because they have been lately instituted. "All regulations of discipline, whensoever adopted, are tests of the ability of those "who seek, by whatever title, to become members of the College. In open Fel- "lowships the principle is *detur digniori*; in proprieties, *detur sed digno*.

"On the complaint of the Appellant, that only the worst exercises were sent "to me by the College, it is sufficient to observe, that they were such as the "Appellant offered on his examination for the Fellowship.

"It is my opinion, that no local claim can compel the College to admit "a member who would, by his ignorance or incapacity, disgrace the Society, "and frustrate the purposes for which it was founded. Had the Society con- "tracted so to do, their contract would have been against their Statutes and void. "But they cannot be considered as having entered into such a contract; ability "to fill the office is necessarily implied in such a stipulation.

"I therefore pronounce and declare that I concur with the College in thinking "that the Appellant is not 'able,' within the true meaning and construction of

REPORT.

" the deed ; and the appeal of the said is hereby dismissed, and " the election of Mr. Holmes confirmed."

(4.) In the same year with the last-named benefaction, Mr. Halitreholme founded a Fellowship, with this limitation in the election to it: " that the said " Fellow be born naturally within the town of Beverley, if any such can be " found graduate and able; or else in any place nigh about Beverley, in all the " county of York next adjacent to the same; and that the said Fellow be a priest " at the time of his election, or within twelve months next ensuing at the " farthest."

(5.) Mr. John Bailey, in the 18th of Henry VIII., founded a Fellowship thus limited:—

" Provided alway, that the said Fellow be naturally born in the parish of Tam- " worth, or else in the county of Stafford; or, for default of such persons, in " any place within the county of Derby. And if there can no scholar graduate " be found within the said University, born within the said places, then the " said Fellow shall be chosen of such persons as be naturally born within the " diocese of Coventry and Lichfield only, and no other where. And the said " Fellow shall be a priest, at the age of twenty-four years, or within twelve months " after."

(6.) Mr. Edward Gregson, in the 19th of Henry VIII., founded two Fellowships, one for a person naturally born within the county of Norfolk, and the second for a person naturally born within the county of Lancaster.

(7.) Mr. Simpson, in the 21st of Henry VIII., founded a Fellowship thus limited:—

" Provided always that the said Fellow be naturally born within the counties " of Cumberland, Northumberland, Westmoreland, or Richmondshire, if any such " able in learning and manners can be found within the Universities of Cam- " bridge and Oxford, preferring always Cumberland. If none such can be found " able in the Universities aforesaid, then the said Fellow to be elect of the most " singular in manners and learning that can be gotten in the University afore- " said, of what county or shire soever they be."

(8.) John Keton, D.D., in the 22nd of Henry VIII., founded two Fellowships, one of which became the subject of legal proceedings in the year 1756. The case, under the title St. John's College *v.* Todington, came before Lord Mansfield in the King's Bench in the following year, and is elaborately reported in Burrow, i. p. 158. From a copy of the Deed of Foundation there recited, it appears that Dr. Keton's Fellows are to be elect and chosen of those persons that be or have been Choristers of the Chapter of Southwell, if any such able person in manners and learning can be found in Southwell beforesaid; and in default of such persons there, then of such persons as have been Choristers of the said Chapter of Southwell, which persons be then inhabitant or abiding in the said University of Cambridge; and if none such be found able in the University aforesaid, then the same Fellows to be elected and chosen of such persons that be most singular in manners and learning, of what country soever they be, that be then abiding in the same University. This foundation again became the subject of dispute before the Visitor a few years later, as we learn from a notice of the proceedings in Rastall's History of Southwell, p. 100. " One of Keton's Fellowships became " vacant; two candidates appeared, of the names of Wood and Abson. Both " had been Choristers regularly chosen, both Scholars of St. John's. The College " made choice of Abson. Wood appealed to the Visitor, alleging for cause, that " Abson was only a nominal Chorister, that he never sung, and did not constantly " attend the duty of the Church. This accusation appeared to the Visitor to be " founded in fact, and he accordingly superseded the election of Abson by the " College, considering his service, as Chorister, in the light of a fraud upon the " foundation."

The Collegiate Church of Southwell has been entirely reconstructed by the authority of the Ecclesiastical Commissioners, with the sanction of Your Majesty in Council, and it is presumed that its capitular character will cease in a short time. The constitution and revenues of this church having thus been dealt with under the sanction of the highest authority, we assume that there can be no insuperable objection to suppressing the rights of the quire, so far as they are concerned in the fulfilment of the literal interpretation of Dr. Keton's Deed of Foundation. The injury which would result to the College from the scrupulous maintainance of such rights is, in our judgment, far greater than any good which

could accrue to the church or its quire; and we believe that their preservation would serve only to tempt persons of superior condition in life to place their sons upon the quire, in order that they might have a claim to the benefits of the foundation. If this were the case, the quire would rather be injured than benefited, and the College would be placed in a situation of embarrassment, from which, in our opinion, it ought to be relieved and protected.

(9.) In the 25th of Henry VIII., Dr. Fell founded a Fellowship limited to a person naturally born in Furness Fells, in the county of Lancaster, if any such able person in manners and learning be found in the University of Cambridge. If not, then the Fellow to be chosen of such persons as be most singular in manners and learning, of what county soever they be, then abiding in the University.

(10.) Thomas Thimbleby, Doctor of the Decrees, in the 26th of Henry VIII., founded a Fellowship, the limitations of which are as follow:—

"There shall be one Fellow elect and chosen of such persons as shall be of "the name and kindred of Dr. Thimbleby, if any such able in learning and "manners be found in the University of Cambridge, or if his kin be poor and "have little exhibition, and be virtuous and disposed to learning. In default of "such an able person of the name and kin aforesaid, then the said Fellow to be "chosen of such persons as be or have been choristers of the church of Tattersall, "in the county of Lincoln, which choristers be tenants' children, or tenants of the "lands belonging to the said Dr. Thimbleby, and to his heirs living in the county "of Lincoln. If none such able can be found in the University aforesaid, then "the said Fellow to be elect and chosen of such persons as have been choristers in "the said College, and naturally born within the county and shire of Lincoln, "which be then abiding within the said College of Tattersall or University. And "if none such can be found able in the University and the said College, "then the said Fellow to be elect of such persons as shall be thought most singular "in manners and learning in Cambridgeshire. And if none such can be found, "then of what county soever they be born, that be then abiding in the said "College or University."

The College at Tattersall has ceased to exist. But if the quire were re-established, the same remarks which have been appended to the Foundation of Dr. Keton would apply to the restrictions imposed by Dr. Thimbleby. The annexation of Scholarships and Fellowships to the situation of a chorister in a church can only be regarded as a remnant of monastic institutions, and could not in our opinion be advantageously continued under the altered circumstances of modern times.

(11.) Roger Lupton, D.D., founded, 27th Henry VIII., two Fellowships, limited according to the terms of the following proviso:—

"Provided always that the said two Fellows be elected of those persons "which be now Scholars of the foundation of the said Dr. Lupton, now "being in the aforesaid College, and of such persons as hereafter shall be "Scholars of his said foundation in the said College for ever, and none other."

Dr. Lupton had founded in the College eight Scholarships, limited to persons born in England, and educated for at least one whole year in the grammar school of Sedbergh.

(12). Mr. Hugh Ashton by will bequeathed property for the foundation of four Fellowships, which was settled by his Executors, in the 28th of Henry VIII., and the election to them limited according to the terms of the following proviso:

"Provided always, that two of the said Fellows shall be elected and chosen of "such as be naturally born within the county of Lancaster, and in default of such "persons, then of such persons as be naturally born within the diocese of "Chester, being and abiding in the said University. And one of the said Fellows "shall be elect and chosen of such persons as be naturally born within the county "of York, and for default of such persons, of such as shall be naturally born "within the diocese of York. And one of the said Fellows shall be elect and "chosen of such persons as be naturally born within the bishoprick of Durham, "or in default of such persons, those that be naturally born within the diocese "of Durham."

(13.) Mr. Henry Hebblethwaite, citizen and draper of London, by his Will, dated June 27th, 1587, bequeathed to St. John's College 500*l.* to purchase lands for, and towards, the maintenance of poor and friendless scholars, especially such as shall come out of Sedbergh school.

Two years after the date of the Will, the legacy was paid by the Executors, and

Report.

the foundation settled for the maintenance of two Scholars and one Fellow on the following terms: "The said two Scholars to be elected according to the Statutes, "and shall first and principally be such, as shall be of the blood and name of the "said Mr. Hebblethwaite, and such as have or shall be Scholars in the grammar "school of Sedbergh, if any such be eligible by Statute. For default of such, "then the said two Scholars to be of the name of the said Hebblethwaite, and "such as be, or shall be, of the said school. For default of such, then such of "the blood of said Hebblethwaite as be, or shall be, born within the parish of "Sedbergh, and such as be, or shall be, Scholars in the said school. For default "of such, then such as be, or shall be, Scholars in the said school. In default of "such, then it shall be lawful for the Master, Fellows, and Scholars, of the said "College, to choose such other Scholars as they in their conscience shall think fit "and worthy.

"The said Fellow to be chosen of such as hereafter shall be one of the Scholars "(if eligible by Statute) wherein all regard and respect, 1st, of blood and name; "2nd, of name; 3rd, of blood, birth, and parish; 4th, of birth and parish, shall "be inviolably observed, as before in the election of the said two Scholars. And "if none of the said two Scholars be eligible, that then the said Fellow shall be "elected; first and principally, of such as shall be of the blood and name of the "said Mr. Hebblethwaite, and is, or shall be, a Graduate in the College, and a "Scholar in the said school of Sedbergh, if any such be eligible by Statute. And "for default of such, then some other Graduate of the said College, the Master "and Fellows observing duly, faithfully, and orderly, all such respects and "regards, &c., as is limited, appointed, and expressed in the election of the said "two Scholars."

(14.) Dr. Francis Dee, Bishop of Peterborough, who died in the year 1638, bequeathed a leasehold estate for the foundation of two Fellowships and two Scholarships; but the estate not being found adequate to carry out the Bishop's intentions, the foundation was limited to one Fellow and two Scholars, equal to those of the Foundress of the College. The candidates for this Fellowship must be of the name and kindred of the Bishop, either from Merchant Taylors' school, in London, or Peterborough School, and none other. This foundation formed the subject of an appeal to the Visitor in the year 1802. The circumstances are related in Wilson's History of Merchant Taylors' School, page 1165. The decision of the Visitor appears to have established the point claimed by the College, that a Scholar from the School, who was not either of the name or kin of the Bishop, had no preference in the election. It is understood that there have been no claimants of this Fellowship under the restriction thus interpreted for many years, and that it is regarded as being virtually open.

Sidney College.

The Two appropriated Fellowships at Sidney Sussex College are thus described by the Master, Dr. Phelps, in his return to our inquiries:—

Evidence, p. 430.

"There are Two Fellowships, and two Scholarships, founded by Mr. Blundell. "The Scholars are nominated from Mr. Blundell's school at Tiverton, in Devon- "shire, by the Feoffees of the said school, and, if found properly qualified by "character and attainments, succeed, according to seniority, to the Blundell "Fellowships. The Fellows and Scholars are subject to the same statutes and "regulations, and entitled to the same powers, privileges, and enjoyments, both of "dividend and official emoluments, as the Fellows and Scholars of the foundation, "except that the term of tenure of each Fellowship expires at the end of ten "years, from the time of taking the Degree of Master of Arts."

From the Appendix to the copy of the Statutes of this College in the British Museum, it appears that the date of the foundation of Mr. Blundell is 1601; and that Emmanuel College declined to accept that portion which was designed for it; whereupon the whole was annexed to Sidney College.

Remarks.

The above group of forty-five restricted Fellowships, comprising the whole number of those which confer corporate rights, and therefore an actual or prospective share in the administration of their respective Colleges, were all, with the exception of Bishop Dee's Fellowship at St. John's College, founded during the sixteenth century. The Statutes of the earlier Colleges were generally of a liberal and comprehensive character, imposing no restrictions on the admission of Scholars or Fellows, either with respect to particular counties, or with respect to the northern and southern divisions of the kingdom. "But," as is stated in Dr. Peacock's book on the Statutes of the

University and Colleges of Cambridge, "in the long interval of nearly a century "(1351–1441) which elapsed between the first and second series of our Col- "legiate establishments the contests between the northern and southern Students "had begun to rage with extreme violence, requiring frequently the interference of "the civil power, and sometimes even ending in bloodshed. The animosities "which were thus generated extended to the members of Colleges, in which a "majority of one party would generally attempt to exclude the other from all "participation in its benefits. Nor were these evils restricted to the natives of the "two great divisions of the kingdom. The natives of a particular county, district, "or diocese, whenever they were sufficiently numerous in a College to effect their "object, were accustomed to elect, exclusively, their local associates and con- "nexions, and thus by converting Colleges into clans to pervert the intention of "their founders. It was with a view to meet these evils and to secure the more "equitable distribution of the benefits of the new collegiate foundations to Stu- "dents from all parts of the kingdom, that a Statute was almost universally "introduced to prevent the election of more than two Fellows from the same "county and in some cases also to secure the election from the Cistrentani and "Transtrentani alternately; and so strong was the feeling of the necessity of this "regulation that it was added upon the petition of the Fellows to the Statutes of "St. Peter's College and Clare Hall, as furnishing the most effectual safeguard "against the undue influence of local attachments or of personal and family par- "tialities."

This distribution of the Fellows of the original foundation into their respective counties or dioceses, so that a certain number from each shall not be exceeded, has long been felt to be injurious to the highest interests of the Colleges, and the restriction, wherever imposed or introduced, has been gradually removed by competent authority. Christ's College is now the only instance in which it is retained, and we gladly concur in the opinion expressed by the Master and a majority of the Fellows of that Society, that, "it would be most advantageous to "have such restrictions removed, provided the same were done by competent "authority."

Evidence, p. 396.

But, we are further of opinion that it would be highly beneficial to the several Colleges if all the limitations on the election to Fellowships which we have described, excepting the case of particular schools, of which we propose to treat hereafter, were entirely removed by an enactment of the Legislature. In coming to this conclusion we are influenced by various considerations, which we proceed to enumerate. In the first place, we assume that it cannot reasonably be questioned that such a change would be beneficial to the Colleges which have accepted, and are, consequently, bound to comply with the terms of such appropriated benefactions. It is in accordance with the whole tenor of modern reforms, by which the Colleges have themselves sought to be relieved from the injurious action of various restrictions by which they were fettered. We have already stated that several Societies, viz., St. Peter's, Clare Hall, Queens', Jesus, St. John's, and Emmanuel, have obtained, by competent authority, the removal of the limitation by which it was directed that not more than a certain number of Fellows should belong to one county or diocese. The Society of St. John's even went further than this; for in an Ordinance sanctioned by Letters Patent of King George the Fourth, and subsequently incorporated in the new code of Statutes granted to that Society by Your Majesty (cap. 12), it is directed that if any Fellow of the original Foundation satisfies the qualifications and conditions which are required by any Sub-Founder from his Fellows, it shall be lawful for the Master and Senior Fellows to transfer such foundation Fellow into the Fellowship of such Sub-Founder, and that the Fellow so transferred shall retain the same place among the Fellows as he had before such transference took place. This important modification seems to have been based on two assumptions: (1) that it is desirable to escape from the restrictions imposed on the election to Fellowships by Sub-Founders; (2) that it is competent for the Society, with the requisite sanction, to proceed to a certain extent in dealing with such limited benefactions. The recommendation, which we have expressed, would, we conceive, only carry out the principles which have thus already been acted upon. Claims of kindred from collateral consanguinity, to which we have referred, might be disallowed on the single ground of the length of time which has elapsed since the establishment of the foundation.

Recommendation.

P. 184.

REPORT.

But there are other considerations, affecting as well the claims of kindred as those of a merely local character, to which we would briefly refer.

In the first place, it is especially to be borne in mind that the Colleges stand in a very different relation to the University from that in which they were placed at the time when these restricted endowments were, for the most part, made and accepted. In modern times, and, as we have said, we are unwilling to recommend any change in this particular, the Colleges and the University are co-extensive, and the former afford the only avenue to the enjoyment of the advantages offered by the latter. Moreover the University is, practically, to a great extent administered by the corporate members of the Colleges. Consequently, the acceptance of any but the best qualified candidates, which the compliance with the wills of Sub-Founders frequently renders necessary, becomes in this altered position of the Colleges a grievance affecting the whole of the University, and consequently, one which may be said to be in some sense of national importance.

Again, the nature and use of Fellowships have undergone a most material change, suggesting important considerations in reference to the question of appropriated foundations. In early times the Fellows were little more than senior Scholars of the House; at all events until they became of sufficient standing to take the D.D. degree: they had studies assigned for their occupation, and special exercises to perform; they were placed in the College to learn rather than to teach; the common designation for both Fellows and Scholars was *Scholares*. The Fellows' allowances were fixed upon a most meagre scale, and could not be acceptable to any but such as were little removed from the lowest class of society. There is also evidence of a rapid succession in the several bodies, the natural consequence of the laborious character of the duties assigned to the members of the foundation, and the scantiness of the advantages enjoyed by them. All this has been changed by the lapse of time. The Fellow can no longer be called a *Scholaris:* he has completed his education; his duties in respect of his Fellowship are almost nominal; he is practically relieved from the tie of residence, and as he no longer requires, so he can no longer be said to receive assistance for the completion of his academical education.

Again, many of what must be considered to have been the chief motives for *local* restrictions in the election to these Fellowships have ceased to exist. We have already observed that nearly all the Fellowships, which we are now considering, were founded during the sixteenth century. These Sub-Founders saw the spirit of clanship and local connection injuriously prevalent in the University. They saw that it had become necessary to take legislative precaution against the spread of such opinions and feelings, and that most of the Colleges had adopted statutable regulations, with a view to obviate the evil which had arisen. A local restriction being thus applied to the original foundation, it was natural that the Founders of additional Fellowships should limit the place of birth for candidates for their foundation to some particular county or place, in order by this appropriation to counteract the disadvantage of the pre-existent exclusive restriction; but it may well be doubted whether these benefactors would have considered such a limitation expedient if the original foundation had been open to the whole kingdom.

It may be contended that the continuance of such limitations of Fellowships to particular places will be the means of promoting the cause of learning in such localities, and that whatever harm may arise to the College which has accepted the restricted gift, it would be wrong to remove the limitation to the prejudice of the favoured spot. To this it may be replied, that the circumstances of our country, and the great facilities which we enjoy of rapid intercommunication, have completely altered the state of the case since the time at which those foundations were created. It frequently happens that the claimants for these foundations have not been residents in or educated at the places designated by the Founders, but have only had the good fortune to be born under the required conditions. Moreover, a native of a particular county or place no longer stands in that restricted relation to the place of his birth which he may be said to have done in ancient times, prior to the growth of our middle classes, and of more migratory habits among them. Few places, at least in those parts of the country which we are called upon to consider, are now far removed from the means of obtaining a good education, and there is accordingly less reason to stimulate the exertions of particular places in the cause of learning. It may also be said that the power of obtaining the rewards of learning with a lower standard of attainments than is required from

other less favoured candidates, is but ill adapted to promote the advancement of education in the privileged localities, and that, if the cause of learning be the plea for the maintenance of such privileges, that cause will be best promoted by the free action of unfettered competition. REPORT.

If in accordance with the opinions we have expressed, it should be thought right to extinguish claims of kindred and local qualification in the existing foundations, it would appear to be a necessary consequence that the creation of any similar claims should be prohibited in the case of future accessions of endowment. Recommendation.

EMOLUMENTS OF FELLOWS.

The following is a statement of the annual value of a Foundation Fellowship at each of the Colleges, from which we have received information on this branch of our inquiry:—

	£.	s.	d.	
At St. Peter's College it is	258	0	5	together with dinner commons.
At Pembroke College it is	317	3	2	ditto ditto.
At Trinity Hall it is	150	0	0	together with 2*s.* per diem during residence.
At King's College it is for an M.A. Fellow	175	11	0	with dinner commons, and rooms rent-free.
At Queens' College it is	145	6	3	together with part of table expenses and 30*s.* per week during residence.
At Christ's College it is	330	9	8	together with 15*s.* 6*d.* per week.
At St. John's College it is	140	0	0	together with an allowance for room rent and a share of corn rents during residence.
At Magdalene College it is	330	0	0	together with £28 for commons.
At Trinity College for an ordinary major Fellow it is	225	0	0	with dinner commons, 4*l.* 6*s.* 8*d.* for liberatura et stipendium, 7*s.* per week during residence, and rooms rent free.
At Emmanuel College for a middle Fellow it is	207	5	0	with part of dinner expenses.
At Sidney Sussex College it is	178	0	0	with some allowance for commons.
At Downing College it is	100	0	0	with 2*s.* 6*d.* per diem during residence.

From Clare Hall, Gonville and Caius, Corpus Christi, St. Catharine's Hall, and Jesus, we have received no information on this point.

BYE-FELLOWSHIPS.

Our observations upon Fellowships have hitherto been confined to those which confer corporate membership upon the persons who are elected to them. We next proceed to consider the Bye-Fellowships, or those which confer only certain special advantages upon the holders, without any participation, actual or prospective, in the government of the College to which they are annexed. These Fellowships appear to have originated in the difficulty experienced in estimating, after the Colleges had received any considerable accession to their means and numbers, what was the proper sum which should be paid by any new Founder for an equal participation by the new objects of his bounty in the privileges and advantages enjoyed by the members of the then existing foundation. Feelings of jealousy also appear, in some instances, to have stood in the way of equalising the new and the old foundations. The want of any fixed standard by which these new Fellowships were to be regulated has led to great diversity of practice as to value, conditions and duration of tenure, qualifications for election, and other incidents.

One of the most objectionable features in the system which has been adopted regarding them, is, in our opinion, the practice of making these subordinate Fellowships stepping-stones to the more valuable ones on the foundation of the College. They rarely provide a young man with sufficient funds for making his own way in the world independently of other resources; and the prospect of being gradually raised, perhaps after passing through two or three of these subordinate and ill-endowed foundations, to the greater advantages of a foundation Fellowship,

Report. is frequently an irresistible temptation to staying within the walls of the College, without any fixed or settled scheme of action, and sometimes wasting in consequence the best years of early life. Another evil which has arisen in practice with respect to these Fellowships has been caused by the altered value of money. The Founders commonly assigned to their Fellows fixed payments, which, however liberal at the time of the foundation, have now become of small and inadequate value; and as these Bye-Fellows have no voice in the management of their own affairs, they have been cut off from all means of ameliorating their condition in this respect.

Evidence, p. 449. Upon these points we would wish to call attention to the Memorial from three senior Fellows of Gonville and Caius College, to which reference has already been made. These gentlemen state that from their experience they are strongly impressed with the conviction that the utility of these endowments would be greatly increased if the stipends were somewhat larger, and the Fellows consequently were more assisted in their several callings at an early period of their career. They add, that it would be a great benefit to the College if gradually, and without prejudice to the interests of existing Fellows, the different benefactions were incorporated and the Fellowships made more nearly equal. We wish to express

Recommendations. our concurrence in these recommendations.

We are of opinion that these Bye-Foundations demand a careful revision, under competent authority. In some cases we believe it will be found that, the value of the estates with which they were endowed having largely increased, considerations of an equitable nature would require a corresponding re-adjustment in the value of the emoluments assigned. In other instances we believe that the property representing the original endowment is altogether inadequate to the maintenance of the objects of the Founder's bounty. In one instance, that of Dr. Goch, at Magdalene College, we are informed that there is no endowment at all for Fellowships which have only a titular existence. If any authority existed having a competent power to legalise the necessary arrangements which would be suggested by justice and expediency, according to the special circumstances of the several cases, we are disposed to think that the Colleges would gladly avail themselves of such powers to do whatever might fairly be required of them to meet the altered position in which they are placed with regard to these supplemental foundations. It would probably be found on inquiry to be at once the simplest and the most advantageous arrangement for the Colleges to adopt a system by which these subsidiary Members might be incorporated with the original Foundation. In Magdalene College and St. Catharine's Hall, where there are only six Fellows on the original foundation, (in practice there are only four and five respectively,) the incorporation of the Bye Fellows would afford a convenient addition to the present means of administering the affairs of the College.

With regard to local, family, and other qualifications, which may now be required in the candidates for these Subsidiary Foundations, we should apply the same principles of revision as those which we have recommended in the case of the Foundation Fellowships.

Peculiarities of Election.

The elections to all collegiate offices and emoluments ought to be regarded in the character of a solemn trust, to be exercised for the benefit of the community at large, without reference to the ordinary notions of patronage. Such we believe to be the spirit in which the collegiate bodies of Cambridge have for many years past disposed of their Fellowships and Scholarships. External bodies or individuals are not, as we think, satisfactory disposers of College preferment, although instances can be adduced to the contrary, such, for example, as the late Bishop Allen, whose practice it was to nominate Examiners and throw the Bishop's Fellowship at St. John's and Jesus Colleges open to public competition. Examples, however, of an unfavourable character have not been wanting; and

Recommendations. we are of opinion that it would be advantageous if the election to all Fellowships and Scholarships were vested in the Master and Fellows, or in that portion of the Society to which the government of the College either is or may be intrusted by the Statutes. No other persons can, in our judgment, be expected to have the same means to determine between the relative merits of contending candidates. The power of election enjoyed by the Society is not absolute, but subject to the controlling superintendence of the Visitatorial power; and we think that, under

the vigilant watchfulness of public opinion, which has now for many years exercised the most beneficial influence on all elections in Cambridge, there is no fear of the Collegiate bodies using this power of choice otherwise than for the best interests of their several Societies. REPORT

There are not many Fellowships which would be affected by the adoption of the change which we have recommended in regard to elections. The following is a list of such foundations:—

The two Ramsey Fellows at St. Peter's College, the election to which is in the Master. St. Peter's College.

Two on the Parke foundation of the same College, the election to which is in the heir male of Archbishop Sandys.

The Mayor and Aldermen of Coventry have the power of recommending a suitable person to succeed on a vacancy in Mr. Frankland's Fellowship in St. Catharine's Hall. This Foundation came under the consideration of the Lord Chancellor, as Visitor of the College, when Lord Brougham held the Great Seal. The case is reported in Russell and Mylne, Vol. ii., p. 590, and the main point decided by the Court was to the effect that though the power of recommendation lay with the Mayor and Corporation, it was the province of the College to examine the person so recommended, and to reject him in case of insufficiency, Catharine Hall.

One at Jesus College, the election to which is in the Bishop of Ely. It is stated in the Statutes of this College that this Fellowship was endowed with the tithes of Shelford rectory, part of the ancient possessions of the see of Ely. The Statutes also direct the College, on filling up every vacancy among the Fellows of their body, to present two names to the Bishop of Ely, whose duty it is to select one. It has long been the custom for the Bishop to take the first of the two names presented to him, thus virtually leaving the absolute election in the hands of the College. We can see no advantage in retaining the regulation of the Statutes. The Bishop, being the Visitor of the College, would be called upon to interfere in the event of any improper person being elected by the College, and is thus armed with a greater power of redress in the event of any wrong being done than could be derived from the selection referred to. Jesus College.

There is also one Fellowship at St. John's College, the presentation to which was conferred by the Foundress upon the Bishop of Ely in consideration of the rights surrendered by him in connexion with the dissolved Hospital of St. John, which formed the foundation upon which the College was established. St. John's College.

There is one Travelling Fellowship at Magdalene College, founded by Mr. Drury, of considerable value, the election to which is in the hands of the Master. Mr. Warter, President and Tutor of this College, states his opinion that "great "advantage might be derived in many Colleges by the removal of certain appro- "priations, limitations, and restrictions, which now affect the tenure of certain "Fellowships, Scholarships, and Exhibitions belonging thereto, and especially so "in his own College." As an instance he refers in particular to this Norfolk travelling Fellowship, and adds that "this, although nearly the best Fellowship in "the College, is now comparatively of no benefit to the College from the restric- "tions placed upon it, while the purposes for which it was founded can be no "longer said to exist." Magdalene College. Evidence, p. 412.

There is one Fellowship at Sidney College founded by Mr. Leonard Smith, the election to which is in the hands of the Fishmongers' Company. Sidney College.

The two Dixie Fellowships at Emmanuel College are in the nomination of the Founder's heir. Emmanuel College.

We are not acquainted with any other Fellowships in the election to which it would be necessary to make any practical change, in order that the principle which we have recommended may be uniformly carried out. It is possible, however, that some dormant rights, not now acted upon, would also require to be extinguished. Such cases must be very rare, and may be treated as inconsiderable.

CONDITIONS OF ELECTION AND TENURE.

The provisions of the several Statutes with regard to the academical standing of candidates for Fellowships are as follow: the B.A. degree, as the inferior limit, is found in the Statutes of St. Peter's, Clare Hall, Pembroke, Corpus Christi, St. Catharine's Hall, Jesus', Christ's, St. John's, Trinity, and Sidney. In the Letters of Foundation of Trinity Hall, it is provided that a person to be elected a Fellow must have studied Canon or Civil Law in some approved University for at least Academical Standing.

REPORT.

three years successively, unless he be a Master of Arts or a Bachelor of repute within a year of the time of incepting in Arts, *i. e.*, a B.A. of at least two full years standing. In the Statutes of Gonville and Caius College, it is directed that the candidate shall have at least two years' proficiency in Dialectics. In Queens' and Magdalene it is sufficient, if the standing of a Questionist be obtained. In Emmanuel the original Statutes require a candidate to be at least a B.A. of the third year; but we believe that by the altered code the B.A. degree alone is sufficient. In Downing College a degree of any kind will suffice for the lay Fellows, the clerical Fellowships being limited to the B.A. degree. A superior limit is fixed in the Statutes of three Colleges only; viz., St. Peter's, Trinity, and Downing; in the two former it is the standing sufficient for taking the M. A. degree, which superannuates; in Downing College "no person shall be eligible "to a Lay Fellowship who is above the age of twenty-four years, nor to a Clerical "Fellowship who is above the age of thirty, or under the age of twenty-three."

Recommendations.

We are of opinion that it is desirable, at least in the three larger Colleges, where the number of Fellowships is such as to render a certain amount of vacancies every year a highly probable event, that there should be a regulation by which no candidate should be admissible after attaining the standing required for the M.A. Degree. We also incline to the opinion that no one should be allowed to obtain a Fellowship who had not been admitted to the Degree of Bachelor of Arts, making, however, an exception to the rule in the case of those Colleges, which admit Law or Medical Degrees as a sufficient qualification.

Legal and Medical Fellowships.

There are in some of the Colleges Fellowships, which are appropriated to persons pursuing the Legal or Medical profession. It has been too much the habit of the College to make use of these Foundations as a means of enabling laymen not devoted to the studies or profession particularly indicated by the Statute or Benefactor, to retain their Fellowships. A Medical Degree, formally obtained, or the

Recommendations.

nominal character of a Barrister has frequently sufficed for this purpose. So far as the Medical Fellowships are concerned we think it would be enough if the M. D. Degree at the usual time were made indispensable. The severity of the Examination, and the course of study insisted on by the University would probably deter persons not properly qualified from seeking to avail themselves of such advantages. And as regards legal Fellowships, the time is probably not far distant when the Inns of Court will institute a satisfactory course of study and Examination as a necessary passport to the rank of Barrister at Law. In the absence of such a test of the actual pursuit of legal studies, a call to the Bar at the proper time should at all events be demanded.

Time during which Fellowships may be kept vacant.

There is considerable diversity both in the law and practice of the several Colleges with regard to the time during which Fellowships are kept vacant. In some codes we find no limit of time assigned, within which it is necessary to proceed to a fresh election; in others, on the contrary, the inconveniently short space of a month is all that is allowed for this purpose. The Master and Fellows of Christ's College, in reply to our inquiries on this point, state their opinion, that inconvenience arises from the shortness of the period (one month after the vacancy is known to the Master) within which every Fellowship of the College must be filled up; and that the interests of the College would be better served, if a somewhat longer, though limited, interval were allowed to the Society to make their election. In Trinity and St. John's Colleges an annual election at a stated time is required by Statute. We are disposed to recommend that in the three large Col-

Recommendations.

leges this rule of an annual election at a fixed time should be adhered to: in the other Colleges, we think it would be convenient if upon a vacancy occurring the space of twelve months were allowed to fill it up, beyond which time we would recommend that it should not be in the power of the Society to keep any of their Fellowships vacant.

Theological Degrees.

We next proceed to notice the statutable requirements in regard to Theological Degrees from the Fellows of the several Colleges. The B.D. Degree is an essential requisite in the Statutes of Corpus Christi, Queens', St. John's, Sidney, and Emmanuel, and is complied with in practice. There are other Colleges, also, in which this Degree is strongly recommended, if not peremptorily enjoined, by the Statutes; but except in the Colleges which we have named, it is not generally the practice for Fellows as such to proceed to this Degree. In our time the B.D. Degree has ceased to be the mark of superior theological knowledge, and we think that the continuance of the rule, by which the attainment of it is made a necessary qualification for the tenure of Fellowships, has led to a relax-

ation of the strict conditions on which it should be bestowed. It is not unlikely that the reputation of the Degree might be raised if it were conferred only on volunteers, more especially if the class of Ten-year men be discontinued, as has been recommended by the Syndicate appointed to revise the Statutes of the University. We can see no advantage to be derived from the continuance of the rule, and we would accordingly recommend that it should no longer be enforced, it being understood that the removal of this obligation shall in no respect affect the professional qualifications of the several Fellows. REPORT. Recommendation.

It has, indeed, been contended that it would be beneficial if the restriction imposed by the Statutes of Colleges upon the Fellows in regard to the choice of a Profession were rescinded. There are, no doubt, strong objections to the practical working of such restrictions by which the emoluments of a Fellowship are made to operate as a temptation to persons to enter into Holy Orders. On the other hand, we cannot contemplate with any satisfaction the simple removal of all obligations to select a Profession at a certain period of life. If it be left free to the Fellow of a College to determine, at his own time and pleasure, whether he will be of any or of no profession, we cannot doubt that the sinecure character of Fellowships would soon become such as to demand some very sweeping measure of reform. Such a change in the law of the Colleges would also be likely, as we think, to produce an injurious effect upon the tone and manners of the University. Moreover, in considering this question, it should be borne in mind that, in the case of several of the Colleges, it was, manifestly, the intention of the Founders to appropriate their endowments to the maintenance of a succession of men who should devote themselves to the service of God in the ministry of the Church. For these and other reasons, we are inclined to recommend only such a relaxation in the existing law of some of the Colleges, as would allow of a reasonable interval of time before a newly-elected Fellow should be required to enter into Holy Orders or vacate his Fellowship. The statutable regulations of Trinity College, where seven years from the M.A. degree, or of St. John's College, where six years from the same time, are allowed to make this determination, seem to us to be of a reasonable character. The Master of Christ's College, where at present only one year is allowed for obtaining Priest's Orders, states, as his opinion, that this time might fairly be extended to five years. Holy Orders. Recommendation.

The ancient Statutes of Colleges for the most part fix an amount of income with which the tenure of Fellowships and Scholarships shall be incompatible. They generally leave the Heads of Colleges unrestricted in this respect. This condition is no doubt in accordance with the principles on which, as we have seen, such foundations were created and endowed. They were designed more as helps to persons little removed from positive indigence in the actual prosecution of Academic study, than as rewards for eminent merit or as aids to further advancement in life, after the studies of the University had been abandoned. In practice, however, the condition has become obsolete, partly because it has been considered inapplicable to personal property, and partly because it cannot be enforced without inquiries of an inquisitorial character. The condition in question was omitted from the revised code of Trinity College, probably for the reasons we have assigned. In St. John's College, on the revision of its Statutes, it was declared in the new Code that ecclesiastical preferment, or income of any kind whether coming by gift, by will, or by inheritance, which should be double the value of a junior Fellowship on a seven years' average (including allowances during residence), should be incompatible with the position of a Fellow. A similar provision occurs in the revised Code of Pembroke College. We are of opinion that this modification of the ancient statutable regulation is not otherwise than reasonable. Private Property.

We have already observed that the Statutes of Colleges requiring the residence of the corporate members have to a great extent fallen into disuse. Fellowships being now regarded in the main as rewards for successful industry and talent, as helps to the prosecution of learning and science or as a means of support during the earlier part of a professional life, we think it inexpedient to attempt to recal the severity of ancient statutable regulations in respect to residence within the walls of the College. It would be sufficient we think if reasonable securities were taken on the revision of College Statutes for the residence during Term time of the Master and Scholars. The Fellows we are disposed to leave unfettered in this respect, due precaution being taken for the transaction of the ordinary business of the several Societies. Fellows constrained to involuntary residence Residence.

REPORT.

are not likely to make valuable assistants in the business of education or in the advancement of the proper interests of the University.

Celibacy.

We notice the condition of celibacy which by law or practice is now invariably attached to the tenure of all Fellowships in Cambridge, only to say that it cannot in our opinion be conveniently separated from the Collegiate system. We do not doubt, however, that the condition has tended to prevent many men of ability and eminence from continuing their residence in the University so long as might have been desirable. We have accordingly proposed a scheme for the extension of the Professorial body and the creation of an entirely new one, under the name of Public Lecturers, which, among other recommendations, appears likely to compensate for the difficulties experienced in retaining the most eminent Graduates in the immediate service of the University owing to the condition of celibacy attached to all the Fellowships. Upon this point we may remark that the Statutes of some Colleges are silent, probably because in Roman Catholic times the celibacy of the Fellows of a College was assumed to be indispensable and no express law was required to enforce it. It is, however, understood that, in the case of the Colleges referred to, one of the "Ordinances prescribed for Colleges" contained in Cap. L. of the Statutes of the University (xii Eliz.) has supplied the omission of the condition in their particular Codes. The following is the Ordinance in question.

"Socios Collegiorum maritos esse non permittimus, sed statim postquam quis "uxorem duxerit, socius Collegii desinat esse: ordinem tamen gradus sui in "academia tenere potest."

In revising the Statutes of the University and of the Colleges it will be necessary to make provision for the continuance of this rule.

KING'S COLLEGE.

Before we proceed to treat of the Scholarships in the several Colleges, it is necessary that we should notice the peculiar circumstances of the Foundation of King's College. We have experienced great difficulties in approaching the consideration of this subject. The unusual constitution of the Society, its anomalous position in relation to the University, its intimate connexion with the Royal Foundation of Eton, the solemn prohibition imposed upon its members, against seeking or even accepting the smallest change in its laws, the magnificence of its collegiate buildings, the affluence of its resources contrasted with the paucity of its Undergraduate Students—all these, as well as other circumstances, involve difficulties and embarrassments of no ordinary weight. We are desirous of stating, in the outset of this branch of our inquiry, that the character of the College, which has in past times been generally remarkable for the ability and learning of its members, has never been more eminent than during the last few years for academical distinctions in proportion to its numbers. It is also a gratifying fact, that since the issue of Your Majesty's Commission the College has voluntarily surrendered the privilege which it possessed by usage from the earliest times of having the B.A. degree granted by the University to its members without passing the ordinary examinations to which all other candidates for that degree are compelled to submit themselves. This concession has done away with an invidious distinction, the removal of which cannot fail to be highly beneficial to the College.

We have received full information relative to the corporate revenues and their distribution, as well as upon other points of interest, in reply to the inquiries which we addressed to the Provost officially, and to the Society in its corporate character. The College, however, has not thought fit to comply with our request to be furnished with a copy of its Statutes, and we have accordingly availed ourselves of a copy of the Charter of Incorporation obtained from the Public Record Office, and a copy of the Statutes, which is found in the Harleian Collection of the British Museum. These documents, which we have caused to be printed, have received our careful consideration. Evidence, p. 347. p. 349.

The first and most important question which offers itself for examination is the position of the Provost and Scholars as it is affected by the oaths which they have taken to obey the Statutes of their Founder. King Henry VI., though he reserved to himself during his life the right of dealing at pleasure with the College which he had endowed, yet took the utmost pains to prevent any one after his decease from introducing the smallest possible change in the code of laws which he had compiled for its government. Not only are the Provost and Scholars bound by the most solemn oaths to observe the Statutes, but are also in the most solemn manner and with a denunciation of the Divine Judgment, prohibited from applying for, procuring or accepting any other Statutes, interpretations or changes repugnant to the plain, grammatical, and literal sense of the Statutes. Oath of the Provost and Scholars.

Under these circumstances, it becomes of importance to inquire what portion of the Statutes continues to be observed, and what portion has become obsolete and neglected. A further material question is, how far the disuse of the Statutes has been occasioned by the change in the national religion. The Provost, Dr. Okes, has stated to us that "the Act of Uniformity has sufficiently removed "the superstitious ordinances necessarily found in Statutes made in the fifteenth "century" and that "there is nothing in the other parts of the Founder's "injunctions, which impedes the present generation from fulfilling with a safe "conscience the 'Mens et Institutio Fundatoris,' which was the maintenance of "true religion with sound learning." We are, however, sorry to say, that although the Royal Founder has so far attained the object at which he aimed, that now after the lapse of more than four hundred years, his laws still exist in the letter, yet we think it will appear on a careful examination of the several Statutes that scarcely any part remains in force but what is dependent upon the relative rights of the various members of the body, or upon its union with the sister foundation of Eton. We think it can be shown, that of the multifarious duties which were imposed by the Founder, and which he most ardently desired to enforce, hardly one is now practically performed: we think also that this non-observance of the Statutable obligations will be found to be in great measure independent of the Evidence, p. 349.

REPORT.

changes brought about by the Reformation, and that it is mainly due to the altered system of University studies, the changes in men's habits and manners, and the superiority in wealth and social position of the class from which the members of the College are for the most part recruited. If these points can be satisfactorily established, we think that a reform of the College Statutes must appear to be a matter of urgent necessity, and that it must be deemed unreasonable to plead the letter of the Founder's Will, or the oaths which he imposed, as a bar to any modification of mere rights and privileges which were conferred solely in consideration of the performance of duties deemed in those early times of the highest moment, but now no longer performed or respected.

Objects of the Foundation.

The objects designed to be promoted by the Foundation are described in the Patent to be "the honour of Almighty God, in whose hand are the hearts of "Kings, of the most blessed and spotless Virgin Mary, the Mother of Christ, "and also of the glorious Confessor and Pontiff St. Nicholas, on whose festival "the King (Henry VI.) was born, the extirpation of heresy and error, which "disturb the peace of Kingdoms and Universities, and had invaded the kingdom "of England; for the augmentation of the clergy, and the ornament of Holy "Mother Church, whose ministries must be committed to suitable persons, to give "light like stars in their spheres, and to instruct the people as well by doctrine as "by example."

Statutable requirements

These objects, it will be seen, are ecclesiastical, and accordingly it is stated in the preamble to the Statutes that the authority of the Pope had been obtained for the Foundation, and that more than one Papal Bull had been issued for the purpose. The seventy poor and indigent Scholars studying grammar at Eton were to form a nursery for the supply of vacancies among the seventy poor and indigent Scholars studying various sciences and faculties at Cambridge, and the latter body was to send forth a continuous stream of able ministers to supply the various wants of the Church. Of the seventy Scholars two were to devote themselves to the study of Civil Law, and four to that of Canon Law: two to the Science of Medicine, and two to that of Astronomy, according to the directions of the Provost and the Dean of Theology: the remainder (sixty) were to go through the ordinary course of Arts or Philosophy and Theology. All the Scholars are solemnly adjured to proceed to Degrees in their respective faculties at the regular time, and in the Statute "De tempore assumendi gradus in qualibet "facultate" it is directed that every Master of Arts, after he has been a Regent in Arts for three years, shall be bound to apply himself to the studies of his respective Faculty, and to take his Degree in the same. Every person admitted of King's College must be a poor indigent Scholar Clerk, having received the first clerical tonsure; and the 29th Statute directs that every Fellow who has incepted in Arts shall, within two years from the commencement of his studies in Theology (*i. e.* within five years from the M. A. Degree), cause himself to be admitted into Holy Orders, and within another year to be admitted to Priest's Orders, unless there shall be some lawful hindrance to be approved by the Provost, or in his absence the Vice-Provost and the two Deans. Similarly the Fellows who are members of the Faculty of Civil and Canon Law, after they have been admitted of the Faculty for four years, shall become Sub-Deacons within one year and Priests within a further space of four years with the like proviso. If any one shall violate the provisions of this Statute respecting Holy Orders, if he persist in his neglect of the Statute for three months after he has been duly called upon by the Provost, or in his absence the Vice-Provost, to take Priest's Orders, and has not taken effectual steps to perform his duty in accordance with the Statutes, he shall *ipso facto* be deprived of his Fellowship. It thus appears to have been the intention of the Founder that every Fellow, except perhaps the two who were destined for the study of Medicine, should take Holy Orders and Degrees in Theology or Civil or Canon Law.

Holy Orders.

Clerical Duty.

The Statute which imposes the necessity of Holy Orders also prohibits the possibility of any Fellow being allowed to receive a stipend, in the way of yearly service, or under any other pretext, for doing clerical duty in any other church than that of the College, so long as he continue a Fellow.

Numbers immutable.

In the Oath to be taken by the Fellows, &c., every one is to swear that he will not procure, nor permit to take place, nor consent to in anywise, any limitation, change, transference, or suppression, of any number defined by the Statutes as belonging to any Science or Faculty, nor of the number of Priests, Clerks, Choristers, or other Ministers of the Collegiate Churches.

REPORT.

The 24th Statute provides that no member of the College shall be absent without leave from the Provost, or in the case of his absence, the Vice Provost and one Dean: that no member shall pass the night outside the walls of the College, if he be at the same time in the town of Cambridge, or within four miles from the same: that no member be absent from the College for more than sixty days in one year, continuously or discontinuously; nor at any one of the greater festivals, or at those of St. Mary the Virgin, St. Nicholas the Bishop, or Edward the Confessor, and that at one and the same time not more than ten Fellows or Scholars shall have leave of absence, except from the morrow of the Assumption of the Virgin to the 1st of October next ensuing, when twenty Fellows or Scholars may have leave of absence upon reasonable cause. If any one can assign some urgent cause of absence, either his own preferment or the sickness of his near relation, or the like, and can confirm the same with an oath, a greater license would appear to have been conceded. The cause assigned for retaining persons so constantly within the walls of the College is to prevent the worship of God and the progress of scholastic study from being impaired. In cap. 38, absence from College for sixty days is declared to vacate a Fellowship, with certain provisoes, which clearly exclude the notion of continued absence beyond that period.

Residence.

The 28th Statute provides that the scholars for the first three years shall be instructed by one or more of the Fellows Graduates in Arts: that the Bachelors of Arts shall be instructed by one or more Fellows, Masters of Arts, and that a Doctor or Bachelor in Theology shall be appointed to instruct the Masters of Arts. Only in the case of Civil or Canon Law is it permitted to go beyond the Members of the Foundation to find competent teachers for the Members destined for those Faculties. A scale of payment is assigned to remunerate the persons employed in these departments of instruction.

Instruction.

That the members of the College would be, as they are called, poor indigent scholars, may be inferred, not merely from the general poverty of those times, and from a comparison of the scale of allowances with the price of provisions in those days, and with the ordinary wages of labour, but also from several provisions in the Statutes themselves. Thus, in the 27th Chapter it is stated, that it frequently happened that Scholar Clerks of approved learning and character, who had passed through all their terms and exercises with great credit, were unable to defray the expenses necessary on taking their several Degrees, in consequence of their poverty and want of friends: and accordingly provision is made for allowances to be assigned on occasion of proceeding to a Degree to the several Fellows, and this not merely in the case of the lower Degrees, when such poverty would appear more easily accounted for, but also in the case of the superior Degrees of all the Faculties. Similarly, in Statute 38 any permanent income of the value of 5*l.* per annum disqualifies a person from continuing to hold his Fellowship. And in cap. 64 the class of persons to be elected into the two Royal Colleges of Eton and Cambridge is strictly defined to be not persons already well instructed or learned, or of ample means of their own, or competently versed in the sciences, but those only who are to be brought up from their earliest boyhood in the King's College of Eton on the Royal bounty; feeble persons, *i. e.*, poor indigent scholars, and having no human likelihood of being able to support themselves.

Poverty.

In all the important particulars enumerated above, the practice of the College in modern times cannot be said to be in agreement either with the letter or the spirit of the Statutes. Neither Holy Orders nor Degrees in Theology are enforced. No members of the College are devoted to the study either of Civil Law or of Medicine. Canon Law has long been discontinued. The ten Sacerdotes Conductitii are reduced to one. No residence is enforced except upon the Undergraduate Members. The property qualification is not and perhaps cannot be enforced. The candidates for the benefits of the Fellowships are no longer poor indigent scholars in any proper sense of the term. No Fellows of the College are appointed as teachers, and this not only in the case of preparation for the superior Degrees, but even the Undergraduate Members are dependent upon external instruction for the ordinary preparation for their first Degree; three members of other Colleges being appointed to lecture in Divinity, Mathematics and Classics respectively. It will be observed that these points are not connected with the changes that would be directly involved in the substitution of the Protestant system of the Church of England in the place of the Roman Catholic religion. Those changes have of course swept away several chapters of the Statutes relating to the religious

Present Practice.

REPORT.

observances of the College. Nor is it necessary to enter into the minute details respecting reading the Bible during the time of dinner in the College Hall; speaking Latin in ordinary conversation; the hours at which the College gates are to be closed, and the keys lodged in the custody of some superior officer of the College; the obedience of the Fellows to the College officers; the provision for frequent disputations and exercises at stated hours and on fixed days. In all these points the Statutes of King's College in no wise differ from those of other Colleges, except perhaps the more minute particularity with which observances that now appear to be trifling, and are uniformly disregarded, are solemnly enjoined with the most sacred sanctions, and their modification in the smallest degree prohibited under the most awful penalties.

We observe a statement of the Provost, with reference to the statutable requirements on the subject of residence. "The residence of a Fellow," he says, "as required by the Statutes, is the same as that of the Provost. But owing to "the change of times and circumstances, our Visitors have sanctioned and "approved of a relaxation of that rule, and residence of non-official graduates "of the College is now only enforced for some special reason by order of the "Provost." We are at a loss to discover by what authority the Visitors could have considered themselves empowered to make such a relaxation. At all events, if such a power exists, we are of opinion that it should be employed to sanction a revision of the Statutes of a much more general character. If it does not, and it is our opinion that the Founder has carefully excluded such a supposition, we think the proper and indeed the only remedy would be that the oaths imposed by the Statutes should be declared, by the authority of the Legislature, to be henceforth illegal, and that the constitution of the College should receive such changes as are obviously recommended by altered circumstances and long experience of the working of other collegiate institutions.

Evidence, p. 348.

Visitor's authority.

Numerical condition.

It has been shown that the seventy Scholars of Eton are the only source of supply to recruit the students of the College. We find in the return of Mr. Romilly, the Registrary of the University, made in reply to our inquiries, that the total number of Matriculations and B.A. Degrees at King's College during the ten years ending with the year 1850 inclusive is, Matriculations 31, B.A. Degrees 30, or as nearly as possible, 3 each per annum. The education of so small a number of Students cannot but be regarded as entirely disproportionate to the great revenues and capabilities of the College.

Evidence, p. 66. pp. 68, 69, 70.

Succession of Scholars to Fellowships.

Another objectionable feature in this foundation is the certainty of succession from a probationary Scholarship to a perpetual Fellowship. The Provost states, "when a Scholar has completed his three years of probation, he is either elected "a Fellow or must quit the College." We believe the practice to be that a Scholar is invariably elected a Fellow after the three years of probation, unless he have disqualified himself by glaring misconduct. This law of succession removes all stimulus to exertion, and appears to defeat the very object for which Fellowships, considered as rewards of learning, were endowed.

Evidence, p. 347.

Recommendations.

It would not be difficult to indicate a plan by which the existing incongruities might be removed, and an extended career opened to the College both for usefulness and fame. For instance, a new distribution might be made of the revenues of the College into three distinct classes, of Fellowships, Scholarships, and Exhibitions all tenable by persons who have received their education at Eton College. We are of opinion that this great school will always afford a sufficient supply of candidates for admission to the College, provided that the Fellowships and Scholarships be made accessible to all who have been at the school, whether they have been on the foundation or not; and we are unwilling in any of our recommendations to travel farther beyond the limits of the present law or practice of the Colleges than appears to be required by the urgency of the particular case. The limitation of the benefits of the foundation to persons coming from Eton School, will not prevent the admission of other Students, who might desire to become ordinary members of the College without seeking for pecuniary advantages. Indeed, there is nothing at present to interfere with the admission of such extraneous Students provided they do nothing to bring a burthen upon the College.

It does not appear to us to be expedient, in the present state of our information, to lay down a precise rule for the distribution of the revenues which we have recommended. We propose generally that the Exhibitions should be merely pecuniary helps, tenable for the ordinary period of Undergraduateship, and confer-

ring no corporate rights upon the holders of them. These we would have bestowed at Eton upon the best scholars of that foundation proceeding to King's College, as a species of commutation for their present right to become Scholars and in due time Fellows of that Society. Besides the Exhibitions we should wish to see a competent number of well-endowed Scholarships bestowed upon Undergraduate Students, after an annual examination in the College at Cambridge, and tenable for five years, to which all persons educated at Eton, whether Exhibitioners or not, might be eligible. Such Scholarships we believe would be found a most valuable means of attracting students, and of maintaining a body of studious and well-informed Undergraduates, to give tone and vigour to the whole system of the College. The Scholarship Examination, we are informed, is found at Trinity College to be the most efficient part of the Collegiate discipline. The succession to Fellowships we would entirely sever from the Scholarships as a matter of right; there should, in our opinion, be an annual Fellowship examination, to which all Etonians, of whatever College, having taken the B. A. Degree, and below the standing required for the M. A. Degree might be admissible as candidates to fill the vacancies that had occurred during the past twelvemonths. Regulations for carrying this scheme into effect might, we think, be made without great difficulty by a duly authorized body, after friendly communication with the school and the College.

By such a scheme, if adopted, a succession of motives would be supplied to stimulate the students of the College in their academical career. A large field of competitors for such prizes as the Scholarships and Fellowships would not be wanting. The school would be largely benefited by having the endowments of the College thrown open to the whole of its scholars, instead of having them confined, as at present, to about a tenth of its number; and the College would be raised to that position in the University which the magnificence of its buildings and its great endowments so well entitle it to occupy.

In the event of such a change as we have recommended being adopted in regard to King's College, it would become necessary to constitute the Provost and a portion of the Fellows a Board of government and election, corresponding to the Master and Senior Fellows of Trinity and St. John's Colleges. At present, the elections being conducted at Eton, the admission of probationary Fellows into actual Fellowships rests with the whole body of Graduate Fellows. This would appear to be too large a number to be duly sensible of the responsibility of election or to carry on satisfactorily the business of Examinations.

Deed of Composition between the College and the University.

Before we quit the consideration of King's College, it is necessary to say a few words on the subject of the Deed of Composition entered into between the University and this Society in the year 1456. Peculiar powers of jurisdiction had been secured soon after the Foundation, under Royal and Papal authority, to the Provost of King's within the precincts of the College, and he was locally exempted from all interference, either from the Ecclesiastical authorities of the Diocese, or from the Chancellor of the University. These privileges in the fifteenth century were considered to be of much importance; and it would appear that the rest of the University bore them with impatience. Feelings of jealousy, indeed, had become so prevalent on account of this peculiar jurisdiction, that cases, as it would seem, had occurred of Candidates from the College being refused their Academical Degrees. To secure the peculiar privileges of the College, and at the same time to prevent the members of the Society from being molested in the enjoyment of *equal* rights with other members of the University, so far as Degrees were concerned, was the object of the Deed of Composition. In accordance with its terms, all other members of the University, in taking any Degree, are still sworn to observe it. But the privileges have ceased to be of any importance, and there is no probability of the members of the College being disturbed in the enjoyment of equal rights with all other Students. It is to be observed that as this Composition is a Deed of Covenants entered into by the University with another body though one of its own members, it does not fall within the competence of the Senate to make any change respecting it. But it may reasonably be doubted whether sufficient importance can any longer be attached to the question to justify the insertion of the Composition Deed, or any reference to its provisions in the Statutes of the University; and it certainly appears objectionable to continue the imposition of an oath intended to secure privileges which have ceased to have any practical significance.

Baker's MSS., Vol. xxv., p. 447.

REPORT.

TRINITY HALL.

We have entered into a minute consideration of the case of King's College, both on account of the peculiar circumstances and the great importance of the Foundation. But we have not thought it necessary to enter upon any lengthened or separate account of the other Colleges severally, as most of them bear so strong a resemblance to each other, both in their present state and past history, that any general observations we have to make upon them will for the most part readily admit of a special application. If we were to treat of each College separately, we should encumber our Report with a needless repetition of details. The Society of Trinity Hall, however, is so far of a peculiar character that it must necessarily form an exception to the rule we have adopted.

Origin of the College.

The Foundation of this College appears to have been occasioned by the ravages committed by the great plague throughout the country, and especially in the diocese of Norwich, during the years 1348 and 1349. It is stated in Blomefield's History of Norfolk (p. 68, folio edit.), that in the year 1349 there were 863 institutions to benefices in the diocese, the clergy dying so fast that they were obliged to admit numbers of youths, that had only devoted themselves for clerks by being shaven, to be rectors of parishes; and that Pope Clement VI., by a bull dated at Avignon, Oct. 13, at the request of Bishop Bateman, dispensed with sixty clerks, though they were only shavelings and but twenty-one years of age, to hold rectories and other livings, the Bull setting forth that it was done that Divine service might not cease in the diocese, he being acquainted by the Bishop that there had been and was no less than a thousand parish churches void of incumbents in this diocese. In the preamble to the grant of the rectory of Blofield, which had been given to the Bishop by a papal Bull for the maintenance of his table during his life, but which he now gave up for a term of years for the support of the College, and in particular for defraying the expense incurred by the erection of the collegiate buildings, it is recited, among other reasons for the gift, that the plague had carried off so many persons in the diocese that few were remaining at that time, by whom the duties of ecclesiastical superintendence could be discharged:—"Quodque pestilentia pridem ingruens tot subtraxit in locis "singulis et in nostra presertim diocesi, quod pauci remanent his diebus, per "quos onera poterint ecclesiastica gubernari. Idcirca ad honorem Dei omni-"potentis ac utilitatem, commodum, regimen et directionem reipublicæ et "specialiter nostræ Cathedralis Sanctæ Trinitatis nostræque dioceseos Norwicensis, "unum collegium scholarium juris canonici et civilis Sanctæ Trinitatis vocabulo "insignitum in Universitate Cantabrigiensi fundavimus" &c.—*Blomefield's Hist. of Norfolk*, p. 362.

Letters of Foundation.

The letters of Foundation, bearing date January 15, 1350—51, state that William of Norwich (Bishop Bateman), in honour of the Holy and Undivided Trinity, and of his holy Cathedral Church of Norwich, which is known to be called after the Blessed Trinity, for the advancement of the worship of God, of the knowledge of civil and canon law, and of the University of Cambridge; and also for the benefit, good government, and administration of the State, and especially of his church aforesaid and the diocese of Norwich, ordained, founded, and established a perpetual College of scholars in Canon and Civil Law in the University of Cambridge in the diocese of Ely, in which he had undeservedly attained the degree of Doctor. He decreed that the College should be called the College of the Scholars of the Blessed Trinity of Norwich, and the house which the said College should inhabit should be named the Hall of the Blessed Trinity of Norwich. He then made provision for the appointment of a Keeper of the College, and for the successive elections of Keeper and Fellows. The Foundation was confirmed by Thomas, Bishop of Ely, on the 20th January, and by the Chancellor and Masters of the University on the 21st January of the same year.

Royal Letters Patent.

The Letters Patent of 24 Edward III. enabling the Keeper, Fellows, and Scholars to hold the site of the College in mortmain, granted also permission to impropriate and hold impropriate the advowsons of benefices to the value of 100 marks per annum. Five other licenses of a similar nature were shortly afterwards granted by the same king; and we may reasonably conclude from this evidence, that the College was endowed by the Bishop with ecclesiastical property belonging to the see of Norwich.

Objects of the Foundation.

From this evidence we gather that the Bishop designed the College which he

had founded to be a nursery of clerks for the supply of the various wants of his diocese. Accordingly, in the Statutes of the College we find it provided, that every Fellow, besides the oath of general obedience to the Statutes, shall also swear that so long as he may live, to whatever dignity he may be raised, he will promote the honour and advantage of the church of Norwich and never the contrary; and that never, so long as he may live, will he act in any cause, action, or business against any Bishop of Norwich for the time being, nor against the church or Chapter of Norwich; and that when he shall not be engaged in scholastic exercises, so long as he may live, he will support in any cause, business, or suit the Bishop of Norwich for the time being, and the church and Chapter of Norwich, for a reasonable and sufficient salary as often as he may be called upon by them; with a proviso that when engaged on scholastic exercises, he shall not be withdrawn from such duties against his will in virtue of his oath.

Statutable requirements.

Another Statute provides, that in order that the Bishop and Chapter may be informed of the names of the persons who are so bound to lend them assistance, and in order that they may the more readily have recourse to such persons, every Keeper of the College shall yearly, at the Synod next after the Feast of St. Michael to be held in the church of Norwich, certify the Bishop, or in his absence the President of the Synod, and also the Prior and Chapter of the church, of the names and surnames of all the Fellows of the College then remaining, and of those who have vacated their Fellowships the year preceding, by means of two Letters Patent sealed with the common seal of the College; one of which letters shall be directed to the Bishop for the time being, and in his absence the President of the Synod; and the other to the Prior and Chapter. Another Statute directs the priests of the College to pray in their missa for the peace and tranquillity of the church of Norwich.

It may here be observed that the College, having had no other Charter of incorporation than the simple license of mortmain above referred to, followed however by the grant of several other Royal Charters in which the corporate character of the Society was assumed and acknowledged, yet at a distance of more than 200 years from its foundation thought it expedient to apply for an Act of the Legislature to remove all doubts as to its corporate existence, and to confirm it in the possession of all the usual rights incident to the corporate character. It is remarkable that, although several other Colleges appear to have had no more formal or regular Charter of Foundation than that which was conferred by Edward III. on this Society, yet, with the single exception of Gonville Hall, we are not acquainted with any other instance of an Act of Parliament or other authentic recognition being obtained to confirm the corporate rights and character which had been previously assumed to exist. The Act of Parliament to which we refer was passed in the first year of Elizabeth's reign, which, after reciting the Foundation of the College by Bishop Bateman in the time of King Edward III., and its continuance up to the period when the Act was passed, thus proceeds:—

Act of Parliament.

"And forasmuche as yf cavillacion shulde at any tyme hereafter be had or "used upon the simple wordes of that tyme, some question or doubt might aryse "of the validitie of the Corporacion of the said Colledge or Hall, and thereupon "daunger or hurte might growe as well to the said Colledge, as also to divers and "sundrie personnes, who hath heretofore received, and whiche hereafter shall "receive gyftes, grauntes, or leases of the said Colledge or Hall: for avoiding of "which inconvenyencys, and for the sure establyshment both of the Corporation "of the said Colledge, and of all other mens rights and interests, it may please the "Quenes Majestie, with the assent of the Lordes Spirituall and Temporall, and "the Commons in this present Parliament assembled, and by the auctoritie of the "same, That the Company and Fellowshypp which now be of the said Colledge, "or shalle hereafter be, shall and maye be a bodye polytike of themselfes, and "incorporated reallye and actuallye by the name of Mayster, Fellowes, and Scollers "of the Colledge or Hall of the Holie Trinitie in the Universitie of Cambridge, "to have being and continuance for ever."

From the alteration of the corporate style of the College, we may assume that the connexion between it and the church and diocese of Norwich had ceased for a long time, probably from a period very little removed from the date of the Foundation. Yet, that the legal and other assistance which the College was bound to render to the church and diocese of Norwich, had at first a real significance, which in these days it is difficult to understand, may be inferred from the declara-

Connexion between the College and the Diocese of Norwich.

REPORT.

tory Statutes which the Bishop added to the original code very soon after the foundation of the College. It is there declared that no one in virtue of his oath of obedience to the Statutes shall be bound to support the Bishop, Chapter, or Church of Norwich against his own father, mother, or other relative to the third degree inclusive, nor even against any stranger, to whom he may have been indebted for the greater part of his life for necessary maintenance, provided always that no one support even such relatives and friends against the Bishop, Chapter, or Church in any cause, suit, or business, according to the requirements and tenor of the said Statute. The relaxation of the law shows the reality and stringency of the original enactment. The Act, however, made no change in the Statutes of the College, which still continue in force to the present day in exactly the same form in which they came from the hands of the Founder in the year 1350–51. Yet although the several members of the College are still sworn to observe the Statutes in their original form, there is, perhaps, no other instance among our Collegiate Institutions, with the exception of King's College, where the alterations, which have been caused by the lapse of time in the general system of the University, have occasioned such a wide and entire departure from the intentions of a Founder, as is observable on an examination of the Statutes of this Society. This almost complete annihilation of the statutable regulations is due partly to the separation of the legal and clerical professions, partly to the diminished importance of Civil, and the entire discontinuance of Canon Law, but in a still higher degree to the prevalent disuse of the ancient system of scholastic exercises and the substitution of other modes of legal study and practice.

Distribution of Fellows into *Legistæ* and *Canonistæ*.

The first Chapter of the Statutes directs that there shall be 20 Fellows, of which 10 at least, and 13 at most, shall be *Legistæ*, and 7 at least, and 10 at most, shall be *Canonistæ*. The *Legistæ* or Students in Civil Law are in later documents called *Civilistæ*. Another Statute provides that every Fellow deputed to the study of Canon Law shall within twelvemonths from the day on which he was admitted into the place of a *Canonista*, cause himself to be raised to all the Holy Orders. A subsequent Chapter directs that any Fellow of the College, who, in the judgment of the majority of the Fellows, is in any way incapacitated from making proficiency in study to the honour of the College, or who on probable grounds is not expected to render himself capable of attaining the degree of Doctor in Canon or Civil Law, shall be forthwith, with the deliberation and consent of the major part of the Fellows, expelled from the society *with this proviso*, that all the Canonistæ in Priest's Orders shall retain their Fellowships in perpetuity, so long as they are willing to remain within the College, until they obtain benefices incompatible with the regulations of the Statutes, or by their bad conduct incur the penalty of expulsion, in conformity with the Statutes. It thus appears that an exception was made by the Founder in favour of those Fellows who were in Priest's Orders, with regard to the duration of tenure of their Fellowships.

Studies.

The third Chapter directs that every Fellow shall bestow himself with diligence on scholastic study until he be capable of giving lectures; and from that time he is, in the condition of a Bachelor, to apply himself continuously to the giving of lectures until he shall have gone through in the usual manner the books of Civil Law as a Legista, and the books of Decretals as a Decretista. The same Statute further enacts that the Keeper and Fellows of the College for the time being shall remain there so long as they behave themselves well, and study diligently, and it declares that they shall not have any title to remain in the College inconsistent with their being removed from the Society for any failure of obedience to the Founder's directions, and that without any redress by way of appeal.

Residence.

The Statute de Residentia et Absentia, after prescribing certain rules for obtaining leave of absence, which clearly exclude the idea of constant absence from the College on the part of the Keeper and Fellows, provides that a moiety of the Fellows shall always remain within the walls for the protection of the College and its property, and among these there shall always be two in Priest's Orders, for the performance of Divine Service. It is further directed that neither Keeper nor Fellows shall be absent *with leave* at any time when there is not general vacation, for more than a month continuously or discontinuously, except on the business of the College, or some necessary business of their own, to be approved by the judgment and assent of the Keeper and a majority of the Fellows.

Allowances.

The allowances of the Keeper and Fellows are fixed by the Statutes, those of the former, for a robe, commons, and other necessaries, being ten marks per

annum, and those of the latter being proportionately lower. Another Chapter directs that the whole stock remanent, after the payment of the necessary expenses of the College, shall be lodged annually in a chest as College treasure. This treasure is to be expended only on the building and repair of the dwellings, walls, or enclosure of the College, or of the Rectories belonging thereto, or in the purchase of perpetual rents for the same, or for the defence of its rights or other permanent benefit of the same, but not for the advantage of the individual members of the said College. It is further directed by a subsequent Chapter, and in language of the most solemn character (super quo Custodis et Sociorum, qui pro tempore fuerint, sub juramento præstito coram Domino, conscientias oneramus), that whenever the College shall possess sufficient surplus of annual income, it shall be obligatory upon it to augment the number of Fellows in proportion to the extent of such surplus income.

Scholarships.

In the additional Statutes which the Bishop gave to the College four years later, he directed that there should be two or three Scholarships founded, with all convenient speed, and that when the income of the Society should suffice for the purpose, the number of scholars should be increased to seven. These scholars, who appear to have had certain duties to perform in the way of attendance upon the Fellows, were to have three marks per annum for all their necessary expenses, and were to have a preference shown them in the elections to Fellowships.

Other Students.

Beyond the Fellows and Scholars it would not appear that the Bishop designed his College to be open for the reception of students. At least we find it directed by the Statutes (cap. 2), that without the unanimous consent of all the Fellows of the College, no one should be admitted to reside with them for any number of days successively, nor after admission should any one be allowed to remain within its walls any longer than the whole body of Fellows unanimously concurred in the permission. We think we are correct in putting this interpretation upon the words of the Statute, for we find that Dr. Caius, in a draft of the code which he at one time had designed for his College, extracts this passage from the Bateman Code of Gonville Hall, and places it under the heading "De pensionariis." Immediately afterwards he subjoins his own regulations for the conduct of "Pensionarii majores" and "minores," or what are now called Fellow Commoners and Pensioners.

Prohibition of Practice in the Courts of Law.

A provision, which sounds strangely to a modern ear, is contained in the third Chapter. It is there directed that no Fellow shall in anywise engage in pleading as an advocate, or in acting as an agent in the office of proctor, in public practice as a public pleader or proctor, nor even in particular cases, out of regard to any one, if by such practice as a pleader or proctor, he may be notably hindered from lecturing or study. "Nullusque Socius ad postulandum in advocatorum "officio, nec etiam ad procurandum in procuratorum officio, in causis communibus, "ut advocatus seu procurator communis, se occupet quovis modo, nec etiam singu- "lariter ex affectione, si tali exercitio postulandi seu procurandi a lectura vel "studio poterit notabiliter impediri." We have already seen that the Fellows were to be exonerated from the burthensome duty of rendering legal assistance to the Church and Chapter of Norwich in the event of such an engagement interfering with the ordinary course of the scholastic exercises. We may therefore safely conclude that the Founder relied entirely on domestic study within the University, and the exercises of the schools for the production of accomplished lawyers.

Holy Orders.

It has been stated that Bishop Bateman designed his College for twenty Fellows besides the Master, that he distributed them into Legistæ and Canonistæ, and that the latter were in all cases required to proceed to Priest's Orders. He further directs that the College should never be left without at least two Fellows in residence in Priest's Orders. The property, however, which he gave to the College (for his death at Avignon in 1355 probably prevented the completion of the endowment on the liberal scale which he originally designed), was found to be sufficient only for three Fellows and two Scholars, and it was not until the year 1581 that the College had means sufficient to act upon the Statute de numero augendo, when one additional Fellowship was created: there are therefore four Fellowships at the present time of the original foundation, but in what manner the regulations of the Statute as to the number in Priest's Orders, would operate in the absence of the full complement of twenty Fellows, it is difficult to determine; it may, however, be reasonably concluded that the Founder's intentions would not be satisfied with fewer than two Fellows so ordained.

But eight Fellowships on subsidiary Foundations have been added to the

REPORT.

four we have described. They are two by Simon Dalling in 1453, who were required to be Canonistæ, and consequently obliged by the Statutes of Bishop Bateman to take Priest's Orders: one by Robert Goodknape in 1508, which is also by the terms of its own Foundation to be held by a Priest: one by Walter Hewke in 1518 to be held by a "Secular Priest:" three by Richard Nicke, Bishop of Norwich, in 1557, two of which he desired should be in Priest's Orders; and the eighth by William Mowse, in 1586, which is unrestricted as to professional qualifications. It would, therefore, appear that eight of the twelve Fellowships at present existing ought, in conformity with the intentions of the respective Founders, to be held by clergymen.

P. 137 in the printed Book of University Statutes.
Evidence, p. 334.

It seems, however, by the statement which the College has sent to us, that the prohibition against lectures and degrees in Canon Law (Stat. Reg. Hen. VIII.) which, although superseded by Queen Mary, was revived in the reign of Queen Elizabeth, entirely destroyed the efficacy of those Statutes of the College which related to the duties of the Canonistæ, and this not merely as to their studies, lectures, and degrees, but also as regards the profession to which they should devote themselves. But even if it be allowed that the abolition of lectures and degrees in this branch of Law would exonerate the Fellows of the original Foundation from the duty of taking Holy Orders, which, indeed, does not appear by any means a necessary consequence, there would still be four Fellowships limited by the terms of their respective Foundations to persons in Priest's Orders, two of which, founded by Bishop Nicke, were instituted subsequent to the prohibition of King Henry VIII., to which we have referred.

Revision of the Statutes.

We have now adverted to the most striking features of this Foundation, as they are delineated in the Statutes and the directions expressed by the subsidiary benefactors. We think it must be admitted, that nearly all the regulations by which the duties of the several members of the College, as distinguished from their rights, were attempted to be defined, have lost their efficacy, and that a revision of the fundamental laws of the Society is urgently called for.

Evidence, p. 338.

The Master and Fellows inform us, that "within the last fifty years the Society "has frequently entertained the idea of obtaining new Statutes, in conformity with "their practice," but they add that "any proceedings on their part would be pre-"mature while changes in the general constitution of the University, and in the "regulations of the Faculty, to which so many of their Statutes refer, were in con-"templation."

Pp. 55, 91. Recommendations.

In another part of our Report we have stated our opinions as to the best mode of reviving the legal studies of the University. We are of opinion that the greatest benefits may arise to the University and to the Country by a re-organisation of the Faculty of Law, with which this College has always been intimately connected. It is of great moment that the connexion which has always subsisted between the University and the great profession of the Law should be maintained and extended. For this reason we are not disposed to revert to the strict conditions imposed by the several Founders of this College with regard to ordination. That the College was founded for the encouragement of legal studies, and that the professions of the Church and the Bar have been irrevocably disjoined, must be accepted as facts. Much weight also must be assigned to the long-continued usage of the College, by which two only of the Fellows are required to be in Priest's Orders, to whom the principal duties of Collegiate instruction and management have been usually deputed. We are, however, of opinion that, if the remaining ten foundation Fellowships are allowed to be held by laymen, it would be expedient to limit their tenure to a term of years. Twelve years from the standing requisite for the M.A. or B.C.L. Degree, would appear to us to be a reasonable time. It deserves to be noticed that all the Colleges in Cambridge, which have been founded since the Reformation, required in their original codes that the Fellows should cease to derive any advantage from the College after a limited time. In Emmanuel and Sidney Sussex Colleges, the time fixed was the standing requisite for the D.D. Degree. In both these Societies, however, a relaxation of this rule enabling the Fellowships to be held for life under the usual conditions was obtained at a very early period. In Downing College, it is directed by the Charter, "that the lay Fellowships" (two only are clerical and tenable for life) "shall be held only for the term of twelve years respectively, and "shall, within that time, be vacated by those who are in the Law line, by their "not being called to the Bar within eight years after their elections, and by those "who are in the Medical line by their not taking the degree of Doctor of Physic "within two years after they are of sufficient standing; likewise by marriage, or

" by entrance into Holy Orders, at any time within the first six years after their " election." REPORT.

An adaptation of the Statutes of the College to its modern practice, with the single exception of the alteration in the tenure of the lay Fellowships, from a perpetuity to a term of years, would appear to us to be highly expedient. Provision should also be made, that the Fellows should pursue the profession of the Law. This at present is generally the case in practice; but we are not aware of any statutable regulation by which the neglect of the rule could be obviated: indeed, it would rather appear, as we have already seen, that forensic practice was discouraged by the Founder. We are, however, very sensible of the inadequacy of any such regulations to secure the objects at which they aim; and we rely with much more confidence on the controlling influence of public opinion, and the spontaneous efforts of the members of the several Colleges, to promote both the professional and general studies which may be indicated, either by the terms of particular Foundations, or by the wants and requirements of modern times.

REPORT.

APPROPRIATIONS TO SCHOOLS.

In considering the limitations affecting the elections of several of the Fellowships and Scholarships at different Colleges, we reserved for future remark the case of schools having claims upon such foundations. The scheme which we have recommended for the reform of King's College will have indicated the mode in which we should be disposed to deal with such appropriations. We have already stated our opinion that it would be very advantageous if local claims and also those of name or kindred should cease to be enforced. The case of schools seems to require a different treatment. We recognise in such foundations an interest sufficiently definite and distinct to entitle them to more favourable consideration.

Recommendation.

The principle of commutation, by which Exhibitions conferred by the authorities of the school on scholars proceeding to the College should be accepted in lieu of the existing claims to Fellowships and Scholarships, would in our opinion be found to work beneficially for both parties. For the schools it would be advantageous if they had an indefeasible right to confer pecuniary rewards upon their best scholars proceeding to the particular College at fixed times, in place of the contingent reversion to vacant Fellowships at long and uncertain intervals. In making such a commutation, regard should be had to the number of persons likely to proceed from the school to the University; and it should also be borne in mind that the Exhibitioners would be equally eligible with other candidates to the open Fellowships and Scholarships on the Foundation of the College; and as the Scholarships would be tenable together with the Exhibitions thus commuted, it would not be reasonable that the latter should continue to be of equal value with the original Scholarship or Fellowship. In order to replace the income withdrawn by the commutation which we have indicated from the existing Fellowships and Scholarships, we should see no objection to make available the sums at present devoted to the maintenance of open Exhibitions, or such as are not restricted to particular schools. In many Colleges these are of considerable value, and we do not doubt that they would be productive of much greater good if bestowed in the way of Foundation Scholarships, according to the mode we have suggested.

Removal of all Restrictions on Fellowships and Scholarships.

For the efficient working of the Collegiate system we think it highly desirable that in every College there should be a competent number of well endowed Fellowships and Scholarships, each open to all the subjects of Your Majesty, wherever born, in the election to which no other qualification should be regarded but merit only. In attaining this object we see no serious difficulty except such as is presented by the claims of schools. All other restrictions upon election which are found to exist may, we think, be removed without violating any principle of justice or equity.

Recommendations.

We think it expedient that an authority should be constituted capable of dealing with this particular class of appropriations, both with power to require the necessary information and to determine between the relative claims of the School and the College. It would be found we believe that some schools had long ceased to furnish claimants for the benefactions designed for them. Some perhaps may have entirely disappeared. An authority so constituted might also determine the relative number and value of the Fellowships and Scholarships to be left remaining. The documentary evidence which we have collected and caused to be printed, more particularly the return made to the Commissioners of King Henry VIII., will supply to some extent the means of determining what the particular number in each case should be. In connexion with this point we may also add that the Charters and Statutes of some of the Colleges, which direct the augmentation of the number of Fellowships in proportion to the increase in the value of the College property, are perhaps deserving of more consideration than they have received in all cases. We have not succeeded in obtaining all the information which is necessary to come to a just conclusion on this subject, and are accordingly compelled to limit ourselves to an expression of the principles upon which we think that any review of such claims ought to be conducted.

The expediency of constituting such an authority as that we have suggested will appear from the following statement in the reply received from the Master and Fellows of Pembroke College, a society which is by no means the most embarrassed by the restrictions annexed to subsidiary foundations.

Evidence, p. 323.

The Master and Fellows say: "In respect to the question whether there are

" any Fellowships, Scholarships, or Exhibitions, attached to the College, in the " conditions or application of which the Master and Fellows would think it advan- " tageous to obtain alterations or modifications by competent authority, with the " view of giving greater effect to the intention of the Founders, and rendering " them more practically beneficial, the Commissioners will have observed that the " Master was authorized by the resident Fellows to express their concurrence in " the statement made by him, April 5, 1851, in reply to the queries 11, 12, and " 13, put to him December 20, 1850; and that statement comprehends all that the " College has to say in direct reply to this Query. It considers that any " alterations to be made in conditions mutually affecting the College and any " School in connexion with it, of necessity require the concurrent consent of both " parties. An obvious scheme presented itself as respected the Ipswich Bye- " Fellowship and Scholarships, which it was thought would be secure of meeting " with the approbation of the Managers of the Ipswich School; but any such " scheme must of course be preceded by discussion and arrangement with them. " If a competent authority existed for the settlement of the several matters touched " upon in the part of the Master's statement here referred to, the College " would gladly endeavour to effect an equitable and satisfactory settlement with " the Trustees, Governors, and Managers of the several Schools, with which it has " any connexion, without losing sight of the design of the benefactors who estab- " lished that connexion with the intent to benefit both parties. The Master and " Fellows entertain no doubt that the alterations, which they themselves desire, " would be at once for the advantage of the College, of the Schools, and of all " immediately interested in their well-being."

SCHOLARSHIPS.

We proceed to enumerate the several Scholarships at the different Colleges, as far as the information in our possession will enable us to do so.

St. Peter's College.

At ST. PETER'S COLLEGE, the total number is 68, of which 30 are in some measure restricted. The Students of Christ's Hospital have a preference to four founded by Lady Mary Ramsey, in 1601. Twenty-five are in the patronage of Lord Melbourne, which were founded by Dr. Bernard Hale, in 1662. One founded by Mr. Miller, in 1683, is appropriated to scholars from Huntingdon school. The remaining 38, on 13 different Foundations, are unrestricted.

As to the mode in which these Scholarships were endowed, our information is very imperfect. It is comprised in the following extract from the reply to our inquiries addressed to the Society:—

Evidence, p. 314.

" The Scholars on the several Bye-Foundations receive respectively sums varying " from one shilling to five shillings and three half-pence per week, subject to de- " ductions for non-residence; but the scholars on the Gisborne Foundation " receive 30*l.* per annum. Several Scholarships on different Foundations may be " obtained by the same person.

" The deductions for non-residence are paid to the Domus Fund. Some of the " Stipends on Supplemental or Bye-Foundations arise from estates which are " administered by the general authorities of the College; others are charged upon " property belonging to various individuals and public bodies. Almost all the " Scholarships are fixed in yearly value by the terms of their respective Foun- " dations."

Clare Hall.

From CLARE HALL, we have received no information of any kind. We learn, however, from the Cambridge Calendar, that there are more than 45 Scholarships at this College, of which 41 and upwards are open, the remaining four being restricted in the following manner:—

Two founded by Mr. Cave, of the value of 1*l.* 1*s.* per week during residence, are appropriated to scholars from Wakefield school. One worth 12*s.* per week, during residence, is appropriated to a scholar from Hull school. The fourth, of the value of 40*l.* per annum, was founded by Benjamin Cherry, Esq., and is appropriated to a native of the county of Herts. It is open to general competition, in case no candidate from the county appears to be duly qualified.

The value of the remainder is thus stated:—

REPORT.

Four of 50*l.* per annum . . } for four years, with 3*s.* 3*d.* per
Four of 20*l.* „ . . } week, during residence.
One by Sir John Trott, 20*l.* per annum.
One by Mr. R. Scrivener, 14*l.* per annum.
One by Rev. J. Hinman, 30*l.* per annum.
Thirty and upwards, varying from 2*s.* to 6*s.* per week, during residence.

Pembroke College.

At PEMBROKE COLLEGE, the total number of Scholarships is 30, of which 16 are appropriated. They are—

Three by Archbishop Grindal, value 28*l.* per annum, to St. Begh's school.
Two by William Smart, . . } value 5*l.* per annum to Ipswich
Four by Ralph Scrivener . . } school.
Six by Mr. Parkin, value 50*l.* per annum; 5 to Merchant Taylors' school, 1 to Bowes' school.
One by Dr. Stuart, value 80*l.* per annum, to Merchant Taylors' school.

It may here be observed that besides these Scholarships there are many valuable Exhibitions at this College for Students from Merchant Taylors' school and Christ's Hospital. The Master and Fellows have expressed a strong opinion to us that it is injurious to the College to have so many Students at their College from two particular schools as are necessarily attracted by the largeness of the allowances.

Evidence, p. 320.

"Among other objections," it is said, "is the repugnance on one hand to having "many of them as Fellows of the College at the same time, lest the College itself "should come to be a kind of appendage to the Schools, while on the other hand "there is an equal repugnance to rejecting them if deserving.

"The College being a small one, the number of Scholars admitted from these "two Schools forms a considerable portion of the whole number of Students.

"It would be a great advantage to the Schools, if by means of an equitable "arrangement they could have the liberty of sending Scholars with considerable "Allowances to other Colleges."

The Master also remarks that "since the issuing of the Commission the College "have had an application from the Managers of the School for the consolidation "of the Ipswich Scholarships. Pending the Commission, the College have not "deemed it respectful to the Queen to entertain the proposal. In default of an "heir to the Foundress, the Crown is their Visitor."

The 14 open Scholarships at this College are—

Six of the original Foundation, of the value of 28*l.* per annum.
Seven by Dr. Watts, } the 4 senior of the value of 14*l.* per annum.
One by Thomas James, } the 4 junior of the value of 12*l.* per annum.

p. 318.

For fuller information on this subject, reference must be made to the replies of the Master (Dr. Ainslie), from whom we have received every assistance we could desire in the whole prosecution of our inquiry.

Caius College.

From GONVILLE and CAIUS COLLEGE we have received scarcely any information. It appears from the University Calendar that the total number of Scholarships at this College is 45, varying from 60*l.* a-year to 8*l.* in value. Of these 20 were founded by Dr. Caius, and by the 15th chapter of his Statutes are thus limited:—

Six to the city of Norwich.
Six to the county of Norfolk.
Three to London.
Two to Herts.
One to Bedfordshire.
Two to Cambridgeshire.

Of other Foundations, two are limited to Norfolk, four to the City of Norwich, and six by Mr. Perse to scholars from his school in Cambridge. This would leave, therefore, only 13 open Scholarships.

There is, however, a scarce book, called Ives' Select Papers, in which may be found the Annals of this College, written by Francis Blomefield, the historian of the county of Norfolk, and formerly Fellow of this Society. This tract we have caused to be printed, and from it we learn that the following persons founded *open* Scholarships there, viz.:—

In the year 1503, Thomas Willows, one Scholarship.
„ 1540, William Gale, two Scholarships.
„ 1585, Joyce Frankland, twelve Scholarships.
„ 1596, Richard Willison, two Scholarships.
„ 1618, William Branthwait, four Scholarships.
„ 1627, Dr. Harvey, one Scholarship.

We also find in the same account the following Foundations of *appropriated* Scholarships, viz.:—

1504, One by Henry Carter for the Diocese of Norwich.
1507, One by William Sigo, for the same.
1540, Three by Thomas Atkin and Margery Hore, for the same.
1564, Four by Joan Trapps: one or more of the scholars are to be chosen by the Governors of the Free School of Sandwich, Kent.
1570, Three by Peter Hewett, for the diocese of Norwich, the first to be chosen by the Master, the second by the President, and the third by the next Senior Fellow.
1570, One by Humfry Bysby, for the school of Eye, in Suffolk, or a scholar from that neighbourhood.
1570, One by Archbishop Parker, to be chosen by the Archbishop of Canterbury, or, *sede vacante*, by the Dean and Chapter, the scholar to be born in Canterbury, and educated at the school there.
1599, Four by William Cutting, for scholars born in Norfolk.
1615, Six by Stephen Perse, with a preference to those who have been at least three years at his school in Cambridge.
1626, Four by Dr. Gostlin, for scholars born in the city of Norwich.
1639, Three by Matthew Stokys, two of which are to be scholars born in the county of Norfolk or city of Norwich; the third is to be nominated by the Bishop of Ely, within two months after a vacancy, otherwise the election devolves to the College.

These, with the Scholarships of Dr. Caius, described at length in his Statutes, would make a total number of 73. In what form these Foundations now exist, we are unable to state: possibly in some cases one or more may have been consolidated by the College, and so the number may have been reduced to that mentioned in the University Calendar.

From the Society of TRINITY HALL we have received the fullest information, for the particulars of which we must refer to the two papers sent to us by the Master and the Bursar. The total number of Scholarships at this College is 16. Two founded by Dr. Allen are of the annual value of 18*l.* each.

Trinity Hall. Evidence, p. 332. p. 341.

There are, moreover, three other classes of Scholarships.

The first of which, three in number, are of the value of 50 guineas each per annum.

The second, also three in number, are of the value of 30 guineas each per annum.

The third, being the remaining eight, are of the value of 12 guineas each per annum.

They were founded as follows;—

Two by Bishop Bateman, A.D., 1354.
One by Simon Dalling, A.D., 1453.
One by Mr. Spicer.
Two by Bishop Nicke, A.D., 1557.
One by Lawrence Maptyde, A.D., 1558.
One by Gabriel Dunne, A.D., 1560.
Two by Dr. Hervey, A.D., 1562.
One by Archbishop Parker.
Two by Dr. Bushby, 1577.
One by Dr. Mowse, A.D., 1586.

We are informed by the Society, that with the exception of Dr. Allen's Scholarships, the foundations have not been kept distinct since the year 1635. It appears also that the appropriations and preferences which were designed by some of the Founders have not been attended to.

REPORT.

Corpus Christi College.

From CORPUS CHRISTI COLLEGE we have received no distinct information. The late Master of the College, Dr. Lamb, in a republication of Masters' History of the College, has, however, furnished all the particulars relating to the Foundations of the Society. From this source we learn that there are 60 Scholarships, 28 of which are unappropriated. There are no Scholarships belonging to the original Foundation, but in the year 1548, in the Mastership of Dr. Parker (Archbishop of Canterbury), six were founded by the Society, two others having been founded in the previous century in consequence of the benefactions of Mr. Brocher and the Duchess of Norfolk respectively. In 1559 the Hon. Roger Manners gave to the College the rectory of East Chinnock for the support and maintenance of four poor scholars, three of whom are to be allowed 16*d.* per week for commons during residence, and the fourth, called a Sizar, is to have 10*d.* per week for his allowance, whilst all four are to enjoy the same privileges with other scholars. The value of the rectory in the year 1695, is stated to have been about 70*l.* per annum. We observe that the impropriate tithes belonging to the College have been commuted under the recent Tithe Commutation Act for 150*l.* per annum. Mrs. Alice Caston, in 1618, left one rent-charge of 12*l.* per annum, and a second of 10 marks, for the founding of three Scholarships in this College, each to be allowed at the rate of 2*s.* 3½*d.* per week, and treated as the other scholars. Dr. John Spencer, Master of the College, in 1687, purchased an estate at Elmington, a hamlet of Oundle in Northamptonshire, consisting of 316 acres of land, and worth at that time 200*l.* per annum. Out of the profits of this estate he left 10*l.* a year to a scholar to be appointed by the Master. By the Cambridge Calendar we learn that Dr. Spencer's Scholar receives now 20*l.* a year. Bishop Mawson, formerly Master of the College, by a codicil to his will, dated September 17, 1770, gave to the College 6000*l.* stock, New South Sea Annuities, directing the dividends to be accumulated until an estate of the clear yearly value of 300*l.* could be purchased. With this he directed 12 Scholarships to be founded, eight of which should be not less than 20*l.* per annum each, and the other four 30*l.* each. An estate was purchased in 1789, called Holton Hall, consisting of 531 acres of land in the parishes of Holton, Higham and Stratford in Suffolk, and the investment having proved a very advantageous one for the College, in 1802 the Scholarships were advanced, four of them to 40*l.* and eight to 30*l.* a year, which appears from the Cambridge Calendar to be still their value, Of the remaining 32 Scholarships seven are limited to candidates born in particular places, and 25 to persons coming from certain schools. The endowments of these Foundations appear to have been for the most part small rent-charges.

King's College.

Evidence, p. 352.

The designation of Scholars may be applied to those probationary Fellows of KING'S COLLEGE who have not yet completed their first three years of probation. The number of persons in this condition is variable, and may be taken at present at about ten. The dividends of a probationary Fellow are 27*l.* 4*s.* per annum. Those of an *actual* Fellow, while still an Undergraduate, are 78*l.* 19*s.* 5*d.* On taking his B.A. degree, he receives 117*l.* 5*s.* per annum. All members of this Foundation have their commons in Hall free of expense, besides a certain weekly allowance in the Butteries.

Queens' College.

Evidence, p. 355.

We have no account given to us of the original Foundation of the several Scholarships at QUEENS' COLLEGE. By the Statutes it appears that they were originally eight in number. We are informed, however, by the Society that the Scholarships have been on two occasions consolidated by the College. It is stated that they are at present 15 in number, 11 being of the value of 15*l.* per annum, two of 40*l.*, and two of 50*l.* It does not appear that they are fettered by any restrictions: the local qualifications required in the eight Foundation Scholars have been abolished by Your Majesty's Letters Patent.

Catharine Hall.

Evidence, p. 363.

In ST. CATHARINE'S HALL there are 43 Scholarships, 13 of which are appropriated, and the remaining 30 open. For fuller particulars respecting these Foundations we refer to the communication received from Dr. Philpott, Master of the College. It appears to be the practice of this Society to consolidate several Scholarships. We have not the means of stating what is the amount of charge incurred by the College for the maintenance of these Foundations. Only three Scholarships of inconsiderable value are limited to particular schools, two founded by Mr. Holway, and one by Mr. Frankland.

From Jesus College we have received no information. It appears from the Calendar that there are 49 Scholarships at this College, of which 15 on the original foundation, and four others of inconsiderable value are open to all candidates. Eighteen are limited to the sons of clergymen, 16 to the orphans, and two to the sons of living clergymen. Seven are locally restricted, and the remaining five to particular schools. Report.

In Christ's College there are 47 Scholarships of the original Foundation, concerning which it is directed by the Statutes that there be always 23 scholars of the nine northern counties and no more, and that there may never be more than three scholars of any one county in England at the same time. The Master, Dr. Cartmell, informs us that in practice there have not been usually so many as 23 Scholars of the nine counties from a want of properly qualified candidates. Christ's College. Evidence, p. 375.

The value of all these Scholarships is 15*s.* per week each during residence.

It appears from the financial statement sent to us by the College, that on an average of the last seven years there has been distributed among the Foundation Scholars as residence money 524*l.* 13*s.* 6*d.*, and also on account of Mr. Tancred's benefaction a further sum of 38*l.* 4*s.* 1*d.* p. 392.

King Edward the Sixth added three Scholarships of the same value as those of Lady Margaret's Foundation, and unrestricted. p. 376.

Sir John Finch and Sir Thomas Baines founded two Scholarships, with preference to the kindred of the Founders, but in other respects unrestricted. The Stipends arise from sources distinct from the Foundation of Lady Margaret;—they are of the yearly value of ten pounds each. p. 377.

Two Scholarships were also added to Lady Margaret's Foundation; the one by Sir Maurice Berkeley, restricted to the County of Gloucester; the other by Dr. Patynson, restricted to the Diocese of Durham. Both were added in the reign of King Henry VIII. p. 378.

There are many other Exhibitions, or unincorporated Scholarships, subsequently added, with various restrictions; of which a full account will be found in the Evidence of the Reverend Dr. Cartmell, Master of this College.

At St. John's College there are 124 Scholarships, of which the following are entirely open, viz.:— St. John's College.

Twenty-seven on the original foundation. Three by Henry Billingsley, 5th Feb.,*33rd Eliz.

One by Robert Clarke.

One by Mrs. Frances Jermin. By Will dated 10th Sept., 23rd Eliz., she directed that so much should be given by her executors as should be deemed sufficient for the Foundation. They determined that a rent-charge of 5*l.* per annum was sufficient for the purpose, which was charged upon an estate in Suffolk accordingly. The Deed is dated 12th Oct., an. Eliz. 24.

The following are the restricted or appropriated Scholarships:—

Four by Mr. Ashton appropriated in the same manner as his four Fellowships described above, page 163.

Two by Mr. Aston, Chief Schoolmaster of Shrewsbury school.

"Election shall be made of the scholars of the sd. free school, in manner "& form following, viz. First, of such scholars, who have been or shall be "born in the sd. town of Salop. 2d. And for default of such, of such as be "or shall be born in the suburbs of the same, or in the Abbey Foriate adjoyn-"ing thereunto, w^ch^ be or shall be the legitimate sonns of burgesses of the "same town, if they be found meet & apt for such preferments. 3d. And for "default of such then choice to be made of such scholars of the sd. school, "as were born within the franchises of the sd. town. 4th. Or in default of "such, then choice to be made of such scholars, of the sd. school as have been "or shall be born within the parish of Cherbury in the county of Salop. "And that every such election shall be yearly, & from time to time made by "the master & seniors of the sd. College for the time being, being of such "scholars as be or shall be sent from the sd. school to the sd. University of "Cambridge. Concerning the w^ch^ scholars, the said bayliffs with the sd.

* See note, p. 160.

REPORT.

" head schoolmaster for the time shall give notice of by their letters to the " sd. master & seniors of the aforesd. College, to be burgesses sonns, or the " sonns of some others in those orders before specify'd. And the sd. master " & seniors shall elect the sd. scholars according to those orders, such as are " godlyest, poorest, and best learned. Provided always, that no person, who " hath been or shall be a scholar of the sd. free grammar school shall be at " any time hereafter sent, notify'd, elected, or admitted to the sd. two scholar- " ships, or either of them being void as aforesd: unless he or they shall have " been a scholar or scholars in the highest form of the head schoolmaster " there, by the space of one whole year at the least."

Two by Mr. Beresford restricted in the same manner as his two Fellowships described above, page 160.

Four by Sir Marmaduke Constable thus restricted:

" The s^d four scholars or disciples for S^r Mar. Constable shall be taken & " chosen of such as shall be of the name & kindred of the s^d S^r Marmaduke, " if any such be able in the University of Cambridge. If none such can " be found, then they shall be elect and chosen of such as are born, or here- " after shall be born within the county of York, or the diocese of the same. " And for default of such, they shall be elect & chosen of such as be most " able & apt in the University of Cambridge, after y^e discretion of y^e master " and fellows.

Five by John Dowman, LL.D., the nomination of which was originally vested in the Warden and Brethren of the Guild of the name of Jesus, &c., in the parish church of Pocklington."

" The same privilege is conferred upon the schoolmaster, vicar, &c. of Pock- " lington, by an Act of Parliament, an. 6 Edw. 6, in these words:

" From henceforth, as often as the sd. 5 scholars' rooms, or any of them " within the sd. Coll. of St. Joh. shall fortune to be void by any means, " that then it shall & may be lawfull unto the master of the free grammar- " school in Pocklington & his successors for ever, with the vicar or curate " or churchwardens of the parish church of Pocklington for the time being, " to nominate, elect, & appoint such like number of scholars to be taken out " of the sd. free school of Pocklington as will then supply the roome or " rooms of the sd. scholar or scholars being void & the same scholars so " being elected nominated & appointed, with the names of them and every of " them, to send & present to the sd. master & fellows & scholars, in like " manner & forme, & in as large & ample manner as the master, warden " and brethren of the fraternity or guild in Pocklington, or any of them, ever " might or should, or ought to have done, at any time before the dissolu- " tion of the sd. guild. And that the sd. scholars & every of them so to " be elected, nominated, & presented, shall be without delay received & accepted " & taken into the sd. College, & shall have such like commodity, exhi- " bition, privilege, & erudition in the sd. College as any other scholar of " the free grammar-school, or any other hereafter or heretofore being nomi- " nated, appointed, or presented by the master & wardens of the said guild, " have, had, hath or ought to have, according to the composition of Dr. " Dowman."

In making this nomination a priority is given to candidates born in Yorkshire, especially such as are of the name and kin of the Founder In default of these, scholars of Pocklington school are to be taken, provided they be properly qualified, with a recommendation in favour of persons born near the places where the property given to the College by this Founder is situate.

Two by Mr. Ducket: the first limited to a certain parish in Holderness, and in default to some part of the same, and in default to the county of York with a preference to the vicinity of Holderness. The second Scholarship is limited to certain places in Kent, and in default of candidates from thence, to the county of York.

Two by Dr. Fell, limited in the same manner as his Fellowships described above, page 163.

One by Mr. Gregson, strictly confined to the county of Lancaster, with a preference to the town and parish of Preston, in the hundred of Amounderness; and in default of such, a second preference is given to vicinity to this parish.

Two by Mr. Ambrose Gilbert, May 6, 1642: originally intended for a Fellow and two Scholars; by a Decree in Chancery, an. 1647, 18 *lib.* per ann. allowed for two Scholars only.

" Mr. Gilbert gave a certain rent-charge of 18 *lib.* per an. out of a messuage " or tenement, called Marsh-House, and all the lands, &c. in the parish of " St. Osyth, in the county of Essex, upon condition that the master, fellows, " & scholars & their successors shall, upon the day of their next election, " according to the statutes of the College, elect & choose two scholars, w^ch^ sd. " two scholars so to be elected shall be of the sirname of Gilbert, or 2d Tor- " kington. And if there be none of the names then eligible, then, in default " thereof, the scholars to be elected out of the school of Colchester in Essex; " and for default of such, then the sd. scholars to be chosen out of such as " are of the town of Orsett in the sd. county of Essex, or born in the county " of Essex. And that the sd. scholars to be from time to time elected " & chosen shall be equally capable of & enjoy all emoluments, benefits, " privileges & profits, with other scholars of the foundation, and the founda- " tion to be deemed the foundation of Mr. Ambrose Gilbert, & the sd. scholars " to be esteemed & stiled Mr. Ambrose Gilbert's scholars."

Two by Mr. Hebblethwaite, described above, page 164.

Two by Dr. Keton, with the *same restrictions* as his Fellowship, described above, p. 162.

One by Mr. Robert Lewis and Mary his wife, founded for 100*l.*, bequeathed by will, October 12, 1620.

" In all succeeding times, for ever, when & so often as the sd. roome & " place of the sd. scholar of Mr. Lewis of Colchester & Mary his wife shall " be void, by whatsoever cause or occasion, if there be then within the sd. " College any scholars or scholar formerly of the sd. free school of Colchester " aforesd. & the sonn of a free burgess of the sd. town of Colchester, " qualify'd according to the statutes of the sd. College: the sd. master & " seniors of the sd. College for the time being shall & will make choice of some " such the most towardly & fit in all respects, for the place. And if it shall " happen there shall be no such sonn in the sd. College, w^ch^ have been of " the sd. freeschool, then it shall be lawfull to & for the bayliffs of the " sd. town of Colchester, the generall preacher of the sd. town, the school- " master of the free school there, for the time being, or any three of them, " to nominate & present to the sd. master & seniors of the sd. College " for the time being a sufficient scholar of the sd. freeschool of Colchester " to succeed into the sd. place, & to be by the sd. master & seniors elected " and admitted.

" Which sd. scholar is to have 12*d.* per week, & all other profits and " allowances as any other scholar of the sd. Coll. has or shall have. For " the maintenance of w^ch^ sd. scholar, the town of Colchester charge them- " selves with an annuity of 7 *lib.* per an."

Four by John Williams, Lord Keeper of the Great Seal of England, thus restricted:

" Imprimis, that the four scholars of this foundation, upon the avoidance " & vacancy of them, be for ever chosen out of the grammar school of West- " minster, out of those four scholars of his Ldp's foundation there, & re- " sideing in the sd. school at y^e^ time of their election. 2d. And that two " of those four scholars aforesd. shall be born within some of the countys " of Wales; and the other two within the diocess of Lincoln. 3d. And for " want of such to be found in the sd. school, born as is aforesd. then the " vacant place to be supply'd (for that time only) of such as shall be born " within the liberties of Westminster, being scholars in the sd. school of " Westminster of the foundation aforesd. at the time of the sd. election (4) to " be for ever made at or about the feast of the Nativity of St. John Baptist, " by the dean of Westminster for the time being, with the schoolmaster of the " sd. common grammar school, & one of the fellows of his Ldp's in St. John's, " to be appointed always by the master of the sd. College, as occasion shall re- " quire. 5^th^ And the sd. fellow so nominated & appointed by the sd. master " to receive towards the charge of his journey toties quoties of the treasurer " of the church of Westminster twenty shillings, & receive nothing of the

REPORT.

" College of St. John's in that respect. 6. And also that the said scholars, and " every one of y^m^ so elected shall and may, after their election into any the " sd. vacant rooms & places, continue still at Westminster school, until " the vigil or eve of St. Michael the archangell next following their election: " or shall & may at their own free choice, presently upon their election come " and be admitted into the sd. College, & live there at the only cost & " charge of their friends, until the vigil or eve of St. Michael aforesd. or " at the farthest the next day after the election of scholars in the sd. " College, and upon the sd. day to be always admitted into the sd. rooms or " places void, & from thenceforth to be had and taken to be reall and actuall " scholars of this foundation, & to enjoy the severall chamber-rooms erected " by his Ldp. for the sd. scholars, as also all allowances, emoluments, and " privileges, as other then actuall scholars for the Foundress do."

It appears that there were originally two Fellowships also on this foundation, but the estate given by the founder being soon discovered to be inadequate, the Fellowships were suppressed at a very early period.

Eight by Dr. Lupton, described above, page 163.

Four by Cardinal Morton, thus limited—

One to the county of Kent.
One to the county of Cambridge.
One to the county of Stafford.
One to the county of Dorset, with this proviso:—

That in default of fit candidates from any one of these counties a candidate from one of the other three should be taken, the electors recurring always on a vacancy to that county from which there has not been an election for the longest time.

Two by Bishop Dee, limited in the same manner as his Fellowship, described above, page 164.

Two by Dr. Riplingham, limited to the county of York.

Four by Mr. Robinson.

" Mr. Robinson left by will a messuage in Birchington &c., in the Isle of " Thanet, for the maintenance of two fellows & two scholars in St. Joh. Coll. " The sd. fellows & scholars to be born in the Isle of Thanet, & brought " up in Canterbury school, or, in default of such, other scholars born in " Kent, & of the sd. school.

" By a decree of Chancery (Nov 22, an. 1652, & upon consent of parties,) " it is ordered, that, whereas the sd. lands were then sunk to 50 *lib.* per an. " & not able to support the charge, the College should maintain (instead of " 2 fell. and 2 scholl.) four scholars, according to the direction of the donor, " in the aforesd. will, for ever. And should bestow the profitts and revenue " of the sd. messuage for ever on the sd. four scholars, according to the direc- " tion of the donor."

One by Mr. Spalding.

" Will. Spalding, of Tamworth, gave a legacy of 60 *lib.*, and 20 *lib.* was " added by Mr. Spalding of Barton in Suffolk, his brother, for maintaining " one scholar; founded March 2, an. Eliz. 42.

" The w^ch^ sd. scholarship he willed to be bestow'd, upon some one scholar, " which shall come from the grammar-school of Bury St. Edmunds aforesd. " as by the sd. will & testament more plainly doth appear. And lastly, we, " the sd. master, fellows & scholars of St. Joh. Coll. aforesd. do give & " grant unto the sd. John Spalding, during his life, the nomination of the " scholars w^ch^ hereafter shall be preferr'd unto the sd. scholarships, according " to the will of the sd. Will. Spalding deceased, so often, as the sd. scholar- " ship shall fall void, during the life of the said John Spalding. Always pro- " vided, that the sd. scholar so nominated by him, the sd. John Spalding, " be qualifyd for learning & manners according to the statutes of the sd. " College. v. White vellum Booke, p. 300.

" In consideration of Mr. Spalding's 20 *lib.* augmentation, this scholarship " is to be equal to y^e^ foundation. ib. p. 301."

One by Dr. Thimbleby, limited in the same manner as his Fellowship, described above, page 163.

One by John Thurleston, Clerk, M.A., of Hymsworth, in the county of York, thus limited :—

"The sd. Mr. Thurleston to have one scholar for ever—in such sort, as "other scholars of the sd. College now have, or hereafter shall have; with "all the profits & commodities now used, or hereafter to be used or had, "by any scholar coming out of the school of Sedberg of Dr. Lupton's foun- "dation.—The sd. scholar to be chose, of such as were or shall be born "within the parishes of Wakefield, Felkirke, or Hymsworth, in the county "of York. And chiefly such as have or shall learn in the school of Hyms- "worth by the space of three years, & being of the kindred of the sd. Mr. "Thurleston. And for lack of such, such to be chosen, as were born nigh, "or in one of the sd. three parishes, or at least within the county of "York.

"For the performance of w^ch^, the College received 90 *lib.* The foun- "dation dat. 20 Aug. an. Eliz. 14. Provided that those who are of the "consanguinity and affinity of the sd. J. Thurleston, shall be always preferred, "whether of the sd. school or no."

One by Jane Walton, widow of Jo. Walton, B.D., Archdeacon of Derby, &c.

"Item, I do give 100 *lib.* of lawfull English money, to be payd by my exe- "cutors, to the master & fellows of St. Joh. Coll. Cambridge, & to be em- "ploy'd by the sd. master & fellows, to the relief & maintenance, of such "scholars as be admitted of that house & of my kinne. And if none such be, "then to the relief of such scholars as shall come from Derby school, & be "admitted of that house. And if none such be, then to the relief of such "scholars, as shall come out of Derbyshire. And my meaning is, that this "relief shall be of the benefit of the sd. 100 *lib.* and the stock shall remain "whole.

"This clause agrees with the will of Jane Walton, lately deceased. extract. "Octobr. 24. 1609, by Raffe Jearman, Rich. Brandreth, executors. v. "Registr. in custodia Magistri, p. 6."

Three by Sir Robert Wood, of Islington, Knt., "who gave the messuage, "or tenement of the Plough, with the two tenements adjoining, called The "Bottle-house and the Bear in Barnewell, for the founding of three scholar- "ships, Feb. 9, an. 1659.

"The scholars to be nominated by Sir Rob. Wood, during his life, and "after his death, by Rob. Wood, of Islington in Surrey, Esq., and John Plat, "of West Horley in the same county, clerk, and by the survivor of them, "out of what school or county they please. Provided they be nominated "and sent to the College two months before the usual time of election, "and well qualify'd according to the statutes of the s^d^ College. And after "their deaths,the afores^d^ three scholars shall be elected by the master and "senior fellows of the s^d^ Coll. First, of such scholars as have learned, or "do learn at the free grammar school at Westminster, and are of the sixth "or seventh form of the s^d^ school. And in defect of such, then, 2^dly^, out of "the scholars of the free school of St. Paul's London, and Merchant Taylors', "or any other school within the city of London or county of Middlesex, "according as the master and seniors of the said College shall think in their "consciences most deserving."

The above list comprises 92 Scholarships, of which 32 are open to free competition, and 60 are restricted in the manner we have described. By the Statutes (cap. 29) it appears that the Foundress' scholars were to be allowed 7*d.* per week for commons, which had been increased to 1*s.* by a grant from Lord Burghley. The 32nd chapter directs that a payment is to be made by members on the foundation for room-rent, inasmuch as two Fellows and four Scholars could, by the old rules of the Society, be compelled to reside in the same apartment. Beyond these two provisions, we find in the Statutes no mention made of allowances to the scholars. In modern practice, we are informed by the Master of the College (Dr. Tatham) that the College allows 6*l.* each to the scholars for room-rent, and that a share of the corn-rents, reserved in the lettings of the several estates, in compliance with the terms of the Act 18th Eliz., cap. 6, which has amounted, on an average of the past

Evidence, p. 397.

REPORT.

Evidence, p. 397.

10 years, to the sum of 665*l.* per annum, is distributed by weekly payments among the scholars in residence. These two allowances, together with the statutable weekly payment for commons, will make the above 92 Scholarships a charge upon the College funds amounting to about 15*l.* each per annum. The value of his Scholarship to each individual will vary with the amount of residence, not only of himself, but also of his fellow-scholars. But besides the Scholarships which we have described there are 24 on the foundation of Sarah Duchess of Somerset, 18 of

p. 400.

which appear to be worth 5*s.* per week during residence, besides allowances for chamber-rent and caps and gowns. The remaining six have a separate estate set apart for their maintenance, and their present emoluments are stated to be 15*s.* per week.

The qualifications for election to the Duchess of Somerset's Foundation are of the following nature:—

"Five of the eighteen Scholars are to be chosen out of the Free School of "Hereford, within forty days after an avoidance; in which choice, Somersetshire, "Wilts, & Herefordshire, to be preferr'd. In default of some of the sd. school, "to be chose out of the three sd. counties (& not elsewhere) tho' of any other "school."

The remainder of the 18, and the 6, who have the separate estate, are to be chosen by turns; the first from Marlborough school, the second from Hereford school, and the third from Manchester school, and so by turns for ever.

There are further seven Scholarships on Mr. William Platt's Foundation, which, with the same number of Fellowships, are governed by a Decree of the Court of Chancery. A copy of this Decree has been furnished to us by the College, and we have caused it to be printed. By the financial statement, supplied by

p. 399.

the College, it appears that the income of Mr. Platt's Foundation, which is kept separate from the other revenues, has averaged, during the past seven years, 916*l.* 18*s.* 4*d.* per annum. Mr. Platt's Scholarships are unrestricted.

Of the whole number of 124 Scholarships at this College, it appears that 58 are more or less restricted to candidates educated at particular schools, viz.:—

FOUNDER.	Number of Scholars.	NAME OF SCHOOL.
Aston	2	Shrewsbury.
Dowman	5	Pocklington.
Gilbert	2	Colchester.
Lewis	1	Colchester.
Hebblethwaite	2	Sedbergh.
Lupton	8	Sedbergh.
Archbishop Williams	4	Westminster.
Sir R. Wood	3	Westminster, &c.
Robinson	4	Canterbury.
Duchess of Somerset	24	Marlborough, Hereford, and Manchester.
Spalding	1	Bury St. Edmund's.
Thurleston	1	Hymsworth.
Walton	1	Derby.

Magdalene College.

Evidence, p. 406.

From the Rev. Edward Warter, the President of MAGDALENE COLLEGE, who was requested by the Master during his absence to give us every necessary information, we have received a full account of the various Foundations belonging to that Society. It appears that there are at present 37 Scholarships at this College, 16 of which are open, and of the remaining 21, four are restricted locally, and 17 to particular Schools. For fuller information, we refer to the communication of Mr. Warter.

Trinity College.

Evidence, p. 423.

In TRINITY COLLEGE, there are 72 Scholarships, all perfectly open except one founded by Mr. Newman, of the value of 50*l.* per annum, for a native of Kent and Cambridgeshire alternately, and such as are filled by scholars from Westminster School.

p. 417.

It appears by the letter of Dr. Whewell, the Master, that every year at least three of the scholars are elected from Westminster school, if so many candidates are found fit. The Master declines to say whether it would be expedient that any modification should be made in this provision for the benefit of Westminster

scholars. It is, however, evident that the restriction does not work beneficially for the best interests of the College. We are informed that, whereas, out of the whole number of scholars, on an average of 50 years, rather more than 1 in 4 have been elected to Fellowships in the College, of 66 Westminster scholars elected during a period of 30 years, only three were elected Fellows. It is difficult to adduce a stronger proof of the inefficient working of appropriated Scholarships. REPORT.

It appears by the financial statement supplied to us by the Bursar that each Scholarship is a charge upon the College of about 46*l.* 16*s.* 8*d.* per annum. Evidence, p. 423.

At EMMANUEL COLLEGE, we are informed by the Society, that 14 Foundation scholars have been the average number maintained for the past seven years, at an annual charge of 52*l.* 13*s.* 2*d.* each, no specific number being fixed by the Statutes. There are several other valuable endowments at this College for the assistance of Students, but no distinction appears to be made there between Scholarships and Exhibitions. For further information upon this subject, we must make reference to the answer of the Society returned in reply to our inquiries. It is stated that about 1,000*l.* per annum is the average annual sum paid by the College in Scholarships and Exhibitions. Emmanuel College. Evidence, p. 427.

In SIDNEY SUSSEX College, there are 20 Foundation Scholarships open to all candidates, each being worth 7*s.* per week, during residence. There are also two open Scholarships founded by Mr. Micklethwaite of the value of 5*l.* per annum each. Mr. Edward Montague also founded two, of the value of 6*l.* per annum each. There are two Blundell scholars, elected by the feoffees of Tiverton school, of the same value with the Foundation Scholarships. Mr. Freeston also founded two Scholarships, the present value of which is 26*l.* per annum each, with certain preferences, in default of which candidates from Yorkshire are to be elected. Sir Francis Clark founded eight Scholarships for natives of Bedfordshire. Their present value is 6*l.* 13*s.* 4*d.* for each of the four senior scholars, and 5*l.* for each of the four junior. Sidney College. Evidence, p. 430.

At DOWNING COLLEGE, there will not be any Scholarships until the College is completed. Downing College.

SIZARSHIPS.

Besides the Fellows, Scholars and Exhibitioners there are also in most of the Colleges a body of Students called Sizars. Persons of this condition pay smaller fees to the University and to the College, they are charged less for tuition and other items of their accounts, and they derive pecuniary and other direct benefits from the foundation. Emoluments.

It was anciently the practice for the Master and every person dining at the Fellows' table to have one or more Students attached to him who performed certain duties which at the present time would be considered to be of a menial character, and in return for such services dined upon the remains of the Fellows' dinner, and received their instruction and maintenance for the most part free of expense. The practice of making the Fellow Commoners contribute to the support of the Sizars is in some Colleges still continued. The menial duties are in all cases abolished. Origin.

The only express foundations for the maintenance of this particular class of Students, that we are acquainted with, are at Trinity and St. John's. At the former College it is directed that sixteen such Students shall be maintained, at the latter nine. Whatever other Sizars are admitted into the several Colleges are due to usage and not to any especial obligation upon the Society. The following is the number of Sizars and Sub-Sizars now admitted at each of the Colleges. Foundations.

St. Peter's	4	Jesus–none	
Clare Hall	3	Christ's	4
Pembroke	3	St. John's	54
Gonville & Caius–none		Magdalene	4
Trinity Hall–none		Trinity	32
Corpus Christi	6	Emmanuel	4
King's–none		Sidney	4
Queens'	24	Downing–none	
St. Catharine's Hall	1		

REPORT.

The benefits arising from these Sizarships are considerable. They will best be exemplified by an instance, the particulars of which we are enabled to give. A Gentleman of St. John's College, who was afterwards the Senior Wrangler of his year, writes thus to our Secretary:—

"I may suppose that the expense of an University education will be a subject "not overlooked by the Commissioners. I should be glad if there be an opportunity "of shewing them my College bills. I send you a statement of the amounts. I "think it due to the College which gives such advantages that I should offer my "testimony to the cheapness of the education which it opened to me. I gained a "Sizarship by open competition, and I had no advantages from school or county "claims. So I consider mine to be no exceptional case. It was my duty to my "friends to abridge my expenses, but I do not consider that I deprived myself of "any advantages in pursuing my studies for the sake of economy. Private tuition "cost me besides 111*l.*"

The following is the abstract referred to:—

BILL.

				Allowances and Exhibitions.		
	£	*s.*	*d.*	£	*s.*	*d.*
1. Christmas	17	7	2			
2. Lady-day	10	5	7	2	2	8
3. Midsummer	11	4	10	20	14	3
4. Christmas	17	14	1	17	2	7
5. Lady-day	11	1	0	2	5	7
6. Midsummer	13	15	10	25	4	11
7. Christmas	18	15	7	19	7	5
8. Lady-day	8	2	11			
9. Midsummer	11	4	1	23	11	11
10. Christmas	34	13	10	24	15	11
	154	4	11	135	5	3

Observe:—In this abstract private tuition is omitted.

It thus appears that the whole net amount paid by this gentleman to his College for three years and a half, that is, from the time of his admission until he took his B. A. Degree was only 18*l.* 19*s.* 8*d.* It may, however, be said that he was a very distinguished Student, and therefore that his is an exceptional case. But we have reason to think that other Students in a similar position can bear testimony to their having received corresponding advantages both at this and other Colleges.

COLLEGE REVENUES.

From twelve of the seventeen Colleges we have received statements of income and expenditure. Five have declined or omitted to furnish us with any information on this branch of our inquiry. They are Clare Hall, Gonville and Caius, Corpus Christi, St. Catharine's Hall, and Jesus.

Gross Incomes.

The gross incomes at the present time of the twelve Colleges, which have replied to our inquiries on this point, are as follow:—

	£.	*s.*	*d.*
St. Peter's	7,317	3	0
Pembroke*	12,013	8	0
Trinity Hall	3,917	2	10
King's	26,857	7	11
Queens'	5,347	0	1
Christ's	9,178	15	5
St. John's	26,166	14	11
Magdalene	4,130	0	0
Trinity	34,521	19	10
Emmanuel	6,516	16	3
Sidney Sussex	5,392	16	10
Downing	7,239	17	0

* In this sum is included 1,878*l.* 1*s.* 10*d.*, being the balance for the year of the receipts and expenses of the College Building Fund.

REPORT.

Net Incomes. Estimate.

The net available incomes of the several Societies it is difficult to state accurately, as the Returns which have been made to us do not all proceed upon the same system. We cannot, however, estimate the gross income of the seventeen Colleges at less than 185,000*l.* per annum.

Beneficial Leases.

We believe that great progress has been made during late years in the improvement of the College Estates, and especially in increasing the regular incomes of the Colleges by running out leases on fines, and letting the properties on terms of rack-rent.

Evidence, p. 314.

The Master and Fellows of Peterhouse say—"No particular system is pursued "in the College with the view of running out beneficial leases. It is usual on the "expiration of the first accustomed interval to set a fine for the renewal; and if "it be not accepted by the tenant, the inclination is to run out the lease. Two "beneficial leases have expired during the last fourteen years. The Master and "Fellows did not, on either of those occasions, receive any compensation for the "loss of the renewal fine. It is the practice to forego a fine altogether when the "terms of renewal are not accepted by the tenant, and during the above-mentioned "period many fines have been so foregone."

The last beneficial lease of land belonging to Pembroke College expired at Michaelmas, 1849.

p. 323.

The Master and Fellows say, in reply to our inquiries on this point—"All "beneficial leases granted by the College of land have been run out. In some "cases, though not in all, the Master and Fellows borrowed money in lieu of "fines. They borrowed it from their Building Fund, for which they have "regularly paid and continue to pay interest, at the rate of four per cent. per "annum; and they are also paying off the debt itself by annual instalments. "They have only granted two beneficial leases of houses; the one of the house in "London alluded to in the repiy to Query 8, which is running out; the other "of four houses adjoining the College site, which is also running out. The "Master and Fellows have not, in either case, borrowed or divided any money in "lieu of a fine, nor have they any intention to do so."

p. 343.

At Trinity Hall a system has been adopted by which, in the course of time, the whole of their property under beneficial lease will come into hand, and its extended rent be made available for the purposes of the Foundation.

At King's College we learn that after the Tithe Commutation Act came into operation, the Society determined to take the tithe and rent-charge into their own hands, and that many of the leases have expired since the year 1836. As regards beneficial leases of other property, the Provost states that "the College have not "adhered to any *fixed* system (their determination with respect to the tithes and "rent-charge being excepted) with the view of running out such leases. They "have, however, on many occasions been content to forego the receipt of fines in "order to improve their regular income: nor have they during the last 35 or 40 "years taken any compensation for the loss by non-renewal.

p. 354.

p. 357.

At Queens' College, Mr. Dalton, the Vice-President, informs us, that "beneficial leases have expired since 1842, the gross increase of whose annual rentals "amounts to 460*l.*

"The College in two instances advanced two-thirds of the fine to the then "existing Society, and has been repaid by annual instalments extending over the "periods of the respective leases.

"Four other leases are now being allowed to run out without any compensation "to the President and those Fellows who would have been entitled to the fines "in case of the renewals having been granted; and thus calculating interest at "four per cent., the interest of the College in the property thus leased has already "been increased by 1,700*l.*

"During the last fourteen years, by a diminution of the fines, the Society has "been enabled to increase the annual corn-rents in seven leases by thirty-three "quarters of wheat, and twenty-six quarters of malt."

p. 395.

At Christ's College some progress has been made in this respect; three beneficial leases having expired since 1830, and the reserved rents of four other estates having been prospectively increased. The Master and Fellows received no compensation for the loss of the renewal Fines.

p. 401.

The Master of St. John's College informs us that "for several years past the "College has been desirous of increasing the number of its estates on rack-rent; "and with this view, whenever a lessee has been unwilling to renew, at the proper "time and on the usual terms, no second offer was made to him, and the lease was

REPORT.

"suffered to run out. By this means several beneficial leases have expired "within recent years, and the demised estates have, in all cases, been re-let on "terms of rack-rent. The regular income of the College having thus been "augmented, the Master and Fellows have of late felt themselves in a position to "decline to accept fines for the renewal of beneficial leases of landed property, "excepting in a single instance, in which the lessee had embarked a very large "sum in the improvement of the estate. The Master and Fellows have not "sought for or received any compensation for the loss of the renewal fines."

At Magdalene College we believe that the system of beneficial leases has never been adopted, and that all the property is let at rack-rent.

Evidence, p. 424. At Trinity College, the Bursar (Mr. Martin) states, that many beneficial leases have expired during the last twenty years, that the Master and Fellows did not receive any compensation for the loss of the renewal fine, and that in renewing leases a large diminution had very frequently been made in the fine in order to obtain an increase of reserved rent during the years added to the then existing term.

p. 428. At Emmanuel College all beneficial leases of land have expired. The Master (Dr. Archdall) states, that the last expired about four years ago. Some beneficial leases of houses have also been allowed to run out, in cases where considerable prospective advantages were likely to accrue to the College. The Master and Fellows received no immediate compensation for the loss of the renewal fines.

p. 434. At Sidney College, the Master (Dr. Phelps) informs us, that the property, both of the original Foundation and also that given by subsequent Founders and Benefactors, is all let at rack-rent, with the exception of a small amount of house property in the town of Cambridge; and of this latter, the reserved rents have been made a large portion of the real value of the premises.

In Downing College, being of recent foundation the system of beneficial leases is prohibited by the Statutes in the following terms:—"And whereas the anti-"cipation of the annual revenues of a College, by granting beneficial leases, and "taking fines or foregifts as a consideration for the same, tends greatly to the "impoverishment of the Society; and the Statute laws of the country have only "been able to impose a qualified restraint on this evil, which before the exist-"ence of those laws had prevailed to a great extent; it is hereby ordained, as a "fundamental law of this College, that no money, or other valuable thing by way "of fine, foregift, or other consideration, shall be demanded or received by this "College, or any member of it, for the grant or renewal of any lease of any lands, "tenements, or hereditaments belonging, or which may in future belong, to the "College; but that any member proposing such demand, or receiving any part "of such money or other consideration, shall *ipso facto* forfeit his place and office "in the College."

The general tenor of the above remarks, we have reason to think, would apply also to those Colleges which have not given us any information as to their financial condition.

There is a curious provision in Dr. Caius' Statutes for Gonville and Caius College. In the 95th section it is directed that "fines for farm-leases shall be "in proportion to the fertility and productiveness of the lands, but shall not be "taken until the rents have been raised to a reasonable value, lest the fines "swallow up the annual income. We, however, direct that the fines shall be-"long to the College, not to the Master and Fellows, except certain manorial "fines which are to be devoted to the Master's use, as an augmentation of his "income, on condition that he reside within the College." The original words are as follow: Fines autem firmarum pro ratione fertilitatis et fœcunditatis terrarum fiant, sed non antequam ad justum censum aucti redditus fuerint, ne fines consumant redditus. Fines autem collegii esse volumus, non magistri et sociorum, præterquam &c. Accordingly it appears from the statement which has been made to us by Dr. Chapman, the Master of the College, that all profits beyond the necessary expenses are invested, and the income only, arising from such investments, is made divisible among the Master and Fellows. "The stipends," he says, "have kept increasing as the income of the College improved, which it p. 325. "necessarily must, independent of any advance in our rents, for we do not divide "the surplus at the audit, after having paid all outgoings, as I have understood is "the custom of some Colleges, but invest it, and the interest of such investments "is then at the disposal of the Master and Fellows."

It thus appears that there is no want of disposition in the Colleges to make

temporary sacrifices for the prospective advantage of their several Societies. We think it of importance that this spirit should be encouraged; and to that end we should consider it advantageous if it were enacted by the Legislature that where a beneficial lease has been allowed to expire, no lease of such property shall be valid for which any fine or premium is accepted. Such a provision as this would ensure to the Society in future the full advantage to be derived from the sacrifices made by a previous generation, and would, as we think, operate favourably as an encouragement to the existing bodies in their attempts to improve the available resources of their respective Colleges.

Recommendation.

VISITORS OF COLLEGES.

In concluding our remarks on the particular changes which appear to us to be expedient in the Constitution and Statutes of the several Colleges, it is necessary that we should make a few observations on the office and authority of the Visitors, without which no College exists. The Founders of Colleges generally selected some eminent persons who, from their position and station, they trusted would be vigilant and effective guardians of their respective institutions. Where the Founder has been silent upon the point, the law has conferred this right and duty upon the heir of the Founder, and in default of his heirs, it lapses to the Crown. General Visitations at stated times, for which in many Statutes careful directions are given, have been long disused; and until the Statutes are made more conformable to usage, it is probable that little benefit would be derived from their revival. But if the recommendations which we have made, should be carried into execution, it seems that it would be highly desirable to make provision for periodical Visitations. For this reason it would be expedient to remove any doubt which may exist as to where the Visitatorial authority resides in particular Colleges. And where this power is vested in Your Majesty, we humbly submit to Your Majesty's gracious consideration, whether some inexpensive and systematic method might not be adopted for providing periodical Visitations of the Colleges, and settling the various questions which may arise. Appeals on particular points are not now uncommon, and we believe that justice is satisfactorily administered on such occasions by the authorities in whom the Visitatorial power is placed. But we should deem it an advantage if a summary mode of visiting the several Colleges periodically were provided. On such an occasion the state of the College in respect to numbers, studies, discipline, and financial condition might be briefly exhibited. Thus an opportunity would be afforded for the correction of abuses, the speedy hearing and redress of grievances would be secured, and the prospect of inquiry would present an useful stimulus to exertion and improvement among the several members of the Society.

Periodical Visitations recommended.

Having now indicated the principles upon which we think that any reform of the University and Colleges should be conducted, it remains to consider the practical means by which such principles could most satisfactorily be applied. There is no doubt much within the power of the several Colleges themselves. We believe, however, that no complete correction of the evils we have pointed out can be effected unless under the authority of the Legislature. How this is to be applied is a matter for grave consideration. The revision of Statutes, the examination of sub-foundations, the incorporation of Bye-Fellows, the adjustment of the claims of Schools, the determination of the relative numbers of Fellows and Scholars, and many other points which we have noticed, involve a multiplicity of details which demand the greatest care, diligence, and prudence for their correct and satisfactory settlement. If Parliament should entertain the question of the reform of the University and its Colleges, it seems to us that it would be convenient to lay down, in an Act of the Legislature, the principles upon which such reforms should be conducted, and to entrust a Board with temporary powers necessary for carrying them into effect. By this means it would be possible to consider care-

Practical means by which the Recommendations of this Report may be carried out.

REPORT.

fully the various individual and corporate interests which would be affected, and to consult the feelings and wishes of those whose active and willing co-operation is necessary for the successful accomplishment of any measure of change, however urgently demanded, and however well matured. The results of the deliberation of such a Board as we have ventured to suggest, arrived at after due consultation with the various parties interested, might properly be referred to Your Majesty in Council for final sanction.

Vested Interests.

We need scarcely add that in any proposed changes we contemplate a due regard being paid to vested interests.

CONCLUSION.

It may perhaps be expedient in this place that we should enumerate some of the more important documents on which our Report is founded: such as—The Foundation Charters and Statutes of all the Colleges; the Report made on the state of the University of Cambridge by the Commissioners of King Henry VIII.; the ancient Statutes of the University, as well as the Code of the 12th year of Queen Elizabeth. All these and some other important documents, we have caused to be printed in a separate form: and as a Supplement to our Report we have printed a great body of Evidence, obtained, after a respectful application on our part as Your Majesty's Commissioners, from the Vice-Chancellor, the Heads of Colleges, the Professors, the Registrary, the Librarian, and many other resident, as well as non-resident, members of the University whom we believed to be men of sound learning and experience.

Our several Recommendations appear in the body of our Report, along with the facts and reasons on which they are founded; and after much deliberation we have resolved not formally to enumerate them in a concluding summary, lest we might injure their effect by exhibiting them apart from the statements to which they appeal for their justification. But we trust that a Table of Contents will remove all difficulty in consulting our Report, and in referring to our Recommendations, mixed up as they necessarily are with many complicated and apparently unconnected details.

The nature of our task, which we have now brought to a close, has unavoidably led us to dwell upon points, where from the progress of that "great innovator," Time, and the operation of social causes little within her control, the University has been left out of her true position and become imperfectly adapted to the present wants of the country, so as to stand in need of external help to bring about some useful reforms and wholesome modifications of her institutions. We have discharged the duty imposed upon us according to the best of our ability, with earnestness and good will, with a loyal fidelity to the commands of Your Majesty, and with veneration and love for that University to which we belong. Had we undertaken our laborious duty in any other spirit, we should have ill interpreted the intentions of the Royal Commission by which we have been guided in our inquiries: for we have a heartfelt assurance of Your Majesty's good will towards those venerable institutions which in times past have had a great and good effect upon the moral and intellectual character of Englishmen, and which owed their corporate life and continued power to the wisdom and munificence of Your Majesty's Royal Ancestors.

Before we conclude this Report, it is with unfeigned pleasure that we attempt another task; that we endeavour in a few words to indicate the points wherein the University has in modern times shown in the spirit of her administration her willingness to enlarge the cycle of her Studies, and to modify her institutions so far as the rigid severity of her laws permitted. We have abundant proofs supplied by our Evidence that the University has been liberal in the general administration of her funds, not husbanding them parsimoniously, but bestowing them, to the very limits of her power, upon objects of great academical importance. Nor should we fail to notice the vote of a Committee to revise the Statutes of the University with a view to petitioning Your Majesty for Your Royal sanction to an amended Code of University Laws. This Committee was voted by the Senate some time before the issue of a Royal Commission had been by any one anticipated. That the University was ready to enlarge its cycle of Studies is proved by its instituting new Triposes of the Moral and Natural Sciences; and thus affording to most of the Professors an extended field of usefulness. A like spirit has been shown by the Colleges, which in several instances have, at a great cost and no small sacrifice of personal interests, enlarged their buildings, and in all cases shown themselves careful guardians of their corporate property, by foregoing a part of the income of the existing body with a view to the prospective benefit of the Society. Many of the Colleges also, have sought wholesome modifications of their Statutes, given up valueless or injurious privileges and gone to the full extent of their powers in obtaining the removal of restrictions which prejudicially limited the free election to their Fellowships and Scholarships. All these were spontaneous acts, and in the right direction. We regard them as the marks of a wise and honourable

REPORT.

spirit, and they have been in good part suggestive to ourselves of the reforms we have ventured to recommend.

Following rather than originating this opening source of amelioration, while fettered by no restrictions, such as have necessarily imposed a limit on internal reforms, we have in the foregoing Report recommended a series of measures, in perfect harmony, as we conceive, with the spirit which has prompted these beginnings, though in some respects going far beyond them. We have proposed the restoration in its integrity of the ancient supervision of the University over the Studies of its Members, by the enlargement of its Professorial system—by the addition of such supplementary appliances to that system as may obviate the undue encroachments of that of private tuition—by opening avenues for acquiring Academical Honours in many new and distinct branches of knowledge and professional pursuit—by leaving to more aspiring Students ample opportunity to devote themselves to those lines of acquirement in which natural bias has given them capacity, or in which the force of circumstances has rendered it urgent upon them to obtain pre-eminence; while yet not denying to the less highly gifted the social advantage of an University Degree. Still following the same lead, though here no doubt passing beyond the immediate limits marked out by internal reformations, we have recommended the removal of all restrictions upon election to Fellowships and Scholarships, and we have pointed out the means by which, without any real injury to the claims of particular schools, all Fellowships and Scholarships may be placed on such a footing as to be brought universally under the one good rule of unfettered and open competition. In a like spirit we have regarded the existing distribution of Collegiate emoluments. We recognise the prevailing practice by which Fellowships are looked upon as just rewards of eminent merit, and as helps and encouragements to the further prosecution of study or general advancement in life. But, at the same time, bearing in mind, that the Fellows of Colleges were by the original constitution of the University in the position of Teachers, and have laborious duties assigned to them arising out of the old scheme of Academical instruction, while in modern times the Fellowships are frequently held by Non-residents, and rarely contribute in any direct way to the course of Academical instruction, though their emoluments far exceed their original value; we have thought, that in consideration of this practical exemption from the performance of such educational duties, it is no more than reasonable and equitable in return, that an adequate contribution should be made from the Corporate Funds of the several Colleges towards rendering the course of Public Teaching, as carried on by the University itself, more efficient and complete.

In proposing reforms, we do not wish to dissociate the present from the past; neither do we recommend changes except for the purpose of removing positive evils. There are minute details—forms and ceremonies—distinctions of dress and rank—and other observances—which might be retained, because they are historical; or if changed at all, it should be by internal, rather than external, legislation.

The teaching of the University should be the exponent of what is highest and best in the condition of Literature and Science; and should be in part also the help and guide to her sons in their aspirations after moral and intellectual excellence. Where she has failed in this, it has been partly, we think, from the want of that legislative freedom which we would wish to give to her.

The long-continued influence of literary and philosophical examples upon the sentiments and conduct of societies is perhaps in no place better illustrated than in Cambridge. The works of Bacon and Newton are, at this moment, influencing its Studies for good. The prevalence of the Newtonian philosophy may have given a severity to a prominent part of its course which made it well fitted for the benefit of the few, but in some respects ill fitted for the benefit of the many. Our recommendations, if acted on, would, we think, remove this objection, yet keep entire that high and honourable distinction given in Cambridge to the sciences which are of all others most exact and severe.

One happy circumstance in the position of the University is deserving of special comment. A great majority of the College Fellowships have long been open to free competition; this has given to the University a high moral elevation, and contributed in a great degree to make her the honoured instrument of public good. The same condition marks the distribution of many valued University Prizes. It is, we think, this fact which has called forth a high sentiment of honour and an unbending sense of public duty on the part of the governing powers and examiners, whether of the Colleges or of the University. That the rewards of competition be

given to the most worthy is a principle now so deeply penetrating the moral life of Cambridge that its violation seems almost beyond the region of thought.

What above all other things gives us hope for the future good of Cambridge, is the manly, free, and truth-loving character of her sons, springing in part, at least, from her Collegiate system, the character of her studies, and the uprightness of her administration, producing in return confidence and goodwill on the part of those committed to her care. In all her members she believes that she possesses a body of men who, strong in their historical remembrances, cling to what is truly good, would seek for no needless change, and would admit of no change which had not the fair promise of scientific, moral, and religious benefit.

With such expressions we conclude this Report, grateful to Your Majesty for Your watchful regard to the lasting honour of the University, and anxious on our own part that what we have recommended may be among the means of contributing to that end.

All which we humbly submit to Your Majesty's gracious consideration.

Witness our hands and seals this 30th day of August, 1852.

TABLE OF CONTENTS.

[NOTE.—The figures denote the paging of the Evidence.]

EVIDENCE FROM THE UNIVERSITY.

THE REV. THE VICE-CHANCELLOR :—
Yearly income of the University, applicable to general purposes, estimated on an average of seven years—yearly income appropriated to specific objects, on the same average, 15. Yearly expenditure of the University estimated on an average of seven years—sums expended out of the University Chest during the last 30 years in extending and improving the buildings of the University, 16. Auditors of accounts — management of the finances, 17.

ANSWERS OF THE SYNDICS OF THE PRESS :—
Appointment of the Syndics—their number—meetings—average attendance, 19. Their authority—the University printer—compositors—printing machines—steam power—employment of inferior officers—privilege of printing Bibles and Prayer-books—paper duty, 20. Licence to print the Bible granted to Scotland—general business of the press—accounts, 21.

THE REV. GILBERT AINSLIE, D.D., Master of Pembroke College :—
Residence, studies, exercises, and examinations for degrees, as prescribed by the University Statutes of 12 Eliz. (1570)—proceedings for the degree of B.A., 22. For the degrees of Bachelor of Law—of Physic—proceedings for the M.A. degree, 23. For the degree of B.D., and D.D., 24. Proceedings for the degree of Doctor of Law and of Physic, 25. Comparison of the present actual practice with the statutable requirements—present proceedings for the B.A. degree, 25. The Mathematical Board—exercises—examinations, 26. Prizes, 27. Present proceedings for the degree of Bachelor of Laws—for the degree of Bachelor of Physic, 28. Present proceedings for the degrees of M.A., B.D., D.D., 29. Present proceedings for the degree of Doctor of Law—Doctor of Physic, 30. Discipline, 30. The Proctors—academical punishments—credit—power of the Vice-Chancellor over persons *in statu pupillari* interrupted by recent Acts of Parliament, 31. Lodging houses—examiners—fees, 32. Fees paid on admission to degrees, 33. Professors' fees—additional fees paid by compounders—cautions for exercises—contributions levied on each college—statutes, 34.

Relations between the University and the Town :—
Memorial from the Town Council, 35.

THE REV. J. POWER, M.A., Librarian of the University :—
Duties of the Librarian—appointment—salary—fees—origin of the University Library—benefactors—permanent funds for the supply of books, 50. Statutes relating to the management of the library—the syndics—meetings of the syndicate—assistant librarians, 51. Appointment of the assistants—hours of attendance—duties—removable for inefficiency or neglect of duty—under whose orders they act—the privilege of using the library—average number of books out of the library at one time—books lost or damaged, 52. Inconvenience of the removal of books for the purpose of reference—class of books and MSS. not allowed to be removed—books lent to Undergraduates—reading-room—private bequests for the purchase of books—tax levied on members for the purchase of books and the support of the library, 53. Expense of bookbinding, 54. Library subscription account—bookbinding—fees to librarian—number of volumes annually added to the library—money value of the books procured under the Copyright Acts, 55. Books procured under the Act 6 and 7 Will. IV., and cost of agency—total number of books and MSS. in the library—books presented by Geo. I.—books and MSS. derived from special bequests or donations—MSS. and books kept in fire-proof apartments, 56. Classification of books—classed catalogue—general catalogue—no printed catalogue—want of provision for the cataloguing of books—by whom new books are ordered, 57. Recommendation of books for purchase—Difficulties of dealing with booksellers and bookbinders—the management of the library of Trinity College, Dublin—want of a more numerous staff and a reading-room—increase of funds necessary, 58. Munificent contributions of the Rev. T. Halford, &c.—great want of store-rooms and a business-room for the librarian and his assistants—the Fitzwilliam Library, 59. Regulations as to admission—The Fitzwilliam Museum—college libraries—Trinity Hall Library—Clare Hall Library—admission to college libraries—the University Library should have a catalogue of the books in the college libraries, 60.

THE REV. J. ROMILLY, M.A., Registrary of the University :—
Duties of the Registrary—emoluments—Government duties paid to the Registrary—average annual produce of the last eight years—fees upon matriculation and degrees paid to the University chest, the proctors, and other officers, 63. Table showing the number of matriculations and degrees of different classes, distinguishing the different colleges, for every year during the last 10 years, as well as their number for the years 1830, 1820, 1810, and 1800, 66-70. Matriculation fees—degree fees—the muniments in the registry, 71.

PROFESSORSHIPS :—
Evidence of :—

THE REV. J. A. JEREMIE, D.D., Regius Professor of Divinity, 76.

H. J. SUMNER MAINE, ESQ., LL.D., Regius Professor of Civil Law, 77.

JOHN HAVILAND, ESQ., M.D., late Regius Professor of Physic, 80.

H. J. H. BOND, ESQ., M.D., Regius Professor of Physic, 82.

THE REV. J. J. BLUNT, B.D., Margaret Professor of Divinity, 86.

THE REV. W. H. MILL, D.D., Regius Professor of Hebrew, 90.

THE REGIUS PROFESSORSHIP OF GREEK, 92.

THE REV. T. ROBINSON, D.D., Lord Almoner's Professor of Arabic, 92.

G. G. STOKES, ESQ., M.A., Lucasian Professor of Mathematics, 93.

THE REV. W. WHEWELL, D.D., Professor of Moral Philosophy, 99.

THE REV. J. CUMMING, M.A., Professor of Chemistry, 102.

THE REV. J. CHALLIS, M.A., Plumian Professor of Astronomy, 103.

THE REV. W. CLARK, M.D., Professor of Anatomy, 107.

THE RIGHT HON. SIR JAMES STEPHEN, LL.D., Professor of Modern History, 111.

THE REV. J. S. HENSLOW, M.A., Professor of Botany, 113.

THE REV. ADAM SEDGWICK, M.A., Woodwardian Professor of Geology, 115.

The Very Rev. G. Peacock, D.D., Lowndes' Professor of Astronomy and Geometry, 121.

Andrew Amos, Esq., M.A., Downing Professor of Law, 122.

W. W. Fisher, Esq., M.D., Downing Professor of Medicine, 125.

William Hallows Miller, Esq., M.A., Professor of Mineralogy, 133.

George Pryme, Esq., M.A., Professor of Political Economy, 135.

T. A. Walmisley, Esq., M.A., Mus. D., Professor of Music, 136.

EVIDENCE ON EXPENSES AND TUITION.

The Rev. G. Archdall, D.D., Master of Emmanuel College:—
Expenses—credit—expense of private tuition—private tutors—poor students—examinations—matriculation examination—terms—residence during vacation—reading parties—lodging-houses—discipline, 142.

The Rev. H. Arlett, M.A., Senior Fellow and late Tutor of Pembroke College:—
Expenses, 142. Credit—tradesmen's bills—Lectures, 143. Private tuition—private tutors—poor students, 144. Examinations—matriculation examination, 145. Inducements to distinguished men to leave the University—staff of lecturers and tutors—reduction of the number of terms—vacations—reading parties—lodging-houses, 146.

The Rev. Joseph Williams Blakesley, B.D., late Fellow and Tutor of Trinity College:—
Expenses—tradesmen's bills—difficulty of preventing credit—discommuning—diminution of Undergradute expenses—College staff, 147. Hindrances to instruction—classification of students—attendance on lectures—private tuition—poor students—hall for poor students, 148. Matriculation examination—inducements to leave Cambridge held out to distinguished men—cathedral preferments—proprietary schools—restrictions on fellowships, 149. Increase of professorships—the resident members of the Senate—fund for endowment of professorships—college staff—terms—vacations—lectures, 150. Reading parties—lodging-houses—hostelries—how they would be important, 151. Admission of Dissenters, 152.

The Rev. J. Cooper, M.A., Fellow and Tutor of Trinity College:—
Expenses—credit—legislative aid required—lectures—college staff, 152. Private tuition—poor students—examinations—period of college residence—matriculation examination, 153. Inducements held out to distinguished men to leave Cambridge—residence required for the B.A. degree—vacations—residence during vacation—reading parties, 154. Lodging-houses—discipline—suggestions, 155. College bills—regulations respecting credit, 156. Regulations of lodging-houses—lodging-house license—lodging-house certificate, 157.

The Rev. J. R, Crowfoot, M.A., late Fellow of Gonville and Caius College:—
Expenses—private tuition—hall for poor students—matriculation examination—inducements to leave the University—lodging-houses—recommendations, 158.

The Rev. R. W. Evans, M.A., late Fellow and Tutor of Trinity College:—
Classification of students—Private tuition—hall or college for poor students—excessive number of examinations—matriculation examinations—inducements to leave the University—terms, 159.

The Rev. John Alexander Frere, M.A., Fellow of Trinity College:—
Expenses—lectures—attendance on lectures—private tutors—poor students, 160. Matriculation examination—inducements to leave Cambridge—college staff—terms—residence during vacation—lodging-houses, 161.

The Rev. W. M. Gunson, M.A., Fellow and Tutor of Christ's College:—
Expenses—lectures—staff of lecturers—private tuition, 162. Poor students—examinations—matriculation examination, 163. Inducements to leave Cambridge—attendance on lectures—staff of lecturers—number of terms—residence during vacation—lodging houses, 164. Latin Professorship—the Spinning-house, 165.

The Rev. James Hildyard, M.A., late Fellow and Tutor of Christ's College:—
Expenses—credit—lectures—matriculation examination—attendance on lectures—private tuition, 165. Poor students—examinations—matriculation examination—inducements to leave the University—increase of lecturers—number of terms—private tuition—the academical year—residence during vacation—lodging-houses, 166. State of the University, 167.

The Rev. Arthur M. Hoare, M.A., Fellow of St. John's College:—
Lectures—College staff—private tuition—hall or college for poor students—examinations, 167. matriculation examination—inducements to leave the University—staff of lecturers—length of residence—the B.A. examination—lodging-houses—theological instruction, 168.

The Rev. H. H. Hughes, M.A., late Tutor of St. John's College:—
Expenses—credit—private tuition—poor students—matriculation examination—tutors and lecturers—length of residence—expense of an University education, 169.

The Rev. H. Latham, M.A., Fellow and Tutor of Trinity College:—
Expenses—College tradesmen—servants—parties—regulation for tradesmen—London tradesmen—power of discommuning—lectures, 170. Staff of lecturers—private tutors—advantages of private tuition—poor students, 171. Examinations—matriculation examination—term of residence—number of students in the Michaelmas term, 172. Residence in College during vacation—reading parties—lodging-houses—private tuition, 173.

The Rev. C. Merivale, M.A., late Fellow and Tutor of St. John's College:—
Expenses, 173. Private tuition—poor students—matriculation examination, 174. Inducements to to leave the University—staff of lecturers—length of terms—vacation—educational reform—classical tripos examinations, 175. Recommendations, 176.

The Rev. J. G. Mould, M.A., Fellow and Tutor of Corpus Christi College:—
Expenses—checks on credit—lectures, 176. Private tuition—scholarships—examinations—private tutors—matriculation examination—inducements to leave Cambridge—staff of lecturers—number of terms—residence in College during vacation—lodging-houses, 177.

The Rev. J. N. Peill, B.D., Fellow and Tutor of Queens' College:—
Expenses, 177. Checks to extravagance—lectures—attendance on lectures—College staff—expenses of private tuition—poor students—examinations—admission of students, 178. Length of terms—residence during vacation—taxes on degrees, 179.

The Rev. H. Philpott, D.D., Master of Catharine Hall:—
Expenses—debts—tradesmen's bills, 179. London tradesmen—lectures—attendance on lectures—expenses of private tuition, 180. Poor students—hall for poor students—college examinations, 181. Matriculation examination, 182. Inducements to leave Cambridge—attendance on professorial lectures—staff of tutors and lecturers—time of residence, 183. Vacations—residence in college during vacation—reading parties—lodgings in town, 184.

The Rev. Joseph Shaw, B.D., Senior Fellow of Christ's College:—
Expenses—credit—lectures—private tuition, 185. Poor students—examinations—matriculation examination—staff of tutors and lecturers—number of terms—residence during vacation—lodging in private houses, 186.

The Rev. J. J. Smith, M.A., late Fellow and Tutor of Gonville and Caius College:—
Expenses, 186. Tradesmen—lectures—attendance on lectures—private tuition, 187. Expenses of private tuition—scholarships and exhibitions and Poor Students examinations, 188. Private tuition—matriculation examination—inducements to distinguished men to leave the University—recommendations, 189. Examination for the B.A. degree—terms—

residence in college during vacation—reading parties —lodging-houses—improvement in the University system—the jurisdiction of the University, 190. The Caput—grand compounders, 191.

THE REV. J. SMITH, M.A., Fellow of Christ's College:—
Expenses—lectures—college staff—private tuition, 191. Poor students—examinations—matriculation examination—number of terms—residence during vacation—lodging-houses, 192.

THE REV. C. A. SWAINSON, M.A., Fellow and Tutor of Christ's College:—
Expenses—tradesmen—parents, 192. College servants—checks on credit—entertainments—lectures—private teachers—scholarships and benefactions, 193. Hall or college for poor students—suggestion for increasing the accommodation in colleges, 194. Examination—matriculation examination—inducements to leave the University—celibacy—college staff—length of terms, 195. Residence during vacation—lodging in private houses —recommendations, 196.

THE REV. W. H. THOMPSON, M.A., Fellow and Tutor of Trinity College:—
Expenses—servants—credit, 196. Money-lenders —legislative aid necessary—tradesmen's bills—lectures — attendance on lectures — college staff — examination—private tutors, 197. Average expenses of a pensioner—private tuition—poor students, 198. College or hall for poor students—examinations—matriculation examination—inducements to leave Cambridge, 199. Increase of professorships—terms—residence during vacation—lodging houses, 200.

THE REV. E. WARTER, M.A., Fellow and Tutor of Magdalene College:—
Expenses—credit—attendance on lectures—private tutors, 201. Poor students—examinations—matriculation examination—means of securing the permanent residence of eminent men—private tuition, 202. Resident terms—residence during vacation—lodging-houses, 203.

THE REV. W. WHEWELL, D.D., Master of Trinity College:—
Discipline, 203. Expenses—parents—checks to extravagance — clandestine extravagance — private tuition, 204. Expenses, 205. Credit—lectures—private tuition—poor students—the number of examinations, 206. Matriculation examination—inducements to leave the University—terms—residence during vacation, 207. Lodging-houses—course of studies, 208.

THE REV. T. WORSLEY, M.A., Master of Downing College:—
Expenses—lecturers—private tuition—poor students, 209. Examinations—matriculation examination—inducements to leave the University, 210. Emoluments of professors—tutorial emoluments—College staff of tutors and lecturers, 211. Reduction of terms—residence in College during vacation —lodging in the town—library, 212.

THE REV. A. H. WRATISLAW, M.A., Fellow and Tutor of Christ's College:—
Expenses—lectures—compulsory lectures — voluntary lectures—staff of lecturers, 212. Private tutors—poor students—examinations, 213. Course of study—College examinations—private tuition—matriculation examination, 214. Inducements to leave Cambridge—recommendations—College staff —length of terms, 215. Residence in College during vacation—lodgings in the town—alterations in the Cambridge system desirable, 216.

EVIDENCE ON MATHEMATICAL STUDIES AND EXAMINATIONS.

THE REV. J. COOPER, M.A., Fellow and Tutor of Trinity College:—
Mathematical examinations—private tuition—examinations, 222.

ROBERT LESLIE ELLIS, ESQ., M.A., late Fellow of Trinity College:—
The course of mathematical studies, 222. Number of problems, 225.

THE REV. T. GASKIN, M.A., late Fellow and Tutor of Jesus College:—
Mathematical proficiency—examinations—amount of mathematical knowledge required for a common degree, 226. Tendency to raise the standard of qualification—average proportion of students to the number taking degrees—examinations, 227. The syndicate of studies—limitation of subjects—books in use, 228. Tendency of the course of mathematical studies — problems — examinations for honours—private tuition, 228. Prizes—remarks—private examinations—reports of the Board of Mathematical studies, 1849, 1850, pp. 230-236.

THE REV. H. GOODWIN, M.A., late Fellow of Gonville and Caius College:—
Mathematical examinations— subjects required for a common degree—for honours—raising the standard, 236. Opinion respecting the present examinations—board of studies—tendency of the present examinations—problems—private tuition—encouragement of mathematical reading, 237. The public teaching of the University, 238.

THE REV. JOHN HIND, M.A., late Fellow of Sidney College:—
Mathematical examinations — the syndicate of studies—limitation of subjects—books in use, 238. Private tuition—inducements to study mathematics after the B.A. degree—proficiency in mathematical science required for the ordinary degree, 239.

WILLIAM HOPKINS, ESQ., M.A., President of the Geological Society:—
Changes in the mathematical examinations since 1827, p. 239. Changes in 1848—moderators and examiners—examinations, 240. Subjects—limitation of subjects—examinations, 241. Vivâ voce examinations recommended—rewards and emoluments, 242. Excellence of the present mathematical examinations—the syndicate of studies—limitation of subjects, 243. Books in use—tendency of the present course of mathematical studies—problems, 244. Course followed by those reading for honours—private tuition—attendance on lectures—vacations—private tutors—the collegiate system as distinguished from the academic, 245. Lectures, 246. Inducements to continue the study of mathematics, 247. Recommendations—general character of the higher class of students—tests of merit, 248.

THE REV. W. C. MATHISON, M.A., Fellow of Trinity College:—
Mathematical examinations—the Board of Mathematical studies—limitation of subjects—problems—private tuition, 249. Suggestions, 250.

THE REV. J. G. MOULD, M.A., Fellow and Tutor of Corpus Christi College:—
Examinations for the B.A. degree—changes—Mathematical Tripos—amount of knowledge required for the ordinary degree, 250. Mathematical honours—vivâ voce examinations—books in use—opinion regarding the course of mathematical studies —problems — private tutors, 251. Inducements held out to mathematical studies—report of the Board of Mathematical Studies, 252.

THE REV. J. N. PEILL, B.D., Fellow and Tutor of Queens' College:—
Qualifications for degrees—examinations—course of mathematical studies—problems—private tuition, 254.

J. B. PHEAR, ESQ., M.A., Fellow of Clare Hall:—
Mathematical education—private tuition—expenses—the public teaching of the University—professorial lectures, 255.

THE REV. R. PHELPS, D.D., Master of Sidney-Sussex College:—
Mathematical examinations—amount of mathematical knowledge required for a common degree, 256. Board of Mathematical Studies—limitation of subjects—books in use—private tuition, 257. Inducements to continue mathematical study, 258.

THE REV. H. PHILPOTT, D.D., Master of Catharine Hall:—
Mathematical examinations—amount of mathematical knowledge required for the B.A. degree—changes in the examinations, 258. Improvement in the examinations—problems, 260. Course of mathematical study for the first degree for honours —vivâ voce examinations—problems, 261. Board of Mathematical Studies—prizes, 262. Elementary mathematics—lectures—tendency of the course of mathematical studies, 263. Problems—private tuition, 264. Inducements to continue mathematical study—the office of moderator—prizes, 265

THE REV. E. H. STEVENTON, M.A., late Fellow of Corpus Christi College :—
Books in use—tendency of the course of mathematical study — classification of candidates for honours—alphabetical arrangement, 266. Suggestions, 267.

G. G. STOKES, Esq., M.A., Lucasian Professor of Mathematics.
Mathematical examinations, 267. Changes in the mathematical course—System of marks—Proportion of students who obtain mathematical honours, 267*a*. — Vivâ voce examination — Board of mathematical studies — Limitation of subjects, 267*b*. Public tuition—Elementary books—Use of MSS, 267*c*. Analytical tendency of the course of mathematical study—Problems—Private tutors—Inducements to continue mathematical study — Smith's Prizes, 267*d*. Adams' Prize, 267*e*.

THE REV. C. A. SWAINSON, M.A., Fellow and Tutor of Christ's College :—
Mathematical examinations, 267*e*. Length of papers—limitation of subjects, 268. Books in use —tendency of the present course of mathematical study — problems — residence required — private tuition, 269. Expense of private tuition—inducements to continue mathematical reading, 270. Classification of students, 271.

THE REV. W. H. THOMPSON, M.A., Fellow and Tutor of Trinity College :—
Encouragement to mathematical studies—prizes—increase and better payment of professors—private tuition, 271.

THE REV. W. WHEWELL, D.D., Master of Trinity College :—
Mathematical studies, 271. Examinations—vivâ voce examinations, 272. The syndicate of studies —limitation of subjects—books in use—tendency of the course of study—problems—private tuition—the Smith's prizes, 273. Improvement of the teaching of the University, 274.

EVIDENCE ON CLASSICAL STUDIES AND EXAMINATIONS.

THE REV. B. W. BEATSON, M.A., Fellow of Pembroke College :—
Examinations—the classical tripos examination—no change advisable—specification of classical books classical tripos – recommendations, 277.

THE REV. E. M. COPE, M.A., Fellow of Trinity College :—
Classical examinations, 277. Ex-officio examiners—recommendations—examiners for the classical tripos — examination papers for University scholarships and the classical tripos, 278. Insufficiency of the education for classical honours—recommendations, 279.

THE REV. G. CURREY, M.A., late Fellow and Tutor of St. John's College :—
Classical prizes and examinations, 279. Examiners, 280. Board of classical studies—specification of classical books—restrictions on University scholarships—and the Chancellor's medals—changes in the method of examinations, 281. Recommendations, 282.

THE REV. F. FRANCE, M.A., Fellow and Tutor of St. John's College :—
Classical examinations—University scholarships —the chancellor's medals, 282. Examination for University scholarships—Board of Classical Studies—selection of classical books—the medal and classical tripos examinations — examinations for scholarships, 283. Classical prizes — lectures—private tuition—poor students, 284. College examinations — matriculation examination — staff of tutors and lecturers – number of terms—residence during vacation—reading parties, 285.

THE REV. W. G. HUMPHRY, M.A., Fellow of Trinity College :—
Boards of University scholarship examiners—oral examinations, 286.

THE REV. J. A. JEREMIE, D.D., Regius Professor of Divinity :—
Specification of subjects — Board of classical studies—scholarships—the classical tripos ought to be open to all, 286.

J. ROBERTS, Esq., M.A., Fellow of Magdalene College :—
Boards of examiners—specification of books—Chancellor's medal examination—classical tripos examination, 287.

THE REV. W. H. THOMPSON, M.A., Fellow and Tutor of Trinity College :—
Honorary classical examinations, 287. Specification of books—examinations—the Chancellor's medals and classical tripos examinations—English essays, 288.

HENRY THRING, Esq., M.A., Fellow of Magdalene College :—
Classical examinations, 288. Ex-officio examiners—examination papers—specification of classical books—honorary distinctions independent of degrees, 289. Vivâ voce examination—study of the English language, 290.

THE REV. E. WARTER, M.A., Fellow and Tutor of Magdalene College :—
Classical examinations, 290. Ex-officio examiners—specification of books, 291. University scholarships—Chancellor's medals, 292.

THE REV. W. WHEWELL, D.D., Master of Trinity College :—
Board of classical studies—specification of books —the Chancellor's medals, &c., 292.

THE REV. ROWLAND WILLIAMS, B.D., Fellow and late Tutor of King's College :—
Classical examinations, 293. Board of classical studies—selection of classical books—restrictions on the Chancellor's medals, 294. Private tuition—collegiate patronage – modern languages, 295.

THE REV. W. S. WOOD, M.A., late Fellow of St. John's College :—
Classical examinations, 296. Boards of Examiners—selection of classical books—University scholarships—the Chancellor's medals, 297.

THE REV. T. WORSLEY, M.A., Master of Downing College :—
Board of classical studies—specification of classical books—the Chancellor's medals and classical tripos, 298.

THE REV. A. H. WRATISLAW, M.A., Fellow and Tutor of Christ's College :—
The honorary classical examinations—prizes—the classical tripos examination, 299. Ex-officio examiners—specification of books—Chancellor's medals, 300.

EVIDENCE FROM COLLEGES.

ST. PETER'S COLLEGE.

The Rev. H. W. Cookson, D.D., Master :—
Appointment of the head—duties — stipend—election of fellows, 306. Residence during terms —stipends—duties—the bursars—prælector—Bye-foundations, 307. Bye fellowships— the scholarships—admission of students—College chapel, 308. Course of collegiate instruction—discipline— expenses, 309. Poor students—reduction of expenses —removal of restrictions on fellowships, &c.— scholarships or exhibitions ineffective — consolidation of fellowships, &c., 311.

The Master and Fellows :—
Average gross yearly income of the College—net income—deductions, 312. Fees—total aggregate of gross and net income—application of the net income—income of the master and the fellows —the Bye-fellows, 313. Weekly sums paid to scholars—exhibitions—expense of table in the College Hall for fellows, scholars, and sizars—expense of repairs—prizes—charities—beneficial leases—purchase of advowsons—addition made to College buildings, 314.
The College Library, 315.

PEMBROKE COLLEGE.

The Rev. G. Ainslie, D.D. Master :—
Election of the master, 316. Duties—stipend—election of fellows—restrictions—duties, 317. Emoluments—election of scholars — restrictions —Bye-fellowships — Merchant Taylors' School — Bowes School—allowance to scholars, 318. Exhibitions—admission of students—College chapel—course of study—rewards—attendance at lectures—and dinner—expenses—poor students, 319. Removal of restrictions on fellowships and scholarships, &c.— Ipswich scholarships, 320.

The Master and Fellows:—
Gross income of the College, 320. Deductions and net receipts—whole gross annual income—clear net annual income—application of the net income, 321. Emoluments attached to scholarships and exhibitions—sizars, 322. Expenses of fellows' and scholars' tables—expense of repairs—beneficial leases—purchase of advowsons—alterations respecting scholarships—schools which have appropriate scholarships and exhibitions, 323.
The College Library, 324.

GONVILLE AND CAIUS COLLEGE.

The Rev. Benedict Chapman, D.D., Master:—
Foundation of the College—statutes, 324. Visitors—government of the College—election of the master—election of the fellows—duties of the master and fellows—stipends—restrictions on fellowships, 325. Bye-fellowships—scholarships—exhibitions—admission of students—College chapel—attendance at dinner—College gates closed—Course of instruction, 326. Lectures—examinations—attendance at College lectures—expenses—poor scholars, 327. Extravagance, 328. Removal of restrictions on fellowships, &c., 329.
The College Library, 329.

TRINITY HALL.

T. C. Geldart, Esq., M.A., Master:—
Foundation of the College—appointment of the head, 330. Appointment of the fellows—qualifications and restrictions—stipends, emoluments, and advantages—residence required of master and fellows, 331. Scholars—duties—election, 332. Bye fellowships—changes of practice, head, and fellows, 333. Present practice, head, and fellows—scholarships, &c., 334. Duration of the tenure of scholarships—law studentships, 335. Rewards—attendance on lectures, 336. Attendance in hall—discipline as to expenses—necessary expenses of a fellow-commoner and pensioner, 337. Poor scholars—extravagance—limitations on scholarships—new statutes, 338.

The Master and Fellows of Trinity Hall:—
Gross yearly income of the College derived from landed estates—fines—gross yearly income derived from houses—tithes, 339. Gross yearly income of the College on the expiration of all the beneficial leases—deductions—income derived from room-rents, fees, &c.—yearly payment by every member on the Boards—gross yearly income, and its application, 340. Scholarships and law studentships—Expenses of the hall table—Chapel Clerkship—sizars—festival allowances—Building Fund—charities, 342. Renewal of leases—beneficial leases—house property—purchase of advowsons—Additional College buildings, 343.

CORPUS CHRISTI COLLEGE.

The Rev. J. Pulling, B.D., Master:—
Statutes—master and fellows—scholars—admission of students—tuition—lectures—expenses, 344. Necessary expenses of pensioners and sizars—particulars of preceding estimate—actual average expenses of pensioners and sizars, 345. Sizarships and scholarships—expenses—appropriation of scholarships, &c., 346.
The College Library, 347.

KING'S COLLEGE.

The Rev. Richard Okes, D.D., Provost:—
Appointment of the head—qualifications—tenure of office—residence required—duties enjoined—powers—election of Fellows, 347. Scholarships—Eton College—exhibitions, &c.—admission of students—divine service—lectures—examinations—prizes—attendance on lectures—at dinner—rooms—extravagance, 348. Restrictions on fellowships, &c., 349.
The College Library, 349.

The Provost and Fellows:—
College income—fines on beneficial leases, 349. Manorial fines—proceeds of sale of timber—sources of income and gross amount in the years 1836 and 1851—house property—tithe rent charges, 350. College dues—gross and net income—deductions—room rents—degree fees—funded property—total aggregate net income arising from all sources—application of the net income, 351. Expense of table and college chapel, 352. Building fund—annual amount of prizes and rewards—other particular purposes to which the college income is applied—expenditure of the general income of the college in 1851, 353. Beneficial leases—advowson fund—collegiate buildings, 354.

QUEENS' COLLEGE.

Letter from the President 354.

The Rev. J. E Dalton, B.D, Vice-President:—
Statutes—headship—fellowships, 354. Scholarships—Bye-fellowships—librarianship—clerkships admission of students—divine service—course of instruction—prizes, 355. Attendance on lectures—at dinner—discipline and expenses—poor scholars, 356.

The President and Fellows:—
Average gross income of the College—deductions—funded property—room rents—fees—total gross and net income—President's stipend, &c.—College table—expense of repairs and buildings—prizes—charities—beneficial leases—purchase of advowsons, 357.
The College Library, 358.

ST. CATHARINE'S HALL.

The Rev. H. Philpott, D.D., Master:—
The College Library, 359.
Appointment of the head—stipend—present practice, 360. Election of Fellows—restrictions—emoluments—present practice, 361. Scholarships—Fellowships of bye-foundation, 362. Scholarships and exhibitions, 363. Admission of students—divine service—course of study, 367. Examinations—rewards—attendance at lectures and dinner—College gates closed, 368. College fees and expenses—rent of rooms—expenses of table—servants—combination room—fees—poor students—reduction of expenses—credit—extravagance—Holway's scholarships—rewards, 369.

CHRIST'S COLLEGE.

The Rev J. Cartmell, D.D., Master:—
Foundation of Christ's College—statutes—the master—mode of appointment according to statutes—present practice—tenure of office—length of residence required by statutes, 370. Present practice—duties according to statutes—present practice—powers according to statutes—present practice—emoluments, 371. The fellows—mode of appointment according to statutes, 372. Present practice, 373. Emoluments according to statutes—present practice, 374. Scholars on the original foundation—mode of appointment, &c., according to statutes—present practice, 375. Salaries—chambers—fellows and scholars on the foundation of King Edward VI., 376. Fellows and scholars on the foundation of Sir John Finch and Sir Thomas Baines, 377. Additional scholarships, 378. Admission of students—divine service—collegiate instruction and examinations, 381. Rewards—regulations of discipline, 382. Parties—debts—tradesmen's bills—necessary expenses of the several classes of students—room rents—annual expenses for noblemen, 383. Annual expenses for fellow-commoners—for pensioners—for sizars, 384. Actual expenses of students—residence required—Poor students—reduction of expenses and restraint on extravagance, 385. Recommendations—discipline—credit—tradesmen—money-lenders, 386. Removal of restrictions on fellowships and scholarships—exhibitions—default of claimants to scholarships and exhibitions—consolidation of fellowships, scholarships, or exhibitions, 387. Table of actual total expenses of 104 students of Christ's College, who proceeded regularly to their first degree in the years 1843-49 inclusive, 388.

The Master and Fellows:—
Gross and net yearly income derived from estates of land—deductions, 389. Gross and net yearly income derived from houses—deductions—gross and net yearly income derived from tithe rent charges—funded property and Exchequer bills—rent of rooms, fees, &c.—income derived from other sources, 390. Total aggregate of gross and net income arising from all sources—distribution and application of the net income—the master—the fellows—the scholars, 391. Exhibitions, 392. College hall table—sizars—expenses of collegiate

buildings — prizes — charities — other purposes to which the college income is applied, 394. Beneficial leases—purchase of advowsons, 395. Addition to collegiate buildings—restrictions on fellowships and scholarships—exhibitions limited to particular schools or localities, 396.

ST. JOHN'S COLLEGE.

The Rev R. Tatham, D.D., Master:—
Election of head and fellows — scholarships — restrictions on fellowships, 396. Restrictions on scholarships—leave of absence—duties of fellows the government of the College—stipends—admission of students—divine service—course of instruction—prizes, 397. Attendance on lectures—College gates closed—expenses—poor students—necessary expenses — extravagance—restrictions on fellowships, &c., 398.

The Master, Fellows, and Scholars:—
Amount and application of the income of the College, 399. Expense of the hall table—sizars—repair of buildings, 400. Beneficial leases—purchase of advowsons—new college buildings, 401.
The College Library, 401.

MAGDALENE COLLEGE.

The Rev. Edward Warter, M.A., President:—
Statutes, 403. Appointment of the head, fellows, and scholars—stipends, 404. Bye-fellowships, 405. Scholarships and exhibitions, 406. Building fund—emoluments and advantages enjoyed by the master, professors, and fellows, beyond the respective stipends assigned to them—rewards for the encouragement of learning, 445.

MISCELLANEOUS EVIDENCE, 449.

APPENDIX, 454.

CAMBRIDGE UNIVERSITY COMMISSION.

CORRESPONDENCE.

Correspondence.

CORRESPONDENCE.

The Commissioners, at the outset of their inquiry, addressed a letter (of which a copy is subjoined) to the following members of the University:—

The High Steward,
The Vice-Chancellor,
The Visitors and Heads of the several Colleges,
The Public Orator,
The Proctors,
The Members of the Caput,
The Registrary,
The Librarian, and
The several Professors.

Cambridge University Commission,
Downing-street, October 30, 1850.

SIR,

HER Majesty the Queen, having been graciously pleased to appoint Commissioners for inquiring into the State, Discipline, Studies and Revenues of the University of Cambridge and the several Colleges thereof, the Commissioners beg respectfully to communicate to you as a copy of the Royal Commission.

They entertain the hope that they shall have the benefit of your assistance and co-operation in their endeavours to fulfil the important duties with which they have been intrusted. In the mode of conducting their inquiries, they will desire to consult, as much as is possible, the convenience of the University.

On behalf of the Commissioners,
I have the honour to be, Sir,
Your humble servant,
(Signed) J. CHESTER.

The following are the answers received in reply to this communication.

1. *From the Vice-Chancellor.*

MY LORD, *Jesus College, Cambridge, November* 8, 1850.

I HAVE the honour to acknowledge the receipt of a letter and a copy of a royal Commission directed to me as Vice-Chancellor. I will take care that the matter to which the letter and commission refer, is duly considered.

I have the honour to be, my Lord,
Your faithful, humble servant,

The Lord Bishop of Chester. G. E. CORRIE, *Vice-Chancellor.*

MY LORD AND GENTLEMEN, *Cambridge, December* 2, 1850.

AFTER having ascertained from high legal authority, that the University Commission is without the form of law, and is, moreover, regarded as unconstitutional, and of a kind that was never issued except in the worst times, I feel obliged by a sense of public duty, to decline answering any of the questions which I had the honour to receive from you a short time ago,

I beg to remain, with great respect,
Your obedient humble servant,

The Lord Bishop of Chester, and other Her Majesty's Commissioners, &c. G. E. CORRIE, *Vice-Chancellor.*

---

2. *Replies of the Visitors of Colleges.*

MY LORD, *Audley End, November* 7, 1850.

I HAVE just had the honour of receiving your Lordship's letter of October 30, addressed to me officially as Visitor of Magdalene College, Cambridge, together with the copy of the royal Commission contained therein.

With respect to the hope expressed by your Lordship that the Commissioners may have my assistance and co-operation in fulfilling the duties entrusted to their charge, I beg leave to say that the subject will demand my best consideration, but that I am not at present prepared to state what course it may be proper for me to pursue.

I have the honour to be, my Lord,
Your Lordship's most obedient humble servant,

The Lord Bishop of Chester,
&c. &c. &c.
Whitehall. BRAYBROOKE.

MY LORD, 1, *Regent-street, November* 11, 1850.

I HAVE the honour to acknowledge the receipt of your letter enclosing a copy of the Commission issued under Her Majesty's authority for inquiring into the State, Discipline, &c., of the University and Colleges of Cambridge.

In reply to the expression of your hope that the Commissioners may have the benefit of my assistance and co-operation in their endeavour to fulfil the important duties with

which they have been intrusted, I beg leave to say that I shall, as Visitor of King's College, be ready to render that assistance, as far as I can, consistently with the fulfilment of the purposes for which I was appointed Visitor, that of carrying out the instructions of the Founder, as expressed in his Statutes.

I have the honour to be, my Lord,
Your humble servant,

The Lord Bishop of Chester. J. LINCOLN.

My Lord, *Ely, November* 9, 1850.

I have the honour to acknowledge the receipt of a copy of the royal Commission, for inquiring into the State, Discipline, Studies, and Revenues of the University of Cambridge and the several Colleges thereof, communicated to me as Visitor of St. Peter's, Jesus, and St. John's Colleges, in the hope that the Commissioners will have my assistance and co-operation in their endeavours to fulfil the important duties with which they have been intrusted.

I have thought it my duty to inform the Heads of the Colleges of which I am Visitor that I have received such a communication.

Your Lordship may depend upon hearing from me again when I shall have had time to pay that attention to the subject of the Commission which it manifestly demands.

I have the honour to be, my Lord,
Your faithful servant,

The Lord Bishop of Chester. T. ELY.

My Lord, *Ely House, December* 6, 1850.

On looking through the Statutes of the Colleges of which I am Visitor, I find the cases in which my Visitatorial authority is to be exercised, clearly defined, and the mode of proceeding in each case pointed out; and I cannot discover that I possess the slightest authority, as Visitor, except in those cases.

Under these circumstances I feel that, by attempting to co-operate with the Commissioners in their inquiries into the state of St. Peter's, Jesus, and St. John's Colleges, I should be assuming to myself a power which, not having been entrusted to me by the Statutes, the members of those Colleges would be warranted in resisting.

I have the honour to be, my Lord,
Your most faithful servant,

The Lord Bishop of Chester. T. ELY.

---

3. *Replies of the Heads of Colleges.*

St. Peter's College Lodge, Cambridge,
My Lord, *Nov.* 8, 1850.

I have the honour to acknowledge the receipt of your Lordship's two letters of the 30th ultimo (delivered to me on the evening of the 5th instant) written on behalf of the Commissioners for inquiring into the State, Discipline, Studies, and Revenues of the University and Colleges of Cambridge, and addressed to me, one as Master of St Peter's College, and the other as a member of the Caput Senatus.

I have also the honour to acknowledge the receipt of two copies of the Royal Commission.

I venture to defer replying to the substance of your Lordship's communications for a short time, in the hope that a slight delay will not be considered unreasonable in a matter of so much importance.

I have the honour to be, my Lord,
Your Lordship's very humble servant,

The Right Rev. the Lord Bishop of Chester. H. W. COOKSON.

My Lord, *St. Peter's College, Cambridge, March* 1, 1851.

I have the honour to inform your Lordship that I will endeavour to return answers, either wholly or in part, to the various questions which have been proposed to me by Her Majesty's Commissioners, for inquiring into the state of the University of Cambridge, and the Colleges thereof, and that I hope to be able, at no distant period, to supply a portion of the information which the Commissioners have been pleased to apply for.

I have the honour to be, my Lord,
Your Lordship's very obedient, humble servant,

The Right Rev. the Lord Bishop of Chester. H. W. COOKSON.

Clare Hall, Jan. 28, 1852.

The Master of Clare Hall declines to return answers to the questions sent to him, or to the Society of Clare Hall, by the University Commissioners.

To the Cambridge University Commission,
Downing street.

My Lord, *Pembroke College, Cambridge, Nov.* 13, 1850.

I have to acknowledge the favour of your letter of the 30th ult., written on behalf of the Commissioners appointed by the Queen to inquire into the State, Discipline, Studies, and Revenues of the University and Colleges of Cambridge, together with a copy of the Commission itself.

Correspondence.

In reply to the request of the Commissioners, that they may have my assistance and coöperation, I beg leave respectfully to say that, as it has pleased Her Majesty to issue such Commission, it will be my desire, as well as duty, to meet the wishes of the Commissioners.

I have the honour to be
Your Lordship's humbleservant,
GILBERT AINSLIE.

To the Right Rev. the Lord Bishop of Chester,
Whitehall.

My Lord, *Pembroke College, Cambridge, Dec.* 9, 1850.

The Vice-Chancellor of our University has signified to the Heads of Colleges that it is not his intention to answer the questions put to him by yourself and the other Commissioners appointed by the Crown to inquire into the State, Discipline, Studies, and Revenues of the University. As the Vice-Chancellor has not consulted or asked the advice of the Heads of Colleges in this matter, I feel myself, as one of them, at liberty to make the Commissioners an offer of such information as it may be in my power to give, on the subjects of their questions, should they please to put them to me.

I have the honour to be, my Lord,
Your most obedient servant,
GILBERT AINSLIE.

The Lord Bishop of Chester.

Caius College Lodge, Nov. 18, 1850.

The Master of Gonville and Caius College Cambridge has had the honour of receiving from the Cambridge University Commissioners a copy of Her Majesty's Commission for inquiring into the State, Discipline, Studies, and Revenues of the University of Cambridge, and of all and singular the Colleges of the said University, and which he will take an early opportunity of laying before the Fellows of his College.

As he has reason to expect that they will wish to be informed, whether the Commissioners have the power to enforce the attendance of the Members of the College: and to compel the different College officers to produce their books of orders and accounts, &c.—he will feel obliged by the Commissioners favouring him with instructions on those subjects

BENEDICT CHAPMAN, D.D.,
Master of Gonville and Caius College.

To the Honourable the Cambridge
University Commissioners.

Corpus Christi College Lodge, Cambridge,
My Lord, *Nov.* 13, 1850.

I have the honour to acknowledge the receipt of a copy of the royal Commission for inquiring into the state &c., of the University of Cambridge, and the several Colleges thereof—communicated to me as Master of Corpus Christi College, by your Lordship, in behalf of the Commissioners.

In acknowledging at the same time the courtesy with which the Commissioners express their hope of obtaining my cooperation, and their desire to consult the convenience of the University; I beg leave respectfully, in a matter so deeply affecting our Collegiate privileges, and the obligations imposed on us by our Statutes, to defer for a while my reply, until I shall have had further time and opportunity for consulting with all the Fellows of my College, as to the course which it will be our duty to pursue.

I have the honour to be, my Lord,
Your Lordship's obedient servant,
J. PULLING.

The Right Rev. the Lord Bishop of Chester.

My Lord, *Eton College, Dec.* 8, 1850.

Upon my arrival at King's College, for my induction, in the middle of last month, I received, amongst other papers belonging to my predecessor, your Lordship's letter of the 30th of October last, with a copy of the royal Commission to the Universities.

I have really not yet been able to make myself well acquainted with the more important affairs of my College, and scarcely with my powers, for I have not resided in Cambridge now for thirty years past.

Without any desire to be considered uncourteous, but with a wish to prevent by any further delay of my answer to your Lordship's letter an imputation of uncourteousness on my part, I must, for the present at least, however unwillingly, content myself with a simple acknowledgment of your Lordship's letter and its inclosure.

I have the honour to be, my Lord,
Your Lordship's humble servant,
RICHARD OKES.

The Right Rev. the Lord Bishop of Chester *Provost of King's College, Cambridge.*

The Lodge, King's College, Cambridge,
July 21, 1851.

My Lord,

I am sensible that I must appear to Her Majesty's Commissioners for this University regardless of the letters received from them relating to the Commission. But I must assure your Lordship that my disregard of these letters is not real.

From the time of my election in November last until the present date I have been too much occupied with the actual business of my office, both as regards the University and my own College, to pay that attention to the questions proposed to me, which their importance requires. I am now preparing for my official visit to Eton for the election to be held there next week. After that time I shall, I trust, be able to find some uninterrupted leisure; and I confidently hope that, before the end of next month, I may again place myself in communication with Her Majesty's Commissioners.

I have the honour to remain, my Lord,
Your Lordship's humble servant,
RICHARD OKES.
Provost of King's College.

To the Right Rev. the Lord Bishop of Chester.

My Lord,

King's College, Cambridge, Feb. 9, 1852.

I have already acknowledged, though at a greater distance of time than I could have wished, the receipt of your Lordship's letter of 30th October, 1850, and the copy of the royal Commission for this University.

I find, upon reference to the first list of queries I received from "Her Majesty's Commissioners for inquiring into the state of the University of Cambridge and the Colleges thereof," that "my attention to the subjoined list is invited, and the favour of such information in reply, as I may be disposed to communicate is requested."

I believe, as I hinted in my first letter to your Lordship, that my powers of obtaining information upon matters belonging to the University in general are necessarily, in consequence of my long absence from the University, somewhat limited; and, therefore, my opinion upon such matters cannot be of very great value.

With regard to matters belonging to my own College, I am not unwilling, from a sentiment of pure respect for the authority of the Sovereign's name, to make any communications which may assist the inquiries of Her Majesty's Commissioners.

But before I proceed to answer any of the questions submitted to me by Her Majesty's Commissioners, I feel it necessary to mention that I *reserve* to *myself* the *right of silence;* especially upon such points (should any such arise) as could not be answered by me without a violation of my Admission Oath. Upon such points the Commissioners must, of course, allow me to be silent. On all others I am ready to afford, as far as I am able, every information which Her Majesty's Commissioners may reasonably require.

In making this statement, *in limine,* I request the Commissioners to believe that I do so, not from any apprehension that my College has aught to fear from this or any other inquiry into its affairs; but solely from a conscientious desire to comply with the injunctions of the Founder of my College, and to maintain the rights by him committed to my charge.

I have the honour to be, my Lord,
Your Lordship's obedient servant,
RICHARD OKES, *Provost.*

To the Right Rev. the Lord Bishop of Chester.

My Lord,

Queens' Lodge, Cambridge, Nov. 25, 1850.

I had the honour of receiving your Lordship's letter, accompanied with a copy of the royal Commission, which, on account of my serious and continued indisposition, of which your Lordship is aware, I immediately sent to our Vice-President, requesting that it might be read to each of the Fellows. It was returned to me last week, but without any remark, and I have strong reason to believe that no public meeting of the Society on the subject to which your Lordship's letter refers has been held, or is contemplated.

I have the honour to be, my Lord,
Your Lordship's most obedient servant,
JOSHUA KING.

The Right Rev. the Lord Bishop of Chester,
London.

My Lord,

Catherine Lodge, Cambridge, Nov. 15, 1850.

I have had the honour to receive the letter, signed by your Lordship on behalf of the Cambridge University Commissioners, together with a copy of the royal Commission.

I beg to acknowledge the courtesy of Her Majesty's Commissioners in expressing a desire to consult the convenience of the University in the mode of conducting their inquiries; and to say that, such a Commission having been issued, I consider it to be my duty to answer the questions proposed by the Commissioners as far as I may be able consistently with a due regard to the obligations imposed upon me by my College Statutes.

Before sending this reply, however, to your Lordship's letter, I have thought it to be right to ascertain the views and opinions of the Society over which I preside, respecting the proposed inquiry; and I find that they do not feel themselves at liberty to grant th e

Correspondence.

authority which is necessary to enable any member of the body to communicate matters of a private nature concerning the State, Discipline, Studies, and Revenues of the College.

I am, my Lord,
Your Lordship's very faithful and obedient servant,
H. PHILPOTT.

The Right Rev. the Lord Bishop of Chester.

Christ's College Lodge, Cambridge,
Nov. 18, 1850.

My Lord,

I have had the honour of receiving your Lordship's letter, dated October 30, communicating to me a copy of the Commission, which Her Majesty the Queen has been graciously pleased to direct to your Lordship and other gentlemen therein named, for the purpose of inquiring into the State, Discipline, Studies, and Revenues of the University of Cambridge, and the several Colleges thereof; and inviting, on behalf of the Royal Commissioners, my assistance and co-operation in their endeavours to fulfil the important duties entrusted to them.

I beg leave to express my sense of the courtesy of your Lordship's letter, and to state that any communication which the Royal Commissioners may think proper to address to me, shall receive my respectful consideration.

I have the honour to be, my Lord,
Your Lordship's most obedient servant,
JAMES CARTMELL.
Master of Christ's College.

The Lord Bishop of Chester.

St. John's College, Cambridge,
Nov. 8, 1850.

My Lord Bishop,

I beg to anknowledge the receipt of the copy of the Royal Commission for inquiring into the State, Discipline, Studies, and Revenues of the University of Cambridge and the several Colleges thereof, which the Commissioners have communicated to me; and in reply to the accompanying letter with which the Commissioners have favoured me, I beg to say that I will give due and early attention to the important subject.

I have the honour to be, my Lord Bishop,
Your Lordship's obedient servant,
R. TATHAM,
Master of St. John's College.

To the Lord Bishop of Chester.

My dear Lord,

Deanery, Windsor, Nov. 7, 1850.

I beg to acknowledge the receipt of your letter and its enclosure, and regret very much that the state of my health at this time prevents my entering into any business. I purpose spending the winter at St. Leonard's, by Dr. Ferguson's advice. I will forward your communication to the Rev. Edward Warter, the Vice-Master of Magdalene College, in whom I place the greatest confidence, and I know that he will give you every necessary information.

I have the honour to be, my dear Lord,
Yours faithfully,
G. NEVILLE GRENVILLE.

The Lord Bishop of Chester.

My Lord,

Trinity Lodge, Cambridge, Nov. 8, 1850.

I have to thank your Lordship for communicating to me, as Master of Trinity College, a copy of the Commission by which Her Majesty the Queen has been pleased to appoint your Lordship and other Commissioners for inquiring into the State, Discipline, Studies, and Revenues of this University and the Colleges thereof, and for the kind expressions contained in your Lordship's accompanying letter.

I hope to be able to communicate to your Lordship, at an early period, such further reply as I may have to make to that letter.

I have the honour to be, my Lord,
Your Lordship's very humble and obedient servant,
W. WHEWELL.

The Lord Bishop of Chester.

My Lord,

Trinity Lodge, Cambridge, Nov. 23, 1850.

regret that I have not been able sooner to reply fully to your Lordship's letter of October 30th, which was addressed to me, as Master of Trinity College, on the part of Her Majesty's Commissioners for inquiring into the State, Discipline, Studies and Revenues of this University and the Colleges thereof; and which expressed the hope of the Commissioners that they might have my assistance in fulfilling their important duties.

I am willing, in agreement with the wish of the College over which I have the honour to preside, to give to the Commissioners, in the discharge of their duty, every assistance in my power, which is consistent with my duty to the College and to the University.

Your Lordship and the Commissioners in general, will not, I trust, be surprised at such a reservation. They are aware that it has always been held to be a matter of the highest

importance to the preservation of the English constitution that the independence of the Universities and of the Colleges thereof, should be maintained by the members of those bodies for the time being. The present Commission, so far as I am aware, does not agree with any previous proceeding sanctioned by the existing law of England so closely as to enable us to direct ourselves in this case by precedent. The Commissioners are aware that in such Colleges the duties of those who administer their affairs, involve the duty of a reserve in communicating on some portions of such affairs; and this duty it would seem, Her Majesty's Ministers recognize, and wish to treat with respect; for having had the advantage of being present in the House of Commons when Lord John Russell declared his intention of advising such a Commission as the present, I heard on that occasion, a statement made by Her Majesty's Attorney General, and acquiesced in by Her Majesty's Ministers, to the effect that the Commission would have no power to compel evidence. But notwithstanding this declaration, the Commission of which your Lordship has been kind enough to send me a copy, does profess to "authorize and empower" the Commissioners to call before them and examine persons, and also to call for and examine books, documents, papers and records.

I am informed by legal advice, that it is proper that I should protest against such expressions, as implying the assumption of an authority which cannot be exercised in this manner without infringing the rights and privileges of this College, and of the members thereof. And I therefore hereby beg leave to protest against such an assumption of authority, and to declare that, in any answers which I may give to the inquiries of the Commission, I do not acknowledge that such authority is conveyed to them by such Commission, nor consent that such compliance of mine, in the present instance, may be drawn into precedent against myself or any other person.

Your Lordship and the Commissioners in general, are so obliging as to express also a desire to consult the convenience of the University as much as possible in the mode of conducting the examination.

I therefore take the liberty of respectfully suggesting that it would, as I conceive greatly conduce to the convenience of members of the University, if the questions were proposed, and the answers returned in writing; and if each member of the University were furnished at once with a list of the leading questions which it is desired by the Commissioners that he should answer.

I would beg leave further respectfully to inquire whether it will be permitted to those members of the University who are applied to by the Commissioners, or to others, to lay before the Commissioners their views as to the state of the University and of the Colleges, on points on which questions are not addressed to them by the Commission.

I have the honour to be, my Lord,
Your very humble and obedient servant,
W. WHEWELL.

The Lord Bishop of Chester.

My Lord Bishop, *Sidney College, Nov.* 13, 1850.

I beg leave most respectfully to acknowledge the receipt of a copy of the Royal Commission which has been issued to visit the University and Colleges of Cambridge.

I thank your Lordship and the other members of the Commission for the courtesy expressed in your Lordship's accompanying letter respecting the mode in which the Commission will conduct its inquiries.

I remain my Lord Bishop,
Your Lordship's obedient humble servant,
ROBT. PHELPS.

Emmanuel College, Cambridge,
My Lord, *Nov.* 8, 1850.

I beg to acknowledge the receipt of your Lordship's communication of the 30th of October, together with a copy of the Royal Commission for the University of Cambridge.

I will take an early opportunity of laying both documents before the Society. And I have the honour to be, my Lord, with the greatest respect,
Your Lordship's obedient faithful servant,
GEORGE ARCHDALL.

The Right Reverend the Lord Bishop of Chester.

My Lord, *Downing College Lodge, Nov.* 11, 1850.

I have the honour to acknowledge the receipt of a copy of the Royal Commission for inquiring into the State, Discipline, Studies and Revenues of the University of Cambridge, and of a letter addressed by your Lordship, on behalf of the Commissioners, to myself as Master of Downing College.

I beg to express to your Lordship and to the Commissioners my sense of the courtesy of this communication and of the terms in which it has been made; and to assure them that its very important subject shall have my immediate and most earnest consideration.

I have the honour to be, my Lord,
Your Lordship's obedient servant,
T. WORSLEY.

To the Right Reverend the Lord Bishop of Chester.

Correspondence.

REVEREND SIR, *Downing Lodge, Cambridge, May* 28, 1851.

IN replying to your letter of the 14th of this month, I beg to express my regret on account of the interval which has elapsed, since my acknowledgment of the first communication made to me on the part of the Commissioners.

This interval has been occasioned, first by serious questions as to the course which it had become my duty to pursue in this matter, and afterwards by the difficulty of explaining, within reasonable limits, the actual and somewhat peculiar position of the College over which I preside.

Before addressing myself to the substance of this enquiry, I feel bound on the one hand, to express my strong sense of the courtesy and consideration which has been uniformly shewn me by the Commissioners, and on the other, formally and expressly to reserve to myself the right of declining to answer any or all of the questions proposed; in so far as such a reservation may be necessary to maintain unimpaired, whatever powers and privileges I am invested with as Master of this College; whether by its own charter and statutes, or by those of the University, or by the law of the land.

With regard to the questions themselves, the answers to some of them will require reference to certain documents of which I have only single copies; and as the placing of these documents for a time in the hands of the Commissioners may become necessary to a clear understanding of the answers, it will I think be expedient to send both the documents and the answers at the same time. The gain on the score of clearness by this mode of proceeding will I hope be my apology for a somewhat longer interval than would otherwise be necessary, before my next communication to the Commissioners.

It will be my endeavour to abridge that interval as much as possible.

I have the honour to be, reverend Sir,
Your obedient humble servant,
T. WORSLEY.

To the Reverend the Secretary of the Cambridge University Commission,
Downing Street, London.

---

4. *Reply of the Rev. A. Thacker, one of the Proctors of the University.*

Trinity College, Cambridge,
MY LORD, *Nov.* 16, 1850.

I BEG to acknowledge the receipt of your Lordship's communication of October 30, and to apologise for not sending an earlier reply.

I have only now to state that I shall be ready, if called upon by the Commission, to furnish all the information in my power, with respect to the office which I have this year the honour to fill in the University.

I am, my Lord,
Your Lorship's obedient, humble servant,
The Lord Bishop of Chester. A. THACKER, *Senior Proctor.*

---

5. *Replies of Members of the Caput.*

St. Peter's College Lodge, Cambridge,
MY LORD, *Dec.* 4, 1850.

HAVING been requested, as a member of the Caput Senatûs of this University, to assist and coöperate with the Commissioners for inquiring into the State, Discipline, Studies, and Revenues of the University and Colleges of Cambridge, in their endeavour to fulfil the important duties with which they have been entrusted, I have the honour to inform your Lordship that I am prepared to give the most respectful and attentive consideration to any communications which the Commissioners may think proper to address to me in that capacity, and also to all matters relating to the Commission which may be brought under my notice in the Senate.

I have the honour to be, my Lord,
Your Lordship's very humble servant,
The Right Rev. the Lord Bishop of Chester. H. W. COOKSON.

Trinity College, Cambridge,
MY LORD, *Nov.* 14, 1850.

IN reply to the communication on behalf of the University Commission, with which your Lordship has honoured me, I beg to say that, in obedience to Her Majesty's commands, I shall be ready, when called upon, to attend the Commission, and to give any information in my power.

I have the honour to be, my Lord,
Your Lordship's most obedient, and very humble servant,
C. B. BROADLEY, LL.D.,
Deputy Regius Professor of Civil Law, and
Member of the Caput Senatus.

To the Right Rev. the Lord Bishop of Chester,
Chairman of the University Commission.

Christ's College, Cambridge, Nov. 8, 1850.

My Lord Bishop,

I beg to acknowledge the receipt of your Lordship's communication, dated October 30, relating to the Commission for inquiring into the State of the University of Cambridge, and can only say now, that I will, when the time arrives, endeavour so to act as best to promote the highest interests of our University and country.

I am, my Lord,
Your Lordship's faithful servant,
FREDERICK GEL

---

6. *Reply of Rev. J. Romilly, Registrary.*

Trinity College, Cambridge, Nov. 6, 1850.

The Registrary of the University has the honour to acknowledge the receipt of a copy of the royal Commission, and also of a letter signed by the Lord Bishop of Chester, and dated the 30th ultimo. The Registrary will give all co-operation that is in his power.

---

7. *Reply of the Rev. J. Power, Librarian.*

My Lord, *Cambridge, Nov.* 9, 1850.

I beg to acknowledge the receipt of your Lordship's letter, enclosing a copy of the royal Commission.

When I see intrusted with that Commission such distinguished Members and well tried friends of the University as your Lordship, the Dean of Ely, Sir John Herschel, Sir John Romilly, and Professor Sedgwick, all of whom are under the same obligation with myself to defend our Alma Mater rogati et non rogati, I am sure that, as Librarian of the University, I need not have the slightest hesitation in tendering my allegiance to the Commission.

Your Lordship is aware that I cannot boast of much more than five years experience in the duties of my office, but I beg to assure your Lordship that to the best of my ability I shall be happy to answer any inquiries which the Commissioners may put to me, or, if I may be allowed to use your Lordship's expressions, to assist and co-operate with the Commissioners so far as I may be able.

I have the honour to remain,
Your Lordship's faithful and obedient servant,
J. POWER, *University Librarian.*

To the Right Rev., the Lord Bishop of Chester.

---

8. *Replies of the several Professors.*

My Lord,

I have the honour to acknowledge the receipt of your Lordship's letter enclosing a copy of the royal Commission for inquiring into the state of the University of Cambridge. I beg to add that I am ready to afford any information which I possess, as far as may be consistent with the oaths which I have taken.

I have the honour to be, my Lord,
Your Lordship's obedient servant,

Trinity College, Cambridge, 13th Nov. 1850. J. A. JEREMIE.

My Lord Bishop and Gentlemen, *Trinity Hall, Cambridge, Nov.* 6, 1850.

I shall be happy to give you all the information of which I am possessed respecting the department of the University with which I am concerned. You may command my attendance either in London or Cambridge.

Your obedient servant,
HENRY S. MAINE.
Reg. Prof. of Civil Law.

The Cambridge University Commission.

My Lord, *Cambridge, Nov.* 11, 1850.

I beg leave to acknowledge the receipt from your Lordship of a copy of the royal Commission appointed by her Majesty, the Queen, for inquiring into the State, Discipline, Studies, and Revenues of the University of Cambridge; and to state that I shall hold myself ready to co-operate and assist, as far as I am able, the Commissioners in conducting the inquiry.

I have the honour to be, my Lord,
Your humble and obedient servant,
JOHN HAVILAND, R.P.P.

To the Lord Bishop of Chester.

My Lord, *Cambridge, Nov.* 12, 1850.

I beg to acknowledge the receipt of a copy of the royal Commission; and the letter which accompanied it, signed by your Lordship, requesting, on the part of the Com-

Correspondence.

missioners, my assistance and co-operation, as Margaret Professor of Divinity, and I have to add I will give this important communication my best consideration,

I am, my Lord,
Your Lordship's humble servant,
J. J. BLUNT.

To the Lord Bishop of Chester.

Reverend Sir, *Ely, Nov.* 27, 1850.

I beg to express to the Right Reverend the Lord Bishop of Chester and to the Gentlemen associated with him, my grateful acknowledgment of their courtesy in transmitting to me a copy of Her Majesty's Commission to them, to inquire into the state of the University of Cambridge,—and in desiring my aid to their inquiry.

In reply, I would assure the Commissioners of my entire readiness to afford them every information which it lies within my province to give, in furtherance of the objects for which my professorship was founded, and of the dignity and efficiency of the University.

I am, Reverend Sir,
Your most obedient servant,
W. H. MILL.
Regius Professor of Hebrew.

The Rev. W. H. Bateson, B.D.
Secretary to H. M. Commissioners for inquiring into the University of Cambridge.

My Lord, *Cambridge, Nov.* 22, 1850.

In reply to a communication received from your Lordship and the Commismissioners appointed by Her Majesty, I beg to state, that if any questions on matters connected with the subjects of their inquiry, be addressed to me, I shall be prepared to return such answers to them as circumstances may enable me.

I have the honour to remain, my Lord,
Your Lordship's very humble servant,
JAMES SCHOLEFIELD.

The Lord Bishop of Chester,
&c. &c.

My Lord, *Master's House, Temple, Nov.* 8, 1850.

I have the honour to acknowledge the receipt of your Lordship's letter of the 30th ult, accompanied by a copy of the royal Commission, for the visitation of the University.

I beg to apprise your Lordship of my entire readiness to render every assistance in my power to the Commissioners in their inquiries.

And I have the honour to be, my Lord, with great respect,
Your Lordship's obedient faithful Servant,
THOS. ROBINSON, D.D.,
Lord Almoner's Professor of Arabic.

TheRight Rev. the Lord Bishop of Chester,
&c. &c.

Pembroke College, Cambridge,
My Lord, *Nov.* 8, 1850.

I beg to acknowledge the favour of your Lordship's letter of the 31st ult., enclosing a copy of the royal Commission.

Should the Commissioners in the course of the important investigation with which they have been intrusted by Her Majesty the Queen, find occasion to require any information connected with the Professorship which I have the honour to hold, it will be my endeavour to meet their wishes.

I have the honour to be, my Lord,
Your Lordship's humble servant,
G. G. STOKES.

The Right Reverend the Lord Bishop of Chester.

My Lord, *Trinity Lodge, Cambridge, Nov.* 23, 1850.

I regret that I have not been able sooner to reply fully to your Lordship's letter of October 30, which was addressed to me as Professor of Moral Philosophy, on the part of Her Majesty's Commissioners for inquiring into the State, Discipline, Studies, and Revenues of this University; and which expressed the hope of the Commissioners that they might have my assistance in fulfilling their important duties.

It is my wish to give to the Commissioners, in the discharge of their office, every assistance in my power which is consistent with my other duties.

Your Lordship and the other Commissioners will not, I trust, be surprised at such a reservation. They are aware that it has always been held to be a matter of the highest importance to the preservation of the English Constitution, that the independence of the

Universities should be maintained by the members for the time being, especially those holding offices in those bodies. The present Commission, so far as I am aware, does not agree with any previous proceeding, sanctioned by the existing law of England, so closely as to enable us to direct ourselves in this case by precedent. I had the advantage of being present in the House of Commons when Lord John Russell declared his intention of advising such a Commission, and on that occasion I heard a statement made by the Attorney-General, and acquiesced in by Her Majesty's Ministers, to the effect that the Commission would have no power to compel evidence. But, notwithstanding this declaration, the Commission of which your Lordship has been kind enough to send me a copy, does profess to "authorize and empower" the Commissioners to call before them and examine persons, and also to call for and examine books, documents, papers, and records.

The Professorship which I hold is of private foundation; and I am not aware of any legal right by which the Commissioners can require me to answer questions on the subjects above described. I must therefore, with every wish that the Commission should be fully informed on those subjects, assert for myself in my capacity of Professor, the privilege of answering such questions only as it may be consistent with my other duties to answer.

Your Lordship, and the Commissioners in general, are so obliging as to express also a desire to consult the convenience of the University as much as possible in the mode of conducting the examination.

I therefore take the liberty of respectfully suggesting that it would, as I conceive, greatly conduce to the convenience of the University if the questions were proposed, and the answers returned, in writing; and if each member was furnished at once with a list of the questions which it is desired by the Commissioners he should answer.

I would beg leave further respectfully to inquire whether it will be permitted to those members of the University, who are applied to by the Commissioners, or to others, to lay before the Commissioners their views as to the state of the University on points on which questions are not addressed to them by the Commission.

I have the honour to be, my Lord,
Your very obedient humble servant,

The Lord Bishop of Chester. W. WHEWELL.

SIR, *Cambridge Observatory, Nov.* 7, 1850.

THE Commissioners appointed by Her Majesty for inquiring into the State, Discipline, Studies, and Revenues of the University of Cambridge, having communicated to me, as Plumian Professor of Astronomy, a copy of the royal Commission, I beg to acknowledge the receipt of the same, and to express my willingness to assist the Commissioners by giving information on such points of their inquiries as may relate to the position which I hold in the University.

I have the honour to be, Sir,
Your obedient servant,

To the Secretary of the Cambridge University Commission. J. CHALLIS.

MY LORD, *Cambridge, Nov.* 19, 1850.

I BEG leave duly to acknowledge the honour of your Lordship's communication, as Chairman of the Cambridge University Commission. It will give me much satisfaction if I can assist the labours of Her Majesty's Commissioners to promote the honour, the interests, and the usefulness of our University.

I have the honour to be, my Lord,
Your Lordship's very obedient servant,

The Lord Bishop of Chester. WILLIAM CLARK.

MY LORD, *Maison Valin, Champs Elysées, Nov.* 13, 1850.

I HAVE had the honour of receiving this day, at this place, a letter dated the 30th ultimo, in which, on behalf of the Commissioners for inquiring into the state of the University of Cambridge, your Lordship expresses their hope that they may have my assistance and co-operation in their endeavours to fulfil the important duties with which they have been entrusted.

I regret that I have not had an earlier opportunity of answering that letter by the assurance (which I now respectfully offer to your Lordship and your colleagues in the Commission) that I shall gladly and promptly render any aid which it may be in my power to contribute towards the fulfilment of the great object, with a view to which that Commission has been issued.

I avail myself of this opportunity for mentioning that I am at present residing in this city partly for the recovery of my health, and partly for the better prosecution of enquiries into the subject of my lectures for the year 1851, the history of the civil constitution and government of France. I may perhaps, therefore, be detained here for several weeks longer. It will consequently be for the Commissioners to decide whether (if they should think it right to examine me at all) they should propose to me written questions, to be

Correspondence.

answered in writing from this place, or should postpone any such examination until I can attend them in person.

I have the honour to be, my Lord,
Your Lordship's most obedient humble servant,

The Lord Bishop of Chester. JAMES STEPHEN.

My dear Lord Bishop, *Hitcham, Hadleigh, Suffolk, Nov.* 7, 1850.

I shall have the greatest pleasure in replying to any questions which the University Commissioners may see fit to put to me, and will do so to the best of my knowledge and ability.

Yours faithfully,
J. S. HENSLOW.

My Lord, *East Lodge, Downing College, Nov.* 18, 1850.

I beg to acknowledge the receipt of your letter accompanied by a copy of the royal Commission.

May I ask your Lordship to inform the Commissioners that I shall consider it my duty to lend what assistance and co-operation I can in the furtherance of the objects for which they have been appointed; and I shall feel obliged if your Lordship will add that it will afford me great satisfaction to do so.

I have the honour to remain, my Lord,
Very respectfully yours,

To the Lord Bishop of Chester. W. W. FISHER.

My Lord, *Westow, Huntingdon, Nov.* 12, 1850.

I am obliged by your Lordship's letter and copy of the Commission for inquiring into the state of the University of Cambridge. I feel a deep interest in it, having, I believe, originated the measure by a motion in the House of Commons, in April, 1837, previous to which I had communication with several members of both Universities. I am desirous of laying my views before the Commissioners as a witness if such be their plan of proceeding, if not, by written statement.

I am, my Lord,
Your Lordship's faithful servant,

The Right Rev. the Lord Bishop of Chester. G. PRYME.

P.S.—Absence from home prevented my writing sooner.—G. P.

The following letter was addressed to those Heads of Colleges who had not previously furnished the desired information:—

Cambridge University Commission, Downing-street,
Sir, *May* 14, 1851.

The Commissioners appointed by the Queen to inquire into the state of the University and Colleges of Cambridge, addressed to you, in the month of December last, certain questions relating to the College over which you preside. As they are desirous of avoiding delay in the important inquiry with which they have been intrusted by Her Majesty, they respectfully express their hope that you will have the kindness to furnish them with the desired information as soon as you conveniently can.

They further request that you will be so good as to supply them with a copy of the Statutes of your College and of any Bye-Foundations which have been superadded to it, and also copies of any Interpretations, Decrees, or Letters-Patent, by which those Statutes may have been subsequently explained or modified.

I have the houour to be, Sir,
Your obedient humble servant,
(Signed) J. CHESTER.

CAMBRIDGE UNIVERSITY COMMISSION.

EVIDENCE FROM THE UNIVERSITY.

The following Paper was addressed to the Vice-Chancellor of the University :—

Cambridge University Commission,
Downing-street, Nov. 5, 1851.

Reverend Sir,

The Commissioners respectfully request your attention to the accompanying Questions relating to the Revenues of the University.

They beg to express an earnest hope that they may be furnished with the desired information at your earliest convenience, and, if possible, before the end of the present Term, in order that they may be enabled to prepare their Report in proper form within the limit of time fixed by the terms of the Commission.

I have the honour to be,
Reverend Sir,
Your most obedient Servant,
(Signed) W. H. BATESON,
Secretary.

To the Vice-Chancellor
of the University of Cambridge.

---

1. What is the yearly Income of the University—arising from Land; Houses; Tithe or other Rent Charge; Government Annuities; Profits of the Press; Fees, Fines, or any other sources; the separate Items being returned according to such an average of years as may be thought fair and reasonable, and the sources of Income being distinguished according as they are applicable to the general purposes of the University, or appropriated to specific objects?

2. What are the general heads under which the Expenditure of the University may be classed? And what is the yearly amount under each head, on an average of the last seven years? Have any large sums been expended in late years by the University, in the erection or extension of their Museums, Lecture-rooms, Library, Observatory, or other Buildings? In what manner have the funds been provided; and what part has been supplied from the general Income of the University?

3. In what manner and by what persons is the annual Expenditure of the University audited and controlled? Is the Vice-Chancellor assisted in the management of the Finances of the University by any permanent officer in the capacity of Bursar? and, if not, does it appear to you that the appointment of such an officer would be attended with advantage, either as relieving the Vice-Chancellor from a part of his onerous duties, or as securing uniformity and continuity in the system of financial management?

4. What is the proportion between the sum received by the University from Persons in *Statu Pupillari*, and that expended by the University in maintaining good order and discipline; in conducting the various Public Examinations; and in such particulars of its administration as more especially affect that class of persons; so far as an approximate estimate can be formed?

Answers from the Reverend the Vice-Chancellor.

The Rev. the Vice-Chancellor.

(A.) The YEARLY INCOME of the UNIVERSITY, applicable to general purposes, estimated on an Average of the Seven Years ending at Michaelmas 1851.

Sums expended out of the University Chest during the last 30 years in extending and improving the Buildings of the University.

The following SUMS have been expended out of the UNIVERSITY CHEST during the last 30 years in extending and improving the Buildings of the University :—

In the Years		£.	s.	d.
1821—1833.	For the purchase of Sites and the erection of New Buildings for the University Press	27,658	12	1
1821—1826.	For building the Observatory and supplying it with Instruments (5664*l.* 15*s.* having been voluntarily contributed in addition by members of the University and others)	13,299	0	0
1823.	For the purchase of Dr. E. D. Clarke's collection of Minerals	1,500	0	0
1830.	For the purchase of ground from King's College as the site of a new Library, Museums, and Lecture Rooms	12,000	0	0
1831.	For the purchase of land for the new Botanic Garden, and for obtaining the Act of Parliament required	3,441	3	8
1832—1833.	For the purchase of Astronomical Instruments for the Observatory	1,686	4	9
1834—1836.	For building the Anatomical Museum and Lecture Rooms adjoining the old Botanic Garden.	2,200	0	0
1841—1842.	For the fittings of the new Mineralogical Museum	735	11	9

(Signed) RICH. OKES, V. C.

In addition to the sums thus expended out of the University Chest:—

The Rev. the Vice-Chancellor.

Sums expended on the Buildings of the University.

In the Years	
1837—1848.	The new Fitzwilliam Museum was erected at a total cost of 91,550*l.* 9*s.* 10*d.*, the funds being supplied partly by the accumulated interest of the money bequeathed by Viscount Fitzwilliam and partly by a loan of 12,000*l.*, borrowed on the security of the same interest. The site of the Museum had been previously purchased at a cost of 9,645*l.*, defrayed by the same fund.
1837—1842.	One side of a proposed Court for a new Library, Museum, and Lecture Rooms was erected, and the fittings of the Library completed at a total cost of 31,711*l.* 12*s.* 7*d.*, of which sum 22,141*l.* 10*s.* was contributed voluntarily by members of the University and others, and of the remainder, part has been defrayed and part is now in course of payment by the Library Subscription Fund.
1840—1843.	The fittings of the new Geological Museum were completed at a cost of 4,122*l.* 5*s.* 1*d.*, paid out of the funds accumulated from the income of the Woodwardian Estates.

(Signed) RICH. OKES, V. C.

Auditors of accounts.

The account of the Receipts and Disbursements of the Vice-Chancellor on the part of the University are audited annually by three Members of the Senate, who are elected by Grace on the 10th of October. The Auditors are usually a Doctor of Divinity, a Regent, and a Non-Regent; and they severally take an oath, administered by the Vice-Chancellor, to perform well and faithfully the duties of their office.

By a Grace passed May 14, 1851, it was provided, that the audit should commence every year not later than the 1st of February; and that a summary of the accounts should be annually printed, subscribed with the names of the Auditors, for the purpose of circulation among the resident Members of the Senate. A summary of this kind has been printed and circulated by the Vice-Chancellor for the last five years.

Management of the Finances.

For every item of expenditure beyond the ordinary routine of business, the consent of the Senate is first asked formally by Grace.

The Vice-Chancellor is not assisted in the management of the finances of the University by any permanent officer in the capacity of Bursar; and it does not appear that the appointment of such an officer would be attended with advantage to the University. The payments to be made, and the accounts required to be kept for the University Chest, are of a simple and ordinary character; and I am not aware that there has been any reason to complain of the want of uniformity and continuity in the present system of financial management.

It is obvious that the Senate would have no authority to place the management of the estates belonging to particular Trusts, of which the Vice-Chancellor is a Trustee *ex-officio*, and the keeping of the accounts relating to them, in the hands of a University officer.

(Signed) RICH. OKES, V. C.

Upon examination of the accounts, and consideration of the whole system of administration of the University, it has been found impossible to state, with any approach to accuracy, what is the proportion between the sum received by the University from persons in *statu pupillari*, and that expended by the University in the particulars of administration, which more especially affect that class of persons.

(Signed) RICH. OKES, V. C.

The following paper was addressed to the Vice-Chancellor and the Syndics of the Press, with sufficient copies of it for the use of the Members of the Syndicate.

Cambridge University Commission, Downing-street,
May 15, 1851.

GENTLEMEN,

HER Majesty's Commissioners for inquiring into the state of the University of Cambridge and the Colleges thereof, respectfully invite your attention to the subjoined List of Queries; and request the favour of such information in reply as youmay be kindly disposed to communicate

I have the honour to be,
Gentlemen,
Your obedient humble Servant,
(Signed) W. H. BATESON,
Secretary.

---

1. How are the Syndics of the Press appointed? What is their number? How often do they meet? Are these meetings at fixed periods, as well as by adjournment, or by the summons of the Vice-Chancellor? How many of them commonly attend, and are they usually the same persons? Do they form Sub-Committees to superintend particular Departments of the Establishment?

2. What is the authority of the Press Syndicate? For what acts do they require the authority of a grace of the Senate?

3. Who is the University Printer? How is he appointed? What is his salary, and what are his duties? Is he removable for neglect of duty or incompetence; and, if so, by whose authority? Does he appoint the inferior officers of the Establishment, and what is his authority over them? How many inferior officers are there, and what are their duties? What is the usual extent of the staff of the Establishment, distributed into its different Departments? How many of these are permanently retained? Are there any aged and deserving officers to whom retiring pensions are given? If so, to what extent?

4. What is the extent and capacity of the Establishment? Is it provided with steam and other machinery, in the most improved modern form? What amount of capital would you conceive it fairly to represent—1st, as invested in useful buildings; 2nd, in fittings and machinery; 3rd, in stores of paper and books?

5. What privileges respecting the printing of Prayer-books and Bibles, and the remission of the Excise Duty on paper, does the Press possess? What other persons or Corporations in England, Scotland, or Ireland, possess the same or similar privileges? State the amounts of duty on paper remitted for every year during the last ten years, and in the years 1840, 1830, 1820, and 1810, respectively, as well for Bibles and Prayer-books as for books in the learned languages?

6. What is the annual sum paid to the University by the Government consequent on the loss of the privilege of printing almanacs? To what purpose was this grant directed by the Act of Parliament to be applied? Have any conditions been imposed by the Senate of the University upon its expenditure? Can you state generally the manner in which it has been expended during the last ten years?

7. Can you state the number of Bibles and Prayer-books, respectively, printed at the Cambridge Press during each of the last ten years, and also in 1840, 1830, 1820, and 1810, What were the prices of the cheapest Bible and Prayer-book, as well as of copies of a medium size and quality, published during each o these years? To what causes do you attribute the great reduction of price which they have experienced? Can you state what portion of this reduction is attributable to reduced profit and what to greater cheapness of production? What changes in the processes of printing or in the arrangements of the Establishment have contributed to this great reduction of cost?

8. What other classes of printing are executed at the Cambridge Press? What part of it is occasional and what is permanent? Are any arrangements made by the Syndics for keeping the whole Establishment in constant activity, by reprints of standard works or of new and improved editions of the works of the fathers, of the great divines of the English Church, and of other authors? Can you give a list of original and other works printed at the Cambridge Press during the last ten years? Is it usual for the Syndics to engage the services of distinguished members of the University in preparing or superintending such publications?

9. Can you give a statement of the net profits of the Cambridge Press during each of the last ten years, as well as in the years 1840, 1830, 1820, and 1810? Can you give a statement of the entire receipts and expenditure of the Press during these decennial periods, including the cost of buildings and of the purchase of new sites? Are the accounts of the Press kept separate from, or mixed up with, those of the University? Do the present profits of the Press appear to yield a fair return to the capital invested in the Establishment, if estimated according to its present commercial value?

10. To what causes do you chiefly attribute the decline of the profits of the Press? Do they appear to you to admit of a remedy, by changes in the management and organization of the Establishment; and, if so, what changes would you propose?

To the Rev. the Vice-Chancellor,
and the Syndics of the Press.

On the 17th May, 1851, the following reply was received from the Rev. G. E. Corrie, then Vice-Chancellor. *Papers relating to the University Press.*

REV. SIR, *Cambridge, May* 16, 1851.

RETAINING, as I still have reason to do, the opinion which, on a former occasion, I took the liberty of expressing, respecting the Commission to which you are Secretary, I doubt not but that the Commissioners will readily excuse me for declining to act for them, as regards the papers which I have this morning received by post.

I have the honour to be, Rev. Sir,
Your faithful, humble servant,

The Rev. W. H. Bateson, Secretary, &c. &c. (Signed) G. E. CORRIE, *Vice-Chancellor.*

On the 6th November following, the annexed letter was addressed to the successor of Professor Corrie in the office of Vice-Chancellor, and in reply was received the information which is subjoined:—

Cambridge University Commission, Downing-street,
REVEREND SIR, *November* 6, 1851.

THE Commissioners for inquiring into the State of the University of Cambridge, thought it right, in the fulfilment of their duty, to address certain questions relating to the management of the University Press, to your predecessor in the office of Vice-Chancellor, who, however, declined to be the medium of communication with the Syndics of the Press upon the subject. As you have now been elected to succeed him in his office, the Commissioners respectfully submit to you the same questions, in the hope that you will kindly, after communication with the Syndics of the Press, furnish them with the desired information.

With a view of facilitating this inquiry, I beg to enclose to you several copies of the paper which was forwarded to the late Vice-Chancellor.

I have the honour to be, Reverend Sir,
Your most obedient servant,

The Reverend the Vice-Chancellor, King's College Lodge. (Signed) W. H. BATESON.

MY LORD, *King's College, Cambridge, March* 5, 1852.

I HAVE the honour to send to your Lordship, on behalf of myself and the other Syndics of the University Press, a statement in reply to a list of queries submitted to us by the Commissioners appointed by Her Majesty to inquire into the state of the University of Cambridge and its several Colleges.

The Syndicate think it due to your Lordship, and the other Royal Commissioners to explain why they have not given full replies to all the queries.

The establishment which they superintend, must necessarily be conducted, to a great extent, on the ordinary principles of trade, and the same reasons which deter a person engaged in business from making public minute details concerning it, seem to the Syndics to show that such a course of proceeding would also be detrimental to the interests of the University Press.

The Syndics assume that the information furnished to Her Majesty's Commissioners, will, in some form, be laid before the public.

Whilst, therefore, the Syndics would willingly have furnished your Lordship and your Colleagues with the fullest information respecting the present position of the University Press, they felt themselves precluded from communicating the same to their rivals in trade, and the public at large.

I have the honour to be, my Lord, with great respect,
Your Lordship's obedient servant,

(Signed) RICHARD OKES, *Vice-Chancellor.*

The Right Rev. the Lord Bishop of Chester.

ANSWERS OF THE SYNDICS OF THE UNIVERSITY PRESS TO THE ROYAL COMMISSIONERS.

The Syndics of the Press are appointed by Grace of the Senate. Appointment of the Syndics, and their number.

The number of Syndics resident in the University is eighteen, of whom two are unable, from illness and other circumstances, to attend.

The meetings of the Syndics are fixed, and summoned by the Vice-Chancellor. Meetings.

The Syndics meet for the ordinary business of the Press once a fortnight during Term. Occasional meetings of the Syndics are also held when any special business requires them.

The average attendance for the last three years, according to the signatures in the Minute Book, is $7\frac{2}{3}$ but the usual attendance is 8 or 9. Average attendance.

No business is transacted unless five Syndics at least are present, of whom the Vice-Chancellor, or his Deputy, must be one. This is fixed by Grace of the Senate, May 27, 1752.

The same persons, for the most part, attend regularly. The business of all the departments of the Press is superintended by the whole Syndicate in common.

The authority of the Press Syndicate is defined by the following Grace of the Senate, passed December 2, 1749:—

"Placeat vobis ut . . . . constituantur officinæ vestræ typographicæ, bibliorumque imprimendorum Syndici et Curatores, in eâque re administrandâ potestatem habeant, Authority of the Press Syndicate.

Papers relating to the University Press.

gratiis vestris concedi solitam, ita tamen ut quicquid ab iis, vel a majori parte totius numeri (quorum unus semper sit Ds. Procancellarius) conclusum fuerit, id a vobis ratum firmumque habeatur."

The University Printer.

Mr. John William Parker is the University printer. Upon the occasion of a vacancy two persons are nominated by the Heads of Colleges, of whom the Senate elect one. The salary of the University printer is 400*l.* a-year, and his duties are to manage the business of the establishment, subject to the supervision of the Syndicate. The inferior officers of the establishment are appointed by the University printer, subject to the approval of the Syndicate. One officer, who was employed at the Press for 55 years, is allowed, by Grace of the Senate, an annuity of 65*l.* for the remainder of his life.

Compositors, Printing-machines, Steam-engine, &c.

The office contains frames, fittings, and appurtenances for 70 compositors; presses and appurtenances for 56 pressmen; eight printing-machines, which require about 50 men and boys to manage, work, and supply them. A ten-horse steam engine; two boilers, turning-ing lathe, forge, and circular saw, occupying, at present, four hands; one (steam-power) milling-machine, hydraulic and screw hot presses, at which, together, 100 men and boys might be employed if necessary

There are also closets and other places, with the needful fittings and appurtenances, for any number of readers, overseers, warehousemen and boys, necessary to carry on, get up, complete, and deliver the greatest amount of work which could, at any time, be done by the greatest number of compositors, press-men, and machinists that could be employed at the before named number of frames, presses, and machines.

The steam and other machinery is good of its kind, and adapted to the purposes for which it is used; but, as in similar cases, practice and experience are constantly suggesting improvements which may, from time to time, be adopted, as circumstances permit.

Employment of inferior officers.

The number of inferior officers actually employed is reduced or enlarged according to the state of trade. The continuance of their engagements depends on their own will, their good conduct, and the quantity of work on hand. The establishment being assimilated, as nearly as possible, in its interior economy and management to ordinary printing-offices, the inferior officers are engaged upon the usual trade terms and conditions. By these conditions they may be discharged at a week's, a fortnight's, or a month's notice, according to their several grades.

Privilege of printing Bibles and Prayer-books.

No person or body corporate in England has the privilege of printing Bibles and Prayer-books, except the Universities of Oxford and Cambridge, and the Queen's Printer.

Paper duty.

By Act of Parliament 2 & 3 Vict., chap. 23, a drawback of 1½*d.* per lb. Avoirdupois is allowed on the paper used in printing, by permission of the Vice-Chancellor, books in Latin, Greek, Oriental, or Northern languages, or in Printing Bibles, Testaments, and Prayer-books in the University.

An Account of Amounts of Duty on Paper remitted in the following Years.

—	On Bibles and Testaments.	On Prayer Books.	On Books in the Learned Languages.
	£. s. d.	£. s. d.	£. s. d.
1810	1,079 7 0		17 3 3
1820	1,739 19 0	*	24 16 6
1830	3,647 6 6		..
1840	2,192 11 5	64 7 2	..
1841	1,624 0 8	55 18 3	..
1842	488 7 5	..	11 17 0
1843	465 7 5	72 11 1	20 7 2
1844	955 18 11½	146 5 5	8 19 4

1846	1,104 0 7½	148 14 4	..
1847	1,084 15 4½	32 16 1	..
1848	1,185 5 7	123 9 5	..
1849	642 4 0	48 14 6½	..
1850	494 10 7½	30 17 6½	..

* No documents can be found for these years which give the separate amounts on Bibles and Prayer Books respectively, both being included in one account.

The annual sum paid to the University by the Government consequent on the loss of the privilege of printing almanacks is 500*l.* a-year, less Income Tax. The Act of Parliament directs that this sum shall be paid to the Vice-Chancellor, to and for the sole use and benefit of the University. A Grace, which passed the Senate January 11, 1782, directs that this fund shall be spent under the authority of the Syndicate, "Vel in novas veterum Scriptorum editiones apparandas, vel in recentiorum opera divulganda." Another Grace, which passed December, 1850, authorized the Syndics to appropriate a portion of the fund to the defraying of the expence of preparing and printing a catalogue of the manuscripts in the University Library.

During the last ten years the whole expense of printing and publishing the Astronomical Observations taken at the Cambridge Observatory has been paid out of this fund; and grants have been made towards the expense of printing and press work of the Transactions of the Cambridge Philosophical Society, and of theological, classical, and other useful works, published by members of the University, of which the sale was not likely to be remunerative.

AN ACCOUNT of the Number of BIBLES, TESTAMENTS, and PRAYER BOOKS, printed at the CAMBRIDGE PRESS in the following Years.

	BIBLES.	TESTAMENTS.	PRAYER BOOKS.
1810	29,500	56,500	24,900

On the expiration of the patent of the King's printer in Scotland, that office was put into commission, and licences to print the Bible were granted in Scotland. This virtually threw open the trade in the North of England, and mainly contributed to force upon societies, and others, not only large reductions in the prices of editions then generally in use, but also the introduction of small copies of the Bible of a much lower class of production as to paper and print. The larger, finer, and more costly editions were thus, to a considerable extent, superseded, and the standard of value lowered.

Licence to print the Bible granted to Scotland.

The business of the Press, besides the printing of Bibles, Testaments, and Prayer books, consists of all printing for the University and its departments; of printing for the several Colleges; of the printing of books edited for the Syndics of the Press; of book and job printing for members of the University; of miscellaneous printing for local societies and establishments; of the works published by the Parker Society, and part of those issued by the Ecclesiastical History Society; and of such book work as, subject to the "Imprimatur" of the Vice-Chancellor, may be offered by publishers and other connexions of the Press.

General business of the Press.

For several years past arrangements have been made by the Syndics for reprinting, as circumstances might warrant, standard works in theology and general literature, in order to provide against the loss which the want of full employment for the workmen would otherwise occasion.

The Syndics have from time to time engaged the services of distinguished members of the University for the purpose of preparing and superintending their publications.

The accounts of the Press are kept separate from those of the University; but the balance of receipt or expenditure, as the case may be, at the end of each year is carried to the general account.

Accounts.

The Vice-Chancellor pays, from the funds of the common-chest, for all work done in the course of each year on account of the University; and the rates of charge for such work are the same as those for other printing of a similar kind.

It does not appear to the Syndics that any change of management could produce greater profits than are now realized; if indeed any change whatever could be made without destroying the efficiency of an establishment, which, for the purposes of the University and its Colleges, must necessarily be kept up on a considerable scale.

The University Press is equal to the execution of a large amount of business; and it need scarcely be added that the annual profits derived from it depend upon the extent to which its capabilities are called into action.

RICHARD OKES.

King's College Lodge, Cambridge, March 15, 1852. *Vice-Chancellor.*

We addressed the Vice-Chancellor and requested information from him on the following points connected with the Studies of the University. He declined complying with our request; but we had the satisfaction of obtaining the desired information from the Rev. Dr. Ainslie, Master of Pembroke College:—

1. A statement of the period of residence required, the course of study prescribed, the exercises to be performed, and the examinations to be passed, for the several Degrees of—

Bachelor of Arts, Law, Medicine;
Master of Arts;
Bachelor of Divinity;
Doctor of Divinity, Law, Medicine,

according to the statutes of the 12th of Elizabeth.

A comparison of the present actual practice of the University with the preceding statement, specifying, amongst other particulars, how the period of residence in each case is actually computed;

In what respects the present course of study differs from that prescribed in the Statutes, and by what authority the change has been made;

Whether any of the exercises prescribed by the Statutes have fallen into disuse, or become mere forms;

In what cases cautions for the performance of exercises are permitted.

2. A statement of the manner in which the University, as distinct from the Colleges, provides for the maintenance of good order and discipline in the case of persons in statu pupillari;

Of the number of officers more especially charged with this duty; the mode of their appointment; their powers; and their remuneration;

Of the academical punishments for the violation of good order and discipline, and by what official authority inflicted.

3. A statement of the number of Examiners employed in the examinations intervening between the first admission of a Student and the degree of Master of Arts; and the mode of their appointment, and their remuneration;

Of the fees or payments required from members of the University at their Matriculation;

On their proceeding to any degree, and during each quarter, term, or year that they continue members of the University;

And of the proportions in which these fees or payments are distributed to the Government, to the University chest, and the different officers of the University, or to any specific objects.

4. Can the Commissioners be furnished with or referred to a copy of the Statutes given to the University by Queen Elizabeth in the third year of her reign?

Answers from the Rev. Gilbert Ainslie, D.D., Master of Pembroke College.

Rev. G. Ainslie, D.D.

1. Statement of the *Residence, Studies, Exercises,* and *Examinations* for Degrees, *as prescribed by the University Statutes* of 12 Eliz. (1570.)

Proceedings for the Degree of Bachelor of Arts. (Cap. V. and VI.)

Proceedings for the Degree of B.A.

The mode in which the Statutes prescribe *Residence* is by exacting attendance at the public Lectures and the performance of School Exercises. Thus they require that a Student in Arts, proceeding to the Degree of Bachelor of Arts, shall be a member of the University four years, to be complete and ended on the Thursday after Midlent Sunday, and that he shall duly attend the Lectures of his Class and perform the requisite Exercises.

The Lectures are directed (Cap. I.) to be given during three Terms or periods in the year, which are thus defined and in this order:

1. The Michaelmas Term from October 10 to December 16;
2. The Lent Term from January 13 to the tenth day before Easter;
3. The Easter Term from the eleventh day after Easter to the Friday after the first Tuesday in July.

The Statutes were no sooner given than "doubts arose" respecting "the years and Terms required;" and consequently in 1578 (21 Eliz.) the Vicechancellor and Heads of Colleges, in whom the Statutes themselves (Cap. L.) vest the power of Interpretation, decreed That any person, who had been enrolled or matriculated before the beginning of the Easter Term, had regularly resided in his College and during the major part of each Term had attended both the University and College Lectures, and had moreover performed the requisite Exercises, might be admitted to the Degree of Bachelor of Arts in the fourth Lent after, that is in his twelfth Term.

Rev. G. Ainslie, D.D.

The fact however of the Michaelmas Term being constituted (Cap. 1.) the first Term of Lectures seems to warrant the conclusion that attendance at the public Lectures during the preceding Easter Term, namely that which immediately follows matriculation, is not required; a conclusion confirmed by the fact that the annual Election of the Ordinary Lecturers was always made (Stat. Antiq. c. 87 and 136) towards the end of the Easter Term.

It was at the same time further decreed that, if any applicant for the Degree of Bachelor of Arts should fail of keeping a Term through the sickness of himself or his natural friends, or for any other necessity or lawful cause, the time and cause of his absence should be stated to the Senate, which might then dispense with the keeping of the Term.

When the Statutes of 12 Eliz. were given, there were among other Lecturers, four Ordinary Lecturers (Cap. III.) in the following departments of *Study*, viz. Rhetoric, Dialectics, Philosophy, Mathematics.

(Cap. IV. and VI.) The Lecturer in Rhetoric is directed to lecture the Students in Arts of the first year on Quintilian, Hermogenes or a Book of Cicero's Rhetorical Treatises. The Lecturer in Dialectics is directed to lecture those of the second and third years on Aristotle's Elenchi or Cicero's Topics. The Lecturer in Philosophy is directed to lecture those of the fourth year on Aristotle's Problems, Ethics and Politics and on Pliny or Plato.

(Cap. VI.) The *Exercises* enjoined to be kept in the public Schools are two Acts and two Opponencies. After Admission *ad respondendum quæstioni* (as appears from the explanations given in a contemporary and authentic manuscript of the person holding the Office of Esquire Bedell) the applicant is required, in accordance with the terms of Admission, to attend at the Schools to answer some Question put to him by the Prælector of his own College out of Aristotle's Prior Analytics.

He is further required to give almost daily attendance at the Schools and there (according to the same authority) defend three Questions in Dialectics and Philosophy against Bachelors of Arts of other Colleges from Ashwednesday (at that time the first Tripos day, though now it is a day later) till the Thursday after Midlent Sunday (the second Tripos day), which is the last day for keeping such Acts and the day on which his Inauguration, as actual Bachelor, is to take place.

(Cap. II. and VI.) An accustomed *Examination* towards the close of his course and general for all the Students of his year is sanctioned, and no other is prescribed.

Proceedings for the Degree of Bachelor of Law. (Cap. XII.)

Proceedings for the Degree of Bachelor of Law.

The Statutes require that a Student in Law, proceeding to the Degree of Bachelor of Law shall be a Member of the University six whole years: and *Residence* during the major part of each Term throughout that period seems to be required, since he is directed to study within his College during the whole of the first year and to attend the Lectures of the Professor of Law during the whole of the remaining five years.

With respect to *Studies*, he is enjoined to study Justinian's Institutes during his first year; and (Cap. IV.) the Lecturer (the Regius Professor) is directed to lecture on Justinian's Pandects or Codex, or on the Ecclesiastical Laws of the Realm about to be edited under Royal Authority, when the Statutes were given, and on these subjects only.

The only *Exercise* enjoined is an Act.

No *Examination* is prescribed.

A Bachelor of Arts may be admitted to this Degree of Bachelor of Law, if after having taken the Degree of Bachelor of Arts he has studied Law four years and kept one Act; but the Statutes are silent as to Residence, Lectures and Examinations.

Proceedings for the Degree of Bachelor of Physic. (Cap. XV.)

Proceedings for the Degree of Bachelor of Physic.

The Statutes require that a person proceeding to the Degree of Bachelor of Physic shall study Physic six years and be a constant attendant at Medical Lectures: which has been understood to mean that a person may be admitted to this Degree at any time in his sixth year. *Residence* therefore during the major part of each Term for five years appears to be required.

As to *Studies* the Lecturer (the Regius Professor) is directed (Cap. IV.) to lecture on Hippocrates or Galen: and the Student is enjoined to witness two dissections.

The *Exercises* required are two Acts and one Opponency: but one of the Acts is dispensed with by a Royal letter, bearing date, April 8, 1681.

No *Examination* is prescribed.

Proceedings for the Degree of Master of Arts. (Cap. VII.)

Proceedings for the Degree of M.A.

If *Residence* were still to be measured by constant attendance at Lectures and at the School Exercises, it would appear that a Bachelor of Arts is required to reside during the major part of each Term for three years from his Inauguration on the second Tripos day, after which he may be admitted to the Degree of Master of Arts; which Degree however cannot be perfected (Cap. II.) till the Magna Comitia or Commencement on the first Tuesday in July next following. But on this subject of Residence some observations will be made in the review of the Present Practice.

With respect to *Studies*, the Lectures, which he is required to attend, are in Philosophy, Astronomy, Perspective and Greek. The subjects of the Philosophical Lectures have been mentioned under the head of Bachelor of Arts. The Mathematical Lecturer is directed

Rev. G. Ainslie, D.D.

(Cap. IV.) to lecture on Mela, Pliny, Strabo or Plato, when lecturing in Cosmography; on Tonstall or Cardan, &c., when in Arithmetic; on Euclid, when in Geometry; on Ptolemy, when in Astronomy. The Lecturer (who is the Regius Professor) in Greek is directed (ibid.) to lecture on Homer, Isocrates, Demosthenes, Euripides or some other ancient Classical Author.

As to *Exercises*, he is enjoined to attend all the Disputations of the Masters of Arts, and to keep three Acts against a Master of Arts and two against a Bachelor of Arts, and also to declaim once.

No *Examination* is prescribed.

It may be mentioned here once for all that the University is at liberty (Cap. XXI.) to admit to this or any other Degree Privy Councillors, Bishops, Noblemen and the sons of Noblemen, who may not have kept the terms and complied with the forms prescribed for the Degree.

Proceedings for the Degree of BACHELOR IN DIVINITY. (Cap. VIII.)

Proceedings for the Degree of B.D.

The Statutes require that a Master of Arts proceeding to the Degree of BACHELOR IN DIVINITY shall take part in the Disputations in Philosophy for four years, and that after that period he shall take part in the Disputations in Theology, attend the Lectures in Theology and Hebrew daily and study the same seven whole years. But in 1575, that is five years after the Statutes were given, it is declared by an Interpretation of Lord Burghley, Chancellor of the University, and the Heads of Colleges that, in the case of non-resident Masters of Arts, attendance at Lectures and even the performance of School Exercises may be dispensed with, or in effect that *Residence* is not necessary. This Decree, made by the very person whose name, as Secretary Cecil, is at the foot of the Statutes and who under their Authority was now, as Chancellor of the University, co-operating, in the act of interpreting, with the Heads of Colleges, several of whom had assisted in drawing them up, must be looked upon as in every respect of equal authority with the Statutes themselves.

The period of seven years is that which had been prescribed (c. 108) by the Laws of the University in times antecedent to 12 Eliz. This period was in those times, as it has been ever since, held to be complete on June 11.

In respect to *Studies* the person proceeding is directed to study Theology and Hebrew: and the Lecturer (who is the Regius Professor) in each of these faculties is directed (Cap. IV.) to lecture on the Holy Scriptures alone. The Lady Margaret's Reader (founded in 1502) also lectures on Theology.

The *Exercises* enjoined are one Act and two Opponencies: the person proceeding is also to preach a Latin and an English Sermon in the University Church; and he is pledged to preach another at St. Paul's Cross in London within a year after he shall have taken this Degree. If however (Cap. X.) the Act be kept against a Doctor, the Opponencies are not required. It has just been noticed that the Interpretation of 1575 allows the University to dispense with the observances of Exercises by non-residents.

No *Examination* is prescribed.

(Cap. IX.)

A person, who being of the age of 24 years at the time of his first becoming a Member of a College shall from that time entirely devote himself to the *Study* of Theology for 10 whole years and perform all the *Exercises* enjoined upon a Master of Arts proceeding to this Degree, may take this Degree without having previously taken any Degree in Arts.

Nothing being prescribed respecting Lectures, it may be inferred that *Residence* is not required, an inference which is confirmed by an Interpretation in 1608. Neither is mention made of any *Examination*.

Proceedings for the Degree of DOCTOR IN DIVINITY. (Cap. X.)

Proceedings for the Degree of D.D.

The Statutes require that a Bachelor in Divinity, proceeding to the Degree of DOCTOR IN DIVINITY, shall give daily attendance during five whole years at the Theological Lectures; for which purpose he would have to reside during each Term in that period.

But doubtless, when the Interpretation of 1575 declared that *Residence* was not obligatory upon a Master of Arts proceeding to the Degree of Bachelor in Divinity and (as will presently appear) of Doctor in Divinity, it would be a consequence that a Bachelor in Divinity proceeding to the Degree of Doctor in Divinity was under no obligation to reside.

This Degree of Doctor in Divinity cannot be perfected (Cap. II.) till the Commencement after Admission.

The prescribed *Studies* are in Theology; of the Lectures in which faculty mention has been made already under the head of a Master of Arts proceeding to the Degree of Bachelor in Divinity.

The *Exercises* enjoined are altogether the same as those stated to be required of a Master of Arts proceeding to the Degree of Bachelor in Divinity; but (Cap. X.) if the Act be kept against a Doctor, the English Sermon is remitted, as well as the Opponencies.

Every person who has obtained the Degree of Doctor in Divinity, is obliged within a year after, under a penalty of 2*l.*, to determine a question in the Schools.

No *Examination* is prescribed.

The Interpretation of 1575, which has been referred to, not only allows a Master of Arts to be non-resident, but also authorizes the University, if he be so, to dispense with his observance

of the Exercises required for any superior Degree; provided he be of the required standing for such Degree, and be known to the University as a person of learning and good character. A Master of Arts therefore, who obtains Dispensation from the performance of the Exercises prescribed for the Degree of Bachelor in Divinity, leaps over that Degree altogether and takes the Degree of Doctor in Divinity at once or, as it is termed, *per saltum*.

Proceedings for the Degree of Doctor of Law. (Cap. XIII.)

Proceedings for the Degree of Doctor of Law.

The Statutes require that a Bachelor of Law, proceeding to the Degree of Doctor of Law, shall continue to attend the Lectures of the Regius Professor five years more, for which purpose *Residence* is necessary: but the Interpretation of 1575, so often referred to, which exempts Masters of Arts proceeding to higher degrees from Residence, does the like for Bachelors of Law.

The Degree of Doctor of Law cannot be perfected (Cap. II.) till the Commencement after Admission.

In respect to *Studies*, there is no injunction beside that to attend the Law Lectures, which have been already described under the head of a Student-in-Law proceeding to the Degree of Bachelor of Law.

The *Exercises* enjoined are two Acts and one Opponency. The Interpretation of 1575 allows the University to dispense with the observance of them by Non-residents.

No *Examination* is prescribed.

A Master of Arts, who has studied Law seven years and performed the above-mentioned Exercises, may be admitted to this Degree; but it is requisite that he should have made formal declaration within four years after taking the Degree of Master of Arts of his intention to proceed in Law.

Proceedings for the Degree of Doctor of Physic. (Cap. XVII.)

Proceedings for the Degree of Doctor of Physic.

The Statutes make no mention of requiring Bachelors of Physic proceeding to the Degree of Doctor of Physic, to attend Lectures at all. Moreover the Interpretation of 1575 respects the *Residence* of Bachelors of Physic equally with that of Masters of Arts and Bachelors of Law. A person, who has taken the Degree of Bachelor of Physic, may five years after be admitted to the Degree of Doctor of Physic; but the Degree cannot be perfected till the Commencement next following his Admission.

Neither do the Statutes make any further mention of the particular *Studies* to be pursued, except that they require him to witness two dissections at least.

The *Exercises* enjoined are two Acts and one Opponency; and the applicant for this Degree must have witnessed two dissections at least. A formal Act at the Commencement is alluded to (Cap. XVIII.). The Interpretation of 1575 permits the University to dispense with the performance of the Exercises by Non-residents.

No *Examination* is prescribed.

(Cap. XVIII.)

A Master of Arts, who has applied himself to the Study of Physic seven years and kept two Acts and one Opponency, may be admitted to this Degree; provided that the Acts have been kept against a Doctor of Physic, and that he has made a formal declaration within four years after taking the Degree of Master of Arts of his intention to proceed in Physic.

Comparison of the *present Actual Practice* with the preceding Statement.

Proceedings for the Degree of Bachelor of Arts.

Comparison of the present Actual Practice with the preceding Statement

The existing Regulations of the University require that a Student in Arts, proceeding to the Degree of Bachelor of Arts, shall keep actual *Residence* during the major part of ten several Terms: they further require that he shall have been admitted, as a Member of some College, at the latest in the Term immediately preceding his actual Residence; and moreover they do not allow of his being admitted to the Degree until the Term after the tenth Term of actual Residence. Thus a person, admitted into any College in the Easter Term, commences actual Residence in the following October, and, having kept the Michaelmas Term in that year and three Terms in each of the three succeeding years, he is admitted to the Degree of Bachelor of Arts at the beginning of the Lent Term in his fourth year: the Degree however being still regarded as imperfect till the General Inauguration on the second Tripos day.

Whereas therefore according to the account before given an applicant for this Degree is apparently required by the Statutes to have kept by Residence the major part of twelve several Terms, he is now required merely to have been a Member of some College during twelve several Terms and to have kept by actual Residence the major part of ten several Terms.

Upon this discrepancy it may be remarked first, That the custom of determining a Student's actual Residence in the University by his registered Residence in his College has rendered the University indifferent to the Law (adverted to in the remarks on Statutable Residence) requiring that Matriculation should be the first step in the Academic course: and accordingly it is now sufficient, if a person be matriculated within the first three Terms of his Residence; secondly, That, as has already been observed (ibid.), although the first of the twelve Terms, which according to the letter of the Interpretation of 1578 are to be kept by Residence in a College, is to be kept equally with the rest, yet the Student was not placed by the Statutes under the public instruction of the University during that Term; and that this probably was the cause, why the University, if indeed it ever did strictly observe the Statute by requiring

Rev. G. Ainslie, D.D.

actual Residence during that Term, yet very soon ceased to require more than a nominal compliance with its directions on that point; thirdly, That Residence during the twelfth or last Term, which is prescribed (as has been stated ibid.) to be kept rather by the performance of School Exercises than by attendance at public Lectures, ceased to be required beyond the time occupied by the Final Examination, when by reason of the increase in the number of Bachelors of Arts, which rendered it scarcely possible that all should be duly exercised, those Exercises had first become a mere form and at length fallen wholly into disuse.

The power to dispense with the keeping of a Term, authorized in certain cases by the decree of 1578, is not exercised in favour of any individual person for more than one Term.

Present Course of Study for the Degree of B.A.

The course of *Study* now is mainly regulated by the Public Examinations, the general departments of which are Classics, Ethics, Theology, Mathematics and Natural Philosophy. As respects the first three of these departments, it is required that what is called the Previous Examination shall be made in the following particular subjects, namely, the Gospels in Greek, Paley's Evidences of Christianity, the Old Testament History, and one of the Greek and one of the Latin Classics: and that the Final Examination shall be made in the following particular subjects, namely The first fourteen or the last fourteen Chapters of the Acts of the Apostles, and one of the longer or two or more of the shorter Epistles of the New Testament in the original Greek, one of the Greek and one of the Latin Classics, three of the six Books of Paley's Moral Philosophy, the History of the Christian Church from its origin to the assembling of the Council of Nice and the History of the English Reformation. And, as respects the last department of Mathematics and Natural Philosophy, it is required that the Previous Examination shall be made in Arithmetic and Euclid and that the Final Examination, so far as regards those who are not candidates for Honours on the Mathematical Tripos, shall be made in certain parts of the following subjects, namely Arithmetic, Algebra, Euclid, Mechanics and Hydrostatics: and that, as regards those who are Candidates for Honours, the range of subjects, which heretofore extended over the whole science of Mathematics, shall be limited by the exclusion of some of the more abstruse. Moreover those who have not obtained Honours are obliged to produce certificates of having attended during one Term at least the Lectures of the Regius Professor of Law or Physic, of the Downing Professor of the Laws of England or Medicine, or of the Professor of Moral Philosophy, Chemistry, Anato my, Modern History, Botany, Geology, Natural and Experimental Philosophy, Mineralogy or Political Economy, and also of having passed an Examination to the satisfaction of one of those Professors whose Lectures he has chosen to attend. But although these two general Examinations, both of which must be passed to the satisfaction of the Examiners before the Degree of Bachelor of Arts can be obtained, constitute the standard of Study for those whose aim is that Degree, its Honours and its rewards, there are other Examinations, of which notice will presently be taken, having a direct and active influence on the course of Academical Study.

Hence by a comparison of the present course of Study with that prescribed by the Statutes it appears first, That the peculiar study of Rhetoric has been superseded by the general study of the best Greek and Latin authors; secondly, That the Dialectics of Aristotle which gradually declined from the age of Bacon, have now ceased to be a special subject of University Study; thirdly, That, although the ancient books on Philosophy, specially prescribed by the Statutes as those which were to be read, still receive attention from the Professors in their Public Lectures, yet, inasmuch as the ancient system of Philosophy has been very much modified, the Studies of the University in Natural, Moral and Political Philosophy have experienced a corresponding change; fourthly, That the science of Mathematics, as it existed in the reign of Queen Elizabeth, has been enlarged by so many and important additions, that it can scarcely be regarded as the same. Most of these additions, being highly suitable for the purposes of intellectual education, were made parts of the Mathematical Studies of the University. All these changes have resulted from the general advancement of learning and science, and have been introduced from time to time by those resident Members of the University, whose talents and acquirements, as well as experience in the instruction of Students, gave them a just and merited influence.

Mathematical Board.

Recently a Board, consisting of Mathematical Professors and Examiners, has been established by the University for the purpose of suggesting such alterations of the subjects of the Final Examination for Honours as may seem to them desirable.

Exercises.

With respect to *Exercises* the two Acts and two Opponencies enjoined by the Statutes, so far as the increasing number of Students permitted, were kept by candidates for Honours till the year 1838, when they were dropped, and the loss of them, as tests of proficiency, was supplied by the enlargement of the system of Examinations. At the same time the Answering of the Question in the Schools, which had long been a mere form, was wholly dropped. And consequently, the only other Exercises appointed to be kept for this Degree, namely those in the Lent Term following Admission, having (as has just been observed in the remarks upon Residence) been long disused, no Exercises at all are now kept for this Degree.

Examinations.

It has been stated in the account given of the present Studies that every Student in Arts is now required to pass two General *Examinations* before his Admission to the Degree of Bachelor of Arts, namely one, called the Previous Examination, in his second Lent Term, the other in his fourth Lent Term, being the Final Examination. The latter, which is the only one prescribed by the Statutes, takes place in January. Notice has been taken of the nature of these Examinations: but it must be further observed that there is a Bye Examination just before Ash-Wednesday for those who have failed to pass the General Final Examination; and that they, who fail in this Bye Examination and in consequence fail of obtaining Admission to

the Degree of Bachelor of Arts before Ash-Wednesday, are degraded to the year below. There is a Bye Examination in the Michaelmas Term for those who were excused from attending, or failed to pass the Previous Examination in the preceding Lent Term. There are also Bye Examinations in the Easter and Michaelmas Terms for those who for any cause have not passed the Final Examination in the Lent Term. *Rev. G. Ainslie, D.D.*

And it has been stated in the same place that beside these two general and compulsory Examinations there is also another by some Professor, which all who do not obtain Honours at the final Examination are required to have passed. But there are now also several other Examinations of those only who submit to them voluntarily. They are the following.

An Annual Examination of Students of the first year in Classics and the lower branches of Mathematics for two of Bell's Scholarships, of which there are eight.

An Examination of the same for Browne's Scholarship, whenever vacant.

An Annual Classical Examination of Students of the first three years for one of Craven's five, Battie's, Davies', Pitt's or Porson's.

An Annual Mathematical Examination of Commencing Bachelors of Arts for Smith's two Prizes.

An Annual Classical Examination of such Commencing Bachelors of Arts as have attained the Honour of Wrangler or Senior Optime for the Chancellor's Medals.

An Annual Examination of all but the last three Classes of Commencing Bachelors of Arts for the Classical Tripos.

In all these Classical Examinations it is the practice to examine in the best Authors.

To the foregoing list must be added two other Annual Examinations of Commencing Bachelors of Arts, very recently established, namely one for the Moral Sciences Tripos, the other for the Natural Sciences Tripos, which may be expected in the course of time to exercise a like influence with the rest of the Examinations upon the Studies of the University. The former of these Examinations comprehends Moral Philosophy, Political Economy, Modern History, General Jurisprudence and the Laws of England. The latter comprehends Anatomy, Comparative Anatomy, Physiology, Chemistry, Botany, Geology, and Mineralogy.

There are also two other annual Examinations, the one in Hebrew for two of Tyrwhitt's six Scholarships, the other in the Scriptures of the Old and New Testaments in their original tongues, and in Ecclesiastical History for one of Crosse's three Scholarships. Although both these Examinations are for actual Bachelors of Arts, the former being in May, the latter in November after Admission to that Degree, yet they are mentioned here because of their obvious tendency to encourage the Study of Hebrew even before Admission.

To the above-mentioned Examinations, all which are conducted in writing, should be added those for determining the superiority of Compositions, which shall entitle their Authors to certain Prizes. For, although the names of the competitors are sent in to the Examiners or Judges under seal, yet this is merely lest, as the competition is voluntary, an unpretending Student should be deterred from competing by the fear of failure, and in no way affects the usual mode of examining, nor is the influence of these Examinations upon the Studies of the University in any respect different from that of the other Examinations. The Prizes annually given are the following, Prizes.

The Chancellor's Medal for an English Ode or Poem;
The three Browne Medals for a Greek Ode, for a Latin Ode, and for a Greek and a Latin Epigram;
The Camden Medal for Latin Verse;
The Porson Prize for a Translation into Greek Verse;
All to Undergraduates.
Also four Prizes given by the Representatives of the University in Parliament, namely two to Undergraduates, and two to Bachelors of Arts for Latin Essays.
The Norris Prize for an English Prose Essay on a Sacred subject to persons who either are or have been Students of the University and are between the ages of twenty and thirty.
The Hulse Prize for an English Dissertation on a Theological subject to a Member of the University under the Degree of Master of Arts.
The Seaton Prize for an English Poem on a Sacred subject to a Master of Arts.
The Burney Prize for an English Essay on a Moral, Metaphysical, or Theological subject in Theology to a Bachelor of Arts of the first year.
The Le Bas Prize for an English Essay on a subject of General Literature to a Bachelor of Arts or Student of Law or Physic of a certain standing.
The Adams' Prize for an English Essay on a subject of Pure Mathematics, Astronomy or other branch of Natural Philosophy to a person of any Degree.
The two Whewell Prizes to the two Commencing Bachelors of Arts who in the examination for the Moral Sciences Tripos show the greatest proficiency in Moral Philosophy.
To these is to be added the Maitland Prize for an essay on some subject connected with the propagation of the Gospel given once in three years to a Bachelor of Arts. Student of Law or Physic of a certain standing.

Some of these prizes, it will be observed, are given only to persons under, some only to persons above, some to persons either under or above the Degree of Bachelor of Arts. They are here collected together, that all the examinations, by which the Students of the University are influenced to the pursuit of particular subjects, may be seen at one view. To separate them would be inconvenient, and, as they are not obligatory, is unnecessary.

Rev. G. Ainslie, D.D.

Proceedings for the Degree of Bachelor of Law.

Present Proceedings for the Degree of Bachelor of Law.

The existing regulations of the University as to *Residence* do not require that a Student in Law, proceeding to the Degree of Bachelor of Law shall actually reside six years, as enjoined by the statutes, but merely that he shall be a Member of some College throughout that period and reside three years, that is the major part of nine several Terms. This period of three years was definitively fixed in 1684, probably to prevent any further relaxation of the Statute. For the unsettled state of the country during the previous part of the 17th century had induced a negligent observance of the Statutes in general: nor is this the only instance at the time mentioned of such restraint being imposed.

The present course of *Study*, so far as it respects law, is mainly regulated by the Professor's Lectures and Examinations, and consists of General Jurisprudence illustrated by Roman and English Law and of International Law. The Student in Law, being required to pass the general previous Examination (described under the head of the present Examinations for the Degree of Bachelor of Arts), is also under the necessity of studying the subjects of that Examination. Moreover, unless he pass the Examination for the first class in his own faculty, he must before keeping his act produce a certificate of having attended, during one Term at least, the Lectures of the Regius Professor of Physic or the Downing Professor of Medicine, or of the Professor of Moral Philosophy, Chemistry, Anatomy, Modern History, Botany, Geology, Natural and Experimental Philosophy, Mineralogy or Political Economy, and also of having passed an Examination to the satisfaction of one of those Professors, whose lectures he has chosen to attend. Compared therefore with that prescribed by the Statutes the present course of Study in the faculty of Law is more general. The extension has been effected from time to time by the Regius Professor of Law in conformity with the increased requirements of the Law Courts. The addition of subjects extraneous to Law has been made by the University with two objects, one that the studies peculiar to Arts, which have ever been deemed to be a good preparation for the study of Law, might not be passed over altogether, the other that Students in Arts might not be induced to quit their own line for that of Law in the hope of attaining a Degree with less exertion.

The only *Exercise* enjoined by the Statutes, namely an Act, is always kept.

No *Examination* whatever is prescribed by the Statutes for a Student in Law, but now he is required by the Regulations of the University to pass the general Previous Examination (described in the account given of the present Studies of a Student in Arts); after which he has to pass three Examinations in Law by the Professor in three successive Terms before he is allowed to keep his Act. He is at liberty to compete with the Students in Arts for the various Classical Scholarships and Prizes; he may be a candidate for an Honour in the Moral Sciences Tripos and in the Natural Sciences Tripos; and he is further at liberty to compete for several of the Prizes for Theological Essays and also for the Tyrwhitt Hebrew Scholarships.

The present practice is to require of a Bachelor of Arts, proceeding to the Degree of Bachelor of Law, neither more nor less than the Statutes do. He may not be admitted till he has been a Bachelor of Arts four years, and he is still required to keep an Act: but he is neither required to attend Lectures nor to pass any further Examination, having in fact already passed the General Previous Examination, enjoined by modern Regulations upon Students in Law, before Admission to the Degree of Bachelor of Arts.

Proceedings for the Degree of Bachelor of Physic.

Present Proceedings for the Degree of Bachelor of Physic.

The existing regulations of the University as to *Residence* do not absolutely require that a Student in Physic, proceeding to the Degree of Bachelor of Physic, shall reside five years, as enjoined by the Statutes, but they require that he shall be a member of some College throughout that period, and reside three years, that is the major part of nine several Terms (which period was definitively fixed at the same time that it was fixed for Bachelors of Law), and that, unless he do reside and attend the University Lectures during the remaining two years, he shall produce certificates of his having throughout the period of his absence attended Medical Lectures and the practice of an hospital in some acknowledged School of Medicine. The present course of *Study* within the University is mainly regulated by the Professorial Lectures and Examinations. The advancement of medical science has necessarily multiplied the subjects of study; and many other authors beside Hippocrates and Galen are lectured upon by the Regius Professor. Also for attendance at two dissections is substituted attendance at the Lectures of the Professor of Anatomy: and the Student is further required to attend the Lectures of the Professors of Chemistry and Botany and of the Downing Professor of Medicine. All these additional obligations have been imposed by the University upon the Student at the suggestion of the late Regius Professor of Physic; and the same remark may be made respecting the Professorial Examinations, of which mention will be presently made.

The *Exercises* enjoined, namely one Act and one Opponency, are kept.

No *Examination* is prescribed by the statutes for a Student in Physic, but now he is required to pass the General Previous Examination, and after that Examinations by each of those five Professors, whose Lectures he has to attend. He is at liberty to compete with the Students in Arts for the various Classical Scholarships and Prizes; he may be a candidate for an Honour in the Moral Sciences Tripos and in the Natural Sciences Tripos; and he is further at liberty to compete for several of the Prizes for Theological Essays and alsof or the Tyrwhitt Hebrew Scholarships.

A person, who has already taken the Degree of Bachelor of Arts and who upon his Inauguration on the second Tripos day is reputed to have completed the four years' residence required

Rev. G. Ainslie, D.D.

by the Statutes for that Degree, may be admitted to the Degree of Bachelor of Physic one year after Inauguration, when he will have completed the five years' *Residence* required by the Statutes for this Degree. In all other respects too he is required to comply with the same laws and regulations which bind an ordinary Student in Physic proceeding to this Degree.

Proceedings for the Degree of Master of Arts.

Present Proceedings for the Degree of M.A.

It would seem that a Bachelor of Arts, proceeding to the Degree of Master of Arts, is required by the Statutes to reside during the major part of nine several Terms. By an Interpretation however given in 1608 it appears that the University never understood the Statute in that strict sense, and in consequence actual *Residence* has never even from the very first been required. The same remark may be made of some other stringent Statutes, the existence of which would lead to the erroneous conclusion that the present practice differed more from the original than in fact it does. The times of Admission, when the applicant for this Degree is said to incept, and of Creation, when the Degree is perfected, have been always observed.

With respect to *Studies*, the same interpretation of 1608 determines that "a man once grounded so far in learning as to deserve a Bachelorship in Arts is sufficiently furnished to proceed in study by himself," and therefore attendance at Lectures was not exacted. It is probable that they never were attended, except voluntarily, even by Residents. As to the *Exercises* enjoined by the Statutes and by which the fitness of the applicant for the Degree was ascertained, the increase in the number of applicants, more especially the non-resident, interposed difficulties, which almost precluded their being kept, and so they gradually fell into desuetude.

No *Examination* is prescribed by the Statutes, nor has any been instituted by the University.

The Statutes allow of the Degree of Master of Arts being conferred on a Nobleman or son of a Nobleman, although he may not have complied with the usual conditions: but the Regulations of the University require that, if such a person enter any College, as a Student, he shall before Admission to this Degree reside during the major part of seven several Terms exclusive of the Term in which he first became a Member of his College and also of the Term in which he seeks to be admitted. Moreover he is required to pass the General Final Examination for the Bachelor of Arts' Degree; and, unless he be a candidate for an Honour on the Mathematical Tripos, he must produce the like certificate, as under the same circumstances is required of a Student in Arts, of having attended Professorial Lectures and of having passed a Professorial Examination.

By a letter of King Charles II. in 1679 the University is authorized to confer this Degree on a Baronet or Knight, although he may not have complied with the usual forms.

Proceedings for the Degree of Bachelor in Divinity.

Present Proceedings for the Degree of B.D.

It appears from the account given above that the Statutes, as interpreted almost at their very promulgation, do not require a Master of Arts, proceeding to the Degree of Bachelor in Divinity, to attend Lectures or School Exercises and that, as a consequence, they do not require any *Residence*.

Another consequence is that, in respect to *Studies*, he is left to himself. The *Exercises* enjoined by the Statutes are one Act, two Opponencies and two Sermons, one Latin the other English, to be preached in the University Church: but if the Act be kept against a Doctor, the Opponencies are remitted. All these are duly kept; no Cautions or pecuniary pledges being required for their future performance. The Statutes further require of him a promise to preach another Sermon at St. Paul's Cross in London within a year after the Degree is conferred: but it is long since this promise was exacted.

No *Examination* is prescribed by the Statutes; nor has the University imposed any.

A person of the age of twenty-four years, when he first becomes a Member of any College, proceeding to this Degree of Bachelor of Divinity though not enjoined to *Residence* by the Statutes, is directed to devote himself to the *Study* of Theology for ten years. The University now expects him to dedicate the same period of time to the Study of Theology before his Admission to the Degree; and moreover after eight of the said ten years have elapsed, requires him to reside during the major part of three several Terms.

The *Exercises* required of him were originally and still are the same as for a Master of Arts proceeding to this Degree.

The Statutes prescribe no *Examination;* but the Regius Professor of Divinity is used to examine him.

Proceedings for the Degree of Doctor in Divinity.

Present proceedings for the Degree of D.D.

The Statutes, as forthwith interpreted in 1575, do not oblige a Bachelor in Divinity, proceeding to the Degree of Doctor in Divinity, to keep any *Residence;* nor has any ever been required.

The Statutes direct him to pursue the *Study* of Theology; but he is under no control.

The *Exercises* enjoined by the Statutes are one Act, two Opponencies and two Sermons, one Latin the other English, to be preached in the University Church: but if the Act be kept against a Doctor, the Opponencies and English Sermon are remitted. All these injunctions are duly observed. The Statutes further require from him a promise to preach another Sermon at St. Paul's Cross in London within a year after the Degree has been conferred: but it is long since this promise was exacted. It is not the practice to deliver the Determination, which by the Statutes must necessarily be cautioned for.

No *Examination* is prescribed by the Statutes; nor has the University imposed any.

Rev. G. Ainslie, D.D.

The Statutes allow of this Degree being conferred on a Privy Councillor, Bishop, Nobleman or son of a Nobleman, although he may not have complied with the usual conditions.

The University occasionally avails itself of the privilege of granting to a Master of Arts the Degree of Doctor in Divinity *per saltum*, and of dispensing with the performance both of the Exercises prescribed for the Degree of Bachelor in Divinity and of those prescribed for the Degree of Doctor in Divinity, Sermons excepted. But in doing so the University exacts a Caution for the performance of the Exercises prescribed. The origin of which practice is this. In times antecedent to 12 Eliz. the postponement of the performance of Exercises was occasionally allowed, and in such cases a Caution or pledge was required for their future performance; in failure of which the Caution was forfeited. Thence arose a general practice, on the part of those who obtained actual Dispensations, of tendering Cautions, inasmuch as they thereby retained the power of keeping the Exercises, if they pleased, at a future time and of recovering their deposits. The privilege of granting this Degree of Doctor in Divinity *per saltum* to a Master of Arts was intended for the benefit of Non-residents only. But it was one, of which Residents would naturally desire to partake; and in consequence a practice grounded in error sprang up. Non-residents being for the most part such persons as had taken their names off the Boards of their College and quitted the University, Residents took their names off their College Boards, and, having done so, claimed to be accounted Non-residents. The loss of the privileges belonging to those, whose names have constantly remained on their College Boards, together with the forfeiture of the Cautions for non-performance of the Exercises required has however operated as a strong check to the practice.

Proceedings for the Degree of Doctor of Law.

Present proceedings for the Degree of Doctor of Law.

The Statutes, as forthwith interpreted in 1575, do not oblige a Bachelor of Law, proceeding to the Degree of Doctor of Law, to keep any *Residence*; nor is any required.

In respect to *Studies* they direct him to attend the Law Lectures; a direction, which by the same Interpretation is rendered nugatory; so that in fact he is uncontrolled.

The *Exercises* enjoined by the Statutes are two Acts and one Opponency.

Under the authority of the Interpretation of 1575 Dispensation is commonly allowed to Clergymen from one Act and one Opponency, and to Laymen from one Opponency: and Cautions are exacted.

No *Examination* is prescribed by the Statutes, nor has the University imposed any.

As the Statutes ordain, a Master of Arts of seven years standing, who has made within the prescribed period of four years the requisite declaration of his intention to proceed in Law, may be admitted to this Degree.

The Statutes allow of this Degree being conferred on a Privy Councillor, Bishop, Nobleman or son of a Nobleman, although he may not have complied with the usual conditions.

Proceedings for the Degree of Doctor of Physic.

Present proceedings for the Degree of Doctor of Physic.

The Statutes contain little concerning a Bachelor of Physic proceeding to the Degree of Doctor of Physic, except that he must keep two Acts and one Opponency, and witness at least two Dissections.

No *Residence* therefore is required; nor is any special course of *Studies* marked out. The Regulations of the University do not require proof of his having witnessed two Dissections; but they require Certificates of his having attended on Hospital practice for three years exclusive of the nine Terms which he kept for the Degree of Bachelor of Physic, and of his having attended Lectures in the Practice of Physic and Pathology, in Anatomy and Physiology, in Chemistry and Botany, in Medical Jurisprudence, in the Materia Medica and Pharmacy, in the Principles of Surgery and of Midwifery and in Practical Anatomy.

Of the *Exercises* abovementioned one Act at least is required to be kept: for the rest, if he desire it, he is allowed dispensation under the authority of the Interpretation of 1575; and in that case he deposits the usual Caution. The applicants are usually non-resident, for whom the License of dispensation was especially designed. The object originally proposed by the institution of Exercises is now partly attained by the establishment of Examinations.

The formal Act at the Commencement has been long discontinued.

Although no *Examination* is prescribed by the Statutes, the Regulations of the University require that a Bachelor of Physic, applying for Admission to this Degree, shall have passed an Examination to the satisfaction of the Regius Professor of Physic, the Professor of Anatomy, the Downing Professor of Medicine and a Doctor of Physic approved by the Senate.

The Statutes ordain that a Master of Arts of seven years standing, who has made, within the prescribed period of four years, the requisite declaration of his intention to proceed in Physic, may be admitted to this Degree. But the Regulations of the University further require that, before he be admitted, he shall produce Certificates of having been employed in the Study of Physic for five years after his admission to the Degree of Bachelor of Arts, and of having attended Hospital practice for three of the said five years, and also of having attended Lectures in the abovementioned subjects; and further that he shall have passed an Examination to the satisfaction of the abovenamed Professors.

The Statutes allow of this Degree being conferred on a Privy Councillor, Bishop, Nobleman or son of a Nobleman, although he may not have complied with the usual conditions.

2. *Discipline.*

Discipline.

The University provides for the maintenance of *good order and discipline* among persons *in statu pupillari* by the promulgation of the injunctions of the Statutes and of other Ordinances

Rev. G. Ainslie, D.D.

enacted by proper authority, which are printed and delivered to every person at his Matriculation, and which he is called upon to make a solemn promise to observe; and further by the appointment of special Officers, whose duty it is to see that such injunctions and ordinances are duly observed.

The Proctors.

Those Officers are two Proctors and two Proproctors, who severally hold office for one year. The former are Masters of Arts nominated by the Colleges according to a certain Cycle, and usually from among their respective Fellows: and they are afterwards elected by the Senate. The latter are Masters of Arts or Bachelors in Divinity nominated by the Vicechancellor and Proctors, and are also afterwards approved by the Senate, and invested with the same authority, as the Proctors, in matters of discipline. On special occasions the University has appointed additional Proproctors. Each of the Proctors and Proproctors is attended at night by two Constables. Moreover the Vice-Chancellor is authorized by an Act passed 6 Geo. IV. (ch. 97) to appoint any number of persons to be Constables.

It has been part of the office of the Proctors from the earliest times to make inquiry after offenders, whether within the precincts of the University or not, and to report them to the Chancellor or Vicechancellor (Stat. Antiq. c. 54). In like manner, acting as the Officers of the University, they make search after common women and others suspected of evil and place them in prison, that the Vicechancellor may hear and adjudicate upon the charges made against them. This power was explicitly granted to the University by a Charter of Queen Elizabeth in the third year of her reign; which Charter together with all previous Charters granted to the University was as explicitly ratified and confirmed by an Act of Parliament passed in the 13th year of the same reign intituled "An Act concerning the several Incorporations of the Universities of Oxford and Cambridge and the confirmation of the Charters, Liberties and Privileges granted to either of them" (ch. 29).

The remuneration of the Proctors and Proproctors, as also that of their attendant Constables, is a proportional part of certain fees paid on Admission to Degrees.

Academical Punishments.

The Academical punishments are Fine, Imposition, Confinement, Public Admonition, Suspension of Degree whether sought or obtained, Rustication, that is Banishment for a certain or indefinite period, and total Expulsion.

The power of punishing for minor offences is delegated to the Proctors and Proproctors, especially that of imposing a certain Fine of 6*s.* 8*d.*, prescribed by the Statutes, upon any one who leaves his College without his Academic dress; which Fine, without a satisfactory excuse be given, is invariably levied on such persons after dusk, when it is more important that those who are of the University should be distinguishable from those who are not.

Punishments by Imposition or by the Confinement of offenders for a limited period within the walls of their College, which is in fact a prohibition from appearing in the public streets, are also inflicted by the Proctors.

Those however, who have committed offences of a graver sort, they are required to bring before the Vicechancellor, who, as well by the Charter above mentioned as by the Statutes of the University, has an independent power of inflicting any punishment short of Rustication or Expulsion. These latter punishments he may not inflict, except with the assent of the major part of the Heads of Colleges: whom therefore he always summons to attend his Court, when any case of a serious nature is about to be tried.

The Statutes (cap. L.) enumerate various offences and prescribe punishments. They further direct that, if they have not themselves assigned an express penalty to any particular offence, the Vicechancellor with the assent of the Heads of Colleges may do so. In pursuance of this direction it is customary for the Vicechancellor and Heads of Colleges to publish from time to time Decrees against particular offences on pain even of Rustication or Expulsion.

Credit.

A similar process is resorted to for the purpose of hindering tradesmen and others from extending to persons *in statu pupillari* either too great or too long Credit; from lending them money upon usury; from issuing Writs against them without having previously given notice to their College Tutor; and generally from committing any act subversive of University discipline. This is effected by the publication of Decrees declaring that any vintner or victualler licensed by the Vice-Chancellor, or any tradesman, dealer or other person so offending shall be punished by deprivation of his Licence or by Discommuning, which is a Prohibition to all persons *in statu pupillari* from having any dealings with him. It should however be observed that the power of the Vice-Chancellor over persons *in statu pupillari* has been very much interrupted by recent Acts of Parliament, which are supposed to have set aside the privilege of the University to adjudicate upon cases when a Member of the University was one of the parties, not because those Acts contain any direct provision to that effect, but because they do not contain a direct reservation of it. It is manifestly impossible for the University to maintain any privilege, granted even by an Act of Parliament, unless such Act contain within itself a provision that the privilege granted shall in nowise be affected except by express legislative enactment. At present persons *in statu pupillari*, charged with a breach of the peace or other offence cognizable by Law, are usually summoned to the Petty Sessions and fined by the Borough Magistrates; and, unless University or College authorities hear of the occurrence, the offender altogether escapes Academical punishment. It should also be observed that the power exercised by the University over victuallers or alehouse-keepers has been interfered with in like manner. Until recently the University had the sole privilege of licensing alehouses; but the Board of Excise have decided that recent Acts of Parliament authorize them to acknowledge, as equally valid, Licences granted by the Borough Magistrates; and it is not unusual for victuallers to obtain both Licences. If therefore the Vicechancellor should, by way of punishment for an offence committed, withdraw the Licence which he has granted to any victualler, it by no means follows that the Borough Magistrates should likewise withdraw

Power of the Vice-Chancellor over persons *in statu pupillari* interrupted by recent Acts of Parliament.

Rev. G. Ainslie, D.D.

the Licence which they may have granted to the same person, nor indeed that they should even refrain from granting a Licence to him, although they had not done so before.

These remarks are not intended to be a discussion on the question whether the Legislature ought or ought not to allow any such privileges to the University on the ground of its being charged with the education and guardianship of so large a number of young men of rank, fortune and talent, of the necessary difficulties experienced in the control of persons of their age, and of the responsibility under which the University lies to the Community, but to show that the ancient privileges of the University have been undesignedly weakened and the direct discipline of the University proportionally affected.

Lodging Houses.

Another exercise of authority by the University, with a view to secure the respectability of the houses, in which those Students lodge, for whom there is not room in their respective Colleges, is its refusal to account any such person as resident, if he is lodging in a house, that of his parent or guardian excepted, for which the tenant has not obtained a special Licence from the Vicechancellor and Proctors. Such Licence is only granted to those tenants who covenant to observe certain regulations prescribed by the Vicechancellor and Heads of Colleges.

It ought to be stated that the Proctors are accustomed to report the misconduct of any person *in statu pupillari* to the authorities of his College, when the offence is not of so grave a character as to require correction by the Vice-Chancellor. And, as there is nothing which Students are more desirous to avoid than such exposure, the power of the University to maintain discipline is by this means very greatly augmented.

The foregoing is an account of the official means employed by the University for the maintenance of good order and discipline; but the constitutional authority which every Master of Arts and person of higher Degree has over the Students must not be passed over in silence. They are indeed so numerous as to be almost everywhere present, and they have it in their power to interfere for the repression of any disorder.

3. *Examiners, Fees, &c.*

Examiners.

The *Previous Examination* is conducted by six Examiners, who are nominated by the Colleges according to the Cycle by which the Proctors are nominated, and afterwards elected by the Senate.

The *Final Examination* for the Degree of Bachelor of Arts is conducted by the two Moderators and eight other Examiners.

The Moderators are nominated by the Proctors and approved by the Senate. They examine the candidates for Honours in Mathematics; in which duty they are assisted by two of the Examiners. These two Examiners are the same persons that held the office of Moderator the year before. They are, under a permanent order of the Senate, proposed for approval. If either of them declines or is re-appointed Moderator, the Vicechancellor, under the same order, proposes some one else for approval. Two others examine those, who are not candidates for Honours, in Mathematics: the two persons, who held the office of Moderator the year next but one preceding, usually undertake this duty being first proposed to the Senate for approval. The remaining four examine the candidates for the Degree of Bachelor of Arts who are not candidates for Honours; two examining in Classics, and two in the elements of Moral Philosophy and Theology. They are nominated by the Colleges according to the same Cycle, and are approved by the Senate.

The *Examination* for the *Classical Tripos* is conducted by four Examiners, who are nominated by the Colleges according to the same Cycle, and approved by the Senate.

Fees.

With respect to remuneration, the Moderators receive a proportional part of the Fees paid on Admission to the Degrees of Bachelor of Arts, Master of Arts, and also, when no Degree has been previously taken, of Bachelor of Divinity. All the other Examiners above mentioned receive 20*l.* each.

The *Examination* for the *Moral Sciences Tripos* is conducted by five Professors and an additional Examiner who is nominated by the Vice-Chancellor and elected by the Senate.

The *Examination* for the *Natural Sciences Tripos* is conducted by six Professors and an additional Examiner similarly nominated and elected.

No remuneration is made to any of the Examiners for these two Triposes.

Rev. G. Ainslie, D.D.

Fees paid on admission to Degrees.

When a person is admitted to any degree by *Royal Mandate*, he pays not only the fees ordinarily paid for that Degree to the Proctor for distribution, but also the fees ordinarily paid in like manner for all the inferior Degrees, which are usually taken as steps to that Degree, and which he may thus have escaped the obligation of taking. He further pays a Fee of 2*l.* 2*s.* to the Chancellor's Secretary, the like to the Proctors jointly, the like also to the Senior Bedell, and 2*l.* 8*s.* to the Registrary, or, if any inferior Degree is passed over, 3*l.* 9*s.* He likewise pays 10*l.* for the Government Tax.

Moreover, if the Degree granted is that of Master of Arts or Bachelor in Divinity, a Fee of 1*l.* 1*s.* is paid to the University Servants: and, if it is that of Doctor in Divinity, a Fee of 2*l.* 12*s.* is paid to the University Servants, another of 1*l.* 1*s.* to the University Chest, and another of 1*l.* 7*s.* to the Professor.

Fees to Professors.

Every person, who attends a course of *Lectures* given by a *Professor*, pays the Professor 3*l.* 3*s.*

Additional fee paid by *Compounders*.

A person, having a life interest of the yearly value of forty marks (26*l.* 13*s.* 4*d.*) in any Estate, is called a *Compounder*, and pays an additional fee of 8*l.* 6*s.* 4*d.*, which is thus distributed.

	£.	*s.*	*d.*
University Chest	2	0	0
2 Proctors	2	0	0
2 Scrutators	1	0	0
3 Bedells	3	3	0
Bellringer	0	3	4
Total	£8	6	4

This Fee is not exacted from a Graduate of Oxford or Dublin, being a Compounder, upon his incorporation; though he becomes subject to it, if he proceeds to any higher Degree. When a Compounder takes any Degree, he pays the Composition Fee not only for that Degree, but also for every inferior Degree, which he may have passed over.

There are also Fees paid for *Exercises*. Whenever any one keeps an Act in the Schools, he pays the University Servants a fee of 8*s.* 6*d* And, whenever any one preaches an English Sermon in the University Church, he pays the Clerk a Fee of 1*s.* 6*d.*; and, when a Latin Sermon, a Fee of 4*s.*

Cautions for Exercises.

The following are the *Cautions* for Exercises.

Exercises.	B.D.	D.D.		LL.B.	LL.D.	M.B.	M.D.
		B.D. before	M.A. before				
	£. *s.* *d.*	£. *s.* *d.*	£. *s.* *d.*	£. *s.* *d.*	£. *s.* *d.*	£. *s.* *d.*	£. *s.* *d.*
Act	10 0 0	36 0 0	46 0 0	20 0 0	24 10 0	19 0 0	14 10 0
Opponency	1 0 0	1 0 0	1 0 0	1 0 0	1 0 0	1 0 0	1 0 0
English Sermon	2 0 0	2 0 0	2 0 0	. .	. .	. .	. .
Latin Sermon	6 0 0	10 0 0	10 0 0	. .	. .	. .	. .
Determination	. .	2 0 0	2 0 0	. .	. .	. .	. .

The condition, upon which a Caution is accepted, is that the Exercise cautioned for shall be kept in the Term next after that in which the Degree, for which the Exercise should have been kept, is conferred. If the Exercise is kept in the next ensuing Term, the Caution is returned; but if the Exercise is not kept, the Caution is forfeited to the University Chest.

Contributions levied on each College.

With respect to *Quarterly Payments*, the University, being liable to pay a certain proportion of the expenses for *Paving and Lighting the town of Cambridge*, levies a contribution* on each College at the rate of 4*s.* 6*d.* a-year for every name on the Boards: 1*s.* 6*d.* is collected in one Quarter, 1*s.* in each of the rest.

A similar contribution is levied for the purchase of Books for the University *Library* at the rate of 1*s.* 6*d.* in each Quarter of the year for every name on the Boards, Sizars excepted.

4.

Statutes.

In compliance with the desire of the Commissioners, a printed copy of the Statutes, which were given to the University by Queen Elizabeth, in the twelfth year of her reign, has been sent to them.

(Signed) GILBERT AINSLIE,
Master of Pembroke College.

15*th April* 1851.

* Since the date of this communication it has been found necessary to raise the amount of the contribution from 4*s.* 6*d.* to 6*s.* 6*d.* a year.

Relations between the University and the Town,

Relations between the University and the Town.

The Council of the Borough of Cambridge addressed to the Commissioners the subjoined Memorial, which was accompanied by the annexed letter to their Secretary from the Town Clerk.

The Commissioners considered it their duty, on the receipt of this Memorial to send a copy of it to the Vice-Chancellor of the University, and to invite him to make such remarks thereon as he should think fit. The Vice-Chancellor thought it expedient to lay the matter before the Senate, and accordingly a Syndicate was appointed, with power to make such remarks upon the Memorial of the Town-Council as the circumstances of the case should appear to require. These remarks having been sent by the Vice-Chancellor to the Commissioners, it has been thought advisable to append them to the Memorial, together with the letter which accompanied them.

---

(1).

Town Clerk's Office, Cambridge,
February 5, 1852.

REVEREND SIR,

I AM instructed by the Mayor and Council of this Borough to forward you the accompanying Memorial to Her Majesty's Commissioners for Inquiring into the State, &c., of the University of Cambridge, &c., together with the enclosed printed copies thereof; and I am further directed to request that you will be good enough to forward at your earliest convenience one of such printed copies to each of the Commissioners.

I have the honour to be,
Reverend Sir,
Your most obedient servant,

Rev. W. H. Bateson, B.D. (Signed) C. H. COOPER, *Town Clerk.*

(2.)

Memorial of the Town Council.

TO HER MAJESTY'S COMMISSIONERS for inquiring into the STATE, DISCIPLINE, STUDIES, and REVENUES of the UNIVERSITY of CAMBRIDGE, and of all and singular the COLLEGES in the said UNIVERSITY.

WE, the Mayor, Aldermen, and Burgesses of the borough of Cambridge, in Council assembled, most respectfully solicit your attention to the subjoined statements and observations, relating to certain privileges claimed and exercised by the University, as respects the government and trade of the town, and to the total or partial exemption of the University and the Colleges therein from certain local burthens.

We humbly submit that these several matters properly fall under your cognizance, and that unless they be taken into mature consideration, the *state* of the University and Colleges must be but imperfectly understood. Moreover, we are most anxious to obey, to the utmost of our power, Her Most Gracious Majesty's expressed wish, that the *fullest information* on the subject to which Her Majesty's Commission relates, should be afforded you.

We trust we may be permitted to disavow most emphatically aggressive motives. We recollect, with deep regret, for how long a period feelings of hostility prevailed between the Members of the University and the Inhabitants of the Town. Believing firmly that the true interests of the two bodies are identical, we make no doubt that the abrogation or abandonment of antiquated claims and privileges must tend most effectually to establish unity and concord.

OATHS.

On the election of the Mayor and Bailiffs, the Vice-Chancellor and Proctors attend at the Guildhall, where the Senior Proctors administer to them the following oath:—

> You shall swear that you shall observe and keep, so far forth as in you lieth, the liberties and customs of this University, as concerning the keeping of the peace, *and also the assize of bread, ale, and other victuals,* and that you shall not unduly or of malice impugn the other liberties and due customs of the said University, as far forth as you shall have knowledge thereof. So God help you through Christ Jesus.

The authority for this proceeding is the Charter granted to the University on the 14th February, 10 Edw. II.

At that time the town had the custody of the assize of bread, ale, and other victuals; but in the 6th Richard II. that privilege was given to the University.

The assize of bread, ale, and other victuals is now abolished, *but no corresponding change has been made in this oath.*

On the Friday next before the Feast of St. Simon and St. Jude, two aldermen, four bur-

Relations between the University and the Town.

gesses, and two inhabitants of each parish in the town appear in the vestry of the Church of St. Mary the Great, and there, before the Vice-Chancellor, the Proctors, and the Mayor, take the following oaths, administered by the Senior Proctor.

The Aldermen's Oath.

You shall swear [if called upon] that you shall diligently assist and faithfully counsel the Mayor and Bailiffs of the town of Cambridge, for peace both of the University and the town to be kept, and to search for evil-doers, and troublers of peace, and vagabonds of the night, and receivers of thieves and evil-doers. All this you, and every of you, shall promise to do faithfully. So help you God in Jesus Christ.

The Oath for the Four Burgesses.

You shall swear [if called upon] to observe fidelity towards our Sovereign Lady the Queen's Majesty, and to be assisting and counselling to her Majesty's Mayor and Bailiffs of Cambridge, and for the searching out of malefactors and perturbers of her said Majesty's peace, and vagabonds in the night, and receivers of thieves and malefactors. All which things you shall diligently observe. So help you God through Jesus Christ.

The Oath of Two of every Parish.

You shall swear [if called upon] every fortnight to make diligent and faithful search for all suspected persons lying within your parish, and to present every such so tarrying for three nights to the Vice-Chancellor and the Mayor. So help you God in Jesus Christ.

This ceremonial, which is called the Great Assembly, is grounded on a Charter of the 20th February, 52 Hen. III., by which it is ordained, that there shall be two aldermen and four of the more discreet burgesses associated to them, all of whom shall swear to be assisting and counselling the Mayor and bailiffs for conservation of the peace and keeping the assize, and to search for evil-doers and troublers of the peace: also two in every parish who shall swear to make diligent search every fortnight in their respective parishes for all suspected persons, and that they shall answer for any one who had received any such for three nights in his house.

The Great Assembly was discontinued for many years previously to 1817, when it was revived by Dr. Webb, Vice-Chancellor.

The words "if called upon" have been usually, but not uniformly, introduced into the several oaths of late years.

It frequently happens that parties summoned by the Mayor to take the oaths at the Great Assembly decline to attend.

We submit that no adequate reason exists for any of these oaths, and that the exacting them tends much to impair the solemnity with which an oath ought ever to be regarded, and engenders or sanctions a notion that the town authorities are dependent on the University. A writer of the early part of the last century says—"the town seems to be subordinate to the University, for their Mayor, every year when he is elected, takes an oath to observe and conserve the privileges of the University."—*Macky's Journey through England*, 5th edit., vol. i., p. 168.)

SEARCH FOR COMMON WOMEN.

By various Charters granted to the University, the officers of that body are empowered to search in this town and suburbs by day and night for common women and persons *suspected of evil*, and to punish them by imprisonment, banishment, or otherwise.

We have lately obtained a local Act, with which is incorporated "The Town Police Clauses Act, 1847," under which the magistrates of the town have power to punish "every common prostitute or night walker loitering and importuning passengers for the purpose of prostitution;" and this, with the power given by the Vagrant Act (5 Geo. IV., c. 83, s. 3) to punish prostitutes behaving riotously or indecently, is amply sufficient to preserve decency in the streets.

The police are vigilant in apprehending offenders against these Acts, who are duly punished by the magistrates.

The Proctors and Pro-Proctors of the University, however, still continue to exercise the powers of search given them by the University Charters. Occasionally mistakes have been committed, and the general exercise of the powers in question tends to place all the unfortunate women of the class referred to on a level with the very lowest; to create strong popular feelings against the University authorities; and to subject the University to a large annual expenditure in the performance of duties which, as it appears to us, can be more efficiently and properly executed by a Police force.

Much of course must depend in the exercise of such powers on the discretion of the gentlemen who fill the Procuratorial office, and we have no reason to believe that any just exception can be taken to the manner in which the present Proctors execute their office; we cannot, however, refrain from suggesting a doubt whether duties of this kind are strictly compatible with the clerical character, and the Proctors are, as you must be aware, with few exceptions, Clergymen.

Alehouse and Wine Licenses.

Previously to 1836, the Vice-Chancellor exercised the exclusive right to license alehouses in Cambridge and the adjacent village of Chesterton, and he still claims that privilege, which, however, we believe will on examination be found to have no legal foundation.

In 1838, an application was made to the Court of Queen's Bench for an information in the nature of a *quo warranto* to try this right. The rule was, however, discharged, on the ground that the claim having been unquestioned for centuries, the Court would not examine minutely the objections thereto, or afford any facilities for trying its validity.

Since 1836, the Town Magistrates have also licensed alehouses in Cambridge.

The inconvenience of two concurrent jurisdictions in a matter of this kind must be obvious.

No adequate reason can, as we believe, be given why the Vice-Chancellor should have the power to license alehouses; and we may perhaps be permitted to refer you to the following remarks on the subject by the late Very Rev. Dr. Lamb, Dean of Bristol, and Master of Corpus Christi College. In a work published by that gentleman in 1838, he observes:—"It is a matter of no importance to the University, as it concerns its discipline, whether the Vice-Chancellor or the Town Magistrates have the power of licensing alehouses: but in times of political excitement, this power may be abused to party purposes, and against such an abuse there seems to be better security by vesting it in a Bench of Magistrates than in an individual. At Oxford, where the authority of the Vice-Chancellor is kept distinct from that of the Town Magistrates, nothing of this kind has occurred. The latter have always licensed the alehouses; and no complaint has been made that the discipline of the University has in anywise suffered by such an arrangement."

By Act of Parliament (17 Geo. II., c. 40, s. 11) the exclusive power to grant Wine Licenses in the Town of Cambridge is granted to the Chancellor, Masters, and Scholars of the University, and a penalty of 5*l.* is imposed for every sale without such license.

The Wine Licenses now granted are by the Vice-Chancellor only, and not, as it is submitted they should be, under the Common Seal of the University.

In some cases 10*l.* is charged for the license, in others only 5*l.*

The right to raise a revenue from the grant of such licenses, though sanctioned by long usage, appears questionable. (See *Morgan* v. *Palmer*, 2 B. & C. 729.)

Weights and Measures.

By various Charters the University has the sole supervision of weights and measures within the Town and suburbs.

By the Weights and Measures Act (5 and 6 Will. IV., c. 63, s. 44) it is enacted, that the Chancellor or Vice-Chancellor of the University and his Deputy shall have the custody of the assize, assay, and overlooking of weights and measures in this Town, and that he and *none other* shall have power to appoint an Inspector or Inspectors of Weights and Measures, and shall have full power and authority to execute all such matters and things as are required or granted to Justices of the Peace.

The Vice-Chancellor does not, it is believed, appoint an Inspector under this Act, but the Taxors (usually Clergymen) perform the duty, as they did before the Act passed.

As might be expected the Taxors do not ordinarily display much vigilance or activity, they occasionally seize defective weights and measures, but we are not aware that proceedings for penalties are ever taken against the parties using them. Most certain it is that the names of the offenders are never known or published; and it has been found elsewhere that the publication of the names of the parties so offending has operated beneficially in protecting the public interests.

At the Court Leet of the University, a fine of 6*s.* 8*d.* was for many years imposed on each publican. This was understood to be, and in effect was, a license to use glasses containing less than the legal measure. We have reason to believe, however, that this objectionable practice is now discontinued.

We cannot but think that the Inspection of Weights and Measures would be far better exercised by the ordinary Police, subject, as in other places, to the control of the Magistracy generally.

Markets and Fairs.

Queen Elizabeth, by her Charter to the University, dated the 26th of April, in the third year of her reign, granted to that body the Clerkship of the Market in the Town of Cambridge, and in the Fairs of Barnwell and Cambridge.

The University Officers make a proclamation annually in the Market, and at each of the Fairs called Midsummer and Sturbridge.

The Taxors also superintend weights and measures in the Markets and Fairs, as in the Town, and have also the exclusive privilege of weighing hops and leather in Sturbridge Fair.

We, in 1850, obtained an Act of Parliament for regulating the Markets and Fairs, and under that Act we appoint an Inspector of Provisions, who has ample powers for the protection of the public.

It would be difficult, we believe, to state what substantial loss the University could sustain by an express abrogation of the powers they possess in the Markets and Fairs, which powers are indeed for the most part practically obsolete.

Relations between the University and the Town.

Theatrical and other Entertainments.

By the Theatres Regulation Act (6 and 7 Vict., c. 68, s. 10) it is enacted, that no Theatre License shall be in force within the University of Cambridge, or within fourteen miles of the Town of Cambridge, without the consent of the Chancellor or Vice-Chancellor of the University, and that the Rules for the management of any Theatre which shall be licensed with such consent within these limits, shall be subject to the approval of the said Chancellor or Vice Chancellor; and that in case of the breach of any of the said Rules, or any condition on which the consent of the Chancellor or Vice-Chancellor shall have been given, it shall be lawful for such Chancellor or Vice-Chancellor to annul the License, and thereupon such License shall become void.

This clause extends not only to the Town of Cambridge, but also to the Towns of Newmarket, Royston, and St. Ives, which are respectively situated within the prescribed distance of the Town of Cambridge.

Respectably conducted theatrical performances take place in Cambridge in the Long Vacation; but the Manager takes out no license whatever, and runs the risk of any proceedings against him under the above Act.

We understand the Manager of the Theatre pays 10*s.* 3*d.* annually to the University or its officers.

It is alleged that the Vice-Chancellor claims the power to prohibit all other entertainments within the Town, to which he has not given his express sanction. Instances have occurred in which such sanction has been apparently withheld capriciously. A few years since, John Braham, the celebrated vocalist, was desirous of giving a Concert here, but the Vice-Chancellor withheld his assent, and the design was abandoned.

We believe no valid reason exists why theatrical and other entertainments of the like nature should be subject to other control here than elsewhere.

Discommuning.

Mr. Gunning thus defines "Discommuning," in his work on the Ceremonies of the University (p. 433),—"That the rights and privileges of the University may be maintained and preserved, it has the power to prohibit, under the severest penalties, all its members from dealing with any tradesman resident in the Town, who shall have violated those rights and privileges, and shall refuse to make atonement for such violation."

It will be seen that this definition is quite wide enough to include every case in which the University authorities may be displeased with the conduct of any tradesman, and there are not wanting instances of the power to discommune having been enforced in former times on the most frivolous and ludicrous pretences.

Of late years the power of discommuning has been used to punish tradesmen who have infringed some order made by the University authorities, or whose conduct has appeared to such authorities to have been wrong in some transaction with a Student.

When a person is discommuned, a printed notice to that effect is published in the several Colleges and elsewhere.

This extensive power is liable to great objections, from its vague character, and from its being exercised by a secret and irresponsible tribunal.

To the tradesmen of the more reputable class connected with the University, discommuning is a most serious punishment, tending very materially to injure their character and credit, and there are consequently very few cases which have occurred or can be suggested in which, as regards such persons, it will not be found that the penalty is greatly disproportioned to the alleged offence; whilst, on the other hand, tradesmen of inferior repute and credit would consider discommuning as no punishment whatever.

Trade Regulations.

The power of discommuning enables the Vice-Chancellor and Heads of Colleges to enforce decrees affecting in various ways the trade of the Town.

To some of these decrees we invite your particular attention.

On the 18th of May, 1844, Dr. Hodgson, Vice-Chancellor, and twelve other Heads of Colleges, made a decree that if any inhabitant of the Town, engaged in any trade or profession, shall institute legal proceedings for the recovery of a debt due to him from any person in *statu pupillari*, without first giving reasonable notice of his claims to the Tutor of such person, he shall be punished by discommuning or otherwise as to the Vice-Chancellor and Heads of Colleges shall seem fit.

Several tradesmen have been discommuned under this decree, and on the 29th of February, 1848, a tradesman was so discommuned for having sued, in one of the Queen's Superior Courts, a Bachelor of Arts, who had ceased to reside in Cambridge, and was living in Yorkshire.

The preamble to the foregoing decree states, that it is expedient, as well for protecting persons in *statu pupillari* against impositions or vexatious proceedings at law, as for securing the regular and prompt payment of all just and lawful debts contracted by them, that the expenses incurred by such persons should be brought as far as is practicable under the inspection and control of the Tutors of their respective Colleges.

It appears to us that it cannot be right to punish a person for merely availing himself of the remedies for the recovery of his debt which are given to him by the laws of the land; and we are quite certain that if the decree in question was really intended to secure the regular and prompt payment of all just and lawful debts contracted by Students, that object has not

Relations between the University and the Town.

been in any degree obtained. This decree rather tends to encourage amongst the Students an idea that having contracted debts they cannot be compelled to pay them, and many instances might be cited in which Students, when applied to for debts, have set their creditors at defiance, and cited this decre in justification of their conduct.

On the 11th of February, 1847, Dr. Philpott, Vice-Chancellor, and fifteen other Heads of Colleges, made decrees to the following effect:—

1. That if any vintner or victualler shall be proved before the Vice-Chancellor to have permitted any person in *statu pupillari* to contract a debt for wine or spirituous liquors exceeding the sum of 10*l.*, without the knowledge and consent of the Tutor of such person, he shall be deprived of his license.
2. That every vintner or victualler with whom any person in *statu pupillari* shall contract any debt for wine or spirituous liquors, shall be required to send notice of the amount of the same at the end of each quarter to the College Tutor of the person so indebted, on pain of deprivation of his license.
3. That every tradesman or dealer with whom any person in *statu pupillari* shall contract a debt exceeding the sum of 5*l.*, shall be required to send notice of the amount of the same at the end of every quarter to the College Tutor of the person so indebted, on pain of being punished by discommuning or otherwise as to the Heads of Colleges shall seem fit.
4. That if any vintner, victualler, tradesman, dealer, or other person, shall take from a person in *statu pupillari*, without the consent of his College Tutor, a promissory note, he shall for so doing be punished by deprivation of his license, by discommuning or otherwise, as to the Vice-Chancellor and Heads of Colleges shall seem fit.

Whilst we are not unwilling to believe that these decrees were made under an impression that they would repress extravagance on the part of Students, we cannot refrain from observing that they have had no such effect; they have, however, seriously injured the trade of the Town, as a student who requires credit can easily evade these decrees by dealing with some person who, not residing in the Town, cannot, therefore be "punished by deprivation of his license, by discommuning or otherwise;" and the manifest tendency of these decrees is to induce the Students to trade with such persons rather than with the inhabitants of the Town, and this is so well understood, that from the time these decrees were first promulgated, the Town has been literally overrun with non-resident traders, soliciting orders from Undergraduates.

Without wishing to dwell on the many other objections to which these decrees are open, we may observe that they are certainly not framed on a principle of impartial justice, as no punishment whatever is provided for the violation of them by persons in *statu pupillari*. If to *give* undue credit be an offence, to *take* such credit should also be considered an offence.

University Courts.

By various Charters the authorities of the University are entitled to exclusive conusance of various matters, both criminal and civil, in which a scholar or person privileged of the University is a party.

Excepting in cases of discipline and discommuning, the University Courts may be considered as obsolete, though instances have not been wanting in modern times in which claims to exclusive jurisdiction on the part of the University have been interposed in order to prevent the ordinary course of justice.

In nearly all the cases over which the Magistrates have summary jurisdiction, the claim of the University to exclusive conusance does not apply. Within the last few years, however, more than one ineffectual effort has been made to induce the Magistrates to forbear from adjudicating in such cases, on the ground that the defendant was a member of the University.

We submit to your consideration whether the time has not arrived when the right to exclusive judicial power on the part of the University may be beneficially abolished. We believe it will be found that the assertion of this privilege has occasioned heavy charges on the funds of the University.

We believe it will be found upon examination that the proceedings in the Court of the Vice-Chancellor and Heads of Colleges are very inconsistent with the spirit and genius of our free constitution. The proceedings are secret. There is no jury. The accused has no adequate previous notice of the charge. He is denied professional assistance, and is cross-examined by the judges, who are his accusers also, and from their decision there is no appeal.

University Constables,

By "An Act for the Better Preservation of Peace and Good Order in the Universities of England" (6 Geo. IV., c. 97), it is enacted, that the Chancellor or Vice-Chancellor may appoint such number of able men as he shall think fit to be constables in and for the University, who shall continue in office either during good behaviour or during pleasure, or for such period of time, either defined or dependent on future circumstances, as such Chancellor or Vice-Chancellor shall direct; and to every man so appointed such Chancellor or Vice-Chancellor shall administer an oath, well and faithfully to execute the office of constable within the precincts of the University during his continuance in office, which certificate shall be evidence of his having been duly appointed; and every man so sworn shall have full power to act as a constable within the precincts of the University, and four miles of the same University, for the time expressed in the certificate, and shall deliver to every such man a certificate of his

Relations between the University and the Town.

having been so sworn, expressing the duration of his continuance in office, unless he shall be sooner dismissed therefrom by the Chancellor or the Vice-Chancellor for the time being; and shall within the precincts of the University and four miles of the same, and during his continuance in office, be subject to the like powers and authorities of Her Majesty's Justices of the Peace within the limits of their respective jurisdictions, as other constables are subject to, and have and enjoy all such powers and authorities, privileges, immunities, and advantages as any constable hath or shall have within his constablewick: provided always, that every such constable, for any act done by him in the execution of his office, shall be liable to be sued or indicted in the Courts of Common Law, notwithstanding such constable may be a member of the University, and notwithstanding any claim of cognizance or privileges whatsoever.

The Vice-Chancellor has frequently appointed constables under this Act, but the magistrates of the town and the public generally have no means of knowing their names, or for what period they are appointed.

Local Burthens.

The University and Colleges are charged to the land tax 100*l.* per annum only, whereas the Town is charged no less a sum than 2,707*l.* 18*s.* 1*d.* per annum.

This appointment was made in pursuance of articles of agreement between the two Corporations of the University and Town, dated 10th April, 1723, and afterwards confirmed by Parliament.

The Town raises by parochial rates, viz., poor rates (including therein borough rates), church rates, and highway rates, above 18,000*l.* per annum.

With some few exceptions the buildings and property occupied by the University and Colleges are not assessed to parochial rates, although a composition for poor rates of 240*l.* per annum is collected by the Vice-Chancellor, and paid to the officers of thirteen of the parishes.

In 1850 a Committee of our body made a Report on the subject of the non-assessment of this property to parochial rates, to which was annexed an Appendix, containing a vast body of documentary and other evidence. To that Report we beg leave especially to invite your attention.

Pursuant to the recommendation of that Committee, a copy of their Report was, by our direction, forwarded to the Vice-Chancellor and the heads of the several Colleges, together with a respectful intimation that we were of opinion that the property occupied by the University and Colleges not then assessed to the parochial rates was legally liable to be so assessed, and that we were therefore resolved to take immediate steps to get such property assessed accordingly, but were at the same time desirous of proceeding to do so with all possible courtesy consistent with the due discharge of what we considered an important and imperative duty, and therefore desired to be informed by the University and Colleges respectively, at their earliest convenience, if they intended to dispute their liability to be assessed to the parochial rates; and that should they do so, we should be prepared to favourably consider any suggestions which they might respectively have to offer for procuring an adjudication upon the question, as speedily, as fairly, and with as little expense as might be practicable.

As yet in no one instance has a satisfactory reply to that communication been received, though we are not unwilling to hope that we may not ultimately be driven to have recourse to legal proceedings, to establish what we conceive to be our just legal rights.

The University and Colleges contribute under the Cambridge Improvement Acts two-fifths of the expenses of paving, cleansing, and lighting the town. It has been said that, considering the present relative value of the property occupied by the University and Colleges, and of the other property in the Town, the University and Colleges contribute more than they ought to do to these expenses. We are quite willing (and have signified as much) that if the unfairness of such quota can be established, the provisions establishing the same should be repealed, provided the University and Colleges are assessed to the parochial rates, and also to the expenses under the Improvement Acts, and enter into an arrangement for the more equitable apportionment of the respective contributions of the University and Town to the Land Tax.

It is but just to state that the leading members of the University appear to be impressed with a conviction of the justice of a contribution by that body to the heavy police expenses of the Town; we regret to add, that two several proposals to that effect, made respectively in 1847 and 1850, did not meet with the approval of the Senate, and that no such contribution is now or ever has been made.

May we be permitted in conclusion to observe, that if proofs be wanting that academical institutions can flourish without the enjoyment of any such privileges and exemptions as those to which we have thus ventured to request your attention, they may, it is believed, be furnished by the Irish and Scotch Universities, and by those more recently established in London and Durham. We are given to understand that the members of all these Universities are, in their several localities, entirely subject to the ordinary constituted authorities, and we are not aware that in any of such places scholars or scholastic pursuits are held in less esteem and honour than they are here.

Given under the Common Seal of the Borough aforesaid, at a Council holden at the Guildhall there, on the Fifth day of February, 1852.

(3.)

Relations between the University and the Town.

King's College Lodge, Cambridge,
June 1st, 1852.

My Lord,

I beg leave to transmit to your Lordship a copy of the remarks made by a Syndicate, appointed by Grace of the Senate, upon the Memorial presented by the Council of the Borough of Cambridge to Her Majesty's Commissioners for inquiring into the University, and to which your Lordship was pleased to invite my attention in your letter of the 10th of February last.

I have the honour to remain, my Lord,
With much respect,
Your Lordship's faithful Servant,

The Right Rev.
The Lord Bishop of Chester.

(Signed) RICHARD OKES,
Vice-Chancellor.

(4.)

Remarks on the Memorial addressed by the Council of the Borough of Cambridge to Her Majesty's Commissioners for inquiring into the State, Discipline, Studies, and Revenues of the University, dated Feb. 5, 1852.

Before entering upon a review of the objections raised in the Memorial from the Council of the Borough of Cambridge to the several privileges which the University enjoys, and some of which it has enjoyed immemorially, it seems expedient to make a few preliminary remarks applicable to all the objections, and concerning the principle upon which the existence of any such privilege is to be justified.

If corporations, such as are the two ancient Universities of England, comprehending very large numbers of young men of a class whose good education in morals, no less than in learning, is of the utmost importance to the community, be allowed to exist at all, the general interests of the country would seem to demand that some means should be taken by the legislature, if necessary, to protect them from the contaminations and evils incident to towns in general. Under the operation of this principle the towns, in which such corporations are situate, would become, in some particulars of local government and privilege, exceptional cases.

Even were an University established at a distance from any dwellings whatever, yet a town would soon spring up around it. Multitudes naturally flock to a place where they can share in the advantages to be derived from so large a community, consisting entirely of a class which expends money both in the support of trade and in the employment of labour; and, when such great and peculiar advantages are enjoyed by the inhabitants of Cambridge, it would not appear unreasonable to expect that the municipal authorities should acquiesce in the curtailment of some of the local privileges which the inhabitants of other towns ordinarily possess, and in the possession by the University of peculiar powers, both which things seem essential and necessary to the very existence of an University in the place.

These remarks, it is desired, may be borne in mind, as they more or less concern all the questions raised in the Memorial.

Oaths.

In the University, and also in individual Colleges, among many ordinances, there are some, for the infringement of which appropriate penalties have been prescribed; and others, for the infringement of which, if indeed adequate penalties could have been provided, they would probably have been either too late for justice, or too burdensome in point of expense to the party exercising the authority to exact them. These considerations, coupled with the reflection that prevention is better than cure, led the Founders to impose upon the members of their several institutions a general oath to observe the ordinances appointed. And it may be assumed that the like considerations led to the requirement of the oaths objected to in the Memorial.

The oath of the Mayor and Bailiffs is of a comprehensive character, and imposes on the chief officers of the Town the highest obligation to preserve the privileges of the University. When it is considered that these privileges materially contribute to the maintenance of order and discipline among the members of the University, and to the protection of public morality and decorum, it does not seem unreasonable that they should be supported and sanctioned by the oath, which is administered to those officers upon their election; it is, therefore, rather a matter of surprise that the municipal authorities should assert that the exacting of this oath "tends much to impair the solemnity with which an oath ought ever to be regarded."

The University cannot be held responsible for the error of opinion adverted to in the Memorial, as having been entertained by a writer about a century since, that any party, which may be under obligation to take an oath to observe the privileges of another party, may be accounted subordinate to it; which is so far from being a just inference, that, in fact, no good reason can be assigned why even a superior party should not be under obligation to take such an oath to preserve the privileges of a subordinate one.

The observation that "the assize of bread, ale, and other victuals is now abolished, *but no corresponding change has been made in this oath*," is incorrect. Ever since the regulations respecting "the assize and price" of bread were abolished by the Act 6 and 7 Will. IV. ch. 37, sec. 1, the mention of bread has been omitted in the oath tendered. With respect to ale, although the setting of the price has been abolished by Acts of Parliament which relieve the vendor from any obligation concerning it, except that it must be "reasonable," it does not

Relations between the University and the Town.

appear that "the assize," which comprehends more than the mere "price," has been abolished.

Search for Common Women.

The University is very far from complaining that the magistrates of the town have, under a recent local Act, the power of punishing "every common prostitute or night-walker loitering and importuning passengers for the purpose of prostitution." On the contrary, it gladly accepts any aid in its endeavours to maintain order and decency; but, besides, that there are obvious reasons why the police should not be the guardians of the Students in such a matter, the University by no means admits that the power granted by the said Act, together with that given by the Vagrant Act (5 Geo. IV., c. 83, s. 3), is "sufficient to preserve decency in the streets." The combined powers of the two Acts authorise the apprehension and punishment of a prostitute only when importuning or disorderly. Now, while on the one hand the proof of importuning can scarcely be furnished except by the person actually importuned, a proof not very much to be expected, on the other hand, the power possessed by the University of apprehending persons *suspected of evil*, not merely represses but prevents such importunity; and it seems most desirable that young men, who may be passing along the streets, should not even be subject to it. With respect to the alleged possibility of occasional mistakes, the evil resulting to modest women, walking out after dusk, would seem, from the very rare occurrence of such interruption, to be much more than counterbalanced by the protection afforded to them by the very same authority from interruption by young men. There is good reason to apprehend that, if the power exercised by the University were wanting, many more mistakes, and those of a less excusable kind, would be committed, and that the results would be no less injurious to the Town than to the University. In this particular the expressed belief "that the true interests of the two bodies are identical" is readily admitted; and were it not that the Memorial sought to deprive the University of the privilege here treated of, it might have been thought undeniable that, under the peculiar circumstance of so many young men being congregated into one town, it was of all things most important to the morals and happiness of the inhabitants that means so efficient and preventive as those exercised by the University should be employed for the preservation of public decency.

It is also objected that "the general exercise of the powers in question tends to place all the unfortunate women of the class referred to on a level with the very lowest." The University is not chargeable with this imputation. It pays attention to difference of condition and demeanour, and makes arrangements accordingly; and it is also the obvious duty of the chaplain who is in attendance upon the persons imprisoned, and who is provided and paid by the University, to attend to such differences in his treatment of them, and in his endeavours to reform them. Moreover it is well known that the fear of imprisonment operates in a very great degree to deter those of better condition from walking the streets.

The statement of the Memorial, that this department of the discipline of the University is chiefly in the hands of clergymen is correct, and the like statement would apply with equal truth to the other departments of its discipline. But it does not appear that, if the discipline were in other hands, it would be more effectively or conscientiously carried out, or that the confidence at present placed in the University by the parents of the young men consigned to its care, would be increased. On the contrary, it may very reasonably be presumed that their parents would view it as a great evil, were the clerical members of the University to shrink from the performance of their accustomed academical duties, this one especially: and it may at least be conceded in this particular case, where the officer has not only to direct the apprehension of the street-walker, but also, it may be, to correct a Student, that the admonition and exercise of authority would not come with less propriety from one who is a clergyman than from one who is not. Neither can it be doubted that they, who take upon themselves this office, look upon it as one of unbounded importance to the morals and well-being of the young men intrusted to the guardianship of the University, and exercise it under a deep sense of their responsibility both to the University, whose officers they are, and to society in general.

It ought further to be stated, that in the year 1825 an Act of Parliament was passed (6 Geo. IV. ch. 97), directing that "every common prostitute and night-walker found wandering in any public walk, street, or highway, within the precincts of the University of Oxford, and not giving a satisfactory account of herself, should be deemed an idle and disorderly person, within the true intent and meaning of an Act (viz. 5 Geo. IV. c. 83), passed in the last" preceding "session of Parliament, intituled An Act for the punishment of idle and disorderly persons, and rogues and vagabonds, in that part of Great Britain called England, and should and might be apprehended and dealt with accordingly." Two important conclusions may be drawn from this fact: first, that the University of Oxford, notwithstanding its excellent police, which during the night-time is under the sole control and management of the University itself, felt the want of a preventive power similar to that vested in the University of Cambridge; and secondly, that the Legislature is neither insensible to the expediency and propriety of granting special powers in special cases, nor to the strong claims which the youth of the Universities have to its protection.

Alehouse and Wine Licences.

If, as is alleged, two concurrent jurisdictions in the licensing of alehouses be inconvenient, the fault would seem to be, not with the University for continuing to exercise its prescriptive right to license, but with those who interfere with it,—and who have the remedy in their own hands. The Vice-Chancellor, having the power to grant licenses, has by consequence the power to revoke them; and this has been found to supply the University with a very salutary

Relations between the University and the Town.

influence over publicans in general, whenever any of the lower class of them have sought to afford facilities for improper meetings, or any of the higher to afford opportunities for improvident expenditure: nor is the control over vintners less necessary or less efficacious for restraining such expenditure than that over innkeepers.

The statement in the Memorial that "by an Act of Parliament (17 Geo. II. c. 40, s. 11), the exclusive power to grant wine licenses in the town of Cambridge is granted to the Chancellor, Masters, and Scholars of the University," might lead to the erroneous supposition that this Act was the original grant of the privilege, which it recognizes, whereas the privilege is in fact as ancient as that respecting alehouse licenses.

On 20th May, 1812, the University, by a formal act, authorized the Vice-Chancellor to grant in future the wine licenses on its behalf, and to require 10*l.* or 5*l.* for the same at his discretion. Before that date the number of vintners at any one time had been limited to four, each of whom paid 40*l.* a year for his license. When the person applying only carries on a trade in wine to a small extent, the Vice-Chancellor requires the less sum. If he were used to exact as much from the smaller dealers as from the larger, the complaint would be more intelligible.

Weights and Measures. Markets and Fairs.

As to the efficacy of the control exercised by the University in these matters, and vested in it with a view doubtless to the special protection of its members, it is most readily admitted that the control would be much more effectual for the general benefit, were it not for the successful efforts made by tradesmen to evade the scrutiny of the University officers. It is stated in the Memorial that "most certain it is that the names of the offenders are never known or published." This is scarcely consistent with the fact that great numbers of false weights and measures are frequently seized in the open market-place.

Theatrical and other Entertainments.

The Vice-Chancellor exercises a discretion as to allowing public entertainments, especially in full Term. It would have seemed that the reason for the occasional withholding of his permission is as obvious as it is valid, namely, the hazard of tumult and disturbance, when a large assembly of young men is collected together at night. The inhabitants of the Town cannot but be sensible of the evil, and the Council of the Borough might not unreasonably have been expected to concur in the expediency of preventing it. Nor can any one fail to perceive how certain and injurious the interruption to the proper pursuits of the Students would be, were frequent entertainments to take place. During the vacations the Vice-Chancellor rarely, if ever, interposes to prevent them.

Discommuning and Trade Regulations.

The University is most anxious both to maintain good discipline and to "restrain habits of extravagance and facilities of credit," concerning which Her Majesty's Commissioners in their Queries to individual Colleges have made special inquiry. Yet, it need scarcely be stated, there are and ever will be persons ready to take every unfair advantage of the inexperience of young men. To control such persons, the Vice-Chancellor and Heads of Colleges are used occasionally to issue edicts, enjoining generally upon tradesmen and others the observance of certain rules, and warning them that, unless they observe those rules, they will be liable to be discommuned. In doing so the Vice-Chancellor and Heads of Colleges have no design whatever to interrupt in the slightest degree the business of the respectable part of the tradesmen in the town, carried on in a fair and open way. All tradesmen that desire to encourage the system of credit, are of course much opposed to these edicts, and it is not unusual for a tradesman, after first evading them, to serve a writ upon the Student, who may have been led to contract a debt with him. When it has come to the knowledge of any Tutor of a College that a tradesman has acted in contravention of any one of these edicts, he makes complaint to the Vice-Chancellor, who calls the Heads of Colleges together and institutes an inquiry. The offender is allowed to be present, and to give any explanation he may think fit. He very commonly admits the offence; but, if not, it is in most cases easily proved by the production of the bill sent in or the writ served, and the declaration of the Tutor that the required notice had not been sent to him, or other similar testimony of the simplest kind.

No specific penalty is imposed upon the offender, but he is treated as a person with whom it is not expedient that the Students should have intercourse, and accordingly a notice is sent to all the Colleges, peremptorily forbidding all persons *in statu pupillari* to deal with him. In fact, the proceeding is of such a sort, that the master of a school might, and perhaps often does, carry it out; and although the proceedings are conducted with form and care, being taken down by the Registrary, and serve for precedents in future, it is altogether a misrepresentation of the nature of the transaction to describe them as those of "a secret and irresponsible tribunal." It has rarely happened that any of the more respectable class of tradesmen have been discommuned. One such case has happened, after due warning on the part of the Vice-Chancellor, and after declaration on the part of the offender of designed resistance to the edict. But it is scarcely necessary to defend such cases. That they should have occurred seems to prove no more than that equal justice is dealt out. If they had not occurred, it might have been asserted that the University acted partially, and that disregard of the edicts was visited only upon "tradesmen of inferior repute and credit, who consider discommuning as no punishment whatever." This, however, is not the question, but whether the professed object

Relations between the University and the Town.

of discommuning is accomplished, which is to keep the Students from dealing with the tradesmen implicated.

If Students have been led to deal with tradesmen in London and elsewhere, it is probably owing to the increased facilities of communication and other causes, quite irrespective of the edicts complained of.

If any tradesmen here are thwarted in their desire to allow undue credit, one of the main objects of the edicts is secured. And, if the University be unable to prevent tradesmen elsewhere from granting such credit to the Students, that would hardly excuse it from not using its best endeavours to prevent tradesmen here from doing so, especially when the advantage which the latter have of ascertaining the family connexions and means of a Student is considered, as well as his proximity to the temptations, which it is in their power to offer. Neither should it be understood, because the objection adverts only to the topic of credit, that the edicts alluded to relate to no other point of discipline, in respect of which the inhabitants of the town may be said to be controlled. The Students cannot seek at a distance carriages or horses, or the more perishable luxuries.

As there is a probability that the Memorial and also these remarks will eventually obtain public circulation in conjunction with the Report of the Commissioners, it will be a satisfaction to the University that dispassionate persons should have the opportunity of weighing the respective merits of the case, and of learning to what extent and under what jealousy and reproach it exerts itself to protect the young men committed to its charge.

Allusion is made in the Memorial to the special case of a tradesman having been discommuned "for having sued in one of the superior courts a Bachelor of Arts, who had ceased to reside in Cambridge, and was living in Yorkshire." The authority for this remark is the edict cited immediately before in the Memorial, which holds out the threat of discommuning to "any inhabitant of the town, engaged in any trade or profession," who "shall institute legal proceedings for the recovery of a debt due to him from any person in *statu pupillari*, without first giving reasonable notice of his claims to the Tutor of such person." Now the very terms of the edict point out that the tradesman alluded to was discommuned not for having sued, but for having sued without having given to the Tutor of the person sued that previous notice of the existence of the debt, which is enjoined by the edict. Moreover the person sued, being a Bachelor of Arts, was still in the class which is designated by the expression *in statu pupillari* employed in the edict, (an expression, of which a clear explanation is appended to the edict,) and therefore still under its control as well as protection; and (although this is not material to the case) the debt was incurred by him during his residence as an Undergraduate. If the edict disregarded in this instance were to have no other result than to effect a temporary postponement of law proceedings, it would not have the result contemplated and desired, which is to prevent improper credit being given, as well as unnecessary litigation.

Again, an opinion is expressed that it "cannot be right to punish a person for merely availing himself of the remedies for the recovery of his debt, which are given to him by the laws of the land." The authority for this remark is also to be found in the Memorial, viz., the preamble to the same edict, which sets forth "that it is expedient, as well for protecting persons *in statu pupillari* against impositions or vexatious proceedings at law, as for securing the regular and prompt payment of all just and lawful debts contracted by them, that the expenses incurred by such persons should be brought, as far as is practicable, under the inspection and control of the Tutors of their respective Colleges." Here also the very terms of the preamble point out that one main object of the University authorities in issuing the edict was to "secure the regular and prompt payment of all just and lawful debts" contracted by persons *in statu pupillari*, which would in general be effected by application to their parents: and it is by no means an object of the edicts, nor the desire of those who make them, to hinder any person, who does not in this manner obtain payment, from availing himself of legal remedies for the recovery of debts, much less to punish him for doing so.

University Courts.

The exclusive jurisdiction of the Chancellor of the University, in cases where a scholar or privileged person of the University is a party, has been impaired by the Act 9 Geo. IV., c. 31, under which magistrates have a summary power of punishing persons for common assaults; for although that Act contains nothing directly impairing his jurisdiction, yet it has done so indirectly, by authorising a person to complain of an assault before the magistrates of the town, without at the same time reserving the privilege of the University. It is true that the authorities of the University, believing that there was nothing in the Act impugning its privilege, and not yet aware that it could be used to abridge that privilege, did endeavour to bring the matter to an amicable settlement with the magistrates and municipal authorities of the town.

The opinion apparently entertained by the Council that "the time has arrived when the right to exclusive judicial power on the part of the University may be beneficially abolished," may be best met by a rejoinder that the Legislature would do but justice to the University by restoring to it that jurisdiction which it had immemorially enjoyed, and which, as the University is persuaded, was not taken away designedly. The attention of the University was not drawn to the Act, when under discussion in Parliament, and in consequence it did not apply for the introduction of a clause to save its privilege. There is no reason whatever to suppose that the Legislature would have refused what it has since so often readily acceded to in other cases.

The peculiar relations existing between the members of the University and many of the magistrates of the Town would not appear to make the latter the most proper judges of causes

Relations between the University and the Town.

in which the former are parties. Students charged with offences are naturally anxious to avoid academic punishment, and with that view they generally make their appearance before the magistrates without their academic dress, and are well content to escape with the payment of a fine, which, being paid to the borough, does not come to the knowledge of the University authorities. The very summary course of proceeding at Petty Sessions generally prevents the authorities of the University and Colleges from obtaining any information of the offence having been committed until the case has been dealt with by the Magistrates, after which, except in flagrant cases, it is very seldom that anything transpires of such a sort as to make it appear that a Student has been implicated.

It is not thought necessary to enter into any general justification of the proceedings in the Chancellor's Court, but it may be remarked that they are conducted according to the rules of the Civil Law, which do not require "a jury" Neither is there one at Petty Sessions. "The accused," it is said, "has no adequate previous notice of the charge." The answer to which is that the charge is always stated in the summons. He thus has at least a longer notice than if he were brought up before the magistrates of the town; and, as to the statement that the offender "is cross-examined by the judges, who are his accusers also," it is no more correct than if the same had been said of the Judges of the land before prisoners were by a recent law allowed to have counsel. The Chancellor is the sole judge, and there are never wanting among his assessors those, who, by such cross-examination, as it is termed, carefully elicit all the circumstances favourable to the person charged. The proceedings are conducted with scarcely any expense whatever.

University Constables.

The Vice-Chancellor avails himself of the power granted him by the Act specified in the Memorial of appointing constables whenever occasion requires; but there neither is nor can be any objection to the publication of their names, and this is the first time, so far as is known, that any desire for such publication has been expressed.

Local Burthens.

With reference to the statement that "the University and Colleges are charged to the land-tax 100*l.* per annum only," it is material to observe, that the whole of this sum of 100*l.* is at the present day charged to the University in its distinct character, and no portion of it is charged to the Colleges as being parts of the University, which may be accounted for by the circumstance that the Colleges, in respect of their sites and the buildings within the walls or limits, are, in common with some other similar institutions, wholly exempt from land-tax. The next sentence in the Memorial refers to an agreement of 10th April, 1723, between the University and Town, by which an arrangement was made with respect to the proportions in which the land tax should be paid by them. This agreement would seem to have been the basis of the apportionment made between the University and Town by the Land-tax Act of 38 Geo. III., c. 5.

It must here be mentioned, in further explanation of this subject, that the sites of Colleges in the Universities of Oxford and Cambridge were exempted from land-tax by the Act 4 Will. and Mary, c. 1. This exemption, in favour of the Colleges, has been continued to the present time, a clause of exemption being in the Land-tax Act, 38 Geo. III., c. 5, now in force. By this Act, the sums chargeable upon various counties and towns are definitely fixed. The proportions to be paid by the University of Cambridge and by the Town of Cambridge are thereby defined, the University being charged with the annual sum of 100*l.*, and the Town with the annual sum of 2,707*l.* 18*s.* 1*d.* These sums, except so far as portions of the latter may have been redeemed, still continue to be paid by the University and Town respectively, notwithstanding the vast increase in the buildings of the Town. Moreover, it is to be presumed, that when the apportionment of the entire land-tax of the kingdom among the various counties, towns, and districts took place, the sum fixed upon any particular locality would be in proportion to the annual value of the chargeable property therein situate. This being the case, the sum charged upon the district of Cambridge would be smaller than that which would have been so charged if the sites of Colleges had not been exempted: under the above circumstances it would seem that the inhabitants of the Town ought to be more than content with the existing apportionment.

The Council of the Borough, in stating the sums raised for land-tax and rates, has omitted the mention of another circumstance, which is important in reference to the preceding statement, namely, that no inconsiderable portion of those sums is levied upon property which, though not strictly Collegiate yet belongs to the University and Colleges, and for which they pay rates and taxes by themselves or by their tenants in the same manner as any other proprietors.

The University makes a voluntary contribution of 240*l.* a year for the poor, which the Vice-Chancellor apportions among the several parishes of the Town at his discretion; but it is not a composition, as stated in the Memorial.

The University and Colleges are of opinion that, in paying two-fifths of the expenses of paving, cleansing, and lighting the Town, they contribute far more than a just and reasonable share. The tolls collected under the Cambridge Improvement Acts amount to upwards of 1800*l.* a year, the whole of which sum is exclusively appropriated by those Acts towards the discharge of the three-fifths payable by the Town. On an average of the last three years the sum raised by the University and Colleges for the purposes of the said Acts amounted to

Relations between the University and the Town.

1,925*l.* 4*s.* 5*d.*, while that raised by rates in the Town was 2,001*l.* 4*s.* 4*d.*; to which must be added a fixed annual payment of 10*l.* out of the Borough Fund.

In conclusion, it may be observed that in the time of Queen Elizabeth the Legislature was of opinion that the good management of the University was a matter of concern to the whole nation, and accordingly, in the 13th year of her reign, an Act was passed formally ratifying all the Charters that had been granted and constantly renewed by successive Sovereigns for conferring and securing those privileges, which it had seemed expedient that the University should possess. Those privileges are continually reserved to the University in Acts of Parliament, some of them very recent, which without such reservation might have the effect of abrogating, or at least impairing them; and not unfrequently they are specially recognised and confirmed. If the expediency of its retaining those privileges be duly weighed, there appears no reason to doubt that the Legislature would take the same view as heretofore, and that the community at large would concur in the propriety of preserving peculiar powers and privileges to the University, especially when it is considered how much they concern the maintenance of good order and morality among the young men entrusted to its care and superintendence.

CAMBRIDGE UNIVERSITY COMMISSION.

EVIDENCE FROM THE LIBRARIAN OF THE UNIVERSITY.

The following Paper was addressed to the University Librarian:—

Cambridge University Commission,
Downing-street,

December 1850.

Sir,

Her Majesty's Commissioners for inquiring into the State of the University of Cambridge and the Colleges thereof, respectfully invite your attention to the subjoined List of Queries; and request the favour of such information in reply as you may be kindly disposed to communicate.

I have the honour to be,
Sir,
Your obedient humble Servant.
(Signed) W. H. BATESON.

---

1. What are the duties of your office? How were you appointed? What is your salary, and the sources from which it is derived.

2. What is the origin of the University Library? Is any provision for its management contained in the University Statutes? What is the present constitution of the Library Syndicate, and by what authority established? How often is it summoned, and what number of its members usually attend? Is it usual to appoint Subsyndicates to superintend particular departments of the Library?

3. What is the number of the Under-Librarians and Assistants? How are they appointed? What salaries do they receive? Are their salaries fixed, or dependent upon length of service? During what hours do they attend, and in what manner are their duties apportioned? Are they removeable for inefficiency or neglect of duty, and if so, by whose authority? Are they considered as acting under your orders, or those of the Vice-Chancellor, or Library Syndicate?

4. What are the privileges of members of the Senate, and Bachelors of Divinity, Law, and Medicine, in using the Library? What are those of Bachelors of Arts? At what periods are books, when taken out of the Library, returned, and under what penalties? What is the average number of books which are out of the Library at one time? Are many books lost or damaged? Are the books examined when returned, to ascertain whether they have been injured? Can you estimate the annual loss, if any, which the library sustains from the exercise of this privilege? Does the removal of books from the Library occasion much inconvenience to Students who resort to it for purposes of reference? What classes of books are not allowed to be taken out of the Library, whether on account of their rarity or value, or their usefulness as books of very frequent reference, or on account of special conditions imposed by the donors of the books, or of the funds by which they are purchased? Upon what conditions are MSS. allowed to be taken out, when required for special examination or collation?

5. Are Undergraduates allowed to consult books in the Library, and if so, under what regulations? To what extent is the Library accessible to strangers? Is there a reading-room provided for the use of those who have not free access to the Library?

6. What are the funds derived from private bequests for the purchase of books, and by whom administered, and upon what conditions? What is the amount, and what is its annual produce, of the tax levied upon the several members of the University, for the purchase of books and the support of the Library establishment; with what payments is its produce charged for salaries, for fittings, for building the new library, or for the interest or repayment of moneys borrowed for such purposes? What is the average charge for binding and repairing books, and in what manner regulated? Is there any revenue derived from fees on matriculation, or degrees, or from fines?

7. What is the average number of books annually added to the library, and what is the sum of money expended for that purpose? What number of books is procured from the privilege conferred by the Copyright Acts (8th of Queen Anne, 54 Geo. III., and 6 and 7 Wm. IV.), and what is their money value, as estimated by their selling price? What is the cost of agency employed for this purpose? What proportion of them comes immediately from Stationers' Hall? Does the University ever contribute some portion of the price of very costly or very expensively illustrated books, when the enforcement of the privilege might be considered as oppressive? Are you of opinion that this privilege might be commuted with advantage to the University and to the interests of literature, for a money payment when applied generally to the purchase of new publications? Is this privilege exercised in all cases, or is a selection made of the publications to which it applies?

8. What is the total number of printed books in the library? What is the number of manuscripts? What is the number of books in the library purchased by George II. from the executors of Bishop Moore, and presented to the University? Are there any other considerable collections of books or manuscripts in the library, which have been derived from special bequests or donations? Are there any departments in the library which you consider as particularly rich, or particularly defective? Are the manuscripts and books of great rarity and value deposited in fire-proof apartments?

9. Are the books arranged generally in classes? Are the manuscript catalogues sufficient for a prompt and easy reference to the books? Is there any classed catalogue? Is there any printed catalogue, either of portions of the library, or of the manuscripts? Is sufficient provision made for the prompt cataloguing of new books, or for making the requisite changes in the catalogues, when new arrangements are made of different departments of the library.

10. When no special provision is made by the donors of the funds, by whom are the new books ordered? Are facilities given for receiving the suggestions or recommendations of individual members of the senate? Are such recommendations, if made usually adopted? Is any systematic arrangement adopted for the purchase, from time to time, of such English or foreign books, as may keep the different departments of the library in a condition to meet the ordinary wants of students and authors in all cases except where very minute and elaborate research is required?

11. Are there any suggestions which you are disposed to make as likely to render the management of the library more efficient, or the library itself more generally useful to the University?

12. Can you state the character and extent of the Fitzwilliam Library? To whom and upon what conditions is it accessible? Can it be regarded as subsidiary to the University Library, more especially as a library of art or of richly illustrated works, which require to be used and consulted with great care and delicacy? Are you of opinion that any of the works of this class, which are preserved in the University Library, might be advantageously transferred to that of the Fitzwilliam Museum?

13. Are you able to state whether the College Libraries are generally accessible to the Undergraduate members of their respective Societies? Are they generally well provided with modern books on subjects connected with the ordinary course of academical study, so as to supersede, in some degree, the necessity of opening the Public Library to them? Are the libraries of the different Colleges easily accessible for the purpose of reference, to members of the University generally?

14. Would it not be useful, if practicable, to place in the Public Library a catalogue of books in the libraries of the several Colleges, which are not found in that collection, as a means of enlarging the resources of students and authors engaged in works of research?

Rev. J. Power. M.A.

From the Rev. J. Power, M.A., Librarian of the University.

Having been requested by Her Majesty's Commissioners to return answers to a printed list of queries regarding the University Library, I beg to report as follows:—

Statutable requirements.

I. The duties of my office, as defined by the statutes of the University, are, as I conceive, to superintend the placing, binding, and cataloguing of the books; to carry into effect the orders of the Library Syndicate made from time to time for the better regulating and securing the Library; and to be present in the Library, either personally or by deputy, during the Library hours. But the increase of the different funds by which the Library is supplied with books imposes many arduous, and often distracting duties on the Librarian, beyond those contemplated in the statute,—duties connected with the selection, recommendation, and purchase of new books, principally foreign, the Copyright Acts supplying us in a great measure with those printed in the British dominions.

Appointment. Salary.

I was elected by the Senate out of two candidates nominated by the heads.

My salary is 210*l.* a-year, being the united salaries of the Bibliothecarius and Proto-bibliothecarius, which two offices were incorporated by grace of the Senate, 7th April, 1845. This sum arises partly from fees, the remainder, and considerably the greater portion, being defrayed out of the University Chest by graces of the Senate.

Fees.

The fees are as follows:—

For the office of Librarian, enacted 30 June, 1581:—

	£.	*s.*	*d.*
On commencing B.A.	0	0	4
„ M.A.	0	0	8
„ B.D.	0	1	0
„ Doctor in any Faculty	0	1	4

For the office of Principal Librarian, enacted 22nd and 23rd of December, 1721:—

On incorporation from Oxford or elsewhere	2	0	0
Additional on Baccalaurei ad Baptistam, Fellows of King's excepted	1	0	0
For Non-Declaration by B.C.L. or M.B.	3	0	0
On persons migrating from Oxford or Dublin, who shall not have kept the majority of their Terms in Cambridge	3	0	0
On "D.D. qui non prius fuerit B.D."	2	0	0
On any Degree at an Extraordinary Commencement	1	0	0

Origin of the University Library.

II. The University Library owes its origin, in common with the public schools, to the munificence of private benefactors, and, pre-eminently above the rest, to that of Thomas Scott Rotheram, Bishop of Lincoln, afterwards Archbishop of York, and Lord Privy Seal to Edward IV. The date of his benefaction is A. D. 1475.* His munificence extended not only to building the library and schools, but he enriched the former with a great number of valuable books. Donations of books have been made at different times by other benefactors, amongst whom the names of Hacket, Bishop of Lichfield, and His Majesty George I., deserve particular mention. From A. D. 1745 to A. D. 1751, a subscription, amounting to 9818*l.*, "for building a new library," probably the large handsome room opposite St. Mary's Church, was collected, including the munificent contributions of 3000*l.* from Geo. II., and 1000*l.* from Holles, Duke of Newcastle, then Chancellor of the University. These have very properly been recorded, with the other contributions, in a tablet which is suspended in the library, opposite to a similar tablet on which are inscribed donations of 2000*l.* from George I. and 3000*l.* from George II., amounting, with other contributions, to 10,989*l.*, towards building the Senate-house.

Benefactors.

In Oriental literature the Library has received valuable contributions from Lewis ("Archidiaconus Midensis, 1727"); from Hobart, formerly Fellow of King's College; from Dr. Buchanan, and the traveller Burckhardt; and has been enriched from time to time by donations from the East India Company.

Permanent funds for the supply of books.

The permanent funds for the supply of books have been founded by Tobias Rustat, Yeoman of the Robes of His Majesty Charles II.; by William Worts, M.A., Fellow of Caius College, formerly one of the Esquire Bedells of the University; and by the investment of about 5000*l.* bequeathed by the Rev. John Manistre, formerly Fellow of King's College, for the purchase of books. But the most important sources of increase are the Library Fund and the Copyright Acts, of which more hereafter.

The large handsome room on the north side of the Library with the Mineralogical and Geological Museums, and Lecture-room beneath, was built by private subscription in 1835-6. The subscription amounted to 21,256*l.* 16*s.*; but the fittings of the Geological Museum were supplied from the Woodwardian Funds, and those of the New Library from the Library Fund.† This fund arises from a self-imposed tax of six shillings a-head on

---

* *Vide* Statuta Academiæ, page 93. The library, however, existed before the time of Rotheram, as may be inferred from the expression "novam librariam," page 93, and still more precisely from the date, 1463, of the grace allowing the Librarian 40*s.* a year "à denariis Scholæ Canonici Juris." *See* page 98.

† It appears that the remaining expenses of building the new library and museums, including the fittings of the former, and the remuneration of the architect, have amounted to 11,714*l.* 12*s.* 3½*d.*, making the whole expense contributed by members of the University 32,971*l.* 8*s.* 3½*d.* This is exclusive of the fittings of the Geological Museum, which, as before stated, have been paid from the Woodwardian Funds; but probably it includes the fittings of the Mineralogical Museum, which, so far as I am aware, possesses no similar resources of its own; but here I am wandering beyond my latitude, and beg to refer to the parties who are able to give more exact information.

every member of the University, sizars excepted, enacted by grace of the Senate, 7 December, 1825, "in usum Bibliothecæ Publicæ," and was originally intended to be expended solely in the purchase of books.

University Statutes for the Management of the Library.

Provision is made in the University statutes for the management of the Library. By grace of the Senate, 11 June, 1748, nine rules were enacted, eight of which have been variously modified by subsequent legislation; but the ninth rule, constituting the Library Syndicate, enacted at first for three years, but rendered permanent by grace of the Senate 11 June 1751, still remains in full force, and constitutes the main foundation of Library Law. On account of its great importance, I transcribe it word for word.

The Syndics.

"That the Vice-Chancellor, Heads of Colleges, all Doctors in every faculty, the Orator and all public Professors, with Proctors, Taxors, and Scrutators, be Syndics for the Public Library; and that the major part of these, or so many of them as shall be met, on due notice to them all, provided such major part shall not be less than five, of whom the Vice-Chancellor to be always one, shall have power to order such things as shall be necessary for the better regulating and securing the same."

Meetings of the Syndicate.

Independently of the special meetings of the Syndicate, which can be summoned as often as it pleases the Vice-Chancellor, the rule universally adopted for the usual despatch of business is, to meet on the Monday after the division of each term; the number of members attending is extremely variable, according to the interest or importance of the business expected. I have sometimes observed as many as twenty present, but more frequently seven or eight. I have, however, never known fewer to attend than five, the number necessary to constitute a quorum.

Subsyndicates are frequently appointed to deliberate on particular questions, and are usually requested to make their report at the next meeting of the General Syndicate.

Assistant Librarians.

III. There are four library assistants—Messrs. Bowtell, Page, Wootton, and Smith. I have had considerable difficulty in investigating the salary of the senior library assistant; the only source of information to which I have access being the minute-book of the Library Syndicate, which does not accord with the salary he is now receiving.

I find there an entry (19 November, 1827), from which it appears that he was then in the receipt of 120*l.* a-year, which was made up as follows:—

	£.
Salary	70
Extra charges, including cleaning the library and providing pens and ink	35
In lieu of perquisites for showing the library	15
	£120

The Library Syndicate agreed at the same time that a grace should be proposed to the Senate to allow him 150*l.* a-year, instead of the sum of 120*l.*

I am informed that no grace to this effect ever passed the Senate.

Again, 4th March, 1833, the Library Syndicate agreed that a grace should be offered to the Senate to allow him an additional 20*l.* per annum.*

Thus I account for the sum of 140*l.*

When Dr. Philpott was Vice-Chancellor in 1847, he pointed out to me, in the University Account-book, that, for some years previous to the Academical year 1845-6, Bowtell's salary had been 140*l.* a-year; but in that year it leaped up suddenly to 160*l.*, and had continued at that sum in subsequent years. The explanation which Mr. Bowtell gives of this circumstance is, that, when Dr. Whewell was Vice-Chancellor (1842-3), the latter told him, at a meeting of the Library Syndicate, that, in consequence of the increased trouble thrown upon him by the occupation and cleaning of the new library, he was at liberty to make a charge of 20*l.*, which he brought in accordingly as a separate charge in form of a bill; but when Dr. Hodson was Vice-Chancellor, in the following year, he (Mr. Bowtell) was told by the librarian (my predecessor, Mr. Lodge) that he had better include this fixed charge in his demand for salary, making the latter 160*l.*, instead of 140*l.*, as it appears in the University Account-book of the following year, when Dr. Phelps was Vice-Chancellor. I find no minute of any kind in the book of the Library Syndicate connected with the above increase; and the above account, given by Mr. Bowtell himself, is all that I have to offer.†

There is no difficulty about the salaries of the other library assistants.

Mr. Page receives 78*l.* a-year, which is made up as follows:—

	£.
Salary	63
In lieu of perquisites for showing the library	15
	£78

The above salaries are paid from the University Chest.

* This grace was proposed and carried.

† Since the above was written I find Mr. Bowtell's statement fully borne out by the recollection of a member of the University, who frequently acted as the deputy of my late predecessor.

Rev. J. Power. M.A.

The following, by graces of the Senate, are paid from the Library Subscription Fund:—

	£.	s.
Mr. Wootton . . .	73	10
Mr. Smith	63	0 *

Mr. Bowtell's salary has been increased from time to time during his long period of service.

Mr. Wootton's was increased by a grace of the Senate from 60 to 70 guineas a-year, at the expiration of his first five years of service, on his re-appointment for a second period of five years.

Appointment of Assistants.

I ought, perhaps, to explain that Mr. Bowtell and Mr. Page were elected by the Senate without any limitation as to the length of service. Mr. Wootton was elected for five years, and at the expiration of that period was re-appointed, by grace of the Senate, for a second period of five years. Mr. Smith was in like manner elected by the Senate for five years, which period is at present unexpired.† With regard to the hours of their attendance, I beg to refer to Rules 18 and 19 of the accompanying schedule, entitled "Rules and Orders for the University Library, May 1st, 1849."

Hours of attendance.

Duties.

Mr. Bowtell is principally engaged in placing and cataloguing the new books, and in altering the places of the old books, where it is necessary. Mr. Page keeps guard at the door, and receives and files the notes left by members of the University when they take out books from the Library. (See Schedule, Rules 2 and 3.) Mr. Wootton and Mr. Smith are chiefly engaged in keeping guard within the library, in replacing the returned books, and in assisting members of the University to find the books they are in search of. In consideration of Mr. Bowtell's advanced age and long service, the Syndicate have allowed him the assistance of one of his grandsons, for which he is allowed to charge 10*l.* a-year in addition to what I have before stated.

Removable for inefficiency or neglect of duty.

The library-assistants are, I conceive, equally with the librarian, removeable for inefficiency or neglect of duty; but I do not see any other way of effecting such removal than by an Act of the Senate, to which body, on the other hand, the party to be removed would appeal if he felt himself aggrieved. Such as have been elected only for a limited period might, of course, be dismissed, if necessary, at the end of such period, simply by omitting their re-appointment.

Under whose orders they act.

I find a difficulty in answering the question, whether the library-assistants are considered as acting under the orders of the librarian, or of the Vice-Chancellor, or Library Syndicate? I believe the University at large are inclined to consider them as acting under the orders of the librarian, all parties being of course subject to the general orders of the Library Syndicate; and, apart from all personal considerations, I am strongly of opinion that such subordination, if it could be effected, would conduce in a very great degree to the well-being of the library. But, beyond the mere authority of a name, I can find nothing in the constitution of the library which gives to the librarian the slightest power or authority over the library-assistants which they are not equally at liberty to exercise over him, namely, by complaint to the Syndicate, or immediately to the Vice-Chancellor, as head of the Senate. Both parties are equally elected by the Senate, and I have already stated my opinion that they can only be removed by an enactment of that body. I am the last person that would wish to abridge the privileges of members of the Senate in the appointment of their servants, but I think that few would object to allow to the Library Syndicate the power of dismissing them in case of misconduct. Another way of strengthening the authority of the librarian, would be to allow him so much per annum to provide himself with a clerk, for whose good conduct he would of course be personally responsible. In urging these observations, I am somewhat anticipating Question 11: I therefore proceed to reply to Question .

The privilege of using the Library.

IV. As I shall frequently have occasion, in answering these Queries, to refer to the schedule entitled "Rules and Orders for the University Library," I will premise that this schedule contains so much of the present library law as relates to the general use of the library. It was printed by order of the Vice-Chancellor in 1849, when the laws of the library were revised and amended by the Syndicate in such cases as fell within its jurisdiction, and by the Senate in such cases as required a fresh enactment. It presents also copies of the solemn obligations which parties enjoying the privileges of the library have taken upon themselves.

For answers to the first three questions of Query IV., the Commissioners are referred to Rules 1, 2, 3, 4, 5, 6, 7, 8, 9, 11, 12, 13, and 14.

Average number of books out of the Library at one time.

The total number of volumes which were out of the library March 4th, 1851, was 3,809. No record has been kept of the number which were out of the library in previous quarters, so that it is impossible to strike an average; but I think the above may be looked upon as a fair estimate for full term time. We happen to have a record of the total number of different books which were borrowed in one particular year, without reference to their being all out at the same time: that nuumber, in the year 1847, was 25,530, making an average of 6,382 per quarter.

Books lost or damaged.

I consider very few books are lost in consequence of the privileges of members of the University, but they not unfrequently sustain injury beyond the fair proportion of wear and tear, partly from careless packing, partly from exposure to rain, partly from the indolent habit of bending back the binding whilst reading the volume.

The volumes are usually returned so large a number together at the end of each quarter, that it is impossible to examine every volume; nor would it be of much use, on account of the

* Since the above was written Mr. Smith has been re-appointed by a grace of the Senate for a second period of five years, with a salary of 67*l.* 10*s.*

Rev. J. Power. M.A.

difficulty of proving that any observed injury was inflicted by the last borrower. It is impossible to estimate nearer than by a very rough guess the annual amount of damage which the library thus sustains, but I am not disposed to estimate it at more than 40*l.* or 50*l.*

Inconvenience of the removal of books for the purpose of reference.

The removal of books from the library without doubt occasions much inconvenience to students who resort to it for the purpose of reference, notwithstanding that certain books of general reference, for example, certain encyclopædias and dictionaries in various languages, by order of the Library Syndicate, are not allowed to be taken out of the library.* The other classes of books which are not allowed to be taken out are scarce printed books by Caxton, Wynkyn de Worde, &c., which are for the greater part locked up in a case by themselves, and manuscripts. By a recent order of the Library Syndicate, members of the University are not allowed to enter the compartments containing the MSS. and scarce printed books, but must ask the Librarian for the volume they require, who must bring it out to them, and replace it when done with. There is yet another class of books which are not allowed to be taken out, namely, those which have been presented by individuals who requested that they might not be removed from the library.

Class of books and MSS. not allowed to be removed.

We possess duplicate copies of many of these, for example, of Mr. Simeon's Works. But the most numerous and important class of books which are subject to this restriction are those purchased from the funds bequeathed by Tobias Rustat, who desired in his will that they might not, under any circumstances whatever, be removed from the library. This provision was formerly neglected, but is now carried into effect. Although Rustat desired in his will that his bequest should be appropriated to the purchase of *scarce* books, nevertheless, this having been for the greater part of two centuries the only available fund for increasing the books of the library, it has come to pass that books of all classes, the cheaper as well as the more expensive, have been purchased by this fund in former years. He further desired in his will, that these books should be kept together by themselves, but this provision, like the former, had not been attended to for many years. Being anxious as far as possible, in compliance with the wishes of the Rustat Trustees, to carry out the provisions of the will, I proposed a plan, which was approved by the Trustees, and finally adopted by the Library Syndicate. Its effect is to exchange the less valuable of the Rustat books for an equivalent in value of such scarce and costly books of the general library (donations of other benefactors, of course, excepted) as the University might wish to put under the same surveillance with the Rustat books, and under the same condition of remaining perpetually in the library. In this manner Mons. Botta's magnificent and expensive work on Nineveh, which had been purchased from the Library Subscription Fund, has obtained a secure resting-place amongst the Rustat books, and has set at liberty several hundred cheap octavo and duodecimo volumes, principally classical and mathematical, for the use and possession of the general library. The same plan is in progress with regard to other expensive works; but making out the lists and prices of the exchanged books, and carrying out the details of the plan, imposes great additional labour upon the Librarian and his assistants, and I fear it will be some years before the whole is completed.

Manuscripts are sometimes lent, in compliance with a grace of the Senate, under conditions which will be found at Rule 6.

Books lent to Undergraduates.

V. The proper answers to the first two questions of Query V. will be found at Rules 15 and 16. I will merely add that the undergraduates frequently obtain the use of the library books through Masters and Bachelors of Arts of their acquaintance; and being myself an "M.A.," I have never refused to exercise my privilege in behalf of any undergraduate who came to me properly recommended, and have been particularly anxious to assist him if he brought me a note from his College Tutor.

No Reading-room.

There is no reading-room at present provided for the use of those who have not free access to the library.

Private Bequests for the purchase of Books.

VI. The funds derived from private bequests for the purchase of books are those bequeathed by Rustat, Worts, and Manistre, which have been before alluded to. I beg to refer to the respective trustees for the precise amounts, but I am disposed to estimate them as follows: Rustat 250*l.*, Worts 700*l.*, Manistre 150*l.*, in all 1000*l.*

The administration of the Rustat fund is committed by the testator to the Vice-Chancellor, the Provost of King's College, the Masters of Trinity and St. John's, the Professors of Divinity, Law, and Physic, the Professors of Mathematics, and the Professors of the Greek and Oriental Languages, or any five or more of them, to be summoned by the Vice-Chancellor.

The administration of the Worts fund is vested in the Worts Trustees, who are, at present, Dr. Ainslie, Master of Pembroke; Dr. Philpott, Master of Catharine; Dr. Cookson, Master of St. Peter's; Dr. Cartmell, Master of Christ's; and Mr. Pulling, Master of Corpus.

Manistre left 5000*l.* for the purchase of books, a part of which was expended in that manner, and the remainder, invested in Government securities, produced 150*l.* a-year, which, with the assumed consent of the Vice-Chancellor, is employed by the Librarian in the purchase of books.

Tax levied upon Members towards the purchase of books and the support of the Library.

The tax of 6*s.* a-head on members of the University produces at present an annual sum of about 2050*l.*, from which, however, Income Tax has to be deducted. I may take this opportunity of mentioning that a strong feeling exists amongst members of the University that Income Tax ought not to have been levied on this annual contribution; and when I consider that it is a sum voluntarily raised by the members of the University for the purpose of keeping up their library, I confess it appears to me rather a tax upon expenditure than a tax on income.

This fund is at present charged with repayment, by interest and instalments, of the moneys

* See Rule 8, also Rule 7.

Rev. J. Power. M.A.

borrowed for the fittings of the new library. I have not access to any precise information respecting the sums borrowed, but I find certain entries in the Minute Book of the Library Syndicate, from which it appears that this fund, usually called the Library Fund, has been charged as follows:—

		£.	s.	d.
1840,	Messrs. Rigby, on account of new fittings	600	0	0
,,	Half-year's interest on five library bonds, due Nov. 2	30	0	0
1841,	Messrs. Rigby's bill for fittings	3,214	12	3½
,,	Charge on subscription fund, by grace, for interest and liquidation of bond	480	0	0
1842,	Interest and liquidation of bond	467	2	6

In the course of this year (November 26, 1842) a new bond for 400*l.* was allowed out of the Library Fund towards the disbursement of Messrs. Rigby's bill. "By this means"—I quote from the Syndicate's Minute Book—"the Library Fund will be charged with an additional payment of 16*l.* per annum till the end of 20 years from the date of the first bond, and of 416*l.* in the 21st year, at which time the existing bonds created by the former grace will have been paid." I do not know the date of the first bond, but from the first payment of 480*l.* in 1841, I conclude it must have been 1840. The two graces referred to are dated December 11, 1839, and June 1841.

After this date I find charged as follows:—

		£.	s.	d.
1843,	Liquidation of bond, No. 3	300	0	0
,,	Interest on bonds	312	6	4
1844,	Liquidation of bond, No. 4	300	0	0
,,	Interest on bonds	266	0	2
1845,	Repayment of bond, No. 5	300	0	0
,,	Interest on bonds	266	0	2
1846,	Repayment of bonds, Nos. 6 and 7	600	0	0
,,	Interest on bonds	237	6	10
1847,	Repayment of bond, No. 8	300	0	0
,,	Interest on bonds	225	4	8
1848,	Repayment of bond, No. 9	300	0	0
,,	Interest on bonds	213	11	8
1849,	Repayment of bonds, Nos. 10 and 11	600	0	0
,,	Interest on bonds	171	18	8
1850,	(Not yet entered in the book to which I have access.)*			

Expense of Bookbinding.

In the year ending Michaelmas, 1850, the charges for bookbinding were as follows:—

	£.
General Fund, comprising books from Stationers' Hall, those purchased from the Subscription Fund, and general repairs	400
Worts' Fund	74
Manistre	8
Rustat	40
	£522

I regret that I do not possess similar data for previous years, excepting 1849, when the binding for the general account was 552*l.* 11*s.* 8*d.*; but the information might be obtained, if necessary, from the trustees of the different funds, and the registrary of the University, with whom the bills are deposited. I will remark only that these charges for the year 1850 are below the average, as it was necessary to practise economy in this year on account of a balance of about 900*l.*, which the deduction of several years of income-tax and of Wootton's salaries for several years, which had been erroneously charged to the University chest, made all at once to appear against the Library Fund Account. I have not yet seen the statement of the Library Fund Account for 1850; but I am glad to hear from the Vice-Chancellor, that the balance against the fund is now nearly, if not entirely, reduced.

Instead of giving separately, as requested, the charges for binding in previous years, I beg to offer the following entries of charges for books *and binding*, as they are entered conjointly in the Minute Book of the Library Syndicate, for the seven years ending Michaelmas, 1849, with the exception of the last, for which they are entered separately.

---

* The above, which, with the remainder of this Report, was written in Warwickshire during the Easter Vacation, was put together from such private memoranda as I had collected for the purpose; on my return to Cambridge I have obtained more definite information respecting these bonds.

April 3, 1840. Fifteen bonds were created of 300*l.* each, amounting to 4500*l.*, bearing interest at 4 per cent.

July 3, 1841. Ten more bonds of the same description were created, amounting to 3000*l.*

Nov. 28, 1842. A further bond for 400*l.*, likewise at 4 per cent., was created, making the total principal borrowed 7900*l.*

Assuming (as I have no doubt is the case, though the data are not before me) that 300*l.* has been paid off in the course of 1850, there will now have been paid off altogether 3600*l.*, leaving a residue debt of 4600*l.*, which, according to the proposed system of repayment, will be liquidated by the end of 1861.

Library Subscription Account.

Books and binding (the latter including also the binding of books received from Stationers' Hall):—

Library Subscription Account.

1846		1355	4	1	1872	13	6
1847		1277	10	9	1919	5	0
1848		1824	5	9	1961	8	0
1849	Books . . 773 16 8	1286	8	0	2008	14	6
	Binding . . 552 11 4						

Manistre Account—Income 150*l. a-year.*

	£.	s.	d.			£.	s.	d.
1843	199	11	3	1847		56	14	10
1844	141	11	0	1848		151	15	3
1845	157	2	2	1849	Books 25 3 0	62	0	6
1846	93	18	0		Binding 16 17 6			

Until very recently, the binding has been under the control of the Senior Library Assistant, who is also employed as bookbinder. But in 1850, the Library Syndicate required that the volumes to be bound should be entered in a book under the superintendance of the Librarian, and that the list should be signed by him before they were sent to be bound. I find it the readiest and most satisfactory plan to make out the list with my own hand, and to mark off the books as they are returned to the Library, at the same time examining the binding and lettering with the charges for the same. I feel that this is a labour which the Principal Librarian ought not to be compelled to undergo; but I see the necessity of it, so long as the bookbinder and Principal Library Assistant are one and the same person as at present. Considering the advanced age and the long service of the person alluded to, I am very unwilling to make any change during his lifetime; but I conceive it is a state of things which ought never to have been allowed, and certainly ought not to be repeated.

Bookbinding.

Whilst upon this part of the subject, I may observe that the Library Fund now bears the whole charge of binding and repairing the books, whereas, before the creation of this fund, the University chest must have borne annually some considerable charges of this description.

There is no revenue beyond the fees to the Librarian before mentioned, arising from fees on matriculation, or degrees, or fines, not excepting what are called the Library Fines arising from the detention of books. The latter go one-third to the Esquire Bedells, and two-thirds to the University chest.

Fees to the Librarian.

VII. The number of volumes annually added to the library is about 5,000. This number is readily determined by the number of book-stamps which have been required, and includes those received under the Copyright Act, as well as those purchased by the different funds.

Number of volumes annually added to the Library.

The number of works procured under the Copyright Acts (8th of Queen Anne, 54 Geo. III., and 5 and 6 Will. IV., during the last seven years, has been as follows:—

A.D.	Complete Works.	Periodicals, &c.	Music.
	No. of Volumes.	No. of Parts.	No. of Pieces.
1844	2,508	3,400	512
1845	2,751	4,643	553
1846	2,682	3,874	449
1847	2,904	4,156	581
1848	3,431	4,324	532
1849	3,160	3,646	412
1850	3,449	3,732	649
	7)20,885	27,775	3,688
Giving for the average of seven years,	2,983	3,967	526

It is impossible to form more than a very rough estimate of the money value of the books thus received, as the lists forwarded to us from Stationers' Hall have no prices attached. It occurred to me that an estimate of the present value of this privilege might be made by summing up the prices of the works advertised, in the London booksellers' catalogue circulars for one year, deducting one-third for new editions, which cannot be claimed, and adding for the value of the music at so much per piece. The pieces of music we receive range in value from 1*s.* or 1*s.* 6*d.* to 1*l.* or 1*l.* 10*s.*; but as the highest-priced pieces are fewer in number, I think 5*s.* would be a fair average price. Taking the year 1850, I find the sum of the prices of the advertised books amounts to . . . . £ 1,846 6 2

Money value of the books procured under the Copyright Acts.

Deduct one-third for new editions	615	8	8
	1,230	17	6
Add for 526 pieces of music, at 5*s.* per piece . .	131	10	0
Estimated annual value of the books received . . £	1,362	7	6

Rev. J. Power. M.A.

Books procured under the Act 6 & 7 Will. IV., and cost of Agency.

It may be urged against this estimate that no abatement is made for the works which are not claimed; but on the other hand, the London Circulars do not contain all that we receive, particularly among such books as are published in Scotland and Ireland.

Our agent, Mr. Greenhill, of Stationers' Hall, is paid sixty guineas a-year for his services. All the books claimed are sent by him from Stationers' Hall, where the Act (6 and 7 Will. IV.) directs that they should be delivered by the publishers within one month after demand made The works printed in Cambridge, and even those printed at the University press, form no exception to the rule, but all of them come to us through the same channel.

Only one instance has occurred during my experience in which the University has expressly remitted its claim, and, on the contrary, has purchased the work at the full price—I allude to Mr. Gould's very splendid and costly work on Australian Birds, to which the University Library was a subscriber. It ought to be stated, however, that in every instance the colouring of the plates, which frequently amounts to half the value of the works, is defrayed entirely from the Library Fund.

I am strongly of opinion that this privilege could not be commuted with advantage to the University and to the interests of literature for a money payment when applied generally to the purchase of new publications. There is no calculating how much we might lose in future years by such commutation, in an age when the human intellect is making such rapid strides in every department, and when the progress of education, by increasing the demand for valuable works, at the same time encourages their production. Our agent is instructed to exercise the privilege in all cases, except that I have taken upon myself to deprecate the sending of infantine publications, of which we used to receive a great number, and which served only to swell out the lists inconveniently, and to embarrass us at the Library. The Commissioners may be aware that we are placed at a disadvantage compared with the British Museum, in being obliged to make a written demand upon the publishers within one year of the date of the publications, whereas the publishers are obliged to deliver at Stationers' Hall the copies destined for the British Museum, without any demand on the part of the latter. In consequence of this disadvantage, it cannot be but valuable publications will escape the vigilance of the most active agent; and such, without doubt, is frequently the case. It would be no injury to the authors if we were put on the same footing as the British Museum in this matter, as it is well known that the booksellers, in making their agreements with the authors, invariably take into account the full number of copies which may be claimed under the Copyright Act, just in the same manner as they would do if such copies were invariably delivered at Stationers' Hall without any demand made.

Total number of books and MSS. in the Library.

VIII. The total number of printed books in the Library is about 170,000, and the number of manuscripts is 3,163.

Number of books presented by Geo. I.

Books and MSS. derived from special bequests or donations.

The number of books purchased by George I. (not II.) from the executors of Bishop Moore, and presented by that monarch to the University, was 30,000, including many of the above manuscripts. With regard to other collections of books or manuscripts, I have already mentioned those presented by Bishop Rotheram, by Bishop Hacket, and the Oriental manuscripts presented by Lewis, Hobart, Buchanan, Burckhardt, and the East India Company.* I may add, that Sir Samuel Morland states, in his History of the Waldenses, that he has presented a great number of manuscripts, of which he there gives a list, connected with the history of that people, and more particularly relating to the history of their persecutions, to the Cambridge Library; of these, the greater part are in the library, but the others appear to be lost. It is uncertain whether they ever came into the Library, as they certainly were not there when Nasmyth formed the catalogue of our manuscripts in 1794—that catalogue enumerating all that we at present have in the library, and no others. There may be other considerable collections which deserve mention as having been derived from special bequests and donations, but if so, I hope the few years during which I have been Librarian will be accepted as an excuse for my ignorance.* I ought not, however, to pass over in silence a collection of classical books and manuscripts bequeathed by the late Greek Professor Dobree, and a valuable collection of Antiquarian Researches in manuscript by Baker, fomerly Fellow of St. John's College, who gave a part of his MSS. to this library, and the remainder to the British Museum. I consider there are very few departments in which our library does not abound in valuable books; I have heard different opinions expressed with regard to our collections in Divinity, but certainly our library is very extensive in that department: it is particularly rich in Architecture, Antiquities, Numismatics and Natural History; in General History also, and in Classical and Mathematical publications, and in those of General Science, including Medicine, I do not think there is much deficiency: the Topographical department is perhaps the least perfect, but since our resources have been efficient, I do not think that any department has been neglected in the modern literature of our own country, or in that of France or Germany. The accessions to the Italian, Dutch, Spanish, and Portuguese books have been much fewer, partly from the circumstance that books in those languages are less in demand, partly because they are not so readily met with, nor so frequently presented to our notice. Still fewer are the accessions in Scandinavian and Slavonian literature.

MSS. and books kept in fire-proof apartments.

The manuscripts and books of great variety and value have very recently been removed to compartments in the new library, which is fire-proof throughout; and by order of the Syndicate, are now placed under strict surveillance, as I have before stated.

---

* I have very recently discovered in the library an old catalogue (Eb. 9. 12), from which it appears that Bishop Rotheram gave 79 books, Bishop Hacket gave 1092, Hobart gave 23; further, Archbishop Parker gave 87, Bishop Tunstal 18, Bishop Horne 50, Bishop Pilkington 18, Sir Nich. Bacon 100, Villiers Duke of Buckingham 106, Dr. Lumley 83, Thos. Lorkin 104, Professor Whelock 16, Thos. Buck 24, Fran. Ash 32, Jo Howarth 38, Jo. Rant 33, Rich. Foxton 36, Alex. Roscius 69.

Rev. J. Power. M.A.

IX. The books are not arranged *generally* in classes, but only so far as is practicable in a large growing library like ours. My predecessor commenced a system of classification, and brought a great many books in Divinity from the old library into the new, intending to pursue the same plan in other departments; but so much confusion was in this manner introduced into the library, that it was necessary to put a stop to the system. My first step, on being elected Librarian in 1845, was to visit the library of the British Museum and the Bodleian. In neither of these libraries did I find that any system of classification was attempted. The learned and distinguished Librarians all assured me it was impossible to carry out a classification in a large growing library, and particularly dissuaded me from disturbing any previous arrangement.

Classification of books.

I have followed their advice so far as it lay in my power, and subsequent experience has amply convinced me of its prudence. I am aware that several esteemed members of the University regret that the system commenced by my predecessor was not proceeded with. I allow that there is a great luxury in a well-classed library, but I believe the utility of the classification is often over-estimated. While such admirable bibliographical books exist as Brunet's Manuel du Libraire, the necessity of classification is in a great measure superseded. Besides, in pursuing any minute research, it is not by the juxta-position of books in a library, but by the marginal references from one book to another that students are carried on in the prosecution of their inquiries, and, provided the books and the catalogues are so arranged that any required book is readily found, I do not think that any student, in a large library at least, has a right to complain.

Excepting in numerous instances where books have been removed from their former places without making the necessary changes in the catalogues, I consider that the manuscript catalogues afford a sufficiently prompt and easy reference to the books. The excepted cases were extremely numerous some few years ago, particularly in the department of Divinity; but the laborious inspections of the library which were made in 1846, in 1849, and 1850, in bringing to light the numerous omissions in marking the catalogues, so as to make them correspond with the new places of the books, have at the same time been beneficial in producing the proper corrections.

A considerable portion of the library still remains for subsequent inspection, and I have a great hope that in a year or two such order will be introduced into the library, that students will have no difficulty in finding any volume they may require. I have, however, several difficulties to contend with, which I could if necessary explain to the Commissioners, but I think I have already been sufficiently diffuse on this head.

No classed catalogue.

There is no classed catalogue of this library, understanding by that term what is called a catalogue *raisonné*. The formation of such a catalogue would be very laborious and expensive, and its use is very much superseded by such books as Brunet's Manuel du Libraire, Watt's Bibliotheca Britannica, &c.

General catalogue.

The General Catalogue is arranged according to the names of the authors, when those names are printed on the title page; if the authors are unknown, the books are entered by the first significant word of the title after rejecting the articles "A," "An," or "The." If the author's name be known, though not printed on the title-page, the books are most frequently doubly entered, namely, once according to each system. Several other classes are also doubly entered, such as Dictionaries, Grammars, &c. We have, besides, shelf-catalogues, which are kept in the assistant's-room, and which serve to inspect the library, but are not usually consulted by students.

No printed catalogue.

There is at present no printed catalogue either of the printed books of the library or of the manuscripts. I confess I have no expectation that the former can ever be accomplished; but with regard to the latter, I am happy to say, that the Syndicate of the Pitt Press have recently determined on printing a catalogue of the manuscripts, and have engaged the assistance of several members of the University in enlarging and improving Nasmyth's already admirable catalogue, and preparing it for publication. When I say there is at present no printed catalogue of our manuscripts, I ought to except the book entitled "Catalogi Librorum Manuscriptorum in Angliâ," printed at Oxford in 1697, which contains a list of the manuscripts at that time existing in our library, and another list of the manuscript library of Moore, then Bishop of Norwich, afterwards of Ely, which, for the most part, but not universally, formed a portion of the donation of George I. to the Cambridge library.

This book has long been familiar to the learned, and has served to make our manuscript library much more *publici juris* than is generally supposed.

Want of provision for the cataloguing of books.

I do not think that sufficient provision is made for the prompt cataloguing of new books: it might proceed more quickly if there were greater unanimity amongst the assistants, and if the Librarian were armed with greater authority. With this exception, considering the circumstances and the extent of our library, I think the labour of our small staff of five persons is economised to the utmost. With regard to the alterations of former arrangements, I have already hinted that they have frequently been made, and very recently without necessity. This has been contrary to my wish and express directions, and, I may add, contrary to the written directions of the Syndicate. The corresponding changes in the catalogues have been only partially made, the omissions occasioning fresh confusion in the library, and putting greater difficulties in the way of the students.

By whom the new books are ordered.

X. Where no special provision is made by the donors of the funds, the books are usually ordered by the Librarian, who conceives that in so doing he has the implied approval of the Vice-Chancellor and the Syndicate, and is, at the same time, carrying into effect the wishes of those who contribute to the Library Fund. In case any great or extensive purchase is contemplated, or that of a very valuable work, the Librarian always brings the affair before the Library Syndicate, who in that case make a written order if they approve. A book is kept in the library for receiving the suggestions and recommendations of individual members of the

Rev. J. Power. M.A.

Recommendation of books for purchase.

Senate, which recommendations when made are usually adopted with as little delay as possible. Similar books are kept for recommending books to be purchased from the different funds. I regret that members of the University do not make more frequent entries of recommendation in these books, but in practice, by far the greater part of the recommendations are made by the Librarian. It is usual to allow certain booksellers to send books on approbation. Amongst these (which are for the most part foreign books) the Librarian makes as good a selection as he is able. He generally directs the booksellers to charge the lower priced of the selected works, which are at the same time the most numerous class, to the Library Fund, entering the titles and the prices of the more costly of the selected works, and such new periodicals as will entail a considerable annual charge if continued, in the books above mentioned, which ensures the recommendations being brought, after a while, before the notice of the Trustees of the different funds. Such books, when purchased, are usually more handsomely bound at the expense of the purchasing funds, and are ornamented externally or internally, or both, with the arms or insignia of the donors of the funds. When the Trustees have made their orders, the purchases are made by the Librarian, who revises the bills of the booksellers and bookbinders, and signs his name to them before they receive payment from the Trustees of the different funds.

Difficulties of dealings with Booksellers and Bookbinders.

In the purchase and binding of so many books coming from different booksellers, and chargeable to several different funds, between which the booksellers themselves can with difficulty distinguish, I have had to encounter immense difficulties, in avoiding the purchase of duplicates, and in providing that the booksellers and bookbinders should make their charges to the proper accounts. When I first became Librarian, I was obliged to rely mainly for information on the senior library assistant, finding no books or established system to guide me in my duty. I soon found in this manner that the same works (I mean works in the progress of publication and periodicals) were sometimes charged to one fund, and sometimes to another; not unfrequently the bookseller charged one fund, and the bookbinder another. At the same time the Trustees were urgent upon me to be careful how I put my name to any charges for which their orders had not been issued. This position was so very harassing and unsatisfactory to me, that I believe I should have given up my situation had I not succeeded in establishing a system of book-keeping, which, though it entails very severe labour on me—for I conduct it entirely with my own hands—yet it enables me to perform this part of my duty with entire satisfaction to myself, and is at the same time attended with benefit to the interests of the library, as it enables me to look up the foreign periodicals and works in progress, many of which had ceased to come into the library for several years.

Beyond what I have described, and the general endeavour on the part of the Librarian to keep every department well supplied, so far as the funds will permit, with the best modern publications, I am not aware that "any systematic arrangement is adopted for the purchase from time to time of such English or foreign books as may keep the different departments of the library in a condition to meet the ordinary wants of students and authors in all cases, except where very minute and elaborate research is required."

The management of the library of Trinity College, Dublin.

XI. I recently paid a visit to the library of Trinity College, Dublin, and was much struck with the accurate and systematic manner in which the books for entering the incoming publications are kept. This is done by four clerks, who are constantly at work under the Principal Librarian. I was pleased to find that the system coincided, to a great extent, with the one I have adopted at the Cambridge Library; but, having to deal with a much larger influx of books, and having to keep distinct the accounts of so many different funds, much as I may envy, I cannot of course attempt to emulate with my own unassisted hands the systematic entries in the lists of the incoming publications, and the extremely beautiful and exact manner in which the Dublin registers are kept, harmonising as it does in the most complete and convenient manner with the binding, placing, and cataloguing the books, and marking the places of such incoming portions of books as are not yet in a mature state for binding, in such a way that the Librarian or any of his assistants can at once lay their hand upon any required portion which may be demanded by a student visiting the library. I regret that such admissions to the unbound portions or parts of books cannot at present be allowed to students visiting the Cambridge Library. Of course such unbound portions or parts ought not to be removed from the library, and ought to be, under the strictest regulations, returned when used, to the Librarian, or his representative, who should examine any such returned portion, and take care that it is restored to its proper place.

Want of a more numerous staff, and a reading-room.

I consider that an accurate system of book-keeping, a more numerous staff, a business-room, and a large and commodious reading-room, are quite indispensable, before such privileges can be generally allowed.

Great importance of providing a reading-room.

I further think that a reading-room is otherwise a consideration of the highest importance. If properly supplied with attendants, it would enable the University to admit the undergraduates to consult such books as their tutors or the University Professors may recommend to them. I am by no means of opinion that the undergraduates ought to be admitted to the privileges enjoyed by graduates, of consulting the catalogues, and taking down the books from the shelves; but I would go to the full extent of accommodating them in the reading-room with any volume they may name and require. I think, too, that with a commodious reading-room, the practice of taking books out of the library might be materially abridged, if not entirely superseded, so that the University library might become, not as at present, the *last*, but the *first* resort of a student, wishing to consult any particular work.

Increase of funds necessary.

I think that some measure ought to be adopted without delay for raising funds for extending the library building, and increasing the number of attendants. I believe that an extremely small proportion of those individuals who at present cheerfully contribute their 6*s.* a-year to the library would object to make that payment 1*l.* a-year, which would be amply

Rev. J. Power, M.A.

sufficient to constitute a building fund, and to provide sufficient remuneration to the Librarian and a more numerous staff of library assistants. I consider that to propose a private subscription for these purposes would be very hard upon those public-spirited individuals who are ever ready to come nobly forward when such appeals are made; whereas a moderate tax, pressing lightly, and almost insensibly on individuals, would be much more efficient in providing the requisite funds. I am aware that great difficulties stand in the way of establishing such general tax, principally arising from the present system of compounding for payments to the Colleges, which, beginning at Trinity College, has gradually extended over the whole University. I may mention that, a year or two ago, a numerous Syndicate was appointed for considering in what manner an adequate fund might be raised for general University purposes, the more immediate object at the time being the laying out the new botanic garden, and providing it with hot-houses, green-houses, &c., having at the same time regard to the extension of the library and other academical purposes. I was myself one of that Syndicate, and I very well recollect, that although every member of the Syndicate, with perhaps one or two exceptions, was anxious, if possible, to lay a fair proportion of the burthen upon themselves and other members of the Senate, yet the difficulties arising from the system of compositions, and the disputed legality of imposing a tax on members of the Senate were so formidable, that no other resource remained but to propose a tax on matriculations and degrees. I forget whether a tax was proposed on matriculations, but I remember that a tax was proposed of 1*l.* on every degree.

The Syndicate was very numerous, and every College and interest was fairly represented; their meetings were frequent, and very fully attended, and every possible means of raising the required funds was fairly discussed on every side; but a witty and clever pamphlet was written in opposition by a talented member of the University, which caused the measure to be thrown out by the Senate. I am the last person to complain of members of the Senate exercising their privileges on such occasions; but I cannot help thinking that the result was most unfortunate for the interests of the University, and of those who may be there educated in future years.

Munificent contributions of the Rev. T. Halford, &c.

While upon this subject, I am sure I ought not to omit mentioning the munificent contribution of 2,000*l.* by the Rev. Thomas Halford, M.A., of Jesus College, towards the establishment of a building fund for extending the library; the example was generously followed by the contribution of 100*l.* from the present Lord Bishop of Durham, and 50*l.* from the present Master of Caius College. These three sums have been invested in Government securities, and constitute at present the only fund for effecting the desired purpose.

Great want of store-rooms and a business-room for the Librarian and his assistants.

There is a great want in the library of store-rooms, and a business-room for the Librarian and his assistants. At Trinity College, Dublin, a spacious and lofty apartment is devoted to this use, well supplied with desks for the clerks, with tables for receiving and collecting the incoming works and parts of works, and with shelves for distributing the latter in their proper places as indicated by the entries in the books to which I before alluded. This is the more necessary, as very valuable works are sometimes many years in completion, and cannot be bound in parts for want of title pages, and directions to the binder: they further require light and air, to prevent the growth of mould and mildew. The present rooms of the Librarian and library assistants are far too small, and the shelves, being crowded with catalogues and bibliographical works, are not available for other purposes. The store-rooms are five small, dark, inconvenient closets; and recently it has been necessary to use for similar purposes a small ill-lighted and damp room, on the ground-floor of the old buildings, where it is impossible to prevent the growth of mould and mildew.

For the reception of works sent by booksellers on approbation and the detention of the same, until the Trustees of the different funds have decided on their purchase or rejection, for receiving, entering, and collecting the incoming parts of periodicals and works in progress, I am obliged at present to use a small empty compartment in the new library, which is destined to receive before long a portion of the Rustat Collection. How it will be possible afterwards to carry on the system I have commenced I really cannot imagine, unless some large and commodious room be provided. I use the same compartment also for receiving the books to be bound, and entering them on the binding list before they are taken from the library. The books are brought back to the same compartment when bound, in order that I may examine the binding and the charges, and mark them off as returned in the list just mentioned. I ought to mention that the system of registration, to which I have alluded in my reply to Question 10, and which I personally conduct with my own hands, extends only to the books purchased by the different trust funds and the library fund. I am obliged to leave to the senior library assistant the easier task of filing the lists from Stationers' Hall, and properly disposing of the incoming parts, contenting myself with marking those lists as the different works are produced from the packing cases. The room in which these books are received, and the lists audited, is also very small and inconvenient.

I am strongly of opinion that the Librarian ought to be provided with one or more clerks under his immediate control, to assist him in his important and arduous duties, and in establishing as far as possible the exact system of Trinity College, Dublin, which should extend to all the new works, from whatever sources received.

The Fitzwilliam Library.

XII. I am tolerably well acquainted with the Fitzwilliam Library, having at the request of a Syndicate, of which I was a member, assisted in its last removal and arrangement. Besides the magnificent collection of engravings extending over many large atlas folios, there is a well-selected library, containing books in divinity, general history, the histories of painters and engravers, topography, and the best works in polite literature both of the Greek and Roman classics, and in the modern languages of England, France, and Italy. The topographical department boasts a magnificent copy of Piranesi's great and costly work on Rome, a work which we do not possess in the University Library, and which, knowing that it is otherwise

Rev. J. Power. M.A.

accessible to members of the University, and further considering its great price, I have not thought right to recommend for purchase, though several opportunities have occurred since I have been Librarian. There is, besides, a valuable collection of manuscript music, principally of the great Italian composers of the 16th and 17th centuries, a part of which, by the permission of the University, was published 26 years ago by Mr. Vincent Novello, who, I have always understood, sets a very high value on the whole of the collection. I do not know the exact number of the volumes of the Fitzwilliam Library, but, at a rough estimate, I should imagine it may contain about 6,000 volumes.

Regulations as to admission.

I believe the Fitzwilliam Syndicate have recently enacted some very excellent and liberal regulations respecting admissions to the Fitzwilliam Library; but, having so little time or occasion to visit it myself, I am really very ignorant on the subject of those regulations, and would beg to refer the Commissioners to some member of the Fitzwilliam Syndicate, to which I have not the honour of belonging.

The Fitzwilliam Museum.

I think the Fitzwilliam Museum may be considered, in some degree, as supplementary (rather than "subsidiary") to the University Library, I have already mentioned one instance, Piranesi's Rome; but excepting the volumes containing collected prints, which are of course unique, I think that there are not a great many printed works which the University Library does not possess. I should be very sorry that any of the many richly-illustrated works in which the University Library abounds should be transferred to the Fitzwilliam Museum, and I should object to such transfer for the following reasons:—

1. The Fitzwilliam Library contains very little room for fresh accessions, no more than is necessary to accommodate the presents of books, which are from time to time made to that institution.

2. It seems hardly advisable to break up a more complete library to enrich one which is less complete.

3. Most of the works of this class in the University Library are purchased from funds bequeathed by individuals with the express intention of enriching the University Library, and to remove them elsewhere would be a violation of the conditions under which the University received them.

College Libraries.

XIII. With regard to College libraries, I can only speak, from personal knowledge, of the libraries of Clare Hall and Trinity Hall. The latter is open to the undergraduates of the College, who are at liberty to have in their rooms to the number of five volumes at a time. The former is not open to undergraduates of the College; but any tutor or Fellow of the College can lend the books to the undergraduates of the College, taking them out of the library in his own name, and rendering himself responsible to the College. The College tutor is ever ready to exercise this privilege in favour of any studious undergraduate of the College.

Trinity Hall Library.

The library of Trinity Hall is well stored with books in the civil law, which are of great use and easy access to the students of the College. It contains, besides, an excellent classical library presented by Sir William Wynne, formerly Master of the College, but not many of the more modern editions.

Clare Hall Library.

The library of Clare Hall contains a good selection of works in divinity, classics, and mathematics, but not many books of recent date, nor is there room for much accession. There is also a largish collection of Italian books presented by Ruggle, the author of the play entitled Ignoramus, which was acted before James I. when he visited the University. It does not contain many modern treatises on subjects connected with the usual course of academical study.

Admission to College Libraries.

I believe that the College libraries are sufficiently accessible for the purpose of reference to members of the University. So far as my own experience goes, I am quite sure that any member of the University, who was *bonâ fide* intent upon any subject of literary research, would not find any difficulty in consulting any book in the libraries of Clare Hall or Trinity Hall: where no previous acquaintance exists, a note of introduction to a member of the society would be all that is required. I have no doubt that the same facility prevails in other Colleges; but, excepting the Pepysian Library at Magdalene College, and the Parker Manuscripts in Corpus College, to both of which I have ever found courteous admission, and the loan of a book from St. John's Library, which a Fellow of the College was kind enough to obtain for me when the copy in the University Library was not to be met with, I have not had occasion personally to apply for assistance to the libraries of other Colleges; but I have no doubt that, in case of application, I, or any other member of the University under like circumstances, should everywhere have met with equal courtesy.

The Commissioners are aware that the two collections I have just mentioned, namely, the Pepysian Library at Magdalene College, and the Parker Manuscripts at Corpus Christi College, are placed under strict surveillance by the respective donors of those collections.

The University Library ought to have a Catalogue of the books in the College Libraries.

14. I think it would be useful, but not practicable, to place in the University Library a catalogue of books which, though not found in that collection, exist in the libraries of the different Colleges. Of such collections as possess printed catalogues, we have already copies of the latter; for example, the Catalogue Raisonné of Queens' College, and the Catalogues of the Manuscripts of Corpus Christi College and of Caius College, besides the lists of the manuscripts in the different Colleges in the Catalogi Libb. Manuscriptorum above mentioned.

In concluding this reply, I beg to assure the Commissioners that I have endeavoured to answer every question as fully as my experience would permit; and if the Commissioners wish to put any further questions to me, I shall be happy to meet their inquiries in the best manner I may be able.

(Signed) J. POWER, *Librarian.*

CAMBRIDGE UNIVERSITY COMMISSION.

EVIDENCE FROM THE REGISTRARY OF THE UNIVERSITY.

The following was addressed to the Registrary:—

Cambridge University Commission,
Downing-street,
December 1850.

Sir,

Her Majesty's Commissioners for inquiring into the State of the University of Cambridge and the Colleges thereof, respectfully invite your attention to the subjoined List of Queries; and request the favour of such information in reply as you may be kindly disposed to communicate.

I have the honour to be,
Sir,
Your obedient humble Servant,
(Signed) W. H. BATESON,
Secretary.

---

1. Will you describe generally the duties of your office? What are the emoluments of it, and from what sources do they arise?

2. What are the Government duties, received by you as Registrary, upon matriculations and degrees? What is their average annual produce? Can you state the corresponding stamp duties imposed upon matriculations and degrees, in other Universities of England, Scotland, and Ireland?

3. Can you state the fees and their average annual amount, which are paid upon matriculations and degrees, to the University Chest, the Proctors, Moderators, Bedells, and other officers?

4. Can you state the number of matriculations and degrees of different classes, distinguishing the different colleges, for every year during the last 10 years, as well as their number for the years 1830, 1820, 1810, and 1800?

5. Can you state the additions which have been made since the year 1820, to the fees payable for matriculations and degrees? For what objects have they been imposed? Have any recent attempts been made to increase them, without success? If the stamp duties were removed, or greatly reduced, would any similar difficulty, in your opinion, occur in increasing the fees payable to the Public Chest, to such an extent as would enable the University to make provision for many objects of great importance to its interests, such as the building of additional lecture-rooms, extending the Public Library, and supporting and enlarging the different scientific collections and museums?

6. Of what nature are the muniments entrusted to your care? To whom, and upon what conditions are they accessible? Is the room in which they are deposited fire proof, well ventilated, and sufficient for its purpose?

Answers from the Rev. Joseph Romilly, M.A., Registrary of the University

The Rev. J. Romilly, M.A.

Question 1.

Duties.

The duties of the Registrary are, to attend all Congregations in the Senate House; to translate all the Graces into Latin, and when the Graces have passed the Senate, to transcribe them into the Grace Books; to take the Subscription of all Undergraduates at their Matriculation, and also the Subscription of all Candidates for Degrees, and to transcribe such Subscriptions into books, on the appropriate stamps impressed at the Stamp Office; to attend the Licensing of Alehouses; to attend the University Court whenever it is held, to take down the evidence, and to transcribe it into the "Acta Curiæ;" to attend at the affixing the University Seal to any instrument; to distribute Professorial Tickets; to have the charge of the University Muniments; to take the Books of Degrees and Matriculations to the Stamp Office to be stamped, and to be present at the examination of them by the Inspectors of Stamps.

Emoluments.

Emoluments.

On the average of the last eight years, the annual Emoluments are, 397*l.* 8*s.*
They arise from—

	£.	s.	d.
1. Alehouse Licences, 2*s.* 6*d.* on each	26	0	0
2. Degrees,* 3*s.* out of 3 guineas 6*s.* „ 6 „ 27*s.* „ 11*l.* 7*s.* 0*d.*	218	0	0
3. Matriculations,† 1 2 6 for Nobleman pays 16 0 0 0 12 6 „ Fellow Commoner „ 11 0 0 0 5 0 „ Pensioners „ 5 10 0 0 1 3 „ Sizar „ 1 5 0	120	0	0
4. Copying Accounts and Graces	10	10	0
5. Sealings, 1 guinea for each	21	0	0
6. Professors Tickets, 1*s.* out of each guinea	3	10	0

The fees for attending the Vice-Chancellor's Court, for drawing up Certificates, &c., for the election of Chancellor, High Steward, or Representative of the University, &c., average nearly 30*l.*, the sum which the Registrary pays to his clerk.

Question 2.

Government duties received on Matriculations and Degrees.

I. The Government Duties paid to the Registrary are,—

1. 1*l.* on every Matriculation, whether of Nobleman, Fellow Commoner, Pensioner, or Sizar.
2. 3*l.* on each Degree of Bachelor of Arts.
3. 6*l.* on each Degree of M.B., LL.B., M.L., M.A., B.D., M.D., LL.D., D.D., Mus. B., and Mus. D.
4. 10*l.* on each Honorary Degree of M.A., LL.D., or D.D.; and also on Mandate Degrees of M.A., &c., &c.

N.B.—This amount of Stamp Duties was imposed by 55 Geo. III., c. 184.

Average Annual Produce of the last eight years.

II. The average Annual Produce of the last eight years,—

2,603*l.* on Degrees.
458*l.* on Matriculations.

	£.	s.	d.
Total on Degrees and Matriculations	3,061	0	0
Government Allowance, 1½ discount, or	45	0	0
Net Annual Payment	£3,016	0	0

Stamp Duties elsewhere.

III. Stamp Duties elsewhere.

By the Act of 5 and 6 Victoria, the Stamp Duties in Ireland were assimilated to those in England; and the duties on Matriculations and Degrees are now the same at Dublin as at Cambridge and Oxford.

There is also now a stamp of 10*l.* on the M.D. degree at the two Scotch Universities.

There are no Stamp Duties on Matriculations and Degrees elsewhere in the United Kingdom, as far as I know.

Question 3.—*Degrees.* Part 1.

Fees upon Matriculation and Degrees paid to the University Chest, the Proctors, Moderators, Bedells, and other officers.

The fees for Degrees are received by the Proctors and the Registrary. Those received by the Registrary are Government fees, paid by him to the Stamp Office.—*Vide* Ans. to Qu. 2.

The fees for Degrees received by the Proctors are for the University chest, for themselves, the Orator, Bedells, Moderators, Proproctors, Scrutators, and University servants.

* In this sum of 218*l.* is included the 1½ per cent. discount allowed at the Stamp Office.
† In this sum of 120*l.* is included the 1½ per cent. discount allowed at the Stamp Office.

The Rev. J. Romilly, M.A.

Fees paid on Degrees, &c.

They arise from Degrees of all kinds. The following is a list of the total number of Degrees in the last eight years:—

14 Mandates, viz., 7 D.D. pr. B.D.; 4 D.D. pr. A.M.; 1 LL.D. pr. A.M.; 2 A.M.
51 Honorary Degrees, viz., 2 D.D. pr. A.M.; 5 LL.D.; 44 A.M.
23 D.D., viz., 13 DD. pr. BD.; 10 D.D. pr. A.M.
14 LL.D., viz., 12 LL.D. pr. LL.B.; 2 LL.D. pr. A.M.
20 M.D., viz., 16 M.D. pr. M.B., 4 M.D. pr. A.M.
2 Mus. D.
9 M.L. (Licentiates.)
29 M.B.
46 LL.B.
55 B.D. pr. AM.
20 B.D. (Stat. Eliz.)
1,774 A.M., viz., 202 A.M. (Fellows), and 1,572 A.M. (not Fellows.)
5 Incorporate A.M.
2,736 A.B., viz., 2,156 Ordinarii, and 580 ad. Bapt.
5 Incorporate A.B.

N.B.—The average Annual Number of Degrees is 600; in the year 1850, the Number was 624.

The average Annual Payments from all these Degrees, are as follows:—

	£.	s.	d.	
Chest .	1,626	15	6	Fees to "Cista Communis."
	31	6	6	Fees formerly received by Vice-Chancellor.
	21	15	0	Fees formerly received by Librarian.
	144	0	0	Compounders Fees of 2*l.*
	about *130	0	0	Cautions for Exercises not kept.
	£1,953	17	0	

	£.	s.	d.
Total to Chest for Matriculations	1,912	5	9
Total to Chest for Degrees	1,953	17	0
	£3,866	2	9

Vice-Chancellor, 17*l.* 17*s.*, Fees on Honorary Degrees.

The Regius Professor of Divinity, Law, or Physic, receives a Fee of 27*s.* on each Mandate in his Faculty.

Two Proctors, 640*l.* between them.

They keep also certain other Fees, which average as follows:—

	£.	s.	d.	
Copia Juramenti .	4	7	0	
Præsentator . .	17	17	0	
St. Mary's . .	6	10	0	After their making the fixed payment of 1*l.* 6*s.* 8*d.*
	£28	14	4	

Total . . 668*l.* 14*s.* 4*d.*

They receive also 113*l.* for their four men.

Two Pro-Proctors, 236*l.* between them.

They receive also, 56*l.* 10*s.* for their four men.

Two Moderators, 243*l.* 10*s.* 9*d.* between them.

Two Scrutators, 98*l.* 2*s.* 6*d.* between them.

Orator 124*l.* 10*s.*

	£.	s.	d.	
3 Bedells . .	536	9	6	On A.B., &c., Degrees.
	27	16	6	Honorary Degrees.
	3	13	6	Mandate Degrees.
	226	16	0	72 Compounders, at 3 guineas.
	£794	15	6	Among them.

School-keeper, Marshal, and other servants, receive Fees on Degrees, which average 42*l.* among them.

Question 3.—*Matriculations.* Part 2.

The Matriculation Fees are paid to the University Chest, to the Stamp Office, and to the Registrary.

* This calculation is made on the supposition of one-fourth being repaid for Exercises afterwards kept. The Registrary not having been able to inspect the Audit Books kept by the Vice-Chancellor, does not know the exact sums repaid by the Vice-Chancellor, nor the exact sums paid to him for Cautions at *Mandate* Degrees.

The average Annual Number of Matriculations in the last eight years, is 458. In the year 1850, the number was 441. *The Rev. J. Romilly, M.A.*

The average Annual Payment for Matriculations to the University Chest, is 1,912*l.* 5*s.* 9*d.*

	£.	*s.*	*d.*	
The Payment to the University Chest, is	13	17	6	For a Nobleman.
	9	7	6	„ Fellow Commoner.
	4	5	0	„ Pensioner.
	0	3	9	„ Sizar.

The average Annual Payment for Matriculations to the Registrary, is 113*l.* 4*s.*

For average Annual Payment for Matriculations to Stamp Office, *see* Ans. to Qu. 2.

The Rev. J. Romilly, M.A.

TABLE showing the Number of Matriculations and Degrees of different Classes, distinguishing the different Colleges for every year during the last 10 years, as well as their number for the years 1830, 1820, 1810, and 1800.

MATRICULATIONS.

Total	..	..	..	..	..	..	..	..	..	..	..	..	..	624

The Total Amount of Degrees in the last eight years, at each of the Colleges, is—

King's	58	Queen's	261
Trinity	1,271	Catharine Hall	195
St. John's	994	Jesus	147
Peterhouse	201	Christ's	264
Clare Hall	155	Magdalene	138
Pembroke	126	Emmanuel	219
Caius	253	Sidney	102
Trinity Hall	94	Downing	31
Corpus	278		

The average Number of Degrees in each College is—King's 7¼; Trinity, 158; St. John's, 124; Peterhouse, 25; Clare Hall, 19⅜; Pembroke, 15¾; Caius, 31½; Trinity Hall, 11¾; Corpus, 34⅝; Queen's, 32¼; Catharine Hall, 24; Jesus, 18⅜; Christ's, 33; Magdalene, 17¼; Emmanuel, 27⅜; Sidney, 12¾; Downing, 4.

Question 5—*Matriculation Fees.*

The Rev. J. Romilly, M.A.

Matriculation Fees.

On 1st June, 1825, the Fees were raised,—

		£.	s.	d.		£.	s.	d.
Nobleman	from	5	0	0	to	10	0	0
Fellow Commoner	„	3	0	0	„	5	0	0
Pensioner	„	1	10	0	„	2	10	0
Sizar	„	0	15	0	„	1	5	0

On 2nd November, 1842, the Fees were raised again,—

		£.	s.	d.		£.	s.	d.
Nobleman	from	10	0	0	to	16	0	0
Fellow Commoner	„	5	0	0	„	11	0	0
Pensioner	„	2	10	0	„	5	10	0

Degree Fees.

Degree Fees.

In 1825, one guinea additional was laid on the Ad Baptistam B.A. Degree. This Fee is paid to the Moderator.

On 2nd November, 1842, an additional Fee of 1*l.* 10*s.* was laid upon all Degrees, except Honorary Degrees.

A fruitless attempt was made in 1848, to lay an additional tax of 1*l.* 10*s.* on all Degrees; and also a new tax of 1*l.* 10*s.* at the Previous Examination.

The object of the additional Fees in 1842, and those proposed in 1848, was to produce an income which might enable the University to repair the great diminution of its funds, which had been occasioned by very great outlays of capital at the Observatory, the Press, the Anatomical Schools, &c., and make the University capable of meeting the daily increasing demands on its funds, from the greater extension of the University system.

If the Stamp Duties were removed, or greatly reduced, I think it not improbable that a measure might be carried somewhat similar to that which failed in 1848. The reduction or removal of the Stamp Duties would be received with great delight; but there will always be a large party among the Members of the Senate, who will endeavour to throw out any general tax which would affect their own body, as well as the Undergraduates.

Question 6.

The Muniments in the Registry.

I. The Muniments in the Registry consist of,—

1. Charters, Statutes, &c., &c., from 1266, including the Statutes of the 12th of Elizabeth, with her signature.
2. Also two copies of the above Charter, and many others relating to the University; the originals of which are in the Tower, and elsewhere.—By Rob. Hare, 1589.
3. Wills proved in the University, from 1500 to 1765.
4. Grace Books, from 1454; also the original Graces, from 1571.
5. Degree Books, from 1454; also the Supplicats for Degrees, from 1569; also the Autograph Subscriptions, from 1613.
6. Matriculation Books, from 1544; the Autograph Matriculations are only since 1724.
7. Mandates, from 1558; also Royal Letters, and Letters from Chancellors of the University, &c., &c.
8. Acta Curiæ coram Pro-cancellario, from 1551; also the Acta Curiæ coram Commissario, from 1551.
9. Audit Books, from 1545; the Vouchers of the Vice-Chancellor's Accounts, from 1558.
10. The Returns of the Assize of Bread set in Cambridge, from 1596 to 1836.
11. The Returns to Parliament of Representatives of the University, from 1614.
12. Title Deeds and Leases of University Estates at Barton, Burwell, &c.
13. Foundations of Professorships, University Scholarships, &c.
14. The Endowments of Mr. Hulse.
15. Manuscripts and Printed Books relating to the University or its Colleges.
16. The University Seal.

II. The Muniments in the Registry are accessible to all Members of the Senate, *in the presence of the Registrary.* Practically they are very seldom consulted. Nothing is taken out of the Registry by any person, but the Vice-Chancellor or Registrary, except with the Vice-Chancellor's permission.

III. The Registry is a fine, capacious, well-ventilated room, admirably adapted for its purpose. It is not indeed fire-proof, but it is separated by thick partition walls from the adjoining premises in the Pitt Press, and may be considered very secure from danger of fire.

(Signed) JOSEPH ROMILLY.

CAMBRIDGE UNIVERSITY COMMISSION.

EVIDENCE FROM PROFESSORS.

The two following Papers were addressed to the several Professors of the University:—

Cambridge University Commission, Downing-street,
November 20, 1850.

SIR,

HER Majesty's Commissioners for inquiring into the state of the University of Cambridge and reporting thereon, respectfully request that you will have the kindness to furnish them with information on the several particulars specified below; and generally to communicate to them such remarks as may either explain the present condition of the University in respect to the branch of study connected with your Professorship, or indicate means for the further advancement of the same.

I have the honour to be,
Sir,
Your obedient humble Servant,
(Signed) W. H. BATESON,
Secretary.

A Statement describing—

By whom the Professorship was founded;

What the duties annexed to the Professorship by the original foundation or constitution;

Whether these have been modified or changed by any subsequent authority; and if so, in what particulars;

What the duties actually performed;

What the nature and amount of the original Endowment;

Whether, and in what way, subsequently augmented;

Whether any extraneous sources of emolument conjoined with it;

Whether any fees received from the persons attending the lectures of the Professor, and if so, the average annual amount thus received;

The present value of the Professorship annually, distinguishing the several sources of income;

The mode of appointment or election to the office; the conditions of eligibility; of tenability;

Whether there is any residence, museum, library, collection, or apparatus attached to your Professorship; and what available funds for the maintenance of them;

Whether opportunities are afforded to Students for instruction in the actual manipulation of instruments, and the conduct of processes of experimental research in the departments of science requiring them;

Whether, in your opinion, the duties enjoined upon you as Professor might be modified in any manner so as to contribute more effectually to the benefit of the University;

The general condition in the University of the branch of study to which your Professorship relates, and the means of promoting its advancement.

N.B.—With the above, the following additional queries were addressed to the three Faculty Professors.

A statement of the period of residence required, the course of study prescribed, the exercises to be performed, and the examination to be passed for the degrees of Bachelor and Doctor of Divinity (the Civil Law) (Medicine), according to the Statutes of the 12th of Elizabeth.

A comparison of the present actual practice of the University with the preceding statement, specifying whether any parts of the course of study or any of the exercises have fallen into disuse.

Whether cautions for the performance of any of the exercises are permitted.

Whether in your opinion any changes might be introduced with advantage to the University, as to the period of residence, the course of study or exercises, and the qualifications required for the degrees belonging to your Faculty.

Cambridge University Commission, Downing-street,

SIR, *February* 1851.

HER Majesty's Commissioners for inquiring into the state of the University of Cambridge and the Colleges thereof, respectfully invite your attention to the subjoined List of Queries; and request the favour of such information in reply as you may be kindly disposed to communicate.

I have the honour to be,

Sir,

Your obedient humble Servant,

(Signed) W. H. BATESON,

Secretary.

---

1. What lecture rooms, properly so called, belong to the University? What is the character of the accommodation which they offer as regards, 1st, the number of auditors; 2nd, museums or apparatus attached to them; 3rd, working-rooms or laboratories, whether for Professors or Students; 4th, proximity to the great masses of the academical population? To what Professors are they appropriated, if to any, or by whom are they used?

2. What other public rooms in the University, not properly lecture rooms, are sometimes used for this purpose, and by what Professors, and by whose authority? Are the public schools of divinity, law, and arts ever used for this purpose?

3. By what authority are lecture rooms assigned to the Professors? Is much difficulty experienced, under existing circumstances, in securing the requisite accommodation? Are some Professors obliged to use College halls or College lecture rooms, or even private chambers, for this purpose, by the permission of the Colleges of which they are members?

4. Has any plan been proposed or partially carried into effect for building suites of lecture rooms in connexion with each other, offering better accommodation, both for Professors and Students? Does the University possess any funds, or, if not, any practicable means of raising them, which would be sufficient for completing such plan? Would not a more ample provision of lecture rooms be required in case the professorial system of the University should receive any considerable extension?

5. What is the present system of fees for attending public lectures? Are many of those lectures gratuitous? Would it be desirable to charge a uniform fee which should be distributed amongst the different Professors, or to leave their remuneration to the general principle of competition? What is the system which has been recently adopted with respect to those Professors whose lectures bear upon the Moral and Natural Sciences Triposes?

6. If the subjects of public instruction were arranged under the following heads:—

1. Theology, including Moral Philosophy;
2. Classical Literature;
3. Mathematics, and their applications to Natural Philosophy;
4. The Natural Sciences, including Chemistry;
5. The Medical Sciences, including Comparative Anatomy;
6. History, Political Economy, Civil and English Law;
7. The Hebrew and Oriental Languages;

What provision is made in the existing foundations of the University for a complete and systematic course of lectures upon them? Would any new foundations be requisite to complete the cycle?

7. To what Professorships, if any, are residences attached? What Professors are entitled to rooms in the Colleges with which their foundations are connected? Are you disposed to think that it would be desirable to provide houses or chambers for any considerable number of the Professors? Might not such a provision facilitate the adoption of regulations for securing the residence of the Professors during a considerable portion of every academical year?

Rev. J. A. Jeremie, D.D.

Answers from the Rev. J. A. Jeremie, D.D., Regius Professor of Divinity.

Regius Professorship of Divinity.

The Regius Professorship of Divinity was founded by Henry VIII. The duties annexed to the Professorship by the original endowment may be found in the revised Statutes of Trinity College, c. 41. The Professors of Divinity, Hebrew, and Greek, were required to lecture four times a week during the Term, and, under certain circumstances, during the Vacation. These duties were modified by a Letter of Charles II., (of which I do not possess a copy). The Professors were then required to lecture twice a-week. The duties actually performed, though somewhat different, are more extensive, partly in consequence of new foundations &c., and partly owing to the recent regulations intended to promote the study of Theology in the University.

Foundation. Statutable requirements. Duties actually performed.

The Regius Professor is expected to preside and moderate at all Acts in the Theological schools, and also to read his own determination on one of the subjects of disputation, and as these Acts take place by Statute every other Thursday during three Terms, they entail no inconsiderable labour. He is also an Examiner for various University Scholarships—for the Craven, the Battie, the Davies, the Browne, the Crosse, and the Bell Scholarships, and on the average, vacancies occur in three of these—the Crosse, the Bell, and the Davies, Battie, or Craven—every year. He has also, jointly with the Margaret Professor, the entire management of the voluntary Theological Examination. The number of candidates last year was no less than 200, and the Examination, which is in writing, lasted four days. He is also a Trustee for the Crane Charities, &c., and usually, from his position, a member of several Syndicates. Other duties of less importance might be mentioned, such as creating Doctors of Divinity, with appropriate speeches, presenting for Divinity Degrees, &c.

I have lectured this year in the Michaelmas and Lent Terms.

Original Endowment.

The Professorship was originally endowed with a fixed stipend of 40*l.* King James I subsequently annexed to the Professorship the living of Somersham, with Colne and Pidley.

Present Annual Value.

The gross income last year was 2,086*l.* 4*s.*, (rent charges 1,496*l.* 7*s.* and rents 589*l.* 17*s.*), to this must be added the Interest on 135*l.* 8*s.* 6*d.* in the 3 per cents reduced, for land taken for railway. The outgoings, including Land Tax, Property Tax, Assessed Taxes, Poor and Highway Rates, Tenths, three Curates, Repairs, Agency, &c., amounted to 808*l.* 8*s.* This is exclusive of Parochial Charities amounting to 109*l.* 6*s.* 6*d.* Mr. Wright, my agent, adds: "I anticipate a reduction in the rent charges next year of about 7 per cent., which will bring them to 1,441*l.*, and most probably the rents will have to be reduced also. If the present prices of agricultural produce continue till 1855, a reduction of 30 per cent. will take place in the rent charges."

With very trifling exceptions, there are no emoluments from extraneous sources.

I am Fellow of Trinity College, but receive no emolument from my Fellowship.

General condition of the Study.

The great numbers who attend Lectures, and the interest which the subject appears to excite in the younger members of the University, are, I think, circumstances of the most encouraging character.

Degrees in Divinity.

Degrees in Divinity.

The Exercises required of an M.A. for the Degree of B.D. are one Act, (to be kept after the fourth year), two Opponencies, a Latin and an English Sermon, and a Determination or Thesis. By the Statutes of the ninth of Elizabeth, if a person of the age of 24 years be admitted of any College, he may obtain the degree of B.D. after ten years without having taken any other. The Exercises performed in this case are the same as those required of a Master of Arts. The candidate is also examined by the Regius Professor of Divinity, for the purpose of ascertaining whether he has complied with the provisions of the Statute, and actually devoted himself to the study of Theology. He must also reside the greater part of three several Terms in some College during his last two years. A Doctor of Divinity must be a B.D. of five, or an M. A. of twelve years standing. The Exercises are one Act, two Opponencies, a Latin Sermon, an English Sermon, and a Determination. The Opponencies are not required for a B.D. or a D.D. degree if, when the candidate keeps his Act, a Doctor of Divinity be one of his opponents. Cautions for the non-performance of Exercises are permitted in the case of Degrees by Royal Mandate or *per Saltum*.

I am inclined to think that, unless the period required for the degrees of B.D. and D.D. be abridged, it is not desirable to change, to any considerable extent, the nature of Exercises which, being in conformity with long established usage, appear to be well adapted to the age and position of the Candidates.

SIR,

I HAVE the honour to acknowledge the receipt of your letter of the 15th of February, containing a list of queries proposed by Her Majesty's Commissioners for inquiring into the state of the University of Cambridge. I beg leave to confine my answers to such queries as relate to my own department.

No Lecture Rooms.

There are no Lecture-rooms appropriated to the Regius Professor of Divinity. The Divinity-school is not in a fit state to be used, and Divinity Acts are generally held in the Law school.

Rev. J. A. Jeremie, D.D.

Nearly three hundred persons, in addition to many who gave no notice of their intention, having sent in their names as desirous of attending my lectures last term, I found it impossible to collect so great a number in the Law-school. I contrived, however, to deliver the lectures in the Arts-school. This is, I believe, the largest room used for lectures in the University, but it was crowded to excess, and afforded little or no accommodation to those who were anxious to take notes of the lectures.

Regius Professorship of Divinity.

No inconsiderable knowledge of the various branches of Theology may be acquired by regular attendance at the lectures of the three Divinity Professors and the Regius Professor of Hebrew; but I think it impossible to give a complete and systematic course, unless the period of residence required in the case of all, who intend to present themselves at the theological examination, be extended at least one year beyond the date of their B.A. degree.

Importance of regular attendance at the Divinity Lectures.

The subject of my own lectures in the Michaelmas and Lent Terms was the History of the Christian Church in the Second and Third Centuries.

Subject of Lectures.

No fees whatever are charged for attendance at Divinity-lectures.

There is no house in Cambridge assigned to the Regius Professor of Divinity, but he is entitled to rooms in Trinity College.

No Fees or Residence.

I have the honour to be, sir,

Your obedient servant,

(Signed) J. A. JEREMIE.

Answers from H. J. Sumner Maine, Esq., LL.D., Regius Professor of Civil Law.

H.J.S. Maine, Esq. LL.D.

My Lord and Gentlemen,

Regius Professorship of Civil Law.

The Regius Professorship of Civil Law, of which I am at present the incumbent, was founded by King Henry VIII. in the year 1540.

Duties.

The duties of the Regius Professor seem to have been left by the Founder to be settled by future ordinances. By the University Statutes of Queen Elizabeth the Professor is directed to lecture four times in each week during the continuance of Term, and he is recognised by these same Statutes as the ordinary president at the disputations on Law, or public Exercises, performed in the Law School by candidates for the degrees of B. C. L. and D. C. L.

Subject of Lectures.

The subject of the lectures is described as "jus civile," an expression which, construed by comparison with other parts of the Statutes, must be taken to imply the Civil Law of England as well as the Roman Law.

Duties actually performed.

The practice of lecturing appears to have been at one period altogether disused, but it has recently been so far revived that I myself and my four immediate predecessors have regularly delivered a course of lectures on Jurisprudence, in each of the three Academical Terms, on such days as seemed to us most convenient. I do not find that the statutable direction to lecture on four days in *every* week of Term has ever been strictly obeyed since the epoch of the Restoration; indeed it is no longer reconcileable with the existing condition of the University system.

The Professors of Civil Law appear at all times, since the creation of their Professorship, to have discharged the office assigned to them of presiding or "moderating" at the disputations on Law, either in person or by their accredited deputy, who, in terms of the Statutes, must be a Doctor of the Law Faculty.

Besides the duties which are annexed to the Professorship by the direct or indirect language of the Elizabethan Statutes, several others have devolved upon its incumbent, the performance of which is not compelled by any ordinance of the University or of the Crown. The most onerous of these is the conduct of the Terminal Examinations in Law, of which I will presently describe to the Commissioners the origin and nature. Examinations of another kind will be henceforth holden by the Professor to test the qualifications of persons who apply for a Professorial Certificate under the Grace passed by the Senate of the University in October, 1848. The Professor is also an *ex-officio* Examiner for the University Scholarships founded by Lord Craven, Dr. Bell, and others; and an important share has very recently been assigned to him in the superintendence of the new Moral Sciences Tripos.

Endowment.

The Regius Professorship of Civil Law was endowed by the Founder with 40*l.* a-year, now reduced to 33*l.* by Treasury fees. This sum constitutes the sole fixed revenue of the office. Her Majesty's Government has lately conferred upon myself an additional annual stipend of 92*l.*, but the stipend in question is in no sense an endowment, and will not descend to my successor.

Fees.

The residue of the emoluments of the Professorship consists exclusively of fees, five guineas being paid to the Professor by every person who commences attendance at his lectures, and seven guineas by every person who disputes in the Law School. I regret that I am unable to state with minute accuracy the average annual amount derived from this source. I myself have held my office a very short time, and I have no means of ascertaining the exact receipts of my predecessor. I have, however, referred to the Law Class lists, or lists of persons proceeding in law, from which the sum received in fees can be calculated approximately, and I find that the annual amount thence derived, if reckoned on this basis, is 126*l.* on an average of 20 years. It should be understood that the number of persons proceeding in Law, and therefore paying fees to the Professor, exhibits considerable fluctuations. In more than one

H. J. S. Maine, Esq. LL.D

Regius Professorship of Divinity.

year the sum received in fees was less than 70*l.*, and the income of the Professorship from all sources was probably under 100*l.* In two years the amount of fees was 225*l.*, and the aggregate revenue about 260*l.* The expenses of investiture absorb rather more than the proceeds of a single year.

Mode of Appointment. Term of office.

The Regius Professor of Civil Law is appointed by the Crown, which is, I believe, completely unfettered in its choice. He holds his office *durante bene placito*.

Residence.

The Professor has no residence, but the College of Trinity Hall usually permits him to occupy a set of its rooms on payment of the usual rent. The Law Lectures are delivered in an apartment known as the Law School, for the use of which the Professor pays an annual sum to the University.

Conditions for Degrees in Law.

The Elizabethan Statutes direct that every candidate for the degree of Bachelor of Civil Law shall have his name inscribed for a period of at least six years on the books of some one College, shall reside in the University nine Academical Terms, shall attend the lectures of the Regius Professor, and shall dispute publicly in the schools. No other conditions are prescribed by the Statutes, and none of those actually prescribed have fallen into disuse. The degree of Doctor in Civil Law is attainable by Bachelors in Law of five years' standing, and by Masters of Arts of seven years standing, provided these last have publicly declared their intention to proceed in Law within four years from the date of their M. A. degree. The condition of the Doctorate is the performance of two Acts or public Disputations, and an Opponency. It has been usual to permit clergymen to caution or compound for one of the Acts, but laymen are required to perform both of them. Both clergymen and laymen are allowed to caution, if they please, for the Opponency.

Some other tests of the qualification of candidates for the B. C. L. degree have been established by the University or by the Professors of Civil Law. Graces of the Senate extend the attendance at lectures mentioned in the Statutes to an attendance during three terms, or a whole academical year, and require that all persons proceeding in Law shall pass the general previous Examination, before performing any statutable exercise for the degree. My immediate predecessor, Dr. James William Geldart, finding that the Act—a public Latin disputation in the syllogistic form on two questions of Law—was a very insufficient criterion of fitness for the degree, instituted, in the exercise of his authority as Professor, a regular series of terminal examinations, which he compelled every student in law to pass before permission was accorded to dispute in the schools. I myself have continued Dr. Geldart's system with some slight modifications.

Course of Study.

The subjects of these examinations and the course of study preparatory to the degree are determined by the Lectures, and vary therefore with each successive Professor. For some years past the character of the course has remained substantially the same, and its subject may be described as General Jurisprudence, illustrated by the Roman and English Law. Large portions of Moral Philosophy and of Legal History have been naturally comprised in it; and in the studies of some years International Law has formed an important element. Candidates for the degree are required to translate with facility the text of Justinian and of the later Jurists, and a considerable command of conversational Latin is demanded for the creditable performance of the Acts. The practice of following the order of topics observed in Hallifax's "Analysis of the Civil Law" has tended to give some degree of fixity to the course.

I append to this statement a copy of the notice published by the Professor, as a guide to persons desirous of proceeding in Law. (A.)

General condition of the Study.

The ordinary candidates for the B. C. L. degree may be discriminated into two classes. The first of these, which is chiefly supplied by Trinity Hall, consists of persons who intend to apply their knowledge hereafter in the practice of the legal profession. The education which they receive in the Law Faculty, although doubtless susceptible in some respects of improvement, is nevertheless of a high order; and the strongest testimonies to its value have been communicated to me by gentlemen who have profited by it, and whose success at the English Bar makes their opinion conclusive on the point. The second class of Students is formed by those who desire to obtain the Baccalaureate in Law as a substitute or an equivalent for the first degree in Arts, without any ulterior design of applying professionally the information which they obtain in the Faculty. Since the Bishops are accustomed to ordain upon it, and since it is a step to the higher grades of the University, the B. C. L. degree is, in fact, available for almost as many purposes as the Baccalaureate in Arts. The motives which induce Undergraduates of this description to prefer the former degree to the latter I have ascertained to be various. Some are led by a supposed taste for legal studies, and others are attracted by the shorter period of residence which is required, ten terms of actual residence being necessary in Arts, and only nine in Law. It is very generally supposed that not a few are influenced by a belief that the tests in Law are more easily satisfied than those in Arts. My own observation has convinced me that the minimum amount of labour which a Student must bestow to qualify himself for the Law degree is materially greater than that demanded for the lower degrees in the Faculty of Arts; and I should conceive that a more intelligible inducement to the class of Students, upon which such motives are likely to operate, would be the very inconsiderable publicity which attends failure in the Law School, as compared with ill success in the Senate-house. An impression, however, that the inferior degrees in Law are attainable with undue facility is very widely diffused, and it has tended to cover the whole Faculty with a discredit which is most assuredly undeserved, but which it is beyond the power of a Professor to remove by his single-handed exertions.

The first Degree in Law and Arts.

Methods of rescuing the lower Degrees from the discredit which attaches to them.

Two methods of rescuing these lower degrees from the discredit which attaches to them have been more than once suggested. It has been proposed, for instance, to subject all law students to the ordinary examination which tests the qualifications of candidates for the B. A. degree, leaving them to pursue their legal studies afterwards. The immediate effect of this

H.J.S. Maine Esq LL.D.

Regius Professorship of Civil Law.

alteration would be to extinguish the Law Faculty. The higher class of students would refuse to enter it, from unwillingness to prolong their residence beyond the period of passing the B.A. examination, and through anxiety to begin a course of study more exclusively professional than can be followed at Cambridge. I should regard their disappearance as an unmixed evil, since I am convinced that, the commencement of strictly professional education tending year by year to fix itself at an earlier period in life, the University will eventually retain its hold on the English Bar through the Law Faculty alone. Students of a lower description would, of course, cease to present themselves for the Baccalaureate in Law, their end being gained when the examination in arts is once passed. I do not hesitate to admit that the banishment of these last-mentioned persons from the law classes would instantly raise the character of the school, which suffers from nothing but their presence. But I doubt whether a change, having this effect, would be desirable or even defensible, considered in relation to the academical system at large. I have never seen reason to regret that, for a certain order of minds, the University should furnish an alternative to its ordinary training by classics, mathematics, and the moral philosophy of Paley. Moreover, although we allow that the principle of the criteria which are adopted in the Arts Faculty is completely faultless, the same admission cannot be made with reference to its present application. I do not think it can be reasonably contended that the appearance of a name in the lower classes of the *οἱ πολλοὶ* proves a more wholesome course of intellectual discipline than its appearance at the foot of the law lists. Besides, it should be remembered that the obligation under which law students are placed of passing the previous examination, *does* necessitate some amount of familiarity with classics and mathematics.

A more admissible scheme.

A much more admissible scheme would retain the existing machinery of the Faculty, with alterations and additions. The means of giving greater definiteness to the course of study might be provided by the establishment of a *Board of Legal Studies*, analogous to the *Board of Mathematical Studies*, which has been lately invested with a measure of control over the mathematical examinations of the University. Again, it might be deemed expedient to reduce the period of attendance at the Civil Law Professor's lectures to one term, attendance being demanded at the lectures of the Professor of English Law during a second term, and at those of the Professor of Moral Philosophy during a third. Lastly, one or two Examiners, appointed by the Senate, might be associated with the Civil Law Professor in the conduct of the law examinations. The appointment of such Examiners would be an important improvement, since it would relieve the Professor from the invidious irresponsibility of his present functions, and would gradually diminish that ignorance of the system pursued in the law schools, which is common in the University, and which has defeated the efforts of successive Professors to enhance the reputation of the Faculty confided to their direction.

The Faculty of Law to be assimilated to the Faculty of Arts.

To give such a scheme any prospect of success, it would be necessary to assimilate the Faculty of Law very closely to that of Arts. At present, the members of the former Faculty are placed under considerable comparative disadvantage. They obtain no degree at all till they are of *six* years standing, and they are not invested with a degree which confers a vote in the Senate and the electoral franchise until they have been enrolled in the books of the University *eleven* years. On the other hand, the first degree in Arts is obtained in *three years and some months*, the grade conferring the franchise being reached in less than *seven* years. In the existing condition of our law studies, there are perhaps inducements to enter the Law Faculty which overweigh these academical disadvantages; but the inducements in question will necessarily be destroyed by the reforms I have suggested, and then the inferiority of the law degree in point of academical advantage will certainly operate unfairly to discourage persons from preferring it to a degree in arts.

The assimilation of the two Faculties would be nearly completed by permitting those students who are honourably mentioned in the law lists—at all times a most deserving class of young men—to compete for University honours in the Classical Tripos.

Inadequacy of Income.

I feel that I must not conclude this detailed statement of matters connected with my professorship, without allusion to a topic which, on many accounts, I should be glad to dismiss in silence. On referring to the particulars which have been given above, the Commissioners will perceive that the duties of the Regius Professor are more onerous, various, and continuous, and that they entail a greater amount of responsibility than those of any other official connected with the educational department of the University. Yet, from the inadequacy, and still more from the uncertainty of the income, it is virtually impossible that any Professor should make the conduct and regulation of his Faculty the principal occupation of his life. I myself am a practising barrister—my two immediate predecessors were beneficed clergymen—and, in none of these cases, can it be said that the University was the theatre of the Professor's most engrossing labours. If the duties of the professorship are maintained on their present scale, it seems desirable that, for all future Professors, such a proportion should be observed between their services and their emoluments as to create a legitimate claim upon the whole of their time.

Fees on Degrees; the evil they are calculated to produce.

At all events, it appears absolutely indispensable that the *method* of remuneration should be altered without delay, since, under the existing state of things, nothing but the personal character of the Professor can save him from the imputation of competing with the University for the fees on degrees by relaxing the stringency of the examinations by which degrees are conferred.

I am, my Lord and Gentlemen,
Your very obedient servant,
(Signed) HENRY S. MAINE.
Regius Professor of Civil Law.

H.J.S. Maine, Esq. LL.D.

(A.)

Notice published by the Professor as a guide to persons desirous of proceeding in Law.

The Lectures on the Civil and English Law commence in the Michaelmas Term, and are continued during the Lent and Easter Terms. Notice is always previously given of the exact day of commencement. It is desirable, though not absolutely necessary, that persons desirous of proceeding in the Law Faculty should begin their attendance in the Michaelmas Term.

Those law students who proceed to the law degree are required by the Professor to pass *at least* two examinations in successive terms. Candidates for the first class must pass three examinations in three successive terms; the first of these taking place in the Easter, the second in the Michaelmas, and the third in the Lent Term. This order of examination will not be changed or inverted unless special cause be shown.

The matter of each examination is always co-extensive with the substance of the Lectures delivered in the term next but one preceding the examination in question. Thus the subjects of the examination in the Easter Term are always those of the Lectures in the October preceding, and so on.

The University requirements for the law degree are, attendance at the Professor's Lectures for three terms, and the keeping a Law Act. This Act may be kept in or after the ninth term of residence.

The Lectures generally follow the order of subjects observed in Hallifax's Analysis. The Lectures are delivered in the Law School.

The class list is published at commencement. The names, distributed into three classes, are arranged as regards the first two classes according to the merit displayed in the examinations and the Law Act. In the third class, the arrangement of names is alphabetical.

J. Haviland, Esq., M.D.

Answers from the late John Haviland, Esq., M.D., Regius Professor of Physic.

Regius Professorship of Physic.

1. The Regius Professor of Physick begs leave respectfully to lay before Her Majesty's Commissioners for inquiring into the State of the University of Cambridge the following answers to their questions respecting the present condition of the studies of the University connected with the Professorship held by him.

Foundation.

2, 3. The Professorship was founded by King Henry the Eighth in the year 1540. The appointment is "to the place of Reader of the Institutes, or Instructor in the science of Physick, for the benefit and advancement in learning of young Englishmen in the University of Cambridge." No duties are specifically annexed to the Professorship either by the original foundation or by the letters patent by which the Professors are successively appointed. By the statutes of 12 Eliz., by which the University is at present ruled, the Professor is enjoined to read Lectures four days a week, during Term-time, from Hippocrates and Galen; he is also required to preside in the schools during the disputations for Medical Degrees. Subsequently other duties have been imposed upon him, the principal one being that of assisting in the examination of candidates for University Scholarships.

Statutable requirements.

Duties actually performed.

4. These duties have been actually performed by the Professors, with the exception of the reading of Lectures, which had been omitted by the predecessors of the present Professor for more than 150 years, but which he renewed in 1819 (two years after his appointment), by reading a course of Lectures on the principles of Medicine, and these Lectures have been continued ever since. He, also, at the same time, instituted Examinations for Medical Degrees, which at first were conducted by himself alone, but afterwards, for the purposes of a first Examination for the Degree of Bachelor of Physick, other Professors, viz., those of Anatomy, Chemistry, Botany, and the Downing Professor of Medicine were, by Grace of the Senate, associated with him for the performance of this duty of examining for the Degree of Bachelor of Physick, and for the like duty of examining for the Order and Degree of Licentiate and Doctor of Physick, there were associated with him the same Medical Professors, together with some other Doctor of Physick not employed in teaching in the University. On the whole, the examinations are conducted with great care, and afford sufficient means of testing the qualifications of the candidates for Degrees, and it is believed that no examination had ever been instituted before 1819 for Medical Degrees in this University.

Original Endowment.

5. The original endowment is a salary of 40*l.* per annum, paid out of Her Majesty's Treasury; which, however, is reduced by fees, &c., to 34*l.*

6. In addition to this a house in the town of Cambridge was given to the Professorship by Mr. Crane, which, its site being wanted for the erection of the present senate-house, was exchanged with the University for a house in Market-street, now let to a shop-keeper at a rent of 150*l.* per annum.

Fees.

7, 8. The only other sources of emolument are the fees for attendance on Lectures, and for presiding at the Medical Exercises in the schools. Their amount, on an average, for the last five years, has been for the Lectures, 22*l.*; for the Acts 47*l.*

Present Annual Value.

9. The present annual value, therefore, is 253*l.*, viz.:—

	£.
From the Treasury . . .	34
„ house rent . . .	150
„ fees	69
	£253

Appointment.

10. The appointment to the office is in the Crown. No conditions of eligibility are prescribed in the original foundation. The office is for life, and a power is vested in the Professor of naming a deputy or deputies to be approved by the Vice-Chancellor.

J. Haviland, Esq., M.D.

Regius Professorship of Physic.

11. The Pathological portion of the Anatomical Museum is especially adapted to the use of the Pupils of the Professor of Physick. This Museum was at the first established principally by means of the General Funds of the University, and is now wholly maintained out of them.

12. The Hospital affords to the Pupils the only opportunities of practical illustration that the nature of their studies admits of, and it is well adapted to the purpose.

13. The Professor begs to state that he sees no means of modifying the duties of his Professorship in any manner, so as to contribute more effectually to the benefit of the University.

General condition of the Study of Physic.

14. The general condition of this branch of study in the University is at present at a very low ebb. For the current academic year, only two or three young men have made known their intention of entering upon Medical Studies. There has been for some years a gradual falling off in the number of Medical Students, which perhaps may be accounted for in great measure by the improved condition of the modes of Medical Education in London and elsewhere, and the superior advantages which Teachers in other Medical Schools have in the opportunities of teaching the subjects connected with Medicine, as Anatomy, Chemistry, Pharmacy, &c., by the *entire want* here of teachers in some very important and necessary branches of Medicine, as Forensic Medicine, Hygiene, Comparative Anatomy, &c., and especially by the shortness and want of continuity in the course of Medical Lectures given here compared with those given in London and in other schools. The time during which he public lectures of the Professors are delivered here, is limited to about seventeen weeks between October and July. The course of lectures, if delivered in the October Term, is very short, and, if extended to the Lent Term, it is interrupted during a period of two months, or thereabouts. The arrangement of Terms at Cambridge is perhaps not ill adapted for the Students of Classical Literature and Mathematical Science, but does not suit those who are studying Natural History, and least of all, Medical Students attending Chemical, and other lectures.

Qualifications of Candidates.

15. By the Statutes of the University it is required that a candidate should be of five year's standing from the time of admission at the University, and that in the course of that period he should have kept, by residence, the greater part of nine several Terms, amounting, on the whole, to about forty-eight weeks in three years; that he should have been a diligent attendant on the Lectures of the Professor of Physick, and have witnessed two dissections; and that he should have kept one Act and one Opponency in the schools; and that a Candidate for the Degree of Doctor of Physick should be either a Bachelor of Physick of five years' standing, or a Master of Arts of seven year's standing; that he should have witnessed three dissections, and that he should have kept two Acts and one Opponency; but no further residence is required. It may be remarked, that during the period adverted to above, when the Professor gave no lectures, the injunctions concerning dissections became a dead letter: yet there is good reason for believing, from a prohibition issued by the University against the exhumation of bodies, that subsequently dissections were actively carried on in the University.

16. In addition to the foregoing requirements in regard to time, to attendance on the Lectures of the Regius Professor, and to Exercises in the Schools respectively, the Regulations of the University now further require that a Candidate for the Degree of Bachelor of Physick should, during his three years' residence, have attended the Lectures of the Professors of Anatomy, Chemistry, and Botany, and of the Downing Professor of Medicine; that during the other two years, if not spent in pursuing Medical Studies here, he should have been employed in attending Medical Lectures and the practice of a Hospital in some acknowledged School of Medicine, in proof of which he must produce certificates; and lastly, that he should have passed an examination by all the above-mentioned Professors: and that a Candidate for the Degree of Doctor of Physick should produce certificates of having attended lectures on certain specified subjects, and also of having attended Hospital practice for three years; and that he should have been examined and approved by the Regius Professor of Physick, the Professor of Anatomy, the Downing Professor of Medicine, and a Doctor of Physick appointed by the Senate.

17. The University has, however, been accustomed to allow some of the Exercises in the Schools to be cautioned for. The usual practice has been that, except under very peculiar circumstances, the Act required for the Degree of Bachelor of Physick should be kept; the Opponency too has been usually kept during the last 25 years, although previously it had been discontinued. And for the Degree of Doctor of Physick one Act has always been insisted on, the Candidate being left at liberty either to keep or caution for the second Act and the Opponency, an indulgence which has been granted to candidates for this Degree, because of their being very frequently employed in the practice of their profession at a distance from Cambridge, so that journeys to the University would be both inconvenient and expensive. And in fact, much less importance has been attached to the keeping of these exercises since the establishment of examinations than when they formed the sole test of the qualifications of Candidates for Medical Degrees, and when no inquiries were made as to their studies here or elsewhere.

18. In reply to the questions "Whether any changes might be introduced with advantage to the University, as to the period of residence, the course of study or exercises, and the qualifications required for Degrees in Physick," and "as to the means of promoting its advancement," the Professor begs to state that, not knowing to what extent it may be thought expedient to carry out such changes, he feels a difficulty in returning answers.

Changes desirable in the course of Medical Study.

The most obviously desirable change would be that which should give Medical Students opportunities of acquiring within the University a knowledge of all the necessary branches

J. Haviland, Esq., M.D.

Regius Professorship of Physic.

of their profession, and of thoroughly completing their medical education here, without which opportunities no University can in strictness be considered as a medical school. Towards this, much has been done of late years, and it has been the endeavour to teach all that our present Medical Staff enables us to do; but it must be confessed that very much remains to be done, which can be effected only by increasing the number of our teachers, and, it may be added, by making the endowments worthy of the appointments, and such as would be sufficient to procure the services of men eminent in their respective departments. The Medical Examinations and requirements do not appear capable of much improvement: yet the Professor is desirous of stating his opinion that all persons intending to proceed to the Degree of Bachelor of Physick should be obliged to pass previously the General Examination for the Degree of Bachelor of Arts. There would still be about two years remaining for the study of Physick; and after examination and approval by the Professors of Chemistry and Botany, either before or after the said General Examination, they might offer themselves for examination, according to the present system for the Degree of Bachelor of Physick; and again, three years after, for the Degree of Doctor of Physick, when, if found qualified, they might have this degree conferred. To render this scheme effectual, Students should be recommended to commence their residence at the University before the age of 18, so that they might obtain the Degree of Doctor of Physick before they were 26 years old, the earliest age at which the College of Physicians in London admit persons into their body. The Professor would further recommend that for the Disputations in the schools, which have lost their value and importance, a public *vivâ voce* examination, conducted by the Professor of Physick in the Latin tongue, should be substituted. Without further entering into details, which would occupy too much of the time of the Commissioners, the Professor will confine himself to the observation that it would be a great encouragement to the study of Physick if such Colleges, as possessed Medical Fellowships, were to bestow them as rewards for the successful cultivation of Medical Science rather than of General Literature, and if the valuable Tancred Studentships were made available to the promotion of a spirit of emulation amongst Medical Students.

(Signed) JOHN HAVILAND, M.D.,
December 7th, 1850. *Regius Professor of Physick.*

H.J.H. Bond, Esq., M.D.

Regius Professorship of Physic.

Answers from H. J. H. Bond, Esq., M.D., Regius Professor of Physic.

GENTLEMEN, 1851.

IN compliance with your request conveyed to me in your communication bearing date the 18th February, I have the honour to submit for your perusal the following observations:—

The first 12 questions in the printed, and the two first in the manuscript paper, which refer exclusively to matters of fact connected with the Regius Professorship of Physic, having been, as I am informed, fully replied to by the late Professor Dr. Haviland, I conclude that it is unnecessary for me to make any statement respecting them, and I will therefore confine my replies to the 13th and 14th of the printed, and the 3rd of the manuscript questions, which invite the expression of individual opinion on certain specified points.

The 13th question I can more conveniently reply to, after having entered at length on the subjects of the remaining two, which I proceed to do by embracing them conjointly.

> "The general condition in the University, of the branch of study to which your Professorship relates, and the means of promoting its advancement."
>
> "Whether, in your opinion, any changes might be introduced with advantage to the University, as to the period of residence, the course of study or exercises, and the qualifications required for the Degrees belonging to your faculty."

General condition of the Study of Physic.

The number of Students attending the medical classes of the University, at all times very variable from year to year, has for several years past steadily and very materially declined. I believe this is to be attributed in great measure to the relation, in which the Universities of Cambridge and Oxford stand to the College of Physicians in London, having been altered by the recent regulations of that body, and to the rising reputation of the London schools, and to the existence of the London University, and to the estimation, in which Physicians individually are held by the public, having less reference than formerly to the University where they are known to have studied and graduated. The privilege and prestige which once attached to the education of the Physician at either Cambridge or Oxford having ceased to exist to the same extent, there remained little to countervail the greater expense incurred and the longer time necessary before the Doctorate in Medicine could be obtained and a position in the profession be secured. These circumstances have, I believe, deterred many from coming to the University as Medical Students that in former years would have done so.

But although the Medical Classes in the University have in consequence numerically declined, the system of instruction which has been pursued with the few that have been educated as Medical Students has not been relaxed, on the contrary, it has received rather a further development. Clinical instruction and hospital attendance, though not formally enjoined by the regulations of the University, have assumed a more prominent and influential part in the system; the number of Pupils, compared with the crowded classes of the metropolitan schools, rendering this personal and practical method of instruction more available and effectual. It has hence resulted, that, although there are but few instances of Students having completed their medical education in the University, most of them have willingly admitted that the time devoted to

H. J. H. Bond, Esq., M.D.

Regius Professorship of Physic.

medical studies during their residence, either in acquiring elementary principles, or in adding to their previous knowledge as advanced Students in Medicine, had been spent advantageously; and the distinction which several of them have early attained in their profession has confirmed this favourable testimony. I may be permitted to add that as regards character, habits of study and intelligence, the Medical Undergraduates of the University will bear comparison, to say the least, with the generality of Students; and it has not seldom happened that a previous career of College idleness has been favourably interrupted from the moment that the Undergraduate has engaged in the medical studies of the University. These particulars I have mentioned with a view of showing that the decline of the study of medicine within the University is assignable rather to external circumstances than to internal defects; the statement will likewise, I presume, justify the consideration of, if it will not suggest the means to be adopted for arresting its further decay and for eventually "promoting its advancement."

The disadvantages that have been detailed, having operated to deter many from entering the University with the intention of becoming Medical Students; the few, that do enter, consist either of such as having graduated with distinction in the mathematical or classical tripos "declare for medicine," induced by the prospect of succeeding to Lay Fellowships, or of Tancred Scholars become Medical Students by obligation of their appointment, and sometimes so "invitâ Minervâ;" with a remainder, the sons of medical men or others still aware of the superior advantages of a Cambridge Degree, as an introduction to any profession; or Undergraduates, who, sent to the University with their destinations in life undetermined, are at some period of their residence, led almost casually to decide upon graduating in Medicine.

These equivocal or precarious sources, which produce the present scanty supply of Medical Students to the University, I submit, might be exchanged for other sources more legitimate and adequate, if the following advantages and inducements could be offered to those proposing to graduate as Medical Students.

Suggestions for the improvement of the study of Medicine.

Firstly. The Medical Undergraduate should, in common with the rest of the Undergraduates, follow the usual course of studies as pursued in the College lecture-room sufficiently long to enable him to attain an amount of proficiency in them, which would, by the intellectual culture, mental discipline, and logical habits of thought such a course is calculated to ensure, afford him a vantage-ground for the prosecution of his ensuing medical education. By this process the labour of attaining the necessary elementary knowledge of his profession would be much abridged, greater precision and a higher scientific standard would be imparted to his inquiries, and the foundation would be laid for those superior attainments which distinguish the physician, whose medical knowledge has been erected on the basis of a matured liberal education; attainments which are seldom found in the practitioner who, having commenced his medical studies when his general education was but little advanced, either never prosecutes them scientifically at all, or in default of a correct and disciplined method to direct him, brings only crude and erroneous notions of science to bear upon the practice of his art. Great as is the importance of such a preliminary education, it must still be remembered that the participation of the Medical Undergraduate in the ordinary branches of University study should not be so long continued that his subsequent medical education would be incomplete at a time when he should be competing for the practice of his profession. Another reason for not deferring his initiation in medical studies too long is to be found in the fact, that few comparatively will undergo the drudgery of learning practical human anatomy if they do not begin early; and further that, as medicine, generally, is a science of observation, habits of abstract study and reading should not so long have preoccupied the mind as to indispose it to the more active and self-reliant methods of inquiry, which are essential to form the mind of the future practical physician.

The Medical Undergraduate's proficiency should, at the term of his preliminary studies be tested by a public examination,—to the passing which, in default of a degree in Arts being conferred on him by anticipation (the usage of the University not allowing this), a sufficient significancy might be given to convey a creditable distinction.

Secondly. The Medical Undergraduate, on the expiration of the time devoted to the general studies of the University, and after having passed an examination in them, should enter on the study of the natural sciences with their especial application to medicine—more particularly theoretic medicine. The distinctive feature in this part of the education of the *Cambridge* Medical Undergraduate should be, that his study of and proficiency in the sciences, which are related to but are more comprehensive than the proper medical sciences, should precede his acquirements in these latter—a method the very opposite to the ordinary mode of proceeding in which the special application of the natural sciences to medicine forms the subject of the Student's inquiries before he has become conversant with these sciences in their widest generality. Agreeably to this view the study of chemistry and general physiology, with zoology and comparative anatomy should be the introduction to the study of human anatomy and physiology and of pathology. Such a course would be strictly a scientific one, the first part being no more than might be considered appropriate as an accomplishment to the education of the general Student; and the latter part affording rather the means of ensuring a philosophical foundation for the subsequent *professional* acquirements of the Medical Student than actually contributing much to these acquirements. This need not prevent the Medical Student from availing himself of the opportunities that might offer of at the same time familiarizing himself with the practical illustration of the medical sciences; as in hospital attendance, &c.* The examination for the M.B. degree would conclude this course of study, and the medical baccalaureate would then be understood as significant of the medical novice possessing the requisite proficiency in the several sciences, which should form the basis of the professional knowledge of the future

* A year's attendance on hospital practice, it will be seen below, would be necessary during his undergraduateship to enable him to obtain his licence ad practicandum at the earliest possible period.

H. J. H. Bond, Esq., M.D.

Regius Professorship of Physic.

physician, but not as implying any considerable acquirements in practical medicine. Those who possessed higher attainments would have the opportunity offered for displaying them by the distinction to be acquired in the newly established Natural Sciences Tripos—a distinction which would be peculiarly appropriate to the Medical Student.

The absolute pretensions of the University to impart from its own Professorial sources the information necessary for its medical alumni need not exceed what has been above stated; for if no more is accomplished than is here proposed, I conceive the University might fairly claim the credit of offering a system of medical education which should invite (as far as amount of instruction alone may be expected to invite), the resort of young men desirous of preparing themselves under its auspices for a liberal profession by a high standard of preliminary medical education. The School of Medicine within the University itself might, indeed, admit of further development and probably would become more complete, but I would insist upon no more than is absolutely necessary to entitle the University to be considered as possessing a medical school, in the light of a substantive part of its system. The Student might, as at present, be expected to complete his qualifications for the licence to practice and for the Doctorate by resorting to other schools without prejudice to this title of the University or to its privilege of reserving to itself the right of examining for, and conferring the license and higher degrees at the proper time on those who had already graduated as Bachelors of Medicine.*

Thirdly. I have said that the University in accomplishing thus much, would continue to invite the resort of Medical Students by the high standard of instruction offered in the preliminary branches of medical education; but unquestionably this invitation would be much more effectual if some share of the emoluments of the University and Colleges were assigned as the reward of a Student's having distinguished himself by his acquirements in the medical sciences; for which the additional distinction of a place in the first class in the Natural Sciences Tripos might be a requisite condition. At present no inducements in the way of distinction or reward are offered for the Student to acquire a proficiency in the medical sciences. In Caius College, it is true, there are three small Scholarships given to proficients in anatomy and chemistry; but with this meagre exception, no one of those premiums with which the University, or rather the Colleges are so richly endowed, is awarded for success in the study of medicine. Though certain Fellowships are appropriated to those who are intending to proceed to Medical degrees, they have been conferred exclusively upon proficients in other sciences or in classical literature; and formerly have even not uncommonly been held by persons who have received no medical education at all. But were it known that but a few even of these sources of emolument would be open for such as distinguished themselves in the medical studies and examinations of the University, there can be no doubt that this inducement, in connexion with the opportunities offered of acquiring such proficiency as has been insisted on, would insure and would maintain a medical school of reputation in the University. It would not be advisable that these emoluments should be of such value, or so long retained, as to render the fortunate possessor of them too independent of future exertions; but if held for a term of years only,† they would be of timely assistance to the young physician during the first years of practice, enable him to maintain his grade in the profession, and encourage him to devote his leisure to the further prosecution of the more scientific branches of medicine.

Mode by which these suggestions might be carried out.

Having ventured to submit the foregoing general views as to the requirements necessary to maintain an efficient medical school in the University, I may be permitted, perhaps, to add a few words in explanation of the mode in which I conceive such a plan might be realized. Its precise adaptation however can, of course, not be indicated, as that would depend on the modifications (if any) that it may be proposed to introduce into the University system generally.

In the detail of the plan, moreover, certain adjustments would be necessary as to seasons and sequence of studies which the peculiarities of medical education, especially the prosecution of practical anatomy, demand, or by which the convenience of the Student would be consulted on his proceeding to complete his studies in other schools—*e. g.* the time of year of his terminating his preliminary medical education in the University should be such as to coincide, as nearly as possible, with the commencement of a medical session in London or elsewhere.

To complete the preliminary course of medical study within the University according to the above scheme, it would be requisite then that the Medical Undergraduate should keep 12 terms before he took his M.B. degree. This is, in fact, less than is actually done at present by the M.B. who has first graduated as B.A. It would be further requisite that more than the major part of each term should be kept, since the terms as kept at present are confessedly inadequate for continuous medical courses.

The preliminary studies of the Undergraduates intending to graduate in medicine with the examination terminating them might be completed in the first six terms. The period of the Medical Undergraduate's examination in the prescribed studies of the University or its extent might possibly not coincide with that of the general body of the Undergraduates, but it does not appear that any great inconvenience would result from introducing some special machinery for examination of the medical class in particular. The remaining six terms should be devoted by the Medical Student to the study of the natural sciences, inclusive of the medical, to the

---

* The degree of Bachelor of Medicine, acquired agreeably to the proposed plan, would be as appropriate to the future surgeon as to the future physician; and it does not appear improbable that some intending to practice as surgeons might be induced to commence their academical and professional education at the University; and it might even be thought desirable again to make use of the privelege, which the University possesses, of granting a licence in surgery.

† Perhaps with this restriction it might not be necessary that such Scholarships or Fellowships should be vacated by marriage.

extent above detailed, these terms concluding likewise with an examination, viz., that for the M.B. degree. The whole Undergraduateship of the Medical Student would thus be completed by a residence of four years.

Regius Professorship of Physic.

The scheme of education thus slightly sketched as proposed for the University Medical Students, supposes that the course of lectures on some of the sciences connected with medicine should be more extensive than those which, under present circumstances, the Professors can reasonably be expected to give. Its realization therefore would necessarily be dependent on the extent to which the Professorial system in the University generally should hereafter be carried, and almost implies that the occupants of the several chairs should find the duties assigned to them sufficient to engage their entire time and attention, and not such merely as might be undertaken complementary to other vocations. This, of course, further implies that the endowments of the several chairs should be adequately remunerative of such extended or exclusive devotion of time and ability.

I may be allowed in conclusion, perhaps, to state, as a general apology for advocating a greater prominency being given to the medical faculty and a medical school within the University, that as in their widest acceptation such faculty and school, more than any other, are mainly concerned and conversant with the all-engrossing and important study of life and organization, the further extension of this study cannot but re-act beneficially on the prosecution of other branches of knowledge in the University, and would be in unison with the recent changes that have been introduced, which have for their object the expansion of the range of academic pursuits and the encouragement of more diversified attainments.

The foregoing suggestions respecting the course of study to be pursued by the Medical Undergraduate and the time proposed for its completion necessitate some remarks on the further

Proceedings in Physic by Graduates.

Proceedings in Physic by Graduates.

The M. B. of two years' standing might obtain his licence *ad practicandum* on the conditions at present in force for the licence as far as regards attendance on lectures and examinations, provided he produces certificates of three years' attendance on Hospital practice, in which case he must have attended one year on Hospital practice during his residence as Undergraduate.

M. D.

The M. B. of four years' standing might obtain his doctorate: thus eight years of an academical and professional study would complete the probationary period of the Cambridge Medical Graduate and Licentiate, a term of years which would place him upon a par probably as to age with most Graduates and Licentiates of other Universities, the earliest age for admission at the London College of Physicians being 26.

Proceedings in Physic by Bachelors of Arts.

Proceedings in Physic by Bachelors of Arts.

The B. A. might become M. B. on the expiration of one year from his final determination in Arts, provided that he had attended for the same period (two years) the same lectures and passed the same examinations as the Undergraduate candidate for the M. B. degree. This, of course, would oblige him during his Undergraduateship to have pursued for one year the same course of preliminary medical study as the Undergraduate proceeding to the M. B. degree. But, as by the proposed plan, the Medical Undergraduate would be engaged during his two first years in the general studies of the University, and would pass an examination in these studies; there would be less reason than at present for offering inducements to Students to prefer taking the *ordinary* B. A. degree previously to graduating as M. B. The candidate for high honours in Arts could scarcely, during his Undergraduateship, devote usefully any time to preliminary medical study: the inducement however to graduate in honours in Arts would still remain, unless such distinction should be regarded by the Student as purchased too dearly by delaying for one year only his proceedings in Physic.

Proceedings in Physic by Masters of Arts.

Proceedings in Physic by Masters of Arts.

In the proceedings in Physic by the M. A. four years of study of medicine might be substituted for the five years at present required before obtaining the licence; and the M. D. degree might be conferred at the same time.

> "Whether, in your opinion, the duties enjoined upon you as Professor might be modified in any manner so as to contribute more effectually to the benefit of the University."

Modification of the duties enjoined on the Professor.

The efficiency of the duties enjoined on the Professor of Physic, as far as relates to the delivery of lectures (on the principles of Pathology and the Practice of Medicine) to Medical Students, very much depends on the extent to which instruction is given to the same Students in the elementary branches of medical study by other Professors, unless, indeed, the Medical Student be expected to acquire this elementary knowledge elsewhere than in the University; for to deliver a course of lectures on Pathology and the Practice of Medicine to a class uninformed in Anatomy and Physiology would of course be an anomaly. Any modification, therefore, if necessary in this part of his duties, would have reference to the general scheme of medical instruction that might be adopted.

If this scheme should be limited in accordance with what has, in the foregoing observations, been suggested as an appropriate and adequate curriculum of study preparatory to the Medical baccalaureate, the Professor of Physic's course of lectures would be mainly confined to the principles of general Pathology. If a more advanced and comprehensive system of medical instruction were introduced, the Professor might be expected to extend his lectures so as to

H. J. H. Bond, Esq., M.D.

Regius Professorship of Physic.

include the practice of medicine—*i. e.* special Pathology and Therapeutics. A more decided modification is required as respects the duties at present enjoined on the Professor when presiding in the "Schools," which, under existing restrictions and agreeably to prescriptive custom, are entirely at variance and out of keeping with the general plan of modern medical education.

The present exercises in the schools might indeed be usefully modified so as to constitute the *vivâ voce* part of a medical examination, which would be in conformity with the usage practised elsewhere, and would be peculiarly appropriate to a profession in which readiness in the production and application of knowledge is so essential. The inaugural Thesis might also be advantageously retained if more precaution were taken than at present to ensure its being a genuine and creditable performance, and if excellence displayed in it were conspicuously distinguished.

Besides his duties as lecturer and examiner in his own peculiar branch of science, it might perhaps be considered as consistent with the position of the Professor of Physic, that he should preside over a Medical Educational Board formed in conjunction with the Professors of the allied branches of study, so as to ensure more effectually an uniform system of instruction, facilitate its adaptation to the requirements of the profession as they might arise, and also exercise a combined and more influential control over the class of Medical Students as a body, on the termination of their more immediate connexion with the tuition and discipline of their respective Colleges.

I beg in conclusion to apologize for the length to which my reply to the questions of Her Majesty's Commissioners has extended—which has arisen from the apprehension that unless assent were challenged to certain fundamental propositions, and unless certain definite suggestions were hazarded I might fail in answering the purport of the inquiry, and not from the presumption that the viewspropounded might not require great modification.

I have the honour to be, Gentlemen, your obedient humble servant,

(Signed) HENRY J. H. BOND, *Regius Professor of Physic.*

Rev. J. J. Blunt, B.D.

Answers from the Rev. J. J. Blunt, B.D., Margaret Professor of Divinity.

Sir,

Margaret Professorship of Divinity.

To the request of Her Majesty's Commissioners for inquiring into the state of the University of Cambridge, "that I would have the kindness to furnish them with information on several particulars specified by them; and generally to communicate to them such remarks as may either explain the present condition of the University in respect to the branch of study connected with my Professorship, or indicate means for the further advancement of the same," I feel myself at liberty, and think it right to respond; as well in order to protect my foundation from suffering injury by partial and unauthentic reports of its character which might otherwise reach them, and to vindicate my own manner of discharging the duties attached to it, as to manifest that respect for the Crown which on many accounts is due to it from a Margaret Professor, who would have a difficulty in persuading himself that feelings unfriendly to his foundation could now be entertained in a quarter to which in times past it has owed so much.

Foundation.

1. The Margaret Professorship was founded by the Lady Margaret Countess of Richmond, mother of King Henry VII.

Statutable requirements.

2. The Professor is required to read such works in divinity (*leget talia opera in divinis*) as to the Chancellor or Vice-Chancellor and Doctors shall seem necessary and expedient. He is to begin his readings on the first day of Michaelmas Term, and to continue them on every "*dies legibilis accustumatus*" in that and every other Term, unless excused by license, for ill health or "other reasonable cause."

The "*dies legibiles*" have been interpreted in statutes subsequent to the Reformation to be Mondays, Tuesdays, Wednesdays, and Thursdays; but the earliest calendar we possess (which is antecedent to the Reformation), and in which the "*dies non legibiles*" and "*dies non disputabiles*" are noted, does not correspond to this reckoning.

He is not to discontinue his Lectures for more than four days in a Term unless excused by licence, for ill health or other reasonable cause. He is not to absent himself for more than 14 days in a Term with licence. He is to provide a deputy in his absence. He is to continue his readings in the Long Vacation till the Feast of the Nativity of the Virgin Mary, unless excused by licence, for ill health or other reasonable cause.

He is to suspend his readings in Lent, if licensed, that he may be the more at leisure to prepare sermons.

About the beginning and end of every Term he is to declare the foundation and say psalms and collects for the dead. Once in a year, about the middle of a Term, he is to read his foundation deed, and in his Missa to say a collect for the Foundress.

If he contravenes these Ordinances he is to be admonished; if he does not reform on the second admonition, he is to be deprived of his stipend; if not on the third, to be removed.

3. These Ordinances have only been modified by use and necessity.

Duties actually performed.

4. With respect to the duties now actually performed by the Margaret Professor, nearly half of the Michaelmas Term I am fully occupied with the Voluntary Theological Examination, of which more will be said presently. In the same Term there is a second Theological Examination (the Crosse Scholarship), on a much smaller scale, in which also I take part. As soon as the Voluntary Theological Examination is ended I begin my Lectures. These I deliver twice a week, till within a few days of the end of Term, when my hearers

Rev. J. J. Blunt, B.D.

Margaret Professorship of Divinity.

are leaving for the Christmas Vacation. In the Michaelmas Term of 1849, I lectured four times a week, two of them repetition Lectures, the room (the Arts' School) having proved too small for the audience.

In like manner, in the Lent term, I lecture twice a week, beginning immediately after the B. A. Degrees have been taken; before which time my hearers have not returned into residence; and I continue the Lectures till within a few days of the end of Term, when they again are leaving for the Easter Vacation.

In the Easter Term (or rather half Term) I have not hitherto lectured, nor in the Long Vacation, against which omission however is to be set that I do lecture in Lent, from which by my foundation I am excused: a "reasonable cause," I submit, for not lecturing in the Long Vacation being that there would be no persons to hear me; and, in the Easter Term, that the whole interval, from the time when I cease Lectures to the time when I resume, is not more than I have hitherto required in which to prepare them.

This I have done on an average of one new course for every year since I have held the Professorship.

I have also occasionally taken a turn as preacher in the University church, a duty which, if not perhaps prescribed by my foundation, I have felt to be in accordance with it, and calculated to promote its ends.

No doubt the deed of endowment, however we may interpret the "*dies legibiles*," prescribes more Lectures in number than I have delivered, but it could not have contemplated any such careful composition of them as is now absolutely necessary if attention to them is to be secured; one of the provisions of it requiring the Professor to begin his readings within 14 days of his election, if that election takes place during Term; and within eight days from the beginning of the Term next following, if during Vacation.

Probably the word "*leget*" would have a more limited or literal meaning when books were chiefly if not altogether manuscripts, and copies of them rarely in the students' hands; and "*Lector*" be understood of one who had to give circulation to the contents of those manuscripts, which would have been otherwise out of his hearers' reach, and supply such remarks of his own as suggested themselves at the moment—the reading and not the comment the staple of the Lecture.

I may be here permitted to add that the preparation and delivery of Lectures, and the Examinations in which I am concerned, by no means represent all the duties I discharge in connexion with my office; the communications I am constantly having with the students, who consult me both personally and by letter with respect to the course of their theological studies, occupying a good deal of my time, and affording me much opportunity of being useful.

Lectures.

My Lectures have been on one or other of the ante-Nicene Fathers; on the use of those Fathers; on Liturgies, especially the Liturgy of the Church of England; and on Pastoral Theology, or the acquirements and duties of the Parish Priest.

The attendance on these Lectures varies. In the Lent Term of 1849 the average number of those who left their names for certificates was 140 In the Michaelmas Term of the same year, 344. In the Lent Term of 1850, 167. In the Michaelmas, 267. But besides these, there were many who did not leave their names, and whose numbers I have, therefore no means of knowing; amongst these latter, not a few, graduates.

Original endowment.

5. The original endowment of the Professorship was 20 marks, or 13*l.* 6*s.* 8*d.*, chargeable on the Abbey of Westminster, now paid in perpetuity by the Treasury, though not to that exact amount, 10*l.* 17*s* 10*d.* being the actual sum received, less income-tax, last year.

6. This endowment was augmented by King James I., with the great tithes of Terrington St. Clement's, and Terrington St. John's Norfolk, together with a small glebe and premises in the same county; and subsequently by one Alice Davers, with certain premises (now stables) in St. Edward's parish, Cambridge.

7. No extraneous sources of emolument are conjoined with it.

Fees.

8. No fees are received from persons attending the Lectures.

Present annual value.

9. The tithes have been commuted for an annual rent charge of 2,402*l.*; the glebe and premises in Norfolk let for 26*l.* per annum; the premises in Cambridge for 18*l.* per annum.

And here I would correct an answer to this question made by me through the Vice-Chancellor to a Parliamentary Inquiry in 1845. I then thought and stated the rent-charge to be 2,400*l.* instead of 2,402*l.*; the rent of the glebe and premises in Norfolk to be 25*l.* instead of 26*l.*; and I forgot and omitted the 18*l.* per annum for the premises in Cambridge.

Of course large deductions are to be made from this net sum for cost of collection, poor's rates, and various payments, legal, customary, and of good will.

Mode of Appointment.

10. The mode of appointment to the Professorship is by election. The electors are the Chancellor or Vice-Chancellor, the Doctors and Bachelors of Divinity who have been Regents in Arts.

The Professor must be "*una apta habilis et idonea persona.*" He holds his office for two years, but may be re-elected.

Residence.

11. There is no residence attached.

General condition of the study of Theology.

13, 14. In speaking of the general condition of the study of Theology in the University, and the means of promoting it more effectually, I shall omit all mention of the exercises for Degrees in this Faculty as falling within the Regius Professor's province to explain and not mine, and shall proceed to other matters.

There is a first or previous examination (as it is called), which takes place in the Lent Term of the second year. This all students have to pass: the subjects of it, Paley's Evidences of Christianity; the Old Testament History; and one of the Gospels in the Greek.

Rev. J. J. Blunt, B.D.

Margaret Professorship of Divinity.

There is a second examination for questionists who are not candidates for honours This occurs at the time of taking the B. A. Degree: the subjects of it, the first 14 or last 14 chapters of the Acts of the Apostles, and one of the longer or two of the shorter Epistles of the New Testament, in the Greek; the History of the Christian Church from its origin to the assembling of the Council of Nice; and the History of the English Reformation.

In the results of these examinations the Colleges are of course interested, and prepare their students accordingly.

The voluntary Theological examination.

These preparations and these examinations conduce to the success of the Voluntary Theological Examination, as it is called, which is a third examination in Theology that I have to notice. This examination, though open to all that have passed their B. A. Degree, and complied with a condition hereafter to be mentioned, is practically confined to persons about to take Holy Orders; and as most of the bishops now require a certificate from the candidates for imposition of hands of having passed it, the term "Voluntary" is become a misnomer. It is held in the beginning of the Michaelmas Term, or about nine months after the B. A. Degree. The subjects of it are—the Greek Testament; assigned portions of the Early Fathers; Ecclesiastical History; the Articles of Religion, and the Liturgy of the Church of England. This examination is conducted by the Regius Professor of Divinity, and the Margaret Professor of Divinity.

There is also a supplemental examination immediately following this, in an assigned portion of the Hebrew Scriptures, for those who volunteer to undergo it, and who have passed the former examination. This is conducted by the Regius Professor of Hebrew.

The Voluntary Theological Examination came into operation in 1843, in which year there were 14 candidates; in 1844 there were 36; in 1845, 83; and so on, in constant increase, till last year, when there were 205, which will probably prove pretty nearly the maximum.

The names of those who pass are arranged alphabetically, and published.

The amount of knowledge displayed by the candidates of successive years, though naturally not increasing in the proportion of the numbers, has been increasing very perceptibly; and on the whole, the working of the scheme, though admitting of improvements, of which I shall speak presently, has been, in my opinion, most satisfactory.

I have said that the preparations made in the colleges for enabling their students to pass the previous examination, and the examination for the B.A. degree, as well as the examinations themselves, have ministered to the success of the Voluntary Theological Examination, which, however, is more fully secured, and may be, I think, secured perfectly, by the lectures of the several Divinity Professors: these lectures, in their turn, conspiring with those of the colleges, to qualify the students for the former examinations also.

Compulsory attendance on Lectures.

Many of these Professors' lectures were numerously attended by the students, even whilst attendance was not at all compulsory; but by a Grace of the Senate, which came into operation last year, a certificate is now required of all persons who present themselves for the Voluntary Theological Examination of having attended the lectures delivered during one Term at least by two of the three Theological Professors. This regulation has the effect of swelling the amount of attendance, and ensuring, so far as it goes, an identity in the parties lectured and the parties examined.

Such is the character of the Voluntary Theological Examination as it exists at present.

In 1848 I addressed a letter to the Bishop of Llandaff, then Regius Professor of Divinity, and published it, in which I stated in detail my views of some improvements which might be effected in our system of teaching theology, consistently with preserving the main fabric of the University teaching, as it is. As in that letter I made those views known to the public, and more especially to the members of the Senate, who appeared to me then, and appear to me still, the persons best fitted to deal with such a question, from local knowledge, from proximate and tentative inspection of the progressive working of the measures for the improvement of the study of theology already introduced, from the interest they have of late manifested in the subject, as well as for another reason, to which I shall shortly advert,—as I then made my views, I say, thus public, I have no reason to withhold them from the Commissioners now.

Suggestions for improvements in the study of Theology.

They are grounded, first, on a projected amelioration of the mechanism of the Voluntary Theological Examination, to be brought about principally by some classification of the candidates who pass it, and by an addition to the examiners (with his own consent) of the Norrisian Professor of Divinity: secondly, on a more complete organization of the lectures of the three Divinity Professors (who would then be *ex officio* the conductors of the examination), such as would bring their lectures into a closer relation to one another, and to the examination itself; each Professor taking on himself one section of the subjects which enter into that examination, as the subjects for his own lectures, and his own share of the examination; and the three Professors thus acting in concert, embracing in their lectures all the subjects of the whole examination: thirdly, on the exaction, from those who present themselves for this examination, of a certificate of attendance at the lectures for a longer period than at present; in fact, for the entire courses of the respective Professors.

It would obviously require some time, in order to carry out this plan, but it is partially in progress even now. Thus, I, for my part, as an examiner in the Voluntary Theological Examination, have had for my share of the subjects, the assigned portion of the Early Fathers, the Ecclesiastical History, and the Liturgy of the Church of England; and I have for some time been engaged, and am engaged still, in reducing my lectures into a two years' course (a period the certificate should cover), which shall comprise all these subjects; the examination, so far as my department of it is concerned, being thus brought into strict

Rev. J. J. Blunt, B.D.

Margaret Professorship of Divinity.

correspondence with my lectures, and becoming a test of the attention bestowed on them by the students.

I have felt my way towards these amended arrangements, and have been drifted towards them by circumstances.

For several years after I succeeded to the Professorship, I lectured on the Early Fathers, taking them one after another, in their chronological order, giving a copious analysis of each, translating passages of any peculiar importance literally, and adding, at the end of each Father, a review of the various conclusions, ecclesiastical and theological, involved in his whole works, pointing specifically to the places from which I drew them.

I found, however, that this method failed to communicate to the students consecutive information (which it was my great object, in lecturing on the Early Fathers, to give them) of the state of the early Church, through any lengthened period of it; those who attended the lectures having run their course in Cambridge, long before I could possibly run mine through this series of Fathers, some of them being voluminous, and requiring much development.

It accordingly seemed to me more profitable to put my hearers in possession of the results of my own reading of these ante-Nicene writers, still constantly sustaining myself by references which they might verify and consult at home, and thus furnishing them with the materials for constructing a history of the Primitive Church, taken from original authorities,—a study which our own Church expressly recommends, or rather, enjoins; which our great Divines have cultivated most carefully; which upholds the canon of Scripture; supplies a practical comment on its meaning through the impressions of an age immediately succeeding that of the Apostles; which vindicates our Reformation both against Romanist and Puritan; and which, for all these reasons, has the strongest claims on the consideration of our clergy, and especially in times like our own.

I have already advanced far in giving this new cast to my lectures on Ecclesiastical History, and fitting them for the purposes of the Voluntary Theological Examination.

I still retain my former plan of lecturing on the assigned portion of the Early Fathers; another element, as I said, of that examination which falls to my lot; no better method having suggested itself.

In like manner, I am completing a course of lectures on the Liturgy, my third subject, part of which I have already delivered; as well as revising from time to time those on Pastoral Theology; still with an eye to the same Voluntary Theological Examination, which I regard as the crisis and consummation of the whole: a provision even now acting on the Church most advantageously, and destined, I feel convinced, under the propitious influences I have supposed, to effect eventually a great change for the better in the theological character of our Parish Priests.

The details I have given with respect to re-casting my own lectures, lead me to the mention of that other reason to which I alluded, as rendering it expedient that the reforms of our system should emanate from within our body, rather than from without, namely, that such adjustment of our lectures to our wants as I have described—an adjustment which the Professor is labouring to accomplish, simply because recommended to him by his own personal experience, the surest guarantee for its being sound and wholesome—runs great risk of being disturbed by the intervention of parties at a distance, who, however good their intentions, are not so intimately acquainted with his position, the difficulties and defects of it, and the remedies for those difficulties and defects, as he is himself, and who thus may dislocate plans which he has been shaping with care and pains, render his efforts abortive, break his spirit, and in the end, rather hinder than help the cause they wish to befriend.

Questions set at the Voluntary Theological Examination.

It may, perhaps, be worth while, for the sake of the future, rather than of the past, to observe, in conclusion, that the questions set at the Voluntary Theological Examination very often relate to topics handled in the previous lectures of the Professor, and that every year, as the lectures and examinations approximate, it may be expected that such will be the case more and more; and accordingly, that those who animadvert upon the questions as above the standard of the times, and the parties to whom they are addressed, and as calculated, if not meant, to mislead the public on the amount of information possessed by our students, have to be reminded that such questions as they denounce have probably been already discussed in the lectures, are now set expressly to ascertain whether the hearers of those lectures paid attention to them, and are frequently far better and more universally answered than others which are more trivial.

I have spoken much more of myself and of my proceedings than is at all agreeable to me, but the Commissioners, I trust, will perceive that it is of necessity and not of choice that I have done so.

I have, &c.,

Cambridge, February 21, 1851. (Signed) J. J. BLUNT.

Rev. W. H. Mill, D.D.

Regius Professorship of Hebrew.

Answers from the Rev. W. H. Mill, D.D., Regius Professor of Hebrew.

SIR, *Brasted, Kent, January* 15, 1851.

IN compliance with the request of Her Majesty's Commissioners for inquiring into the state of the University of Cambridge, I have the honour of submitting to their notice the following succinct replies to the questions annexed to your letter of the 20th November last, together with the more detailed remarks suggested by the last of them on the present condition of the University, in respect to Hebrew studies and the means of advancing the same.

Q. 1. By whom the Professorship was founded.
Q. 2. What the duties annexed to the Professorship by the original Foundation.
Q. 3. Whether these have been modified or changed, and in what particulars, by any subsequent authority.
Q. 4. What are the duties actually performed.

The Regius Professorship of Hebrew was founded by King Henry VIII. Its duties are defined, in conjunction with those of the cognate Professorships of Divinity and of Greek, in the original Statutes of Trinity College. They consist in lecturing four times at least in the week for the space of one hour during each academical term, and also during the long vacation, unless there should be a pestilence so dangerous as to cause the principal Colleges of the University to dismiss their inmates. The gradual alteration of habits in respect of residence until the present century, when the most salubrious summer in Cambridge would furnish but one or two, if any, who would attend Hebrew lectures, has made the last condition obsolete with regard to this, even more than the two other Professorships. And with respect to all these Professorships the obligation of *four* lectures has been expressly reduced to that of *two* lectures in each week by the revised Statutes of King Charles II.

Ever since the October term of the year 1848, in which I was instituted to the Professorship (and in the course of which I delivered four lectures), my practice has been to comply with the original stricter Statutes, so far as to give four lectures a-week during the whole of the usual period of academical residence in each term; that is, two critical lectures in the Schools on the interpretation of some pre-announced portion of the Hebrew Scriptures, which my hearers follow with the original text before them; and two elementary lectures on the language in my rooms at Trinity College. But beside this standing duty of my office, which I propose to continue without relaxation, I have other occasional duties which, though not imposed by the Foundation, or by any authoritative modification of it, are by usage inseparable from the Professorship. These are (1) assisting the four other Regius Professors (of Divinity, Law, Medicine, and Greek) and the Public Orator in the examination for the University Scholarships founded by Lord Craven and Dr. Davies: also more specially (2) the examination for the Hebrew Scholarship founded by Mr. Tyrwhitt; and (3) the Hebrew portion of the examination for the Theological Scholarship founded by Mr. Crosse; and (4) of the voluntary Theological examination in October.

Q. 5. Nature and amount of the original Endowment.
Q. 6. In what way subsequently augmented.
Q. 7. Extraneous sources of emolument (none).
Q. 8. Fees for lectures (none).
Q. 9. Present annual value of the Professorship.

The salary attached to the Professorship, and received according to the original endowment from the Royal Foundation of Trinity College, is 40*l.* per annum; but as this stipend, once a liberal one, has been long augmented from other sources to the Regius Professor of Divinity, so at length, by an Act of the present reign, have the Professorships of Hebrew and Greek been endowed with Canonries in the Cathedral Church of Ely. Being the first Hebrew Professor to enter upon this enlarged endowment, I have never, like my predecessors who were destitute of it, exacted any fee from those who attend my lectures, either the critical or the elementary, but invite all members of the University to attend them gratuitously. The pecuniary value of the Professorship is therefore to me 640*l.* per annum.

Q. 10. Mode of appointment. Election to the office. Conditions of eligibility, and of tenure.

The election to the office is with the Vice-Chancellor, the Heads of Trinity, St. John's, Christ's, and King's Colleges, with the two senior Fellows of Trinity. The candidate, who must be a Graduate in Divinity, or a Master of Arts, may be examined as to his competency for the Professorship by these authorities; but is always obliged to deliver before them in the public Schools a Latin Prælection illustrative of some Hebrew passage. The condition of tenure is the performance of the academical duties imposed on the Professor as such (*Q.* 2, 3), and now also of those which are required of him as Canon of Ely (*Q.* 6) by the Cathedral Statutes.

Q. 11. Residence; museum, &c. (none).
Q. 12. (Inapplicable).

I occupy by virtue of my office rooms in Trinity College. There is no library or museum of any kind attached to the Professorship.

Q. 13. Whether the duties enjoined might be usefully modified.

I know no better mode of fulfilling the objects of the Professorship than by continuing to combine elementary instruction to the younger Students, with critical and exegetical lectures to the more advanced; both of which, as I have before observed (*Q.* 4), come entirely within the injunctions of the existing Foundation.

Q. 14. Condition of this branch of study in the University.

The disposition towards the study of the Hebrew language depends mainly in this University, as in England generally (whatever may be the case in other countries), on its esteemed connexion with theology. It is of moment that this connexion should be rightly estimated; neither undervalued on the one hand, nor exaggerated, as by those (including some popular lexicographers) who would ascribe to the language itself a prerogative of sanctity which belongs only to its inspired writings, finding mysteries of science in its elements and its structure. The application to its study of just and reasonable principles of philology cannot fail to evince its great importance in sacred learning, to contribute a variety of illustration to the earliest records of mankind, and more especially to that system of intellectual and moral discipline by which the ancient possessors of Divine revelation were trained for a more perfect light hereafter; when this sublime aphoristic speech was to be succeeded by other more appropriate vehicles to the world at large. That intelligent interest in the subject, which I believe to be increasing in the University, needs but a right direction and assistance to lead to very beneficial results.

Rev. W. H. Mill, D.D.

Regius Professorship of Hebrew.

Necessary imperfection of the ordinary study of Hebrew.

Of those who attend lectures it is certain that a large proportion will of necessity, and yet more from choice, be content with a very moderate knowledge; while all should be encouraged to seek the highest attainable proficiency. And it is more peculiarly necessary to bear this in mind in the case of our present subject, because there is none among the studies pursued in the University, in which the mistake of a superficial for an accurate knowledge is so easily made, or with such difficulty corrected to the many. A learner who should begin his Greek reading with the New Testament might imagine, after being enabled to construe the text of some books in it, that he was in a condition to criticize the accuracy of our own or other versions; but the first other Greek book that he attempted to read would suffice to undeceive him; to show him probably that his imagined facility in interpreting the Hellenistic text of the sacred books proceeded from the unconscious recollection of what he had fancied himself competent to judge or to correct. But a learner who had made an analogous study of the original text of the *Old* Testament, and with the same natural imagination, has no *such* means of correcting his mistake, and perhaps continues under its influence all his life. And as it is this mistake alone in any case that verifies the proverbial remark (which were otherwise most untrue) that total ignorance is preferable to "a little knowledge," the effect of such an error cannot be too carefully guarded against here. It is most desirable that all whose Hebrew study is thus limited should be made to understand the necessary imperfection of their grasp of an ancient language, whose extant monuments are so few compared with what must have been its actual extent and copiousness; and that without some further means than they now possess of independent critical knowledge, they are utterly incompetent to review the work of the Hebraists either of the 5th or of the 16th centuries, to correct their real defects or errors, or to measure their value as interpreters with those who had preceded or who have followed them. With the notice of these further means of critical knowledge, and of the opportunities of their cultivation in Cambridge, I will now conclude my answer to the last question of Her Majesty's Commissioners.

Rabbinical literature.

The study of Rabbinical literature is the most obvious of these means; and as this involves the actual tradition of those who had the custody of the original text of the Ancient Scriptures (and till a period subsequent to the Christian era its *sole* custody), the utility and importance of this study is necessarily very considerable. Opportunities for its cultivation are never wanting where there are Jewish teachers, such as have always within my memory existed in Cambridge; an eminent learning in this department characterizing the individual who has now for many years received an annual stipend as Hebrew teacher from the University, and whose instruction to the pupils that engage him I have found usefully auxiliary to my own. As the tradition, however, to which this study owes its importance has never since the last great dispersion flowed in a clear unbroken stream—as it is separated, at the highest point to which we can trace it, by very many centuries, from the books whose true critical interpretation is the great object of our search—as it is in regions and under habits very uncongenial to those of the ancient inhabitants of Palestine that the tradition has had its course, before as well as after the highest point of which I speak—its accuracy or purity can never be implicitly trusted. And it becomes an especial duty of those who occupy the Professorial chair in the University to guard others against an overweening or exclusive attachment to a mode of Hebrew study possessing such a prescription as this. The consequences which I would deprecate are—the holding of even the ablest Jewish grammarians as of unquestionable philological authority respecting the ancient language; the disposition to regard superstitiously as infallible the Masoretic determination (valuable as it is) of the text of the Old Testament; and in consequence to disregard contemptuously the testimony which the Alexandrine and other ancient versions often afford to a Hebrew text, varying from that which the existing Jewish MSS. contain.

Means of its pursuit in Cambridge.

Necessity of the study of the cognate Semitic languages.

A more important help, in my judgment, and certainly no less indispensable to a critical mastery of the ancient language of Palestine, is the study of the other Semitic languages, *i. e.*, not only of the old Biblical Chaldee, which, after succeeding the Hebrew as the common speech of the Jews, and surviving in many Rabbinical writings, has also become extinct; but of its sister dialect, the Syriac, of which, though now a dead language, there is a large body of good ecclesiastical literature extant; and also of the yet living Arabic and Ethiopic languages. The original sameness in structure in all these forms of speech, and the preservation of the roots common to them, which, in the instance of the Bedouin Arabs especially, has been in the very soil and climate in which they flourished in the ages of the Bible, unmixed from that time to the present with any foreign language or idiom, mark the great importance to the Hebraist of this collateral aid, and of none more than that which we derive from Arabia, and its older ante-Mahometan monuments. The recently discovered remains of the ancient Assyrian empire have indeed afforded to our own time an accession, which no preceding age had anticipated, to our means of exploring the ancient Aramaic language, as it existed prior to its records in the books of Daniel and Ezra; but were this accession far more abundant than it can ever prove to be, it would not supersede the larger supplies which we have from the later Syriac and Arabic literature. The ready access to this help of sacred philology is the principal advantage of the last century and a half over the age to which we owe most of our authorized versions of the Scriptures; and notwithstanding the excesses in its application by many of the Schultensian school, it must ever continue to be the most valuable implement of Hebrew criticism, without which none can aspire to any eminence in its pursuit.

Desirableness of further encouragement to this study in the University.

Any means therefore by which the study of Arabic may be promoted, I should regard as directly conducing to the objects of my Professorship. And I am the more willing to recommend the claims of a language which, while ancient and very little changed, yields scarcely

Rev. W. H. Mill, D.D.

Regius Professorship of Hebrew.

to any in the extent of territory and of population among which it is now spoken and cultivated; because it does not appear that, in the encouragement recently given in the Universities to the study of the modern languages of Europe, those of Asia have shared in the least. Yet even in a political view, our ever increasing relations to the East bear a sufficient proportion to those with our kindred nations in Europe and America, to give to the cultivated languages of the Levant, of Persia, of Turkey, and of our own possessions in India, a great claim on our interest and attention.

Hoping that these observations may not be wholly unworthy the attention of Her Majesty's Commissioners, to whom I would very respectfully submit them, as in some degree meeting the object of their questions addressed to me,

I have the honour to be, Sir,
Your most obedient humble servant,
(Signed) W. H. MILL, D.D.,
Regius Professor of Hebrew.

Rev. W. H. Bateson, &c. &c.

Regius Professorship of Greek.

The Regius Professorship of Greek.

The Rev. James Scholefield, M.A. Regius Professor of Greek, was so good as to reply to the questions which were addressed to him respecting his Professorship and the studies to which it relates, but the Professor having subsequently informed the Commissioners that the information which he had sent was not written with a view to publication, it has not been considered right to include it in the body of evidence.

Rev. T. Robinson, D.D.

Answers from the Rev. Thomas Robinson, D.D., Lord Almoner's Professor of Arabic.

Professorship of Arabic.

1.* In answer to my inquiries addressed to the Almonry Office, I am informed by the Secretary, that after a careful search he finds only that in the year 1724 the two Professors (one in each University), called Readers in Arabic, were in the payment of that office, under the authority of the Lord Almoner; and that there are no Records whatever anterior to that year, nor anything to show their origin.

Foundation.

No statutable requirements.

2. I am not aware of any Rules laid down in the original Foundation or Constitution for the duties of the Professorship.

3. I am not aware of any subsequent instructions.

Duties actually performed.

4. Lectures are given in Arabic or Persian Literature, and in the explication of some author, in the Easter Term, three days in the week.

Endowment.

5. The original endowment was 50*l.* per annum, from which sum 9*l.* 10*s.* is annually deducted for Exchequer Fees.

6. Not subsequently increased.

7. No extraneous sources of emolument.

No Fees.

8. No Fees from those who attend Lectures.

Present Value.

9. The present value, 40*l.* 10*s.*

Appointment.

10. The appointment is vested in the Lord Almoner.

No Library.

11. There is no Library appropriated; but there is a Class of Oriental Books in the University Library, which might with great advantage be increased, not only by the addition of MSS., but of many Foreign Editions of Oriental Authors and by a Catalogue Raisonnée.

Suggestions.

13. The number of those who wish to avail themselves of the Lectures is so small, that the time of the Professor would probably be more profitably employed in the preparation of Class books in Arabic and Persian, and the editing some good authors in those languages. To any such plan I shall be most happy to give my best attention, in concert with the Regius Professors of Arabic and Hebrew. But the demand for such books being trifling in this country, and the charge of printing them very great, it will be necessary that provision should be made for the expense of such publications.

Establishment of Arabic Scholarships.

14. I believe the only probable means of increasing the number of Students in those languages, and of exciting a general spirit for their cultivation, would be the establishment in the University of one or more Scholarships, similar to those which have been attended with such marked success in promoting the study of Hebrew.

(Signed) THOS. ROBINSON, D.D.,
Lord Almoner's Professor of Arabic.

REVEREND SIR, *Master's House, Temple, March* 17, 1851.

Lecture Rooms.

In reply to your letter of the 19th ult., Ihave the honour to state, for the information of Her Majesty's Commissioners, as the only points within my own knowledge, that

* The numbers refer to the Articles of Enquiry, Nov. 20, 1850.

Rev. T. Robinson, D.D.

Professorship of Arabic.

one of the rooms of the Pitt Press has always been kindly assigned to me, by the authority of the Vice-Chancellor, for the purposes of my Lectures, as I believe is the case also with some others.

That my Lectures have always been gratuitous.

No Fees.

That no Residence, or Rooms in College, are attached to my Professorship. Such provision would undoubtedly facilitate the adoption of regulations for securing residence, which under existing circumstances is impossible, except the Professor be also a Fellow of his College.

No Residence

I have the honour to be, Reverend Sir,
Your obedient and faithful servant,
(Signed) THOMAS ROBINSON, D.D.,
Lord Almoner's Professor of Arabic.

Rev. W. H. Bateson, &c. &c.

Answers from G. G. Stokes, Esq., M.A., Lucasian Professor of Mathematics.

G. G. Stokes, Esq., M.A.

Pembroke College, Cambridge, March 1851.

Professorship of Mathematics.

Sir,

In reply to the Circular dated November 20, 1850, which I had the honour of receiving from you, I beg to forward the following statement for the information of Her Majesty's Commissioners.

I have the honour to be, Sir,
Your obedient humble servant,
(Signed) G. G. STOKES,
Lucasian Professor of Mathematics.

To the Rev. W. H. Bateson, Secretary.

Foundation.

The Lucasian Professorship was founded by Henry Lucas, Esq., in the 17th century. With respect to the duties annexed to the Professorship by the original foundation; the nature and amount of the original endowment; the mode of election to the office; the conditions of eligibility; of tenability—I beg to refer to the Deed of Foundation, of which a copy is subjoined. (See Deed of Foundation, marked A.)

Duties actually performed.

The duties actually performed consist in examining the Candidates for the Smith's Prize and Bell Scholarship, and in delivering a course of lectures in the Easter Term. Besides this, in the present Term I revived the practice of being at home twice a week for two hours each time, for the purpose of receiving persons who wish to consult the Professor on mathematical difficulties, a practice which had fallen into disuse. I have not yet had much experience as to the practical working of this system, but from what I have already seen I am inclined to think that it will be useful,* in which case I shall feel bound to continue it, except, perhaps, in the Easter Term, when I give daily lectures.

The original endowment has not been subsequently augmented.

Fees.

There are no extraneous sources of emolument conjoined with it, unless fees for attendance at lectures can be considered such. On the contrary, the Royal Grant (see document marked B) which confirms the deed of foundation excludes the Professor from College and University offices, and prevents him from holding any benefice which involves cure of souls or requires residence contrary to the statutes relating to the Professorship. This grant contains, however, a dispensation to the Professor to hold a Fellowship at any College along with his Professorship, notwithstanding any College statute to the contrary. A later grant (see document marked C) contains a dispensation to the Professor to hold his Fellowship without taking Holy Orders. The validity or invalidity of these dispensations, under various circumstances, seems to involve several legal questions, into which I do not enter.

Amount of Fees.

A fee of two guineas is received from each person attending for the first time the lectures of the Professor. As I have not held the Professorship for two years I cannot give an average: the amount received the first year was 35*l.* 14*s.*

Present Annual Value.

The present income of the Professorship arises from two sources—first, the rent of the farms purchased by the executors of Mr. Lucas, secondly, the fees for attendance at lectures. The gross rental of the farms is 155*l.* a-year. The rent was fixed after certain repairs had been agreed on which were to be executed by the landlord; and therefore a certain percentage, say 10 per cent., of the expense incurred on entering into possession, ought to be deducted from the annual rent. Besides this, there are certain expenses attending the collection of the rent, and allowances on account of tiles, &c., the average amount of which I do not at present know, but which may be estimated at about 7 or 8 per cent. of the rent, say 11*l.* This gives,—

	£.	s.	d.
Gross rent	155	0	0
Deduct for repairs £15 3 5			
Ditto insurance 2 18 0			
Ditto expenses of collection, &c. (about) 11 0 0			
	29	1	5
Net value, about	£125	18	7

* Subsequent experience leads me to doubt whether this provision is likely to be efficient at present.—(*Note added Dec.* 20.)

G. G. Stokes. Esq., M.A.

Professorship of Mathematics.

As to the receipts for lectures I cannot give an average, and shall therefore take them the same as the first year, namely 35*l.* 14*s.* From this is to be deducted 4*l.* 4*s.* for the wages of an assistant, leaving a net balance of 31*l.* 10*s.* This gives approximately for the net income—

	£.	s.	d.
Rent . . .	125	18	7
Lectures . .	31	10	0
	£157	8	7

The delivery of lectures involves, however, some additional expense on account of the purchase and maintenance of a collection of instruments. If a reasonable deduction be made on this account, the net income will be reduced to somewhere about 140*l.*

No Residence, Museum, Library, Collection, or Apparatus.

There is no residence, museum, library, collection, or apparatus attached to the Professorship. There is nothing handed down from one Professor to another except a few letters and manuscripts. There are no funds available for the purchase or maintenance of any museum or collection of instruments. The instruments employed in lecture are the private property of the Professor. It has latterly, however, been usual for the Professor who undertook the course of lectures which I now deliver to take the instruments employed by his predecessor, on a private agreement respecting the cost; and in this very restricted sense the instruments may be regarded as forming a collection attached, not to a particular Professorship, but to the course of lectures delivered on a particular subject. The additions to the apparatus made from time to time are made at the Professor's own expense.

Subjects of Lectures.

The subjects (Optics and Hydrostatics) to which my lectures refer do not, like Chemistry, require much *systematic* instruction in processes of experimental research. An opportunity is afforded to students at lecture of witnessing, and in some cases of performing, a variety of qualitative experiments; and the mode of performing the more important quantitative experiments is explained. But in these subjects any new researches likely to be undertaken which involve quantitative experiments must, for the most part, be of a character so completely original that no general directions can well be given.

Statutes relating to the Professorship.

I think that the statutes relating to the Lucasian Professorship have been drawn up with great wisdom, and that it would be inexpedient (not to enter into the question of right) to alter them in any essential respect. With respect to the provision for receiving students who wish to consult the Professor, I beg to refer to what I have already said. The practice of delivering to the Vice-Chancellor written copies of not fewer than ten of the lectures delivered by the Professor in the preceding year has not, I understand, been attended to since the time of Newton, nor does it seem desirable that it should be continued. No Professor, I imagine, would scruple, under the existing regulations, to substitute a continuous course of lectures for the weekly lecture required by the statutes, which, from the change of customs, would be useless, or all but useless, if delivered. Were the duties of the office much increased, no one, I conceive, whom it would be desirable to have would undertake the office, at least with the present salary. Besides, I do not see how the general instruction of the Students (I speak with reference to Mathematics and Mathematical Physics) could be undertaken by the Professors without a virtual abolition of the office of Professor as at present constituted. I feel satisfied that the ordinary instruction of the great mass of Students cannot be effectually carried on without question and answer, which would altogether change the character of a Professorial lecture. Besides, lectures of this kind, in order to be effectual, would take up so much of the time of the Professors as would leave them no leisure to pursue the branches to which they especially attend to the extent which the modern state of science requires, if it is to be at all adequately represented in the University. I do not at all mean to say that lectures accompanied by experiments are not of great value as *supplementary* to other modes of instruction. But the delivery of such lectures involves no change in existing regulations.

Physical Science.

Suggestions.

My Professorship relates to Mathematics generally, with respect to which the reputation of Cambridge is too well established to need remark. In the opportunities afforded by the University for the study of physical science, there is, however, one desideratum to be noticed, which is *a museum of physical instruments*. There are, I believe, few Universities of any note which are not provided with a museum of the kind. An assortment of the usual instruments required in exact quantitative experiments would be too extensive for anything but a public collection. Such a collection would be useful, not only for the lectures of the Professors, but for enabling resident Graduates who might be engaged in original investigations to perform experiments, to which their researches might lead them, which would require the use of exact instruments. It would be highly advantageous, too, that students generally should have access to such a collection, so far as to see the instruments; more than this would hardly be compatible with the safety of the more delicate ones. For, even though the use of the instruments were explained in the lectures of the Professors, it would greatly tend to clearness of conception in the minds of the Students to have the power of examining them one by one, according as their studies led them to the consideration of such or such an instrument. In the department of Astronomy, an opportunity is in fact afforded to the Students, by the establishment of the observatory, of inspecting the instruments actually employed in the science. A collection such as that here contemplated would not, of course, consist of instruments on at all the same scale of magnitude and expense as those which are devoted to astronomical observation in a first-rate observatory.

G. G. Stokes, Esq., M.A.

Professorship of Mathematics.

Deed of Foundation.

(A.)

Deed of Foundation.

Omnibus Christi fidelibus ad quos hoc presens scriptum pervenerit Robertus Raworth de Grayes Inn, in comitatu Middlesexiæ, armiger, et Thomas Buck de Cantabrigia, in comitatu Cantabrigiæ, armiger, executores ultimi testamenti dignissimi viri, Henrici Lucas de London, armigeri nuper defuncti, salutem in Domino sempiternam. Sciatis, quod cum prædictus venerabilis et consultus vir Henricus Lucas, armiger, ex propenso suo in Academiam Cantabrigiensem, et in rem literariam affectu a præfatis Roberto Raworth, et Thoma Buck, executoribus suis, terras comparari ad valorem centum librarum annuatim supremo testamento mandaverit, in annuum Professoris, seu Lectoris Mathematicarum Scientiarum in dicta Academia stipendium vel salarium perpetuo cessuras, sub ejusmodi constitutionibus et regulis, quas executores sui, adhibito Procancellarii et Prælectorum Collegiis dictæ Academiæ consilio, tam honori magno istius corporis, quam hujusce literaturæ, omni hactenus præmio destitutæ, incremento ac promotioni judicaverint summopere accommodatas; nos prædicti executores, pro ratione fidei nobis commissæ de exequenda præclari benefactoris voluntate soliciti, rogato prius et impetrato dictorum Procancellarii et Præfectorum consilio, habitoque ad id consilium præcipuo respectu, ordinationes infra scriptas, promovendis istis studiis Mathematicis, uti arbitramur, apprime conducentes, approbamus, omnique per dictum Henrici Lucas testamentum nobis concessa authoritate ratas volumus et declaramus.

Itaque statuimus imprimis et ordinamus, quod perpetuis futuris temporibus quicquid annui reditus (deductis necessariis expensis) ex prænotatis terris ad usum prædictum acquisitis vel acquirendis quacunque justa ratione accreverit, id integre cedet in subsidium et præmium Professoris Mathematici, modo infra dicendo, et sub conditionibus mox exprimendis electi, et constituti.

Quod officium attinet dicti Professoris Mathematici, ut horum studiorum, qua publice, qua privatim, excolendorum ratio habeatur, volumus et statuimus ut dictus Professor teneatur singulis intra unius cujusque termini Academici spatium septimanis semel ad minus aliquam Geometriæ, Arithmeticæ, Astronomiæ, Geographiæ, Opticæ, Staticæ, aut alterius alicujus Mathematicæ disciplinæ partem (pro suo arbitratu, nisi aliter expedire Procancellario visum fuerit) per unius circiter horæ spatium legere atque exponere, loco et tempore a Procancellario assignandis sub pœna quadraginta solidorum pro singula lectione omissa, ex stipendio ipsi debito per Procancellarium subtrahendorum, et Bibliothecæ Academicæ, pro coëmendis libris, vel instrumentis Mathematicis, applicandorum; nisi ex gravi corporis infirmitate officio suo satisfacere non poterit. Quam tamen excusationem nolumus ultra tres septimanas valere, ut nisi elapsis tribus septimanis alium substituat idoneum Lectorem, Procancellarii judicio approbandum, sciat sibi pro qualibet lectione prætermissa viginti solidos de stipendio suo per Procancellarium subtrahendos, et usui prædicto applicandos. Quo autem dictus Professor ad munus hoc legendi non perfunctorie præstandum efficacius astringatur, præstiti fideliter ab ipso officii certius extet indicium, et studiorum præsentium fructus quadantenus etiam ad posteros derivetur, statuimus ut dictus Professor semel quotannis, proxime ante festum Sancti Michaelis non pauciorum quam decem ex illis quas præcedente anno publice habuerit, Lectionum exemplaria nitide descripta Procancellario exhibeat, in publicis Academiæ archivis asservanda; quod si ante tempus præscriptum facere neglexerit, eo usque careat stipendio suo, donec effectum det, et quanta fuerit rata portio temporis postea elapsi, usque dum id perfecerit, tantam redditus sui vel salarii annui partem Procancellario teneatur exolvere, Bibliothecæ Academiæ ad usus prædictos applicandam. Quinetiam decernimus, ut dictus Professor teneatur duobus per singulas cujusque termini hebdomadas a Procancellario præstituendis diebus, unoque extra terminum die, quandocunque dictus Professor in Academia præsens fuerit, per duas horas itidem prælegendas omnibus illum consulturis vacare, liberum adeuntibus aperto cubiculo accessum præbere, circa propositas ipsi quæstiones, et difficultates haud gravate respondere; in eum finem globos et alia idonea instrumenta Mathematica penes se in promptu habere; inque omnibus ad illud propositum spectantibus studiosorum pro sua virili conatus adjuvare; quorum aliquod si ultro neglexerit, corripiatur a Procancellario, et si de neglecto officio sæpius admonitus neutiquam se emendaverit, poenam incurrat intolerabilis negligentiæ inferius decretam.

Porro ut horum observatio fortius muniatur, et ne quis ex dicti Professoris absentia aboriatur neglectus, statuimus ne dictus Professor inter præfinita terminorum intervalla Academia excedat, aut alibi extra Academiam per sex dies continuos moretur, nisi gravissima de causa per Procancellarium approbanda, idque petita prius et impetrata a Procancellario venia: sin fecerit secus, quanta fuerit rata portio temporis ab egressu suo præterlapsi, tanta salarii sui parte penitus excidat. Quod si forte diutioris ab Academia absentiæ, quæ dimidii termini spatium excedat, causa acciderit necessaria, Procancellarii, et duorum (qui Collegiorum Præfecti fuerint) seniorum Doctorum judicio approbata, aliquem interea idoneum substituat, qui suo loco legat, et reliquis muniis fungatur modo supradicto, et sub poena consimili.

Quinimo pari causa, ne dictus Professor ab officii sui debita executione distrahatur, nolumus omnino et prohibemus, ut is ulla quavis ecclesiastica promotione gaudeat, quæ animarum sibi curam adnexam habeat, aut residentiam exigat hisce statutis adversantem; sub pœna amissionis, ipso facto, omnis juris quod in hac sua professione prætendere valeat.

Quoad personam vero et qualitatem Mathematici Professoris, volumus et injungimus, ut qui huic provinciæ admovetur, sit vir bonæ famæ, et conversationis honestæ, ad

Professorship of Mathematics.

Deed of Foundation.

minimum Magister artium, probe eruditus, et Mathematicarum præsertim scientiarum peritia instructus. Ejus autem nominandi, et eligendi jus et potestas esto penes nos prædictos executores venerabilis viri Henrici Lucas, durante nostra utriusque vita, aut uno supremum diem obeunte, penes alterum e nobis, qui in vita superstes permanserit. Postea vero perpetuo futuris temporibus ejus eligendi plena potestas sit penes Procancellarium, et Præfectos omnium Collegiorum dictæ Academiæ, vel illam partem Præfectorum qui electioni interfuerint, et peragatur tunc electio in hunc modum. Postquam Mathematici Professoris locum quacunque ex causa vacare contigerit, Procancellario incumbet quam cito fieri poterit, schedula scholarum publicarum ostio per octo dies continuos affixa, cum de dicta vacatione, tum de tempore ad futuram electionem destinato significare (tempus autem electionis ultra trigesimum a prima significatione diem extrahi nolumus) quo tempore dicti electores publicis in scholis in unum congregati juramento semetipsos obstringant, seposito omni privato respectu, affectuque sinistro, se nominaturos, et suo comprobaturos suffragio quem, conscientia teste, ex petitoribus (vel ex iis qui ab electorum quolibet nominantur) maxime secundum prænotatas qualitates idoneum censuerint ad id munus obeundum; is vero, in quem plura suffragia conspiraverint, pro electo habeatur: quod si duobus forte vel pluribus paria obvenerint suffragia, Procancellario jus erit unum ex illis, qui aliis (si quando id contigerit) plura et inter se paria suffragia obtinuerint, pro suo arbitrio eligendi. Electus autem proximo opportuno tempore admittatur a Procancellario, præstito ante admissionem juramento se munus Professoris Mathematici a dignissimo viro Henrico Lucas in hac Academia institutam juxta ordinationes et statuta officium suum concernentia, pro suo posse fideliter executurum. Denique, quo prædictus Professor intra debitos honestatis atque modestiæ limites contineatur, neque de ulla criminum ultro admissorum impunitate præsumat, statuimus ac decernimus, ut si dictus Professor convictus fuerit vel propria confessione, vel per testes idoneos, vel per evidentiam facti de crimine aliquo graviore (puta de læsa Majestate, hæresi, schismate, homicidio voluntario, furto notabili, adulterio, fornicatione, perjurio) vel si intolerabiliter negligens fuerit, neque pœnis superius expressis poterit emendari, per Procancellarium et Collegiorum Præfectos (vel majorem eorum partem) a sua amoveatur Professione, sine spe regrediendi, aut commodum aliquod ulterius percipiendi. Quod si senio, morbo diuturno, aut incurabili impotentia, seu debilitate corporis vel animi fractus, suæ Professioni (modo et forma prædictis) perficiendæ non suffecerit, abrogetur ei Professio per Procancellarium et dictos Præfectos (vel majorem eorum partem) hoc tantum adhibito moderamine, ut illi (sic a Professionis munere non sua culpa dimisso) si tempore Professionis suæ laudabiliter se gesserit, neque alias ipse de proprio ad valorem centum librarum annuatim provisum fuerit, tertia pars stipendii remaneat usque ad mortem suam; reliquis partibus successor sit tantisper contentus, integrum post ejus mortem percepturus. In cujus rei testimonium nos præfati Robertus Raworth et Thomas Buck sigilla nostra præsentibus apposuimus. Dat. 19 die Decembris, Anno Regni Domini nostri Caroli Secundi dei gratia Angliæ, Scotiæ, Franciæ, et Hiberniae, Regis, Fidei Defensoris, &c., decimo quinto, Annoque Domini 1663.

(B.)

Grant of King Charles the Second confirming the Foundation.

Carolus Secundus Dei Gratia Angliæ, Scotiæ, Franciæ, et Hiberniæ Rex, Fidei Defensor, &c. Omnibus et singulis has literas visuris salutem. Cum per dilectos nostros Robertum Raworth et Thomam Buck, Armigeros, Executores ultimæ voluntatis consulti viri Henrici Lucas, Armigeri, nuper defuncti innotuerit nobis dictum Henricum Lucas in rei literariæ beneficium Professoris Mathematici munus in Academia nostra Cantabrigiensi instituisse; necnon dictis iisdem Executoribus suis, adhibito Procancellarii et Præfectorum Collegiis dictæ Academiæ consilio, quæ ad dicti muneris commodam constitutionem, ac executionem debitam sibi ex usu viderentur, ordinandi curam commendasse: Et cum dicti Executores pro ratione fidei sibi commissæ, rogatò prius et impetrato prædictorum Procancellarii, et Præfectorum consilio, ordinationes quasdam fecerint eo conducentes, quas a nobis supplicite oraverint authoritate nostra regia stabilitas iri et ratificatas. Item cum dicti Executores de prædicto munere ulterius bene mereri studentes, juxta consilium Prædictorum Procancellarii et Præfectorum, per sanctionem quoque nostram Regiam dicti Professoris Lectionibus publice habendis certos ex Academicis auditores assignari; ab Electoribus dicti Professoris et ab Electo Professore juramentum exigendi potestatem fieri; dicto Professori, si Collegii cujusvis socius fuerit, sodalitii sui una cum dicto Professoris loco retinendi privilegium indulgeri; et si ante susceptum hoc munus socius non fuerit, ut postea in socium eligi possit, facultatem concedi; eundemque demum Professorem a muneribus quibusdam publicis obeundis eximi ac prohiberi a nobis itidem supplices efflagitaverint; Nos dictæ Academiæ commodo juxta ac studiorum profectui consultum capientes, dictorumque votis Executorum benigne annuentes, imprimis ordinationes istas a prædictis Executoribus confectas Regia nostra potestate sancimus, et confirmamus, iisque omnibus et singulis plenum obsequium deberi atque præstari volumus et mandamus. Item lectionum, quas secundum ordinationes prædictas Professor Mathematicus habere tenetur, auditores esse volumus non-graduatos omnes post annum secundum, et Artium Baccalaureos omnes usque ad annum tertium sub eadem pœna cui per statuta Academica obnoxii sunt a reliquis publicis Lecturis absentes. Quinetiam Procancellario potestatem impertimus juramentum exigendi et administrandi tam illis, qui per dictas ordinationes eligendi jus obtinent, quam Professori electo et mox admittendo, juxta sensus in dictis ordinationibus expressos, atque præscriptos. Porro volumus et statuimus, ut dictus Pro-

fessor eligi possit in socium cujusvis Collegii non vetante professione sua; et ne is sodalitio suo, si quod ante susceptum hoc munus obtinuit, aut postea obtinebit, vel ullis sodalitii sui emolumentis aut privilegiis eo tantum nomine, seu causa privetur, quovis cujuscunque Collegii statuto non obstante. Nolumus denique et prohibemus, ut prædictus Professor Decani, Thesaurarii, Seneschalli, aut Lectoris cujusvis in suo Collegio munus capessat, aut ut inibi Tutorem se gerat (nisi Nobilium forte vel generosorum sociis commensalium) vel ut Procuratoris, Taxatoris, aut alterius cujuslibet lectoris publicum in Academia officium sustineat, sub pœna omissionis ipso facto omnis juris, quod in hac sua professione prætendere valeat. Quapropter et dictum Professorem ab omnibus et singulis muneribus istis prædictis liberatum volumus et exemptum. In cujus rei testimonium has literas nostras fieri fecimus patentes. Teste me ipso apud Westmonasterium decimo octavo die Januarii, Anno Regni nostri decimo quinto.

(C.)

Grant of King Charles the Second, containing a Dispensation to the Professor to hold a Fellowship without taking Holy Orders.

Carolus Secundus, Dei Gratia Angliæ, Scotiæ, Franciæ, et Hiberniæ Rex, Fidei Defensor, etc. Omnibus et singulis has literas visuris salutem. Cum munus Professoris Mathematici in Academia nostra Cantabrigiensi a consulto viro Henrico Lucas non ita pridem institutum authoritate nostra regia et literis patentibus stabiliverimus, et ordinationes ad idem munus spectantes raticaverimus, et ad petitionem executorum cum consilio Procancellarii et Præfectorum privilegia insuper nonnulla eidem Professori Mathematico in perpetuum concesserimus; inter quæ statuimus ut dictus Professor eligi possit in socium cujusvis Collegii non vetante Professione sua, et ne is sodalitio suo, si quod ante susceptum hoc munus obtinuit aut postea obtinebit, vel ullis sodalitii sui emolumentis aut privilegiis eo tantum nomine seu causa privetur quovis cujuscunque Collegii statuto non obstante. Quod privilegium ea intentione illi indulsimus ut eidem Professori liceret quodvis sodalitium capessere et retinere. Quod ut debitum sortiatur effectum nec restrictioni alicui in damnum aut præjudicium ejusdem Professoris pateat indulgentia nostra; insuper volumus et statuimus ut verba nostra prædicta in favorem dicti Professoris semper accipiantur, ut non eo tantum sed nec alio quovis nomine aut causa sodalitio suo aut ejus emolumento privetur nisi quod quemlibet ejusdem Collegii socium cujuscunque professionis et ordinis merito privare debeat. Et speciatim volumus et ordinamus ut ordines sacros non nisi ipse voluerit, suscipiat, nec ob defectum sacrorum ordinum sodalitio cedere ipse teneatur aut ab aliis quibusvis cogatur, sed ea immunitate quamdiu suo munere fungitur gaudeat et fruatur quo quilibet socius Medicinæ aut Juri civili vel canonico dicatus frui solet quovis cujuscunque Collegii Statuto aut consuetudine vel interpretatione quacunque non obstante. In cujus rei testimonium has literas nostras fieri fecimus patentes. Teste me ipso apud Westmonasterium vicesimo die Aprilis, Anno Regni nostri vicesimo septimo.

Per breve de privato sigillo,

PIGOTT.

SIR, *Pembroke College, Cambridge, Dec.* 20, 1851.

IN reply to the Circular relating to the University Lecture Rooms, Museums, &c., which I had the honour of receiving from Her Majesty's Commissioners, I beg to forward to you the following statements.

I have the honour to be, Sir,

Your obedient humble servant,

(Signed) G. G. STOKES,

Rev. W. H. Bateson, Secretary. *Lucasian Professor of Mathematics.*

Lecture Rooms.

1. The Lecture Rooms, properly so called, which belong to the University are those of Divinity, Botany, Geology, and Anatomy; to these may be added the Mineralogical Museum, which is adapted for a lecture room as well as a museum, to which, from the nature of the collection, there can be no objection.

The Divinity Lecture Room, which is the one in which my own lectures are given, is capable of containing perhaps 200 auditors. The Geological Lecture Room and the Mineralogical Museum, especially the former, would hold more; the Anatomical Lecture Room not so many.

Museums.

There are very good Museums of Mineralogy, Geology, and Anatomy. The two latter are immediately contiguous to the corresponding lecture rooms. There is, however, no museum of physical instruments. The want of such a collection is strangely inconsistent with the high character which Cambridge maintains for the study of the exact sciences, and astonishes foreigners who visit the University. Another great want of a similar nature is that of a Chemical Laboratory. At present nothing of the kind exists, with the exception of a small room, attached to the Botanical Lecture Room, which is used by the

G. G. Stokes, Esq., M.A.

Professorship of Mathematics.

Professor of Chemistry as a laboratory for the purposes of lectures. But it would be essential to the vigorous prosecution in the University of the study of a science in which so much depends on manipulation, that there should be a complete and thoroughly equipped laboratory for the use, not only of the Professor, but also of such other members of the University as might engage especially in the study of that science.

Lecture Rooms.

The lecture rooms at present used, taken as a whole, occupy a pretty central situation. The Geological Lecture Room, the Mineralogical Museum, and the Anatomical School, are used respectively by the Professors of Geology, Mineralogy, and Anatomy. The Divinity Lecture Room is used by the Norrisian Professor of Divinity, the Regius Professor of Hebrew, and the Lucasian Professor of Mathematics. The Botanical Lecture Room is used by the Professors of Botany and Chemistry, and by the Jacksonian Professor of Natural and Experimental Philosophy.

2 and 3. The following is a list of the other rooms in the University used for lecture rooms, and of the Professors by whom they are so used. The list is taken from the programme of Professors' Lectures for the present Academical year.

Places	Used by
The Arts School . . .	Lady Margaret's Professor of Divinity.
The Law School . . .	Regius Professor of Civil Law.
The Hospital . . .	Regius Professor of Physic.
Downing College (room in) .	Downing Professor of the Laws of England.
Downing College (room in) .	Downing Professor of Medicine.
A room in the Pitt Press .	Regius Professor of Greek. Lord Almoner's Reader of Arabic. Lowndean Professor of Astronomy and Geometry.
Trinity College (room in) .	Professor of Moral Philosophy.
The Observatory . . .	Plumian Professor of Astronomy and Experimental Philosophy.
St. Catherine's Hall (room in)	Professor of Arabic.

Lecture Rooms required.

4. In the plan which has been proposed for the new library, it has been contemplated to devote the under part to museums and lecture rooms. One wing of the proposed building has already been erected. This wing contains the Mineralogical and Geological Museums, and the Geological Lecture Room. The University possesses no funds for carrying out this plan. The wing which has been already built has been erected solely by voluntary contributions. It is needless to say that a more ample provision of lecture rooms would be required in case the professorial system of the University should receive any considerable extension, when so much difficulty is felt even under existing circumstances.

Fees.

5. Till very lately the lectures of the different Professors were quite independent of each other with regard to the fees, if any, paid for attending them. Nearly half of the Professors lectured gratuitously, and the rest charged a fee ranging from one to five guineas for the course of lectures.

Attendance on Lectures.

A regulation was passed by the Senate in October, 1848, according to which those who, being candidates for the degree of B.A. or honorary M.A., are not candidates for honors, are required to attend the lectures delivered during one term at least by some one or more of a specified set of Professors, and to obtain a certificate of having passed an examination satisfactory to one of the Professors whose lectures they have chosen to attend. This regulation, and the institution of the Moral and Natural Sciences Triposes, which took place at the same time, rendered a certain amount of co-operation necessary on the part of those Professors who were affected by these measures. Accordingly, those Professors agreed to certain regulations, of which the following are those which relate to fees.

"(2.) That *lecture tickets*, not transferable, be delivered by the Registrary to all Undergraduates who apply for them, directly or through their College Tutors: these tickets being of two kinds, namely, *special tickets*, delivered on payment of three guineas each, and admitting the person thereon named to the lectures of some one Professor in one or more years; and *general tickets*, delivered on payment of five guineas each, and admitting the person thereon named to any one or more of the courses of Professors' Lectures, in the same or different years; and that a Professor's Certificate be not given to any Undergraduate who has not provided himself with one or other of such tickets."

"N. B. These regulations refer only to the attendance of Professors' Lectures *required by Grace A.*" (the Grace relating to the professorial qualification for ordinary degrees). "The attendance at the Lectures of Professors on the part of persons wishing to take a degree in the Faculties of Law or Medicine will continue to be regulated by Graces already in operation, and by the Professors concerned therewith. The full courses required by Grace for such degrees being fifty lectures, will generally occupy two terms; and for these two terms, the regulations (as to fees) made for those proceedings in the Faculties may be different from those here stated."

"The terms of attendance of persons not requiring certificates will, as hitherto, be regulated by the Professors severally."

"It is understood that the Professors may admit gratuitously to their Lectures persons recommended by the Tutors, in such cases as have hitherto been customary."

"(3.) The sum raised according to Article 2 shall be distributed in the following

manner:—the Registrary shall retain a shilling of every guinea; and, after providing for the expense of the Lecture Tickets, the residue shall be divided (for the present) into sixteen shares; two of these shares shall be given to the Professors of Anatomy, Chemistry, and the Jacksonian Professor, in consideration of their expenses in apparatus and preparations; and one to each of the other ten Professors named in Grace A."

G. G. Stokes, Esq., M.A.

Professorship of Mathematics.

So long as the Professors' Lectures are independent of each other, the attendance of the Students on each being perfectly voluntary, I think it is best that the remuneration of each Professor should be independent of the others. The regulation requiring a Professor's Certificate as an essential condition for obtaining an ordinary B.A. degree rendered it advisable that a different system should be adopted, so far as the Lectures bearing on this certificate were concerned. Should the University at any future time think fit to pass any other measure by which a certain number of the Professors would be included in some general scheme of a similar nature, a re-arrangement of the system of fees would doubtless follow in natural course.

6. In the following remarks I shall confine myself to the third head noticed in the Circular of the Commissioners, namely, "Mathematics, and their applications to Natural Philosophy."

Mathematical Lectures.

With respect to Professorial Lectures on Mathematics, I beg to refer to the opinion which I have already expressed as a member of the Board of Mathematical Studies, who in their First Report observe, "these Lectures" (the Lectures of the Mathematical Professors) "cannot, however, be expected under any arrangement to supersede other channels of instruction; and it may be doubted whether Professorial Lectures on pure Mathematics are ever likely to form an effective part of the general system. The case is different with the branches of Natural Philosophy, the importance of experimental and illustrative Lectures on which, as *supplementary* to other modes of instruction, cannot be too much insisted upon." Indeed, I think that Professorial Lectures in pure Mathematics, except perhaps in a few of the highest subjects, would be of very little use. The great mass of Students require a good deal of personal superintendence, so that for general Mathematical instruction College Lectures are far more effective than Professorial could be. By *Professorial Lectures* I understand Lectures which those who attend have nothing to do but to hear, and are not examined in any way. It is true that in the Scotch Universities the Mathematical instruction is carried on by the Professors; but the Professorial Lectures are there much what College Lectures are here; and it is the nature of the Lectures, not the name by which they are called, which determines their utility. It is true that in the case of a few of the highest subjects it is impossible to form classes in the different Colleges, in consequence of the small number of Students who proceed so far. But such subjects are, I conceive, much better learned by studying books at leisure than by hearing Professors' Lectures.

As regards the applications of Mathematics to Natural Philosophy, Lectures are actually given by the Mathematical Professors in those branches which are included in the course for Mathematical honors, or at least such of them as admit of being illustrated by experimental Lectures. I very much doubt whether it would be possible, under existing circumstances, for the Professors to secure Classes, were Lectures given in branches which do not enter into the public examinations of the University.

Residence.

7. There are hardly any of the Professorships to which residences or rooms in College are attached. I will only state positively that there is nothing of the kind attached to the Lucasian Professorship.

I think that it would be inconvenient to attach residences to particular Professorships, because the same Professorship would be liable to be held at any time by a married man, who would require a house, at another by a Fellow of a College, who would be resident in his College. The same inconvenience would not attend the plan of providing a limited number of residences for the body of Professors generally, and allowing each Professor, or each of those Professors whose residence during the greater part of each Academical year might be considered desirable, the option of a residence or an equivalent increase of salary: yet I do not see that even this plan would offer any greater facilities for passing regulations to enforce the residence of Professors than increasing their salaries to an amount equivalent to the value of a residence; for it is not the difficulty of procuring houses which is an obstacle to the immediate introduction of such regulation, but the circumstance that, in consequence of the smallness of the salaries attached to most of the Professorships, the services of the best men could not be secured were not a good deal of latitude allowed with respect to residence.

Answers from the Rev. W. Whewell, D.D., Professor of Moral Philosophy.

Rev. W. Whewell, D.D.

"By whom the Professorship was founded."

Professorship of Moral Philosophy.

Foundation.

The Professorship of Moral Philosophy, as it is now termed, was founded in 1667, under the title of a Professorship of *Moral Theology and Casuistical Divinity*, by Dr. John Knightbridge, of Spofforth, Yorkshire. His will being found after his death to be informal and invalid, the design was carried into effect by his brother Anthony. The foundation was augmented by Dr. Smoult, the first Professor, who held the office from 1683 to his death in 1707.

Rev. W. Whewell, D.D.

Professorship of Moral Philosophy.

"What the duties annexed to the Professorship by the original foundation or constitution."

Statutable requirements.

By the original foundation the Professor was to be B.D. and *fifty* years old at least, and was to deliver *five* lectures every term; a copy of which was to be exhibited at the end of each term to the Vice-Chancellor, to be either printed or kept in the public library.

"Whether these have been modified or changed by any subsequent authority; and if so, in what particulars."

Modification of Duties.

No Professor on the original terms could be found. The Court of Chancery being applied to, directed, in 1680, that the Professor should be at least *forty* years old, and should deliver *four* lectures each term.

"What the duties actually performed."

Duties actually performed.

The present Professor is not aware that any lectures were given by any of his predecessors in the office. He himself has given at least twelve lectures every year, (except the year in which he was Vice-Chancellor); and has applied to the electors for permission to give twelve lectures in one term instead of four in each term, which permission has been granted. In the present year the Professor has given *twenty* lectures, in conformity with an arrangement made in reference to rules recently established by the University. According to these rules students are required to attend the lectures of some one or more of certain Professors, among whom is the Professor of Moral Philosophy, and to undergo examinations by the Professors; and although these rules are not as yet fully in operation, the Professor has given his lectures and prepared his examinations as if they were.

The Professor has also published several of the lectures, which he has delivered, and other works relating to the subject; especially a book entitled *Elements of Morality, including Polity*, of which two editions have appeared.

Prizes.

The Professor has also offered to give every year, so long as he holds the professorship, two prizes of 15*l.* to the two persons who shall show the greatest proficiency in moral philosophy, in the examination for the Moral Sciences Tripos, which offer has been accepted by the University.*

"What the nature and amount of the original endowment."

Original Endowment.

Dr. Knightbridge's endowment was a rent charge in Yorkshire, certain lands in Essex, and a house in the Minories, amounting (after certain charges) to somewhat more than 50*l.* per annum.

"Whether, and in what way, subsequently augmented."

Augmentation.

Dr. Smoult, the first Professor, added an endowment of 300*l.*, which was invested in lands in Herts.

The house in the Minories was, in 1837, sold to the London and Blackwall Railway Company.

The lands in Essex were, in 1838, sold advantageously to J. Attwood, Esq., under an Act of Parliament.

The proceeds of these sales were invested in public securities in the name of the Accountant General of the Court of Chancery.

"Whether any extraneous sources of emolument conjoined with it."

I know of none.

"Whether any fees received from the persons attending the lectures of the Professor; and if so, the average annual amount thus received."

No Fees.

No fees have hitherto been asked or received from persons attending the lectures of the Professor. When the new rules of the University come into full operation, certain of the students will have to pay certain sums for lecture tickets. This payment, as the matter is for the present arranged, is to be divided in a certain manner among the general body of the Professors. What the average of such payment will be it must, I think, be very difficult to say, till the new rules have been for some time in operation.

"The present value of the Professorship annually, distinguishing the several sources of income."

Present Annual Value.

The present annual income is as follows:—

	£	s.	d.
Rent charge in Yorkshire	26	16	3
Lands in Herts	32	0	0
Accountant General	74	0	0
	£132	16	3

"The mode of appointment, or election to the office; the conditions of elegibility; of tenability."

Mode of Appointment.

The Professor is elected by the Vice-Chancellor, the Regius and Margaret Professors of Divinity, and the Master of Peterhouse; the last having a casting vote.

For conditions of eligibility, see answers to questions 2 and 3.

* The Professor has more recently offered a prize of 20*l.* for the *middle Bachelors*, as well as the two prizes of 15*l.* for the *commencing Bachelors:* and these prizes have been accepted by the University.

"Whether, in your opinion, the duties enjoined upon you as Professor might be modified in any manner so as to contribute more effectually to the benefit of the University." — *Rev. W. Whewell, D.D.*

Professorship of Moral Philosophy.

I do not see any way in which the duties enjoined upon the Professor could be advantageously modified, except it were thought necessary to give a more formal sanction to the practice which I have adopted, of giving all the lectures in one term. This practice, according to the present habits of the University, I think to be a great improvement on the Founder's plan.

Opinion as to the modification of duties.

The Professor's principal means of promoting the study of his subject is by his lectures, and their connexion with examinations; a matter in which the University must make its own rules; and has recently made them with reference to the improvement of this study; and is likely to go on doing so, if not interfered with.

Perhaps more weight might be given to the Moral Sciences in general, and the beneficial influence of the Professor's lectures on such subjects might be promoted, if there were a *Board of Moral Studies*, similar in its constitution to the Board of Mathematical Studies recently instituted. But this also is a matter which the University must regulate for itself. It has lately been employed in endeavouring to construct such a scheme.

"The general condition in the University of the branch of study to which your professorship relates, and the means of promoting its advancement."

General condition of the Study.

The study of Moral Philosophy though not, till recently, promoted by the lectures of the Professor, has never ceased to be pursued in the University to a considerable extent. Besides the examinations in Paley's Moral Philosophy, which are part of the examination for the ordinary B. A. degree, there are some college lectures and examinations on such subjects; and proficiency shown in such subjects aids candidates, in some cases, in obtaining fellowships; though hitherto, I conceive, not in any great degree. The most effective means of promoting the study of Moral Philosophy in the University would be, that the colleges should establish or continue lectures and examinations upon the subject within themselves, preparatory to the lectures and examinations on the same subject appointed by the University; and especially, that they should give more weight to proficiency in the subject in their elections to Fellowships. It does not seem unlikely that this will take place, in consequence of the establishment of the Moral Sciences Tripos. The places which students obtain in the Classical Tripos, established 28 years ago, in a few years came to have great weight in the elections of Fellows of Colleges.

No external legislation could accelerate this result. No legal obstacles to such a change exist. And the independence of the Fellowship elections of Colleges could not be interfered with by any extraneous power, without, in effect, destroying the existence of the Colleges.

Prizes.

The advancement of the study of Moral Philosophy would be promoted by any measure which should give additional value to the honour belonging to an elevated place in the Moral Sciences Tripos: for instance, by prizes given to persons so placed. From a persuasion that this is so, I have, as before stated, offered two prizes of 15*l.* to such persons.

(Signed) W. WHEWELL.

My Lord, *Trinity Lodge, Cambridge, March* 27, 1851.

Lecture Rooms.

I have received with the date "Cambridge University Commission, February 19, 1851," a list of queries relative to the lecture-rooms and houses for Professors in this University. Several of those queries refer to points on which those Members of the University who wish to promote the general studies of the University, and the efficiency of the Professor's instructions, have long felt great difficulties which they see no way of removing. I do not know whether it will be any satisfaction to your Lordship, or lead to any advantage, that I should state some of the difficulties which the queries bring to mind. Without much expecting that this will be the case, I will make a few brief remarks on the subject.

1, 2, 3. It may suffice to say, generally, that the University Lecture Rooms, including all that can be used, the Public Schools, College Halls, and the like, are insufficient to answer their purpose *well*, though I am not aware that any Lectures have been prevented from this cause.

4. The "New Library" plan includes Lecture-rooms, of which some have been built. The continuation of this plan includes more Lecture-rooms, and I suppose may be expected to be carried into effect at some future time, by means of the same kind of resources to which the University had recourse in building the existing portion of it; namely, the voluntary contributions of its members appealed to for that purpose; I am not aware that the University has any funds which could be drawn upon for such a purpose.

If new Professors were founded, especially if their sciences required Museums and apparatus, additional room for such purposes might be needed; but it does not appear that any extension of the Professorial system which is at present going on, would require new Lecture-rooms, as all the Professors lecture already.

Fees.

5. The arrangement respecting Professors' fees agreed upon in connection with the *Professor's Certificate* (not the Moral and Natural Sciences Tripos, as stated in the Question), was that certain fees should be paid for lecture-tickets, and divided among the

Rev. W. Whewell. D.D.

Professorship of Moral Philosophy.

lecturing Professors with reference to the number attending their lectures. This was made the rule, in order that Professors might not be able to increase their receipts of fees by being easy in giving certificates of attendance and examination.* But this arrangement was considered as only experimental and temporary, to be revised when the new examinations had taken a settled bearing.

6. The arrangement of subjects proposed in the Question appears to me to be quite at variance with the usual courses of study. The study of Moral Philosophy is now very little connected with Theology, and very much connected with Law; and especially if we include in our studies, General Jurisprudence and International Law, as we ought to do. The former subject is already recognized by the University in the Moral Sciences Tripos. The Professorships most needed to complete the Professorial scheme of the University, are Professorships of International Law, of Zoology, and of Ethnography or Comparative Philology.

Residences.

7. I do not know if it would much increase the habit of Professors residing much in the University, if they had ex-officio houses. The recent laws of Clerical Residence on livings will very unfavourably affect the habits of residence of our Professors; for the Professorships are, in general, so poorly endowed, that the Professors are tempted to accept livings to make up a sufficient income; and then, they are only allowed by law to reside here during the term that they lecture. This change of the law has already very much broken up the scientific society of Cambridge.

I have the honour to be, my Lord,
Your very faithful and obedient servant,

The Lord Bishop of Chester. (Signed) W. WHEWELL.

Rev. J. Cumming, M.A.

Answers from the Rev. J. Cumming, M.A., Professor of Chemistry.

Professorship of Chemistry.

The Professorship of Chemistry was founded by the University in the year 1702. The present Professor was elected in 1815. No duties are annexed to the office, except the delivery of a course of Lectures annually. There has been no modification by subsequent authority.

Duties.

A course of about 28 Lectures was given annually by the present Professor and his immediate predecessors until the year 1831. From that time thirty Lectures were given in the Lent, and twenty in the Easter Term. This was continued until the year 1845; but the attendance in the Easter Term was so small, consisting of only four or five medical students, that the original plan was resumed of giving Lectures only in one Term.

Endowment.

The original endowment was a grant from the Treasury of 100*l.* per annum, which has not been augmented.

Fees.

The extraneous sources of emolument are the fees for attendance on the Lectures.

Present Value.

The present Professor has admitted, gratuitously, pupils recommended by their tutors. The fees from others average, at present, about 20*l.* per annum. The present value of the Professorship is about 120*l.* per annum, being 100*l.* granted by Parliament and 20*l.* from fees annually. This is the gross income, subject to deductions, for pay of an assistant, and for expenses for apparatus, &c.

Mode of Appointment.

The mode of appointment to the office is by open election, "More burgensium." There are no conditions of eligibility or tenability.

Residence, &c.

There is no residence, museum, library, collection, or apparatus attached to the Professorship.

The apparatus is the private property of the Professor, and there are no funds for this purpose.

There are no opportunities afforded to students for instruction in the actual manipulation of instruments, as there is only one room appropriated to the Chemical Professor, and there is no apparatus for the use of students.

Hitherto the study of Chemistry has not only been neglected but discouraged in the University, as diverting the attention of pupils from what have been considered their proper academical studies. The recent establishment of a Tripos for Natural Science will, it is to be expected, remove this objection.

(Signed) J. CUMMING.

REVEREND SIR, *North Runcton, Lynn, April* 2, 1851.

I beg to enclose to you my answers to the questions from the Cambridge University Commission, dated 19th February.

Several of the questions are of such a general character that I am not competent to answer them; I have therefore confined myself to those more immediately connected with my own professorship, and have the honour to be,

Reverend Sir,
Very respectfully yours,
(Signed) J. CUMMING.

---

* It was not supposed that any of the Professors were likely to do this, but it was thought well to make the accusation impossible by making the fact impossible.

April 2, 1851. *Rev. J. Cumming, M.A.*

1. There is one room with folding doors attached to the chemical professorship, which is used both as a Laboratory and Lecture-room; but there is neither Museum nor apparatus attached to it. Professorship of Chemistry.

2. The room above mentioned was built about twenty years since; in lieu of a former lecture room near Queens' College, which was appropriated, by Grace of the Senate, to the Chemical professorship, at the time of its foundation. Lecture Room.

4. A more ample provision of lecture rooms would be required in case the professorial system of the University should receive any considerable extension; and is in fact, now required; but I am not aware that the University has any funds for that purpose.

5. The fees for attendance on the Chemical Lectures have been three or two guineas for the course, according to the number of lectures: but pupils have been admitted gratuitously on the recommendation of their Tutors. The system which has been recently adopted is, to charge a uniform fee, to be distributed amongst the different Professors. Fees.

6. No new foundation would be requisite for instruction in Chemistry; but the present should be enlarged, to meet the necessities pointed out in the former communication; especially a lecture-room is required and a room for the private manipulations of students. The want of an assistant is strongly felt at present, and must become still more urgent. Suggestions.

7. There is no residence attached to the Chemical professorship; but, in general, and especially in the case of this professorship and others, whose stipends are barely adequate to the hire of a house, it seems highly desirable that houses should be provided for Professors required to reside. No Residence.

(Signed) J. CUMMING, *Professor of Chemistry.*

Answers from the Rev. J. Challis, M.A., Plumian Professor of Astronomy. *Rev. J. Challis. M.A.*

1. "By whom the Professorship was founded." Plumian Professorship of Astronomy.

The Plumian Professorship of Astronomy and Experimental Philosophy was founded by Dr. Thomas Plume, Archdeacon of Rochester, by will bearing date September 2, 1704. Foundation.

2. "What the duties annexed to the Professorship by the original Foundation or Constitution."

The duties were prescribed by the original Trustees named by Archdeacon Plume, who were required to consult, for that purpose, with Sir John Ellis, Sir Isaac Newton, and Mr. Flamstead, the Astronomer Royal. They are contained in the Royal Letters Patent, confirming the foundation of the Professorship, dated June 11, in the sixth year of the reign of Queen Anne. Statutable requirements.

The Professor is enjoined, first, to deliver yearly two prelections, or orations, on Astronomy or Experimental Philosophy, in Latin, in the public schools.

Secondly, to make astronomical observations. The following is a translation of the original statute, relating to this part of the Professor's duties. "We order, moreover, that the said Professor, besides other things left to his own will and judgment, shall diligently direct his attention to those observations chiefly, which shall seem to be desired for advancing and perfecting Astronomy, according to the various additions to this science in the progress of time, such as the following are considered to be in the present day; viz., that all comets be accurately observed, as often as they are visible in this latitude, their longitudes and latitudes be computed, and orbits be determined by calculation, also transits of Mercury and Venus over the Sun; eclipses of the Sun, Moon, and of Jupiter and his satellites, the apparent places and diameters of the Moon in her quadratures, and sometimes in octants and oppositions, the places of Saturn, Jupiter, and Mars in their oppositions, and sometimes in quadratures, elongations from the Sun, chiefly of Venus and Mercury, conjunctions of Jupiter and Saturn, difference of the right ascensions of the Sun and some fixed star when the Sun is in his apogee or perigee, or at mean distances, also the difference of right ascension of Venus and the Sun, when Venus is in her perigee or near it." The Professor is required also to provide a residence and observatory, to board and lodge an assistant, and to purchase and take care of astronomical instruments. The observations as well as the two prelections, are to be written out each year, and delivered to the Vice-Chancellor, to be kept in the archives of the University, and to be printed when it shall seem good to the electors.

Thirdly, to give lectures. The regulations under this head are thus stated:—"Moreover, that the advantages of Students and the advance of science may be regarded more and more continually, we wish and decree that each year, as often as can be conveniently done, according to the number of the studious, the Professor hold various courses or colleges (collegia), at his residence, or publicly, in Astronomy, Optics, Trigonometry, Mechanics, Statics, Hydrostatics, Magnetics, Pneumatics, and other subjects of that kind, which relate to the illustrating or teaching of Experimental Philosophy; and that those who enter any course, pay to the said Professor for the expense of the experiments, and as a reward for his labour, such an amount as shall seem right to the Vice-Chancellor. It would also be desirable, if these excellent studies make due progress in the University, that the Lucasian Professor of Mathematics should hold these Colleges in conjunction with the Plumian Professor, and that they should share in equal proportions, the expenses and rewards of their common labours."

3. "Whether these (duties) have been modified or changed by any subsequent authority; and if so, in what particulars."

Rev. J. Challis, M.A.

Plumian Professorship of Astronomy.

Modification of Duties.

The intentions of the original trustees respecting the taking of astronomical observations, seem not to have been fully carried out, probably on account of the inadequacy of the portion of the funds (10*l.* per annum) directed to be applied to the purchase and repair of instruments, and in paying an assistant. By a Grace which was passed by the Senate, May 5, 1820, when the erection of an observatory by the University was in contemplation, it was provided that "the duty of the principal observer should be vested in the Plumian Professor." Accordingly on the completion of the building in 1823, Mr. Woodhouse, the Plumian Professor at the time, took the direction of the observatory, and commenced residence in it. His successors (first Mr. Airy and then myself) have discharged the same duty, residing constantly at the observatory.

The prelections mentioned in the original foundation, if ever begun, have long since been discontinued.

The Plumian Professor was appointed one of the examiners of the candidates for the mathematical prizes, founded by Dr. Smith, in 1769,

By a regulation confirmed by Grace of the Senate, April 7, 1848, the Plumian Professor is permanently an Examiner for the adjudication of the Adams' Prize, which was founded in that year, to be awarded every two years to the author of the best Essay on some subject of pure Mathematics, Astronomy, or other branch of Natural Philosophy.

The Plumian Professor is *ex officio* a member of the Board of Mathematical Studies established by Grace of the Senate Oct. 31, 1848.

Duties actually performed.

4. "What the duties actually performed."

The Plumian Professor has the sole direction of the course of Astronomical observations carried on at the Observatory. He is occupied in taking part of the observations, in examining and verifying the calculations required for completely reducing the observations, in preparing the reduced observations for the press, and writing the explanations necessarily accompanying the published observations.

An observatory Syndicate is annually appointed by Grace of the Senate, consisting of the Vice-Chancellor, the Masters of Trinity, Christ's, and Caius Colleges, the Lucasian, Plumian, and Lowndesian Professors, with five other members of the Senate, for the purpose of inspecting the Observatory and instruments, ordering repairs and additions, examining accounts, and receiving reports from the Plumian Professor of the astronomical proceedings in the Observatory. The execution of what is ordered or recommended by the Syndicate falls upon the Plumian Professor.

The other duties actually performed are, giving a course of 12 Lectures in each Lent Term on Practicul Astronomy and Astronomical Instruments, examining the Candidates for the Smith's Prizes, examining the Adams' Prize Essays, and attending the meetings of the Board of Mathematical Studies.

Lectures appear to have been given at intervals before the appointment of Mr. Airy to the Professorship in 1828, since which time they have been given uninterruptedly. Mr. Airy lectured on Mechanics, Hydrostatics and Pneumatics, Geometrical Optics, and the Theory of Light, which subjects (with the exception of Mechanics undertaken by the Jacksonian Professor), were continued by me on succeeding to the office in 1836. In 1843 I added Practical Astronomy and Astronomical Instruments. At present I lecture only on the last named subject, the other subjects having been undertaken by the Lucasian Professor, on his appointment to his Professorship in 1849, in consideration of the pressure of the duties falling upon the Plumian Professor as Director of the Observatory.

5. "What the nature and amount of the original endowment."

Endowment.

Archdeacon Plume by Will (Sep. 2, 1704) ordered his executor "to pay to Dr. Covell, Master of Christ's College; Dr. Bentley, Master of Trinity College; Dr. Francis Thompson, Master of Caius College; and William Whiston, the Lucasian Professor, the sum of 1,000*l.* he had in the Bank, and 700*l.* and 202*l.* 12*s.* 2*d.*, Orphans' Stock in the Chamber of London, to erect an observatory and to maintain a Professor of Astronomy and Experimental Philosophy, and to buy or build a house with or near the same, and willed that the principal money should not be removed from the bank till a good purchase had been made with it."

It appears that between the date of the will and the date of the letters patent of June 11, 1708, the above-named Trustees made a purchase of land in the parish of Balsham, county of Cambridge, and annexed the same to the office of Plumian Professor. Also, that an agreement was entered into (Feb. 9, 1705) with the Master and Seniors of Trinity College, that "Roger Cotes, then nominated to the Professorship, and his successors after him should have the rooms and leads of the King's gate of that College for a dwelling and Observatory, so long as the Trustees and Electors of the said Professorship shall think fit." Ten pounds per annum was to be paid for the use of the rooms. This agreement did not continue long in force.

The Plumian estate in Balsham is principally freehold, a small part only being copyhold.

6. "Whether, and in what way, subsequently augmented."

Augmentation.

The income of the Plumian Professor was augmented by Dr. Smith, on the institution of the Smith's Prizes, by 50*l.* per annum, being part of the interest at 3 per cent. on 3,500*l.* Old South Sea Annuities.

7. "Whether any extraneous sources of emolument conjoined with it."

Rev. J. Challis, M.A.

Plumian Professorship of Astronomy.

In consequence of a representation made by Professor Airy of the inadequacy of the income of the Plumian Professorship to remunerate the Professor for the time and labour required for the superintendence of the Observatory, a Grace of the Senate was passed Feb. 27, 1829, for raising the net income to 500*l.* per annum by annual grants from the University chest.

Subsequently to the above arrangement the University purchased some copyhold land in the parish of Balsham, which, with the copyhold of the Plumian Estate, is held in trust by the present Professor. The annual rent from this purchase is 20*l.*, and constitutes a part of the income above mentioned.

8. "Whether any fees received from the persons attending the Lectures of the Professor; and if so, the average annual amount thus received."

Fees.

Each person attending a course of Lectures pays a fee of one guinea. The Plumian Professor gave annually two courses of Lectures, one in Optics, Hydrostatics, Pneumatics, and the Theory of Light, the other in Practical Astronomy, the former of which was discontinued in 1850. The annual payments for the first course (taking the average of the five years 1845-1849) amounted to 22 guineas, and for the other course (taking the average of 1846-1850) to 24 guineas, no deduction being made on account of expenses on apparatus.

9. "The present value of the Professorship annually, distinguishing the several sources of income."

Present Value.

	£.	s.	d.
Net Income from the Plumian Farm, inclusive of the rent of the University purchase (average of the five years 1846-1850) .	252	11	0
Dr. Smith's Augmentation	50	0	0
By grants from the University chest (average of the five years 1846-1850)	197	9	0
Lectures (average of fees for Lectures on Practical Astronomy in 1846-1850)	25	4	0
Total present annual value . . .	£525	4	0

10. "The mode of appointment or election to the office; conditions of eligibility; of tenability."

Appointment.

The power of electing given to the Trustees named in the Will of Archdeacon Plume, was afterwards to be exercised by the Vice-Chancellor, the Masters of Trinity, Christ's and Caius Colleges, and the Lucasian Professor, for the time being; and in case one of these Masters is Vice-Chancellor at the time of election, the Master of St. John's College is one of the Electors. On the occurrence of a vacancy, the Vice-Chancellor, as soon after as possible, affixes to the door of the public schools a schedule announcing the vacancy and the day of election. The election must not take place before the thirtieth day after affixing the schedule, nor later than the sixtieth. The electors are required to meet in the Public Schools, and to take oath not to elect any one through favour, interest, or bribe, but to choose the candidate whom in their consciences they consider to be most fit for the office. The competition is free to all, whether single or married, Englishmen (nostrates) or foreigners (exteri et peregrini), if only they are competently learned (doctrina idonei), and of good life and morals. It is permitted to any of the electors to examine the candidates either by himself or others. The person elected must have three votes at least. If three of the electors have not agreed on the sixtieth day in choosing the same person, the Chancellor of the University may decide in favour of a candidate who has two votes. The elected candidate is immediately admitted by the Vice-Chancellor, who is authorized by the Letters Patent to administer an oath to him, to the effect that he will discharge the office of Professor of Astronomy and Experimental Philosophy, according to the regulations relating thereto, faithfully and to the best of his ability. It is provided also that if the Professor should be negligent in committing to writing and publishing the observations and prelections, after admonition by the Vice-Chancellor, he may be deprived of his office by the major part of the electors: moreover, if he should not conduct himself virtuously and diligently, or be absent from the University longer than is right, at the will of the electors he may be fined, or deprived of his office.

11. "Whether there is any residence, museum, library, collection or apparatus, attached to your Professorship, and what available funds for the maintenance of them."

Residence.

The Plumian Professor resides (rent-free) at the Observatory.

Library.

There is a library of astronomical works at the Observatory, formed partly by purchases at the expense of the University, and partly by presents from British and Foreign Observatories and Scientific Institutions.

Apparatus.

There are a few small astronomical instruments, as a transit, a quadrant, and a sextant, attached to the Plumian Professorship. These, with some portable instruments belonging to the observatory, and apparatus collected at the private expense of the present Lowndesian and Plumian Professors, are made use of in the Lectures on Practical Astronomy.

The apparatus employed in the Lectures on Experimental Philosophy has been collected at the expense of successive Professors, and is now in possession of the Lucasian Professor, being purchased by him on his undertaking to lecture in 1850 on subjects in Experimental Philosophy.

There are no available funds for the maintenance of apparatus proper for lecturing either in Astronomy or Experimental Philosophy.

Rev. J. Challis, M.A.

Plumian Professorship of Astronomy.

12. "Whether opportunities are afforded to Students for instruction in the actual manipulation of instruments and the conduct of processes of experimental research in the departments of science requiring them."

Opportunities of Instruction afforded to Students.

Any member of the University has liberty during one hour each day to go through the observatory and inspect the astronomical instruments, attended by one of the assistant observers, whose duty it is to answer questions. Also the Plumian Professor brings his class in the course of his lectures into the observing rooms, and explains to them the uses of the parts of the instruments actually employed in making observations, and the methods of observing. But no opportunity is given to the Students of practising the taking of observations, as this could hardly be done without interference with the regular work of the observatory.

It has been the practice in the Lectures on Experimental Philosophy to give every facility to the Student for inspecting the experimental arrangements after the lecture hour, and witnessing a repetition of the experiments; but no general means of conducting experiments by his own hand are at his disposal.

13. "Whether, in your opinion, the duties enjoined upon you as Professor might be modified in any manner so as to contribute more effectually to the benefit of the University."

Means of promoting the Study of Astronomy.

After much consideration I am unable to suggest any modification of the duties actually performed by the Plumian Professor, by which the interests of the University would be more effectually promoted. It may, however, assist Her Majesty's Commissioners in forming an opinion on this point, if I lay before them certain particulars relating to the Observatory, and the duties it entails on the Plumian Professor.

The arrangement by which the Lucasian Professor undertook in 1850 to lecture from that time on Experimental Philosophy, relieved the Plumian Professor of a portion of his duties which pressed heavily upon him, in consequence of the occupation of his time by the superintendence of the Observatory. The duties which devolve on the Director of that establishment are of so constant and laborious a nature that they prevent his taking an active part in the instruction of the students, or being prominently engaged in advancing the mathematical studies of the University. This will be made apparent by the following statement.

Astronomical Observations.

A system of regular astronomical observations was commenced at the Observatory in 1828 by Mr. Airy, who, at the same time, introduced the plan of publishing the observations completely reduced and fit for the use of the theoretical astronomer. Observations have been carried on, with slight interruptions, to the present time; and the plan of publishing the observations completely reduced, which entails a very large amount of labour in calculation, has been adhered to. From 1828 to 1832, the only instrument in use was the transit, and Mr. Airy had one assistant. In 1832, a 5-feet equatorial was added; and at the beginning of 1833, the mural circle came into use: at the same time a second assistant was appointed to take observations with the mural circle. When I succeeded Mr. Airy in 1836, the large 20-feet refractor, presented to the Observatory by the Duke of Northumberland, late Chancellor of the University, was in course of erection. This instrument was first used in 1838, and has been pretty regularly employed ever since. Observations made with an equatorial, especially one of large size, demand considerably more time and labour than those made with meridian instruments, and more complicated calculations for completely reducing them; consequently, the work of the Observatory was much increased by the addition of the Northumberland equatorial. But no addition has been made to the number of the Assistants. To keep up a regular succession of observations with the large equatorial and the meridian instruments, demands great personal exertions and expenditure of time on the part of the Plumian Professor. The current calculations necessary for maintaining the consecutiveness of the observations, the taking a part of the observations, examining and verifying the reductions, publishing the reduced observations, maintaining correspondence with British and Foreign Observatories, and the many details incident to the management of a scientific establishment, would be a sufficient occupation of his time if he had no other duties to perform. The discharge of that portion of the duties which relates to the studies of the University, so far limited the time I was able to give to the Observatory, that the publication of the observations has been unavoidably delayed to a later period than is desirable, those of 1845 being the last published.

The present time is distinguished by unusual activity in Astronomical Science, and within a few years many new bodies of the solar system have been discovered, the theories of which require, from Observatories furnished with powerful instruments, continued series of observations. To supply this demand, numerous observations have been taken both with the meridian instruments and the large equatorial of the Cambridge Observatory; and it would be much to be regretted if the pressure of other occupation should render it necessary to abandon this class of observations.

The duties of the Professor too numerous.

Any addition to the permanent official duties of the Plumian Professor would leave him no time for the pursuit of any original scientific research in Mathematics or Natural Philosophy, or for writing a Treatise on any Mathematical subject,—a position in which it is undesirable for the credit of the University that any of its Mathematical Professors should be placed. By experience in Astronomical observation, and necessary acquaintance with what is going on in foreign Observatories, the Plumian Professor would be likely to be qualified to write a Treatise on Astronomy, which might bring before the Students the latest improvements and most approved methods in a department of science eminently practical and useful, and so far to counteract any tendency to become too abstract or too exclusive, to which the mathematical studies of the University may be liable. Such a work, it is generally admitted, is much wanted at present in the University; but the Plumian Professor is too much pressed, even by his actual engagements, to be able to give the requisite time to it.

Rev. J. Challis, M.A.

Plumian Professorship of Astronomy.

Superintendence of the Observatory.

It might be thought desirable, in order to give the Plumian Professor the opportunity of taking a more prominent part in the instruction of the Students, to separate the direction of the Observatory from the duties of the Professorship, and place it in other hands as a distinct office, as is the case with the Radcliffe Observatory at Oxford. I am not, however, of that opinion. The superintendence of an Observatory was clearly the object chiefly contemplated by Plume in founding the Professorship; and the advantage of securing the residence in the University of a Professor who, by his office, is at once connected with the advancing science of Europe, and with the mathematical studies of the University, is by no means to be given up.

Suggestions.

After the above representation, the only suggestion it occurs to me to make is, that the efficiency of the Observatory might be increased, and the arduous duties of the Director of it be in a great measure lightened, if it were maintained on a more liberal scale of expenditure. The total annual amount of the charges on the University Chest, on the Observatory account, is between 500*l.* and 600*l.* The salary of each of the two Assistants is sometimes 70*l.*, and at most, 80*l.* per annum, with coals and furnished apartments. This is barely a remuneration for the services of an expert observer and computer, and cannot be expected to secure assistance in any portion of the work which requires an acquaintance with mathematics. It is understood, however, that the above-named expenditure is as large a proportion of the University income as can be devoted to the maintenance of an Observatory.

Emoluments of the Assistants.

Apparatus.

An offer has been made of apparatus proper for carrying on a series of magnetical observations at the Cambridge Observatory; but the additional expenses that would be incurred in the erection of a building for this purpose, and in engaging a competent Assistant, have deterred me from taking any steps towards the accomplishment of this object.

Great importance of increasing the efficiency of the Observatory.

The Cambridge Observatory is an institution of public utility, and contributes to the scientific reputation of the country. The observations here made and reduced have been largely used in England, on the Continent, and in America, for the determination of geographical positions and for the advancement of Astronomy theoretically. I beg, therefore, respectfully to suggest to Her Majesty's Commissioners, whether, on this account, as well as for the reasons more immediately relating to the Plumian Professorship, it be not desirable to increase the efficiency of the Cambridge Observatory, either by a direct grant from the public funds, or by remitting the Government tax on degrees, and thus enabling the University to devote to the maintenance of it a larger annual expenditure.

14. "The general condition in the University of the branch of study to which your Professorship relates, and the means of promoting its advancement."

General condition of the Study.

The number of Students that, for 13 years, attended my lectures on Experimental Philosophy varied from 20 to 30, and about the same number have attended the lectures on Practical Astronomy. Probably this falls somewhat below the number that, by previous reading and acquaintance with mathematics, would be able to profit by experimental and illustrative lectures. More interest appears in general to be taken by the Students in abstract mathematical processes than in attending to the experimental evidence on which the different departments of Natural Philosophy rest, and tracing them from their principles to their results in practical applications. There may be reason to fear that the present system of mathematical studies in the University tends to become too abstract and too exclusive of the propositions and processes of reasoning required by the actual demands of science. It is my opinion that this tendency might be counteracted by an understood arrangement, according to which the College lectures and system of instruction should be so conducted as to be preparatory to lectures of an experimental and practical nature, and the subjects brought before the Students in these lectures be formally introduced into the Examinations for honours. Such an arrangement might be facilitated by publications, on the part of the Mathematical Professors, of Treatises on the subjects of their lectures, which should describe in detail experimental processes and the facts established or illustrated by them, and refer for demonstrations to the more mathematical text-books on the same subjects current in the University. I think, too, that a taste for Experimental Philosophy might be promoted by founding a complete Cabinet of Physical Apparatus, to which the Professors, and the Students themselves under certain regulations, might have recourse for the general purposes of lectures and for experimental research.

(Signed) JAMES CHALLIS, *Plumian Professor.*

Cambridge Observatory,
January 28, 1851.

Answers from the Rev. W. Clark, M.D., Professor of Anatomy.

Rev. W. Clark, M.D.

Professorship of Anatomy.

Her Majesty's Commissioners for the University of Cambridge having requested me to answer certain questions relative to the professorship of anatomy, and to the present condition of the University in respect to the branch of study connected with that professorship, I proceed to answer such questions, prefixing to my answers each question seriatim.

***Question* 1.—By whom was the professorship founded?**

Foundation.

The University of Cambridge, appointed by special grace, in the year 1707, Mr. George Rolfe, Professor of Anatomy. Mr. Rolfe was not a graduate of the University, but seems to

Rev. W. Clark, M.D.

Professorship of Anatomy.

have delivered several courses of Anatomy to the satisfaction of the University, and to have received the title of Professor as an honorary distinction. "Cum Georgius Rolfe varias anatomias in hâc academiâ perfecerit summâ cum laude in usum studiosæ juventutis optimum, placeat vobis, ut professoris anatomici titulum propter singularem ejus in istâ facultate peritiam honoris ergo consequatur."

It does not appear that any particular duties were annexed to the professorship.

Question 2.—What were the duties annexed to the professorship by the original foundation or constitution.

Duties.

Though no duties were thus assigned, yet it is clear that the University expected that the Professor of Anatomy, after his appointment, would continue to deliver lectures: for the following Grace was passed by the Senate April 1, 1728, "Whereas Mr. George Rolfe, who by favour of this Senate obtained the Professorship of Anatomy in this University, has been several years absent from his office, and, though sent for by Mr. Vice-Chancellor's order, has taken no notice, and continues still in neglect: may it please you that his Professorship be declared vacant, and that another by you be chosen to succeed him in his office and title." Thus was the Professorship of Anatomy established, and thus was the office declared to be an active one, though the duties of it were not defined. And it is worthy of remark, that at the time when the first Professor of Anatomy was appointed in Cambridge there was no similar establishment either in London or in Edinburgh. Cheselden first lectured on anatomy at a public institution in London, St. Thomas' Hospital, in the year 1711: and Monro, who had attended Cheselden's lectures, and who afterwards studied in Paris and Leyden, was the founder of the Edinburgh school.

Question 3.—Have these duties been modified, or changed, by any subsequent authority; and if so, in what particulars?

Modification of Duties.

Within my own memory the lectures delivered by successive Professors of Anatomy have differed in subject-matter. Sir Busick Harwood's course consisted, at least in the later years of his life, of lectures on physiology, illustrated by the anatomy of man and of animals. When Dr. Haviland was appointed professor, (he held the office from 1814 to 1817,) he gave a course strictly of human anatomy. On the death of Sir Isaac Pennington, Dr. Haviland, became the King's Professor of Medicine, and it was then a principal object with him to afford to our medical students the means of due instruction within our own University. And I, who had been appointed to the Professorship of Anatomy in 1817, worked with him, to this end, to the best of my ability. My lectures, therefore, were lectures on the anatomy and physiology of the human body, though still combined with frequent demonstration of the differences of structure in the lower creatures. Until the new anatomical schools were built, the course was begun and concluded in the October term. But, after that, when the Museum had been greatly increased, and new regulations had been made respecting the studies of candidates for medical degrees, my course was continued through the Lent term as well as the October term, and consisted of at least 50 lectures.

Question 4.—What are the duties actually performed?

Duties actually performed.

The duties which I consider to belong to my office, are,

1. To keep the objects in the Museum in a due state of preservation, and to add to them as opportunity may occur.
2. To deliver a course of lectures on the Anatomy and Physiology of the Human Body.
3. To deliver a course of lectures on Comparative Anatomy, now that the Natural Sciences Tripos and the Professorial condition of the B.A. degree have been established. This distinct course has been delivered in the last two years only.

Question 5.—What is the nature, and what the amount, of the original endowment?

Endowment.

There was no original endowment.

Question 6.—Was there any subsequent endowment?

Augmentation.

In the year 1766, Richard Watson, Fellow of Trinity College, and Professor of Chemistry, applied to Lord Rockingham for a stipend from the King. He obtained a stipend of 100*l.*: and then similar sums were procured from the Crown for the Professor of Anatomy and some other professors.

These payments now depend upon an annual vote of the House of Commons: and the amount paid to the Professors of the University is about one third of the sum which is levied as a tax upon our degrees. I, for one, do not think it right, or creditable, that the University Professors should be paid in this way. As the indefensible tax upon our degrees will doubtless be remitted, it is to be hoped that the University will then find some means of paying her own professors.

Question 7.—Are there any extraneous sources of emolument?

No.

Question 8.—Are any fees received from the persons attending the lectures of the Professor; and if so, what is the average annual value thus received?

Fees.

When the lectures were given in the October term only, the fees paid by each student were

three guineas for the first course, two guineas for the second course. When the lectures were extended through two terms, the fee for each of two courses was five guineas. The average number of pupils from 1826 to 1835 was 23 per annum. The average number from 1835 to 1850, inclusive, 13 per annum. This does not give accurately the amount received from attendants at the lectures, because the apprentices and pupils of surgeons in the town have always attended gratis.

Rev. W. Clark, M.D.

Professorship of Anatomy.

Question 9.—What is the present value of the professorship annually, distinguishing the several sources of income?

The gross value is the Parliamentary stipend 100*l.*, diminished by income-tax, and increased by the amount of fees.

Present Annual Value.

The net value is scarcely anything, for I now find it necessary, and have found it so for some few years past, to engage an assistant to perform the dissections for the lectures on human anatomy, and to demonstrate them to the class. This gentleman receives from me one-half of the Parliamentary stipend and the whole of the fees. With respect to the remaining half of the stipend, I think that, on an average of years, the greater part of it has been spent upon the Museum.

Let no injurious reflection be cast upon the University in consequence of this statement. This would be most unjust. The Senate has always voted the means for procuring every accession to the Anatomical Museum which has been recommended to that body, as the Florentine wax models, the specimens selected from Brooke's Museum, the entire Museum of Dr. Macartney. The sums required for these purchases, added to the large expenditure upon the new anatomical buildings, have absorbed much more than what I conceive to be a due proportion of the funds of the University.

Question 10.—The appointment or election to the office, with whom is it?

The election is with the Senate; all members of the Senate have a vote: there is no nomination. The number of candidates is not limited; that candidate who has the greatest number of votes gains the election.

Appointment.

There is no condition of eligibility, nor of tenability; though, from the instance of Professor Rolfe, it may be inferred that if the Professor does not lecture he will be supposed to have relinquished his office.

Question 11.—Is there any residence, museum, library, collection, or apparatus, attached to your Professorship, and what available funds are there for the maintenance of them?

There is no residence attached to the Professorship of Anatomy.

No Residence.

There is a museum containing—1. an excellent pathological collection; 2. a very useful collection of human and comparative anatomy. Both of these are constantly receiving accessions. Together they consist of about 4,000 specimens.

Museum.

There are a few anatomical works of value attached to the Museum, the gift of Dr. Macartney.

With respect to the funds for the maintenance of the Museum, the University allows 30*l.* annually, nominally for the maintenance of the preparations in spirit. This sum more than covers the expense of spirit, under improved methods of securing the jars. The surplus saved goes towards the purchase of glass.

Question 12.—Are opportunities afforded to students, &c.?

Very few instances have occurred where students wishing to dissect have not had the means of doing so, though the prejudice of the people against dissection still continues.

Dissection.

Question 13.—May the duties enjoined on you as Professor be modified, so as, in your opinion, to contribute more effectually to the benefit of the University?

Since the establishment of the Natural Sciences Tripos, a good deal more work has fallen upon the Professor of Anatomy. I have felt that one and the same person cannot now perform the whole to his entire satisfaction, consequently, I have explained to leading members of the University at various times that some change is desirable. The change I would propose is, that the duty of lecturing upon Human Anatomy and Physiology should be assigned to another, and the University has full power to adopt and to act upon this proposal if it be approved when brought before the Senate in convocation. If this change were adopted, the instruction of the medical students would be the principal care of the lecturer on Human Anatomy, and, perhaps, in addition to the ordinary demonstrative course, he might give a shorter course, embracing the Anatomy of the Tissues, normal and pathological, and the History of Development. The lecturer on Comparative Anatomy might, in addition to his proper course, give in due time a course on Zoology. The material for this, it cannot be doubted, would soon be sufficient if a room were assigned for a Zoological Museum; or perhaps the University may prefer to appoint a third lecturer on Zoology.

Suggestions.

But it will be worse than useless to appoint an additional lecturer on Anatomy, unless a distinct lecture-room and distinct dissecting-room can be assigned him. There is no space at present for two persons, and the lecture-room and dissecting-room for human anatomy ought,

Rev. W. Clark, M.D.

for obvious reasons, to be in proximity to the Museum, and yet distinct from it, and from the contiguous lecture-room.

Professorship of Anatomy.

Question 14.—What is the general condition in the University of the branch of study to which your professorship relates, and what the means of promoting its advancement?

General condition of the Study of Anatomy.

With respect to comparative anatomy, the lectures have been delivered only in two academic years. I believe that when the Natural Sciences Tripos and the Professorial condition of the B.A. degree are fairly at work the competitors for distinction in it will be numerous, and then those lectures will be well attended. In the first year the attendants were only nine in number, in the second they were 13.

As to the lectures on Human Anatomy, the attendance on them, in any given year, depends mainly upon the number of medical students then in the University. The number of such students has for several years past been on the decline. Probably the decrease has been caused in part by the demands made on the time of the young men by the additional number of public examinations; and in part by the greater facilities for obtaining medical degrees in London.

The great value of our medical degrees is this, that they are conferred on duly qualified candidates who have followed professional studies after they have undergone the preliminary education which the University affords and prescribes. No curtailment therefore of time which has been found requisite for this education should be thought of. Neither can it be considered too much, that, after that education has been completed, three other years should be passed before the licence to practise medicine can be obtained; these three years being spent in attending the courses, connected with medicine, of the Professors of the University, and then other teaching, and attendance on hospitals elsewhere, if the student wishes for such. If our students were to enter the University at 18 years of age, they would, if capable, obtain the license to practise medicine at 24 or 25 years of age. But the custom of coming up at a much more advanced age than 18 appears to be gaining ground; and too many exhaust the best years of adult life in preliminary study when they ought to be employed on the business of the world. But this remark does not apply to the medical students alone.

Though I have stated my opinion that it might be well to appoint an additional teacher whose province should be Human Anatomy, yet I should be very unwilling to go much farther than this, and to remodel our medical school upon the plan which has sometimes been advocated. The plan to which I allude arises out of a comparison of the number of our professorships and of the subjects of our lectures in connexion with medicine, with the more numerous appointments and subjects of teaching in a great London hospital. These critics recommend us to found professorships of materia medica and pharmacy, of medical jurisprudence, of midwifery, of surgery, &c. I can see no good in such endless multiplicity of minute teaching in our University. Our great distinction is that we give to all our students, according to their capacities, a preliminary education such as long experience, and careful comparison, often repeated, of our methods with those pursued in other institutions, have shown to be the best. This preliminary education (as I call the collegiate and university system previous to the B.A. degree) cannot, I believe, be much improved in principle, whatever may be thought of its details. It cultivates the taste and matures the reason, and fits men to secure for themselves the mastery in every subsequent professional pursuit. If, after such preliminary education, the object of the student be medicine, the University affords him the means of learning the principles of chemistry, of botany, of physiology, of the practice of medicine, and the details of anatomy. She requires attendance on the lectures of her Professors of these branches; but on subjects which are merely the skilful application of the principles of some of these combined, she seems to think that a young man requires not special instruction by means of lectures; or, that the desired information may be best acquired from books, or from practical men in large hospitals. Though we have no lectures on such subjects, yet our Cambridge physicians still attain to the highest professional distinctions, and still secure the confidence of the world, and still are ranked amongst the most famous promoters of the various branches of medical science. I believe that the present high character of the English physician will greatly fall, if ever it should unfortunately happen that all the members of the medical faculty have attained their professional knowledge and skill without those previous studies at an English University which now connect him and his faculty, through its most distinguished members, with the highest rank of intellectual and moral culture in every walk of life.

Doubtless the connection of medical students with our University will be preserved and extended if due rewards for distinguished merit be offered. There are in some of our colleges Fellowships appropriated to medical students; in many there are Fellowships for the holding of which no proceeding in any special faculty is prescribed. Some of these might, perhaps, be made the reward of excellence in some branch or branches of science connected with medicine: but no persons should be admitted as candidates for them who have not proved that they have appropriated the advantages of the previous education in literature and arts.

(Signed) WM. CLARK, M.D.,
Professor of Anatomy.

Cambridge, February 3, 1851.

Answers from the Right Hon. Sir James Stephen, K.C.B., LL.D., Professor of Modern History.

Sir J. Stephen, K.C.B., LL.D.

Professorship of Modern History.

Maison Valin, Champs Elysées, Paris, 14th December, 1850.

SIR,

I HAD the honour to receive at this place, a few days ago, your letter dated on the 20th of November last, in which you intimate to me the desire of Her Majesty's Commissioners for inquiring into the state of the University of Cambridge that I would "furnish them with information on the several particulars specified in the questions subjoined to that letter; and that I would communicate to them such remarks as may either explain the present condition of the University in respect to the branch of study connected with my professorship, or indicate means for the further advancement of the same."

In obedience to this requisition, I subjoin the following series of answers to the questions so proposed to me.

I am, Sir,

Your most obedient humble Servant,

To the Rev. W. H. Bateson. (Signed) JAMES STEPHEN.

Foundation. 1. The Professorship of Modern History was founded by King George the First in the year 1724.

2. The original foundation or constitution of the Professorship is defined in the warrant under the royal sign manual by which each holder of the office has, in his turn, been appointed, and is not defined in any other instrument of which I am aware. But the terms of that warrant determine nothing regarding the duties of the Professorship.

Duties. 3. I am not aware that those duties have ever been modified or changed by any subsequent authority.

Duties actually performed. 4. The duties actually performed are, first—the delivery of a course of Lectures once in each year; and secondly—the examination of the candidates for honours in the Tripos of Moral Sciences.

Endowment. 5. The original endowment consisted of a grant charged on the Civil List amounting nominally to £400, but really to £371. 8*s*. per annum.

6. The endowment has never been in any way subsequently augmented; on the contrary, it was entirely taken away on the accession of her present Majesty, when the Civil List was relieved of this charge; though Parliament has since granted the sum of £371. 8*s*. for the maintenance of the office. I state this merely as a matter of fact. In point of law, I apprehend that, if Parliament should at any time withhold the annual grant, the Lords Commissioners of the Treasury might, by process of law, be compelled to make the payment to which the revenues of the Crown were pledged by King George I.

7. There are no extraneous sources of emolument conjoined with this annual grant.

Fees. 8. I have not received any fee from any person attending my lectures. The present annual value of the Professorship is therefore £371. 8*s*.

Appointment. 9. The appointment to the office is by a warrant under the royal sign manual. The condition of eligibility is, that the Professor be a Graduate of the University of a rank not inferior to that of Bachelor of Laws. I am aware of no peculiar condition on which the continuance of the tenure of office depends.

Library. 10. There is an inconsiderable collection of books attached to my professorship. There is no fund available for the maintenance of it.

11. This question is inapplicable to the Professorship of Modern History.

12 and 13. These questions are incapable of any complete answer except by entering into an inquiry into the whole system of our academical education. I cannot however suppose that the Commissioners would wish to receive from me an explanation of my views on that general subject; for I have scarcely any experience to guide me; and could write at best nothing more than a theoretical speculation. Nevertheless, I have now passed a sufficient time at Cambridge to have reached the two following practical conclusions as to the hindrances by which the studies of the place, and especially the study of History, are obstructed.

Suggestions. First then, it seems to me evident that all reforms must be futile unless the annual vacations be very greatly abridged. At present they occupy from 27 to 30 weeks. Three times in each year the studies of our pupils are interrupted; and in the summer-time the interruption lasts during at least four months. Such intervals as these are fatal to all continuity of thought, and to all habits of persevering industry. The vacations are either devoted to frivolous amusements, or to desultory reading; or to studies conducted in other places, under other teachers, and upon other plans, than those of the term time.

To the parents and guardians of our pupils the expense of such holidays is most formidable, and the inconvenience extreme. Our University education is at best but half an education; for it provides employment for less than half the year. In this also chiefly consists the expensiveness of it. For every shilling laid out in a year by a father on his son at Cambridge, he must, in the course of the same year, expend on his son's education, almost as much more somewhere else.

Private Tutors. Is is said, indeed, that the young men pass their summers most advantageously with private tutors on reading parties. That this may be true of some few may readily be admitted. They are the few who are rich, and the few who are energetic. But my

Sir J. Stephen, K.C.B., LL.D.

Professorship of Modern History.

solicitude is not for them, but for the multitude who are poor, and for the still greater multitude who are indolent or idle. The energetic will take care of themselves; the rich will be cared for by others. The idle and the poor should be the chief objects of our care; both because they need it most, and because they are the great majority. I therefore earnestly advise the retrenchment of our vacations so as to reduce them to three months, or, at the very most, to four months, in each year. The practice of considering any one term as kept, when only half of it is kept, is, I believe a modern innovation. The world at large will never cease to condemn it, as an innovation in which the governing body of the University have too great an interest to be impartial judges of its propriety.

The length of the Academical Course might be reduced from three years to two.

Secondly, suppose the length of the academical year thus increased, the length of the academical course might perhaps be safely reduced, from three years to two. But supposing it to continue during three years, I am next of opinion that it is a capital error to require of the whole body of our students the prosecution, during three years, either of Classical or of Mathematical studies. A young English gentleman who has reached his twentieth year with but a slight and superficial knowledge of Greek and Latin, and of elementary Mathematics, may in general be pronounced incapable of any considerable attainments in either. Yet in other literary pursuits such a youth might pass his time with great advantage, and perhaps with credit.

I propose therefore that, at the close of the preliminary examination, those who have passed it should be arranged in two classes—the class of proficients, and the class of non-proficients. To the members of the first class I would assign the exclusive privilege of becoming, as at present, candidates for Classical and Mathematical honours, at the end of their academical course; and I would exempt them from the necessity of passing any other final examination. On the members of the second class I would impose the necessity of passing a final examination in at least two sciences, moral or physical, of their own selection; exempting them from the obligation, and excluding them from the privilege, of being again examined either in Classics or in Mathematics.

If this regulation were adopted, a large body of young men would be annually emancipated from an hopeless thraldom to studies for which they are disqualified, and transferred to studies in which they might do something to the purpose. Thus my own class and that of every other Professor, would be constantly supplied with recruits, not perhaps from the ablest men, but still from men of whom it is unjust to despond, and who might thus be rescued from the temptations and the penalties of a misspent youth.

General condition of the Study of Modern History.

Of the actual state of Historical studies in the University I know and can report nothing, beyond the mere fact that my Lectures in 1849 (delivered within a few months from my appointment, and the only course which I have yet delivered) were attended by a numerous audience who appeared to take much interest in the subject. The only means of promoting the advancement of such studies which I am able to suggest with confidence, are the means which I have already mentioned.

(Signed) JAMES STEPHEN.

Sir, *Richmond-on-Thames, 4th February,* 1852.

In the answers which, on the 14th December, 1850, I returned to the series of questions which had been proposed to me by Her Majesty's Commissioners of Inquiry into the State of the University of Cambridge, I made use of the following expressions:—

"The original foundation or constitution of the Professorship of Modern History is defined in the warrant under the Royal Sign Manual, by which each holder of the office has, in his turn, been appointed, and is not defined in any other instrument of which I am aware. But the terms of that warrant determine nothing regarding the duties of the Professorship."

In the month of May last, that is at the distance of five months from the date of the preceding answer, I, for the first time, became aware that the Professorship which I hold had been created by letters patent under the Great Seal. From a copy of them, which I then obtained, I learned that they bore date on the 28th September, 1724, and that they contained regulations which are substantially as follows, regarding the duties of the office.

The letters patent require the Professor to appoint at least two Preceptors of modern languages, and to pay them proper stipends. Each Preceptor is to instruct gratuitously twenty Scholars of the University, to be nominated from time to time by the Crown, by instruments under the Royal Sign Manual. Every such Scholar must study at least two such languages. Once at least in each Term the Professor is to deliver a public Lecture, explanatory of the method in which, and by the aid of what authors, the study of Modern History will be most advantageously pursued. He is to make an annual report to the Crown, through one of the principal Secretaries of State, of the progress of each of the twenty Royal Scholars.

I lost no time in reporting both to Lord John Russell and to the then Vice-Chancellor of the University the discovery I had thus made. I reported to them also that, as far as I could ascertain, no Royal Scholars had ever been appointed, and that no stipends had ever been paid, by any of my predecessors, to any Preceptor of modern languages in the University of Cambridge.

A correspondence followed, having for its object to determine what, under these circumstances, it was my duty to do. It seems superfluous to trouble you with any copy of that correspondence. The result of it is, that I have already appointed a Preceptor of the German language, and that I expect, in the course of a few days, to appoint another Preceptor of the

French language. The condition of each of these appointments will be, that I shall pay to each of the Preceptors any remuneration which the Vice-Chancellor for the time being may direct, for such instructions as may be given by them to any Royal Scholars, whom, in pursuance of the letters patent, the Queen may be pleased to appoint. *Sir J. Stephen, K.C.B., LL.D.* Professorship of Modern History.

On the 25th of January, in the present year, I, for the first time, learnt that I had been mistaken in reporting to Lord John Russell, and to the late Vice-Chancellor, that no Royal Scholars had ever been appointed. On that day I received authentic copies of two instruments under the Sign Manual of King George I., dated respectively on the 27th of February, 1724-5, and on the 31st May, 1725, by the first of which instruments fifteen Scholars, and by the second of which five Scholars, are nominated, under the letters patent of the 28th of September, 1724, "for the studying of Modern History, and the learning of modern languages, in the University of Cambridge."

I cannot venture to assert that these are the only examples of such appointments having been made, but merely that they are the only examples of which I have ever yet received any intelligence.

I have to request that Her Majesty's Commissioners would be pleased to append this letter to my answers of the 14th December, 1850. It will correct the errors into which I fell in writing those answers, from the ignorance under which I then laboured of any letters patent, or other instrument, having been ever issued for creating and defining the duties of my office. It will also correct the errors into which I fell in addressing Lord John Russell and the late Vice-Chancellor, from the ignorance under which I even then laboured of any appointments having been made of Royal Scholars under the letters patent of September, 1724.

I am, Sir,

Your most obedient humble servant,

The Rev. W. H. Bateson, &c. &c. &c.

(Signed) JAMES STEPHEN.

Answers from the Rev. J. S. Henslow, M.A., Professor of Botany.

Rev. J. S. Henslow, M.A.

Hitcham, Hadleigh, Suffolk, November 27, 1850.

Professorship of Botany.

1. The "Cambridge Calendar" states the Professorship of Botany to have been originally founded by the University in 1724.

2. No duties were absolutely annexed to the Professorship, but the Government agreed to pay the Professor 100*l.* per annum on condition of lectures being delivered, as in the case of the Professorships of Chemistry, Anatomy, &c. Duties.

3. This Professorship afterwards became a patent office, with a salary of (nominally) 200*l.* per annum. My patent contains no stipulations as to lectures, and my predecessor delivered none during the last 30 years of his life. Endowment.

4. The duties which I have actually performed have consisted in delivering a course of 20 lectures during every Easter Term for the last 25 years; and in examining the medical students in Botany, since this demand has been made upon them. Duties actually performed.

N.B.—The half term after Easter does not admit of a longer course, and it has sometimes happened that I have given one or two less than 20, sometimes one or two more.

5. See Answer 2.

6. See Answer 3.

7, 8. A fee of one guinea from the students who attend the lectures. The average for the last ten years has been under 20*l.* per annum. Fees.

9.

	£.	
From Government (say)	177	per annum.
Fees (say)	20	,,
	197	
Deduct expenses incurred from non-residence . .	15	,,
Net Value about	182	

Present value.

10. The Prime Minister appoints whom he pleases. My patent is for life, by writ of Privy Seal, and is dated 1825. Appointment.

11. None whatever attached to the Professorship: but there is a museum with a small library, and containing a Herbarium, under my care, as "Walker's Reader in Botany," an unsalaried officer without a residence. Soon after my appointment, the Senate passed a grace to allow 30*l.* annually to maintain and augment the collections in the Museum. Residence, Museum, &c.

12. The chief opportunities afforded to Students are in the Botanic Garden, and in the Museum, which has lately been thrown open by a communication with the Anatomical Schools; but there is no subordinate to attend at stated hours, or to assist in preserving the specimens from injury, or in rendering them properly available for the purposes of study. Opportunities afforded to Students.

13. They cannot, unless I were to devote more time to my Professorship than would be

Rev. J. S. Henslow, M.A.

Residence, Museum, and Library.

consistent with my duties to my parish. I conceive the lately established Natural Sciences Tripos will necessitate entirely new arrangements with respect to future appointments to the Botanical chair. In order to retain the services of any one duly qualified for the office, his income should be made independent of any extraneous sources beyond what he might command from fees at lectures and by labouring at his science. He should be required to reside during the greater part of the year. He should have the chief control over the Botanic Garden, and not merely (as at present) the mere use of it. There should be sufficient funds at his disposal for maintaining the garden in a fair state of efficiency, and for supplying the Herbarium with the materials now so rapidly accumulating that no one who is unacquainted with the present state of the science can have any idea of its necessities in this respect.

14. The general condition of this branch of study in the University may be compared to the amount of knowledge which a freshman may be supposed to have acquired of Mathematics after having studied Euclid for half a term. Of course I do not include in this estimate the knowledge possessed by a few individuals who may have paid some degree of attention to the subject apart from all University considerations. In order to promote this study among our Students, a few prizes, in addition to the honour of being in the Natural Sciences Tripos, would be very advisable. But I conceive there would be no way so effectual for enabling Botany to assume a *status* in the University, irreproachable in the eyes of scientific men, as by affording a resident Professor the opportunity of devoting his *entire life* to so vast a subject. Beside giving general instruction, he could then encourage every Student who might possess a taste for the pursuit, to co-operate with him in carrying on researches and experiments which would bring credit to themselves and to the University.

(Signed) J. S. HENSLOW.

My dear Sir, *Hitcham, Hadleigh, Suffolk, March* 13, 1851.

I am sorry I have been too much occupied to be able to reply before to-day to the last set of queries sent me nearly a fortnight ago.

Lecture Room.

1. My Lecture-room will hold (I guess) about 150. It has a private room attached, which I have converted into an apology for a Museum. The Lecture-room is used by myself during the Easter Term, and appropriated to the uses of the Jacksonian and Chemical Professors during the other Terms.

Funds for apparatus &c.

Government aid required.

2, 3, 4. Can be better answered by some resident Professor; but my own conviction is, that the University will never raise sufficient funds (even if she possesses the power of doing so) for procuring the requisite accommodation, and the necessary apparatus for rendering a Professorial system effective, without the interference of government. Some make-shift (as hitherto) may be contrived, which will only postpone indefinitely what is needed immediately.

Fees.

Suggestions.

5. There is no uniform system about fees for lectures. I charge one guinea for all who do not take out a ticket from the Registrar, but others charge differently. The system recently adopted among the Professors whose lectures bear upon the Moral and Natural Science Triposes, is to have tickets issued at a certain price, the receipts to be shared in certain proportions among them, some receiving twice as much as others. I do not exactly approve of the scheme we have adopted, though I consented to it. I think it would be desirable to charge a uniform fee, which should be distributed equally among the Professors, to ensure a course of Lectures sufficient for a pass Examination; and in addition to this, a small fee might be superadded from those who attend particular Professors giving Lectures which have more direct reference to the Tripos Examinations. It is of the utmost importance that the amount required for the Examinations should be as nearly equal as possible from the several Professors. If a Professor were not disposed to discharge his duties honourably, he (at present) possesses the power of lowering the standard in his own subjects for a pass Examination, and thus competition might be acting injuriously to the interests of the University; or he might make his Examinations comparatively harder than those of other Professors, and thus escape a burden which a want of competition would hold out no inducement for him to bear. If we can secure a high standard for the new Triposes by engaging a staff of independent examiners, then (if we abstract all considerations of the greater or less popularity attached to a given subject) the Professors who take most trouble, and are most competent, will no doubt command the largest classes. A competition for e es over and above the regular stipends would then be advantageous, and I do not think a Professor ought to feel himself aggrieved (considering the peculiar advantages of his own position) if others were allowed to give public Lectures on the same subject as himself, and pocket fees to which his own laziness or incompetency might give him no just claim. The great evil of our present system arises from men being compelled to attend Lectures in College for one or more hours during the best part of the day, from which they are often deriving no benefit whatever. If they had free choice of Lectures, attendance might be sufficiently secured by certificate, and I think a Term would be more efficiently kept than by daily appearing before some Lecturer from whom they are acquiring nothing.

6. I am not sure that I exactly understand the bearing of this question. If it mean that in the present grouping of the subjects under seven separate heads these groups are to be considered as equivalents, it is certainly a more difficult question than I feel competent to answer. Almost any one of the Natural Sciences requires the study of a life to enable a man to become thoroughly proficient in it; and, unless some limit be set to what may be expected in each, to require the whole (including Chemistry) would be a vast deal beyond what would probably be expected in Theology (including Moral Philosophy), or from some of the other groups, not excepting Mathematics. The completion of a cycle would require the foundation of more than one new Professorship. I need only notice Zoology to show how deficient we are. The best judgment would be obtained by inquiry at some of the foreign Universities as to what degree of subdivision several of the subjects would advantageously admit; and how many Professors should be appointed for the sake of securing due progress in the several departments of a given Science.

Rev. J. S. Henslow, M.A.

Professorship of Botany.

Study of Natural Sciences.

Zoology.

7. The two Downing Professors have residences, but I am not aware that any others have them. I think the Professorial system cannot be made complete without an adequate staff of Professors being resident during two out of three Terms. I think it would be most advisable to procure houses and chambers of different capabilities for securing this important object.

Residence of Professors.

(Signed) J. S. HENSLOW, *Professor of Botany.*

Answers from the Rev. Adam Sedgwick, M.A., Woodwardian Professor of Geology.

Rev. A. Sedgwick, M.A.

Professorship of of Geology.

Question 1. By whom was the Professorship founded?

Foundation.

By Dr. Woodward; who, in a Will, dated October 1, 1727, bequeathed his cabinets of English fossils to the University of Cambridge, "to be reposited in such proper room or apartment as shall be allotted by the said University" to the satisfaction of his executors. Soon afterwards he died, and the cabinets of English fossils became the property of the University. But the collection being considered incomplete without the remaining foreign cabinets, described n Dr. Woodward's printed catalogues, the Vice-Chancellor was empowered, by a grace of the Senate (passed February 26, 1728), to purchase the foreign cabinets for a sum not exceeding 1,000*l.*

This purchase being effected, the whole Woodwardian collection, English and foreign, came into the possession of the University, was arranged in five cabinets, and was deposited in a small room, contiguous to the Sophs Schools, under the Public Library.

By the same Will, Dr. Woodward directed his executors to purchase, and convey to the University, lands of the yearly value of 150*l.*, the rents of the said lands to be appropriated yearly in the manner following: viz., 110*l.* to a Lecturer, 10*l.* for an audit dinner, and 10*l.* to two annual Inspectors; the remaining 20*l.* to be applied "to the payment of taxes and other necessary contingencies." He also directed, in case any surplus should remain out of the 20*l.*, "that it be disposed of yearly and every year in such manner as the University shall think fit; but in hopes that for the honour of the University, and the benefit that will thence accrue to the public, if the design of this donation be rightly carried on, that the said University will be pleased to dispose of the said residue in making experiments and observations, in correspondence, in natural collections, books, and other things that may serve to the promoting the good ends of this donation."

These directions of the Will were, not long afterwards, carried into effect; and, January 31, 1731, Dr. Woodward's four executors appointed Dr. Conyers Middleton the first Professor. Such is the history of the foundation and endowment of the W oodwardian chair.

Question 2. What were the duties annexed to the Professorship by the original foundation or constitution?

Statutable requirements.

The Professor was "never to be absent from the University for more than two months in the year, and those to be in the Long Vacation." He was to read "at least four lectures in every year, at such time and in such place as the University shall appoint, on some one or other of the subjects treated of in *Dr. Woodward's Natural History of the Earth*, and in his defence of it against Dr. Camerarius, in his *Discourse on Vegetation*, or in his *State of Physic*." The Lecturer was further required to publish and print, at least one of the said lectures every year; he was to have the custody of the fossils and catalogues; he was "to reside in or near the apartment allotted for repositing of the said fossils;" three days every week he was to attend in the Museum, from 9 to 11 A.M. and from 2 to 4 P.M.; to exhibit the said fossils gratis; and specially to take care that none of the fossils be mutilated or lost.

Question 3. Have these duties been modified or changed by any subsequent authority; and if so, in what particulars?

Modification of Duties.

From the year the Professorship was founded to the Easter Term of the year 1818, the duties annexed to it were never modified or changed by any grace of the Senate. The room in which the collection was deposited was small, damp, and ill-lighted, and utterly unfit for a residence or a lecture-room. Partly on this account, and partly from the absence of all academic interest in subjects connected with the natural history of the earth, no course of lectures, during a period of 88 years, was given by any of the Professors; nor, during that period, were

Rev. A. Sedgwick, M.A.

Professorship of Geology.

any single annual lectures published in compliance with the express directions of Dr. Woodward's Will.

Several of the Professors were men of scientific zeal, and one of them, Mr. Michell, was a great original observer and writer on questions connected with the natural history of the earth; but I believe that neither he nor any other Professor, during the past century, could have obtained a permanent geological class. The attempt was, indeed, made by Professor Hailstone, soon after his appointment, in the year 1788. With the concurrence of the University, he attended one or two courses of Professor Werner's lectures; after which he returned, from Germany, with a series of typical rocks and minerals, added them to the Museum, and published a syllabus of an extended course of lectures. He failed, however, in obtaining a class, as the subject was at that time regarded with no favour, and he never afterwards renewed the attempt.

In the early part of this century the science of Geology began to excite some interest among the resident members of the Senate; and when it was understood (during the Lent-term of 1818) that Mr. Hailstone was about to retire from his Professorship, a Syndicate was appointed by the Senate to consider "what rules, orders, and directions might be fit to make in regard to the Woodwardian Lectureship," &c., &c.; and *on the day following my election* to the Woodwardian chair, a good and stringent report of the Syndicate was published (May 19, 1818), containing the following clause, viz., "*That to entitle the Woodwardian Lecturer to the receipt of his annual stipend, it shall be certified to the Vice-Chancellor that Lectures have been given.*" The same Report also stated, "that it would tend to the diffusion of science, and to the credit of the University," if an extended course of lectures were read "on fossil organized bodies and the constitution of the earth's strata;" and the report concluded by recommending that if, after a new room has been built, such an extended course be given by the Professor, an addition be made to his stipend.

Such is the history of the Woodwardian foundation, and such were the obligations attached to it in 1818, under the sanction of a Grace of the Senate, at the time of my appointment: and having, as Woodwardian Professor, given a short course of lectures in 1819, and an extended course in the Easter Term of 1820, a Grace passed the Senate (in the October Term of 1820) to the effect, that an annual sum of 100*l.* be added to the Woodwardian stipend, on the express condition that such an extended course be given, year by year, gratuitously to the members of the University.

Question 4. What are the duties actually performed?

Duties actually performed.

1. A course of about 30 geological lectures is annually given to a good class, chiefly composed of members of the University. Several members of the town of Cambridge have, on application, been admitted to the whole gratuitous course; and a geological lecture is now very seldom given without the presence of several persons who are not members of the University.

2. The whole collection is now arranged in a geological Museum, under the new wing of the Public Library. It is open six days a-week, from 10 A.M. to 4 P.M. I am responsible for the custody of this collection, and while in the University I am ready to attend with the keys, and to exhibit such specimens as are not under glass, and are locked up in the drawers of the several cabinets; such, for example, as those which are stored in the original cabinets of Dr. Woodward.

3. The arrangement of the new collections added by myself, or purchased at my suggestion by the University, or presented to the Museum by munificent friends, has, however, formed, and continues to form, out of all comparison, the most laborious and costly duties that have arisen out of my office. Some account of the labours thus employed, either by myself or at my personal cost, will be given in the answer to a subsequent question.

Question 5. What is the nature and what the amount of the original endowment?

Endowment.

This question has been answered in the historical account, above given, of Dr. Woodward's foundation.

Question 6. Was there any other subsequent endowment?

There has been no subsequent endowment. All the existing funds have been derived from the lands conveyed, by Dr. Woodward's executors, to the University.

Question 7. Are there any extraneous sources of emolument?

None.

Question 8. Are any fees received from persons attending the Lectures of the Professor?

Fees.

No direct fees have ever been received. I may, however, remark that, in consequence of Graces recently passed by the Senate, establishing a Tripos of Natural Sciences, and compelling every Undergraduate not a candidate for honours, to obtain a certificate of attendance on the Lectures of (at least) one of the University Professors, a considerable addition will, probably, hereafter accrue to the Woodwardian stipend. Such annual additions are at present distributed on a fixed scale by the Registrary of the University; and may be regarded as fees for additional labour thrown upon the several Professors, who are now called upon to examine those who apply for ordinary certificates, as well as those who are candidates for honours in the new Natural-science Tripos. The sums received by myself from this new source, during the last two years, since the new Graces came into operation, have not, collectively, amounted to 10*l.*

Question 9. What is the present value of the Professorship annually, distinguishing the several sources of income?

When the lands, purchased by the executors of Dr. Woodward's Will, were conveyed to the University, there was a surplus of rent (above the annual sum of 150*l.*) amounting to 8*l.* 6*s.* 5*d.*

This surplus was awarded, by the executors, to the Professor; and, as before stated, he received (on the award of a Grace passed in the October Term of 1820) a stipend of 100*l.* for extra Lectures. For the last thirty-one years he has therefore received from the Woodwardian trust the annual sum of 218*l.* 6*s.* 5*d.*, the several sources of income distinguished as follows:—

Present value.

	£.	*s.*	*d.*
Stipend, by Dr. Woodward's Will	110	0	0
Surplus of rent	8	6	5
Payment for extra Lectures	100	0	0
	£218	6	5

Question 10. The appointment and election to the office, with whom is it?

Mode of Appointment.

By the express directions of the Founder's Will, the executors, and the survivors or survivor of them, had the original appointment to the Professorship, and the four first Professors were so appointed. But after the decease of all the said executors, the right of election was, by the directions of the Will, vested in the whole Senate of the University, in addition to whom the Archbishop of Canterbury, the Bishop of Ely, the President of the College of Physicians, the President of the Royal Society, and the two representatives of the University in Parliament, had not only the official right of vote, but also the privilege of voting by proxy. By a clause in the Will no married man is eligible, and the form of election is by open poll.

Question 11. Is there any residence, Museum, Library, Collection, or apparatus attached to your Professorship; and what available funds are there for the maintenance of them?

Residence.

1. There is not any residence attached to the Professorship.

Museum.

2. There is now an excellent Museum, consisting of two large contiguous rooms; one of which is used exclusively as a Museum, and the other partly as a Museum and partly as a Lecture-room.

Library.

3. There is a small library in the Museum, composed of books bequeathed by the late Professor Green, and of books presented by the nephew of the late Professor Hailstone; also of some very valuable works purchased out of the Woodwardian funds during the last thirty-three years, under the sanction of the Auditors and Trustees of the estate: such as Cuvier's Ossemens Fossiles, Agassiz' Poissons Fossiles, the Transactions of the Geological Society of London, Sowerby's Mineral Conchology, &c., &c.

Collections.

4. There is a noble collection of fossils, British and foreign, arranged stratigraphically in one apartment of the Museum, and in the other apartment there is an unrivalled collection of British rock specimens, and several other miscellaneous collections.

Cost of keeping up the Collection.

5. The annual cost of keeping up a collection like that lodged in the new Woodwardian Museum must be considerable, but the funds available for that purpose are now very small. In proof of which I may state, that, within the last five years, bills to a considerable amount, paid by myself for fossils which I thought important to the academic collection, and for which payments I produced vouchers, have been more than once returned on my hands, not from any want of confidence on part of the Board of Auditors and Trustees (the Vice-Chancellor and the Heads of Colleges), but for the plain and sufficient reason that there were no funds in hand to meet the demand. By the Report of a Syndicate (May 19, 1818) before alluded to, it appeared "that the clear annual income of the Woodwardian Estates was then about 430*l.*, and that there was an unappropriated accumulation (from the rents) of 1,200*l.*" By a Report of another Syndicate (March 14, 1821) it further appeared that there was at that time an unappropriated accumulation of more than 1,700*l.*; and it was suggested in the Report, that these accumulations might be applied to the fittings of a new Museum.

New Geological Museum.

The second Syndicate (1821) was appointed, in the terms of a Grace, introduced by myself, to consider the best means of erecting a new Geological Museum, fit for the reception of the old collection, and of the great additions that were then made to it; and a negotiation for a site was entered upon with the Trustees of the Botanic Garden. This negotiation failed, chiefly from a general wish expressed by the resident members of the Senate, that a place should be found for the whole collection in an intended new wing of the Public Library. The failure of this plan was followed, so far as regarded the new Geological Museum, by a very unfortunate but inevitable delay of more than twenty years.

Insufficiency of Funds.

When the new Museum was, in 1842, ready for the Woodwardian Collection, the "unappropriated accumulations" were much increased, and the Auditors paid, I believe, for the fittings of the Museum, a sum not less than 2,500*l.* They had also, by help of the accumulations, discharged other heavy bills, among which I may mention a bill of 500*l.*, paid in 1840 for a duplicate series of foreign fossils from the collection of Count Münster; and another bill, of about 120*l.*, paid during a previous year for a noble specimen of the Irish fossil stag (*Cervus megaceros*), which now stands in the basement of the Museum. But all the accumulations are now exhausted, and the rents of the Woodwardian Estates are greatly lowered, so that the annual sum at the disposal of the Auditors is, I am informed, barely sufficient for the necessary expenses of the Museum, and for the payment of the annual stipends above mentioned.

Account of the present collection.

The following short account of the manner in which the present collection was formed, as well as of its extent and arrangement, may not be considered out of place in this reply to the questions proposed by Her Majesty's Commissioners. To comply with the letter of Dr. Woodward's Will was morally impossible. It would have been a mockery to lecture on an exploded theory of the earth, or to enlarge on the mistakes of Dr. Camerarius. But to give an extended course of lectures during the academic term, and to employ each Long Vacation in surveying and col-

Rev. A. Sedgwick, M.A.

Professorship of Geology.

lecting fossils from the great series of British strata—thereby bringing together a collection worthy of the University, and illustrative of the present condition of geology—did seem to be in conformity with the spirit and scope of the founder's Will. With the entire approval of the University, I therefore commenced, during the first Long Vacation after my election to the Professorship (1818), and I continued, during the Long Vacations of more than thirty years, a series of geological surveys, chiefly confined to the British Isles. The fruit of these surveys, carried on with great labour and at no small personal cost, was, year by year, conveyed to the University, and arranged in new cabinets, so long as it was possible to find a place for them. In a very few years, however, all further arrangement became impossible, and the ponderous cases of fossils collected by myself, or contributed by my friends and fellow-labourers, were deposited in such places of security as could be found for them; and in 1842, when the new Museum was first opened, an enormous collection, the accumulation of twenty previous years, was, for the first time, unpacked, and made available to the public. For one or two years Professor Ansted assisted me with great zeal and ability in bringing the new collection into approximate order, and he was remunerated by one or two grants made to him by the Senate out of the Woodwardian Funds. After he had been called away to other duties, I, at my own cost, engaged the very valuable assistance of Mr. Salter, an excellent naturalist and palæontologist; who was before long, however, drawn away from the Cambridge Museum by a permanent appointment under Government. Lastly, I had the good fortune, in 1846, to secure the assistance of Professor M'Coy in carrying out the final arrangement of the British and foreign fossils. During the first year of his residence in Cambridge, the sum of 100*l.* (half the annual fee for which he undertook the arrangement of the Cambridge fossils) was granted to him by a grace of the Senate; but since that year the whole responsibility of the arrangement has fallen on myself, and at a cost that would have been ruinous to me had I possessed no means beyond those which I derive from the Woodwardian stipend.

Professor M'Coy's services.

The arrangement of the palæontological part of the collection is now nearly complete; and the self-devotion and untired zeal with which Professor M'Coy has given himself to the task, and the consummate skill with which he has carried out its details, are far above all common praise, and entitle him to the lasting gratitude of the University. Some notion may be formed of the greatness of his task, when it is stated that Count Münster's duplicates amount to more in number than 20,000; and that they form but a minute fraction of the great palæontological series Professor M'Coy has now arranged stratigraphically in the Museum.

In addition to the great palæontological series, which is now arranged in table-cases and upright cabinets on the first floor of the chief apartment of the Museum, there is, in a side-closet, the whole original collection of Dr. Woodward, in five ancient cabinets; and with the exception of a few pyritous specimens, which have fallen to pieces from spontaneous decomposition, the whole series is well preserved, and is in accordance with the printed catalogues. In a second closet are the books forming the library of the collection. In a third closet (in addition to an arranged series of cretaceous fossils), there is a very valuable collection of recent shells, presented by Henry James Brooke, Esq., of London, and a fine series of recent corals, presented by the Rev. G. L. P. Garnons, of Sidney College. These two collections of recent shells and corals ought hereafter to be arranged entirely under glass, in the contiguous apartment of the Museum; in which case they would afford excellent materials of preliminary study to any one engaged in the investigations of palæontology. In the upright cases of the same floor are seen a fine collection of fossil fishes; many fine cavern bones, both British and foreign, and many bones, teeth, tusks, and fragments of mammal's skeletons, chiefly from the British drift. On the same floor are also seen several very fine specimens of fossil reptiles, among which I may point out two very instructive portions of the skeletons of two large plesiosaurs, presented by the Rev. Samuel Banks, Rector of Cottenham, and T. S. Jones, Esq., of Ely. In one of the upright cases of the floor is a very instructive general series of Irish palæzoic fossils, presented by R. Griffith, Esq., of Dublin. And in the cabinet on the same floor is also a noble series of carboniferous limestone fossils, from Lowick, Northumberland, presented by the Rev. G. Jenkinson.

On the basement floor of the same room are exhibited several skeletons of fossil reptiles; casts of skeletons of fossil reptiles, presented by the Earl of Enniskillen and Sir Francis Chantrey; the skeleton of the fossil stag of Ireland; many large mammal's bones from the British drift; casts from the magatherum, and other mammals presented by the Royal College of Surgeons, and by Professor Owen; casts from several fossils of the Sivalick Hills, presented by the East India Company; and casts from the dinotherium and other extinct mammals, presented by myself.

Benefactors to the Museum.

To enumerate all those members and friends of the University who have assisted in the formation of the great palæontological series in the Museum would be impossible within the limits of this reply; but I am called on specially to name the following gentlemen as benefactors to the Museum:—Professor Henslow; the Rev. G. H. Stokes, Fellow of Caius College; W. Hopkins, Esq., of St. Peter's College; and the Rev. Osmond Fisher, Fellow of Jesus College; J. Packe, Esq., of King's College; Professor Ansted, of Jesus College; J. H. Pollexfen, Esq., of Queen's College; Rev. J. Foster, of Wickersley; and S. M. Saxby, Esq., of the Isle of Wight.

In the second apartment of the Museum (occasionally used as a lecture-room) are deposited the rocks and simple minerals presented by the late Professor Hailstone; a good cabinet of simple minerals, presented by a former Chancellor of the University (the Duke of Grafton); a fine series of the bones of fossil reptiles, from the neighbourhood of Ely, purchased out of the Woodwardian funds; a magnificent and nearly perfect skeleton of a plesiosaurus, purchased by a subscription of some resident members of the University for 220*l.*; a noble series of the rocks and fossils of Australia, presented by Rev. W. B. Clarke, of Sydney, New South Wales; a valuable series of palæozoic fossils from the north of Europe and North America, presented

Rev. A. Sedgwick, M.A.

by the Russian Government, and by Professor H. Rogers, of the United States; and, lastly, the great mixed series of rocks and fossils collected by myself since the year 1818, chiefly from the British Isles, but also from France and Germany.

Professorship of Geology.

Some portions of the collections in this apartment are arranged and catalogued; and rough, preliminary catalogues of the unarranged portions are deposited in the Museum. Much additional labour must, however, be bestowed on the cabinets in this part of the collection before they can be exhibited with full advantage to the student; but I count with confidence on the assistance of the junior members of the University in the performance of this my only remaining task.

Catalogue.

No general catalogue of the Museum can be made before its arrangement is more complete; but a very detailed description, by Professor M'Coy, of all the British palæozoic fossils in the collection, is nearly finished. The first part has been published, and the concluding part will, I trust, appear in a few months. This work will form a thick quarto volume, and will contain many excellent plates of all the new species in the Museum, belonging in the British palæozoic series, executed (at my own cost) by a good artist, who has been working, during a portion of the three last years, within the Museum, and under the immediate direction of Professor M'Coy. The cost of the letterpress of this work has been generously contributed by the Syndics of the University Press.

This elaborate work may, by easy references, hereafter serve the purpose of a good *catalogue raisonnée* of the palæozoic part of the Cambridge collection. In like manner, the monographs of the Palæontological Society, interleaved and placed over the British series of the secondary and tertiary fossils in the Museum, will exonerate my successor from the necessity of making detailed descriptive catalogues of the secondary and tertiary British fossils. But so soon as the arrangement of the collection is nearly complete, a short general catalogue (somewhat of the nature of a consulting index) ought to be undertaken; stating the contents of each cabinet, the formations to which they belong, the number of drawers, and the number of specimens in each drawer; and especially the localities of the several specimens. Details (like those of Dr. Woodward's old catalogues) will generally be unnecessary; and when the specimens are well arranged, a glance of the eye over them will generally inform the student all that they can teach him. Such a synoptical catalogue I do not despair of completing before I resign my office.

Question 12. Are opportunities afforded Students? &c.

Opportunities afforded to Students.

The students have every opportunity for a daily examination of the collection, that is compatible with its safety, and the most instructive specimens are placed under glass.

Question 13. May the duties enjoined on you as Professor be modified so as, in your opinion, to contribute more effectually to the benefit of the University?

Founder's Will not complied with.

Under this head I have little to suggest, as the duties of my office have been greatly modified by myself, with the liberal concurrence of the University. It would, perhaps, be expedient to obtain a legal sanction for these modifications; as neither the lectures now given, nor the arrangements of the Museum, are in accordance with the letter of the founder's Will.

Question 14. What is the general condition of the University in the branch of study to which your Professorship relates; and what the means of promoting its advancement?

General condition of the Study.

To the first question I can reply with grateful feelings for the past, and with good hopes for the future. During about twenty years immediately following my appointment I had a very crowded class. It then fell off (during a short period of general depression among the professorial lectures) to less than half its number. For the last five or six years it has again risen in number to, at least, its former limits. So long as there is accommodation in the Lecture Room, the inhabitants of the town are freely admitted, and some of them have attended the whole course. I might further, by way of reply, appeal to the philosophical literature of the last thirty years, and to the many geological essays published by Cambridge men; and I might give a list of men who, after a Cambridge training, have filled high offices in the Geological Society of London, or in the Government Survey. I might also dwell on the good moral effects produced among the members of the University by an enlarged and liberal study of the phenomena of geology. As to the means of promoting the advancement of the studies to which my Professorship relates, enough has, perhaps, been stated in the previous replies. I will, however, by way of conclusion, venture to throw out some not I think unimportant suggestions.

Means of promoting it.

(1.) If such additions be made to the collection as mark the progress of the science (and without such additions the old collection will gradually lose a great part of its value), the second room of the Museum will before long become crowded with cabinets, and with fossil bones, or casts of such bones, and thereby be made unfit for a lecture-room: but one or two ample lecture-rooms might be fitted up, at a very small cost, in a portion of the old buildings of King's College, which are almost contiguous to the Museum. Such lecture-rooms would serve the purposes of the University till another side of the intended square of the Public Library shall have been erected. Meanwhile the Geological Collection might go forward, increasing without a check. To this end the Ornithological Collection (which forms no part of the Woodwardian Museum) should be removed to another place; for even now it seriously injures the exhibition and the arrangement of the Geological Series.

(2.) When a new side of the intended library square shall have been erected, it will (agreeably to the architect's plan) contain a series of lecture-rooms. It would greatly forward the interests of science were the Collection of Comparative Anatomy hereafter arranged in this new building on the same floor with the Geological Collection; for palæontology cannot be studied, to good effect without a constant appeal to comparative anatomy; and comparative anatomy would gain continual interest by an appeal to analogous organic structures derived from the Old World. In that case the present Anatomical Museum might be appropriated to human anatomy and pathology, &c.

3. So far from being detained in Cambridge during the long vacation, the Professor ought

Rev. A. Sedgwick, M.A.

Professorship of Geology.

to be employed in making field surveys, either in the British Isles or on the Continent, during three or four months of each summer. To secure this very essential object, an allowance for travelling expenses might, perhaps, be made him out of the University funds. Within the thirty-four years of my service I have many times, during the summer's geological tour, spent more than the whole stipend of the Professorship. I do not by any means make this statement by way of complaint; for the work was one of good will: but this state of things cannot and ought not to last; and in making this recommendation I have no personal interests to serve in any vulgar sense, as my period of service is nearly over, and I am now becoming unfit for the robuster duties of an office which I hope soon to resign to more youthful and vigorous hands. If the Professor confined his labours to the closet, his lectures, however ably elaborated, might fall almost dead from his lips; but if he meet his class, year by year, after a voyage of discovery, he will be rewarded by finding an animated and earnest audience.

4. The annual inspection of the five Woodwardian cabinets has, under the express direction of the Founder's Will, been the means of preserving the old collection in its integrity. The duty of these Inspectors is very simple: viz., to examine the old collection, drawer by drawer, to see that the specimens correspond with the catalogues, and to report on their condition. This work has been done effectually; but I venture very earnestly to recommend that, in in addition to the two Woodwardian Inspectors, at least one good naturalist and geologist be annually appointed by the University to inspect and report upon the new collections. For example, to report upon the condition of the catalogues; the progress of arrangement, year by year; the defective portions of the Museum, and the means of supplying such defects; the removal of imperfect specimens when better specimens can be supplied; in no instance, however, removing from the Museum any specimen that has been figured or described in the printed catalogues, &c. In this way the collection will not stagnate, but will advance with the discoveries of a progressive science; and the Academic Collection will in successive years represent, as it ought to do, the actual condition of geological discovery. For this end it would be well for the University from time to time to appoint some scientific Inspector, who was not a member of the University, but well acquainted with the state of the great British collections; such, for example, as the collections in the British Museum, or in the London Museum of Practical Geology. The occasional report of such an Inspector might produce a very healthy rivalry, and might very greatly benefit the University, by suggesting an interchange of duplicate or redundant specimens. Additional collections of great value, and necessary to the perfection of the University Museum, might in this way, as I know by experience, be gained with very little cost.

5. The custody and exhibition of the old Woodwardian cabinets belongs exclusively to the Professor; but the present condition of the Museum requires the daily presence of an assistant curator. During the last five years William Farrer has been employed by myself as clerk and assistant to Professor M'Coy, in the arrangement of the great palæontological collection. He was paid for services at the rate of eight hours a-day; but many times (especially during the past year) I have paid him additional fees, for the extra labour of three additional daily hours. The work he has gone through has been very great, and has been done effectually. He has been since employed, under the sanction of the Vice-Chancellor and the Board of Auditors, in attending the Museum, for which he receives a small, but, I think, inadequate stipend from the Woodwardian Estate. But now that the University possesses a new collection of very great value, and that geology is an acknowledged subject of academic study, the Senate would do well to sanction the appointment of an assistant curator, with a better salary, to be paid out of the funds of the University. No menial duties should be imposed on him; and he would find ample employment in working under the Professor, in making catalogues, in mounting and labelling specimens, and (while the Professor is absent) in daily explaining to visitors and students the nature and arrangements of the collection.

For nearly a hundred years the University but ill discharged the obligations that were contracted by the acceptance of the Woodwardian bequest. She provided neither an adequate museum nor a lecture-room; and although all the surplus derived from the Woodwardian Estates has been very properly expended on the New Museum, I think the Senate still owes a large arrear of debt to the equitable claims of the Professorship. All the proceeds of the estates are devoted to specific objects by the express terms of Dr. Woodward's Will, and the increased rents of the estates are by no means more than sufficient to meet the present annual demands for such specific objects. But other objects have arisen out of the progress of geological science, and their importance has been sanctioned by recent graces of the Senate; and it is not, I trust, improper for me (through the medium of this reply,) respectfully to urge upon the Senate the appointment of an Assistant Curator of the Museum. It now contains a noble collection of very great value, which is the property of the University, and which has been brought together at great cost, but without any tax on the ordinary Academic funds. During the latter half of the period in which I have filled the Professorship (without taking into account the great yearly expenses of geological surveys in the long vacations) I have, at my own cost, contributed more than 1,300*l.* towards the collections and arrangements of the Museum; and, I may add, that several liberal friends have also, at great personal cost, contributed to the fossil stores of our cabinets. I make not these remarks in the way of boasting; but in the earnest hope that the Senate, as well as the Woodwardian Auditors, may, through Her Majesty's Commission, become acquainted with the previous suggestions, and may endeavour to carry them into effect, so far as they appear practical and expedient; and they are offered with sentiments of heart-felt good will.

It might be said in reply, that the Woodwardian funds are all appropriated, and that the corporate funds of the University are too low to meet any costly demands which may be made upon them. But if the corporate funds be low, the aggregate College incomes are very great;

and the Colleges are bound to uphold, by every honest means compatible with their corporate obligations, that great cause of liberal Academic instruction of which the Professorial lectures now form an essential part. The Colleges can only exist in honour, and consequently in safety, by a wise and generous use of those great instruments which Providence has placed in their hands; and I doubt not, that by a wise and liberal policy, and without any unreasonable sacrifice of private interests, ample means might be found within the University for giving full life and activity to every institution or organ of public instruction that exists within it.

Rev. A. Sedgwick, M.A.

Professorship of Geology.

Answers from the Very Rev. G. Peacock, D.D., Lowndes' Professor of Astronomy and Geometry.

The Very Rev. G. Peacock, D.D.,

Lowndes' Professorship of Astronomy.

1. By whom was the Professorship founded?

Foundation.

By Thomas Lowndes, Esq., of Overton, in the county of Chester, by will bearing date May 6, 1748. The following is an extract of the portion of his will which relates to this Professorship:—

Endowment.

"I give and devise all my estates at Overton, and all my lands and hereditaments in Smallwood and elsewhere in the county of Chester, and all other my real estates, unto the Chancellor, Masters, and Scholars of the University of Cambridge, and their successors for ever, subject, nevertheless, to such just debts as my personal estate shall not be able to pay, upon trust that they shall for ever pay all the clear rents and profits of my said real estates annually to the support and maintenance of a Professor of Astronomy and Geometry in the said University of Cambridge, after deducting thereout all costs charges, and expenses of executing the said trust hereby in them reposed, and all taxes, repairs, and other outgoings; which Professor I will shall be for ever called Lowndes' Astronomical and Geometrical Professor in the University of Cambridge, and shall be from time to time chosen and appointed by the Lord High Chancellor, Lord Keeper of the Great Seal of Great Britain, the Lord President of the Privy Council, the Lord Privy Seal, the Lord High Treasurer, or the First Lord Commissioner of the Treasury, the Lord Steward of the King's Household for the time being, or the major part of them. And I will and desire that proper statutes, rules, and ordinances in relation to the said Professorship, and the number of the lectures to be read therein, and the times for such reading, and all other regulations for the perpetual government of the said Professorship, shall be made by and under the hands and seals of the Right Honourable Thomas Earl of Macclesfield, Martin Ffolkes, Esq., President of the Royal Society, Dr. Bradley, and my much-honoured friend William Jones, Esq., of Beaufort-buildings; which statutes and ordinances shall be for ever binding to the said Professors."

Appointment.

2. What are the duties annexed to this Professorship by the original foundation or constitution?

Duties.

The founder empowered certain persons named in his will to frame statutes for the regulation of his Professorship, but it does not appear that any deed for this purpose was ever executed by them. Amongst the papers in the possession of the Lowndean Professor is the following sketch of a statute, with several corrections and interlineations, purporting to be drawn up by George Earl of Macclesfield, all the other parties named for that purpose being dead, but it has neither name, date, nor signature:—

"Whereas Thomas Lowndes, Esq., by his last will and testament, did found a Professorship of Astronomy and Geometry in the University of Cambridge, and did direct that statutes for the same should be made by the Right Honourable George Earl of Macclesfield, Martin Folkes, Esq., the President of the Royal Society, James Bradley, D.D., Royal Astronomer at Greenwich, and William Jones, Esq.; and whereas the settling the said statutes has been hitherto omitted, lest the good intent of the founder should be frustrated, I, George Earl of Macclesfield, now the only survivor of the above-mentioned persons, do constitute and appoint the following statutes to be observed by every person who shall hereafter be elected Lowndes' Professor of Astronomy and Geometry in the said University:—

"The person elected to be Professor shall, within one calendar month after he shall be chosen, repair to the University and exhibit to the Vice-Chancellor the instrument of his election, and promise to observe the following statutes,—

"(1.) To reside in the University the major part of each Term, or two whole Terms every year, otherwise to read yearly one course of Astronomy, consisting of at least 20 lectures, explaining the motions of the sun, moon, planets, comets, and stars; the doctrine of eclipses, physical causes of the planetary motions, phenomena of the tides, and such other things as have relation to Astronomy; and also to read one course of Geometrical lectures in every year, not less than 20 in number, upon Euclid, Archimedes, Apollonius, or some modern Geometrical author; the principles of Plain and Solid Geometry, Trigonometry, the Conic Sections, &c., upon pain of forfeiture of 20*s.* for every lecture omitted.

"(2.) To give public notice of the time and place of reading, and print a syllabus of the heads of the lectures to be read.

"(3.) To provide a good clock and a meridian telescope, with other astronomical instruments (if not before provided), proper for observing the transits of the sun, moon, planets, eclipses of the sun, moon, and satellites of Jupiter, and the places of comets, under the penalty of 50*l.*, to be deducted out of that year's salary. And with those instruments to observe as many of such phenomena as can be seen at Cambridge for six weeks in every year, together with a competent number of transits of fixed stars; the observations to be deposited in the

The Very Rev. G. Peacock, D.D.,

Lowndes' Professorship of Astronomy

University Library, and a copy thereof to be sent by the Professor to the Royal Society within six months after the end of the year in which the observations were made, on pain of forfeiting 20*l.* or every year such observations shall not be made and communicated to the Royal Society as aforesaid. All the forfeitures to be applied to the use of the University Library for purchasing books of Astronomy and Geometry. Such instruments as shall be purchased by any Professor, to belong to his executors, except he gives them to the Professorship.

"(4.) If the Professor be disabled by age or infirmity, he may appoint a deputy, who shall perform the several parts of the duty above required."

3. Have these been modified or changed by any subsequent authority: if so, in what particulars?

No.

4. What are the duties actually performed?

Duties actually performed.

The present Professor, for some years after his appointment, gave a course of lectures on Plane Astronomy, both practical and theoretical, illustrated by an apparatus and instruments, which were well attended. As he felt it necessary to conduct the Students who attended his lectures to the Observatory, for the purpose of showing the construction and explaining the use of the principal instruments which it contained, and was obliged to avail himself of the permission and the assistance of the Plumian Professor, he could not refuse to accede to his request that this, his own peculiar department of practical Astronomy, might be transferred to his own course of lectures. He subsequently gave a course of lectures on Geometry, and for three successive years attempted to form a class for a course of lectures on the Principles of Analysis and their Application, but without success. In the Michaelmas Term of 1849 he succeeded in forming a small class for lectures on Astronomy, but failed to do so on the following year.

5. What is the nature of the original endowment?

Original Endowment.

Two farms, one at Smallwood and the other at Overton, in the parish of Attringham, in the county of Chester, with two small cottages and closes attached to them; they contain altogether 261 acres; they are let for a gross rent of 460*l.* per annum, and their average produce during the last three years has been 436*l.* per annum.

6. Whether subsequently augmented?

There has been no addition to the original endowment.

7. Whether any, and what, extraneous sources of emolument?

None.

8. Whether any fees received from persons attending the lectures?

No fees.

No fees have been received, the lectures being gratuitous.

9. The present value of the Professorship?

Present value.

About 436*l.* per annum.

10. The mode of appointment or election to the office: conditions of eligibility and tenability?

Appointment.

The electors are the Lord High Chancellor, or Lord Keeper of the Great Seal, the Lord President of the Council, the Lord Privy Seal, the Lord High Treasurer, or the First Lord Commissioner of the Treasury, the Lord Steward of the Queen's Household for the time being, or the major part of them. There are no conditions of eligibility or tenability.

11. Is there any residence, museum, library, collection, or apparatus attached to your Professorship, or any fund for maintaining them?

No Residence, Museum, Library, or Collection.

There is no residence, museum, library, or collection belonging to the Professorship. There is a collection of apparatus belonging to the present Professor, which is partly deposited in the lecture-rooms of Trinity College, and partly with the Plumian Professor.

12. Are any opportunities afforded to Students for instruction in the actual manipulation of instruments in the department of science with which your Professorship is connected?

Lectures.

The lectures on Practical Astronomy are given by the Plumian Professor, who explains the construction and manipulation of the instruments in the Observatory, as well as hand and other instruments not permanently fixed. The lectures of Theoretical Astronomy require little apparatus beyond globes, maps of the stars, and diagrams on a sufficiently large scale to be visible to a general audience.

13. Whether, in your opinion, the duties enjoined upon you as Professor might be modified in any manner, so as to contribute more effectually to the benefit of the University?

As a member of the Royal Commission, I feel myself restrained from giving an answer to this important question. There can be no doubt, however, but that the duties of this as well as of other Professorships might be modified in conformity with some general and systematic arrangement, so as to be made much more beneficial to the University.

(Signed) GEORGE PEACOCK, *Lowndes' Professor.*

Answers from Andrew Amos, Esq., M.A., Downing Professor of Law.

A. Amos, Esq., M.A.

Downing Professorship of Law.

West Lodge, Downing College, Cambridge, December 4, 1850.

SIR,

IN answer to your letter, dated November 20th, 1850, relative to the Cambridge University Commission, I beg to refer you for information upon the matters in question to the examination of the late Professor Starkie, and to my own, before a Committee of the House of

A. Amos, Esq., M.A.

Downing Professorship of Law.

Emoluments.

Statutable requirements.

Moral Science Tripos.

Causes of the small number of Law Students.

Suggestions.

Academical Residence.

Commons on the subject of legal education, in the year 1846, and to a letter addressed by myself to Dr. Whewell, on the subject of education at the University of Cambridge, published in the year 1846; and to my introductory lecture upon the laws of England delivered at Downing College in the present year, and recently published.

I beg to state in addition that the emolument of my professorship, as specified in the Cambridge Calendar, cannot under any circumstances be increased out of the College revenues; but is liable to be diminished, in case those revenues prove inadequate for certain purposes, or if the number of lectures prescribed by the College statutes are not delivered.

Twenty-four lectures are required to be given, according to the statutes, in every year after the first receipt of salary. My first receipt of a half-year's salary was at the last Michaelmas. I had, however, given a course of lectures previously, at Downing College, to the University in the year 1849. Since the last Michaelmas I have delivered 24 lectures of an hour or more each, conformably to the College statutes.

Besides lectures, I have duties imposed on me by the College statutes, for which I receive no further remuneration. The Downing professors, unlike other professors in the University, are constituent members of a collegiate corporation, exercising trusts unconnected with the duty of lecturing.

Besides the prescribed duties of my professorship I have voluntarily discharged, or undertaken to discharge, various other portions of University business. These are the examinations incident to the Moral Science Tripos, together with preliminary arrangements; and the examinations for certificates required by the New Graces. I have attended syndicate meetings; and I am one of the two examiners chosen by the Vice-Chancellor, and approved by the Senate, for adjudicating the Le Bas prize.

The Commissioners can judge better than myself of the probable effect of the Moral Science Tripos, and of the certificates required by the New Graces, towards increasing the members of the Law class; and it may be deserving of attention that law lectures being only just revived, after an intermission of upwards of twenty years, sufficient time has not transpired for establishing an opinion of their utility and interest among undergraduates, their parents, or their other advisers.

I cannot, however, but think that College lectures, College examinations, the previous examination, and the Senate House examination (all of them compulsory), and the honours and emoluments incident to fellowships, scholarships, and prizes of various kinds, must tend very materially to keep down the numbers of a class of English Law. Proficiency in English law, it will be recollected, does not, like the Civil Law degree, afford any passport to clerical ordination, diminish the period of residence, or exempt from mathematical examinations. Attending law lectures is totally incompatible with reading for high honours or fellowships; and the less assiduous portion of undergraduates will generally be employed, if employed at all, in providing against the loss or postponement of a degree, and the classifications of compulsory examinations, or the risk of being placed among those whose names I have observed, follow a prefixed designation of "not worthy to be classed."

I think there can be little doubt but that for future lawyers it would be desirable, if they were not induced or compelled to read so much classics and mathematics at the University, as is at present the case, to the exclusion of English law and other cognate sciences, such as the Civil Law, Moral Philosophy, and Modern History, for which professorships have been established. There is no Professorship of Belles Lettres or English Literature, or of Medical Jurisprudence, at Cambridge. All these subjects are deserving of attention from a student desirous of studying law systematically, on a literary, historical, and philosophical basis. The inconveniences arising from a confined system of University education, at least as regards lawyers, are aggravated by the circumstance that it is the custom of most schools so to educate youth as to reflect honour on their schoolmasters by grasping University prizes and emoluments with the greatest certainty. The passage of youth through the University is too often a mere career of display, having acquired at school as much of classics, if not also of mathematics, as it might be desirable to enforce or encourage to the exclusion of other studies.

It would, I think, be attended with great benefit to the community, if the authorities of colleges, in awarding fellowships, would pay an obvious regard to honours obtained in the Moral and Natural Sciences Triposes; which might be accomplished without relinquishing a paramount consideration of mathematical and classical attainments. It is far less usual than formerly for barristers to be educated at the Universities. It has never been usual with attorneys. As to undergraduates proposing to themselves the bar as a profession, their talents, if they enter the Universities, commonly prompt them to aim at obtaining fellowships, and, consequently, to pursue a course of study considerably different from what would otherwise be thought judicious, notwithstanding the great utility of mathematics and classics in forming the mind of an accomplished lawyer. Moreover, in order to have a better chance of obtaining fellowships, candidates for them postpone their entrance at the University to an age of life which leads to their pursuing exclusively mathematical and classical studies, at a time when they ought to be practically following their profession. Although, therefore, supposing even that degrees were attainable merely by examinations in law, there would still be a powerful tendency in the present University system to attract the youth of the Universities away from following the most judicious course of education for a future lawyer.

I think, further, that the present length of academical residence, and the want of proximate reference in academical studies required for degrees, and taught in college lectures, from which undergraduates are not allowed to absent themselves, to the immediate wants of a practising lawyer, must prevent many young persons from entering the University. Their parents probably think that they have read at school enough of classics, except as their own inclinations may prompt them, and that there is no paramount necessity for further mathematical reading

A. Amos, Esq., M.A

Downing Professorship of Law.

than, at most, what is required for an ordinary degree, but would gladly send them to the University, for the purpose of studying law scientifically, and in connection with the other Moral Sciences, provided that a Degree could be thus obtained, and still more so if it were an honorary Degree, or if it led to academical emoluments.

I am persuaded that the present compulsion and encouragement adopted by the University of Cambridge, in regard to classical and mathematical studies, operates to prevent a great number of future lawyers from entering the colleges; renders the attainment of academical emoluments and fame every year more incompatible with success in the legal profession, and operates as a virtual abandonment of most excellent means and opportunities of laying at the University a solid foundation for legal eminence, and for public services that may command the admiration of the country and of posterity.

(Signed) ANDREW AMOS.

SIR, *Downing College, March* 1st, 1851.

Lectures on Medical Jurisprudence desirable.

In answer to your communication, dated 19th February, 1851, I have to observe, with reference to the sixth question, that, to complete the cycle, as regards English law, a course of lectures on Medical Jurisprudence would be desirable: I believe the University of Cambridge is almost the only Medical School of repute in Europe that is without a chair of Medical Jurisprudence. I do not, however, consider the want of such lectures to be among the more pressing exigencies of the law department.

Study of English Literature.

But I regard it as of immediate importance for lawyers (perhaps it may be thought more so for clergymen), that they should be conversant with the Belles Lettres, particularly as regards the language and literature of England. Young men often quit the University with the highest mathematical and classical honours, who have no habituation with the use of the English language, so essential for the skilful performance of many duties incident to the profession of the law. This want is very inadequately supplied by the excessive cultivation of the classical languages, which are studied in the University less with a view to improvement in modern composition, or even to the matters conveyed by them, than as a scope for philological astuteness.* It has appeared to me that, conceding the point of philological studies being a valuable exercise of the faculties of the mind, their importance has been somewhat overrated in this University, in consequence of the eminent services that have resulted from them to the community, and the deserved fame acquired by their cultivation, in times when the classical authors stood in great need of those criticisms, commentaries, and textual emendations which have been elaborately bestowed upon them for more than a century past.

Philological Studies.

Want of Lectures on Scientific Agriculture.

It would be travelling out of the questions proposed to me to do more than intimate the want in the University of lectures on scientific agriculture, especially as connected with chemistry, and also on civil engineering. Lectures upon these subjects may be thought edifying and attractive to various classes of young men, inasmuch as they relate to matters which are of importance in the daily business of the world: with proper encouragement, therefore, or even the removal of discouragements, their adoption would not be attended with financial difficulties. It may be thought also, that the scientific treatment of these and like practical subjects would attract classes of students to the Universities who are now kept away by the combined effect of the arrangement of Terms, and the very unpractical character of Cambridge studies, at least those in which alone students are encouraged, or, which alone, in fact, they are allowed to pursue without interruption.

Compulsory study of Greek and Latin.

It can scarcely be doubted, that, among the great mass of society, it must be thought a misapplication of time, after reading Greek and Latin authors to the age of eighteen or nineteen, to be under any compulsion as regards the further pursuit of them. I would suggest to the Commissioners, that the great changes which are in progress in regard to the distribution of property, and the diffusion of education, independently of the progress of population, require that, in modifying the institutions of the University, attention should be paid to the attraction of classes of students who have not hitherto usually received an University education. As respects the profession of the law, I may notice, that thi observation will apply to the very numerous and very important class of attorneys; and that the usage, once so general, of an University training for the bar is rapidly discontinuing.

Better provision for Professors.

With regard to the objects of several of the queries, I conceive, that, in the absence of a considerable parliamentary grant (which is scarcely a presumable contingency) no immediate improvement of any consequence can be effected. For example, the salaries attached to most of the Professorships are so meagre, that they could not be completely filled unless sometimes held in conjunction with cures of souls in distant parishes. As regards the two Law—Professorships, their endowments are not sufficient to buy lawyers of learning and talent out of their profession, and are scarcely compatible, if they be not decidedly incompatible, with the successful persecution of it.

Means of promoting the Study.

But if students be allowed and encouraged to attend to other subjects than classics and mathematics, by a more general participation of honours and emoluments, and by the modification of various existing compulsory rules, then, and then only, do I think that the Moral and Natural Sciences Triposes can flourish. If this vitality be imparted to them,

---

* The importance of cultivating classical philology at the time when it first became a primary branch of University education must have been far greater than at present; seeing that then there was so very little else that was valuable to be learnt; and that then the talents and the industry of centuries had not been expended on the elucidation of the classical authors.

all the minuter details adverted to in the questions proposed by the Commissioners will speedily fall under some arrangement which will be the more satisfactory, as it will be founded on the experience of a state of things which is at present only conjectural. But unless reading men shall no longer sacrifice their most important interests by attending the Lectures of Professors, and poll-men shall no longer be compelled to attend Lectures, and undergo examinations exclusively, or nearly so, in Mathematical and Classical subjects, then all the methodical arrangements contemplated in the Commissioners' questions will amount only to the delineation of an academical Utopia.

A. Amos, Esq., M.A.

Downing Professorship of Law.

I am,

Your obedient servant,

(Signed) ANDREW AMOS

Answers from W. W. Fisher, Esq., M.D., Downing Professor of Medicine.

W. W. Fisher, Esq., M.D.

Professorship of Medicine.

I am requested to make, as regards my Professorship, a statement describing—

1. By whom the Professorship was founded.

Sir George Downing.

2. What are the duties annexed to the Professorship by the original foundation or constitution?

Statutable requirements.

There are two Downing professorships; one of the laws of England, the other of medicine; and it is provided by the charter of Downing College, "That the Professors shall read such lectures, or courses of lectures in their several departments as the electors to the Professorships for the time being or the major part of them, shall from time to time order direct, and appoint," and it is provided, moreover, by the statutes of the College, "That each of the Professors shall, after the commencement of any payments in respect of their salaries, in every year read one course of twenty-four lectures at the least, of one hour each in length, on twenty-four different days in Lent, Easter, or Michaelmas Terms, in the Faculty of which he is a Professor, on the usual terms on which public lectures are given in the Universities, and in addition to any lectures which he may be obliged to give, in respect of any other appointments in the University."

3. Whether those duties have been modified or changed by any subsequent authority; and if so in what particulars?

Modification of Duties.

My own duties are only so far modified as they may be considered to be affected by the grace of the Senate, February, 1829, which renders it compulsory on the part of the medical student to attend the lectures of the Downing Professor of Medicine, if they amount to fifty in the course of the academical year.

4. What are the duties actually performed?

Duties actually performed.

During the last academical year I delivered a course of lectures in the October Term, on the Preservation of Health; in the Lent Term, on Clinical Medicine; in the Easter Term, on the Materia Medica, and on Pharmacy. I am one of the Examiners for the degree of Bachelor of Physic and Licentiate in Medicine.

5. What is the nature and amount of the original endowment?

Endowment.

There is a stipend of 200*l.* a year attached to the professorship, and paid by the College; but should there be any deficiency in the revenues of the latter, then the stipend is to abate in proportion.

6. Whether, and in what way, subsequently augmented?

It has not received any augmentation.

7. Whether any extraneous sources of emolument are conjoined with it?

There is an allowance by the College of 3*s.* 6*d.* a-day for commons during residence.

8. Whether any fees received from persons attending the lectures of the Professors; and if so, the average annual amount thus received?

Fees.

The fee for attendance on all the courses of my lectures has been five guineas, and the annual amount has varied from 10 to 25 guineas.

9. The present value of the Professorship annually, distinguishing the several sources of income?

Present Value.

	£.	s.	d.	
College stipend	200	0	0	
Commons	50	0	0	average
Lectures	15	15	0	average
Fees for examining the candidates for the degree of Licentiate in Medicine, 10*s.* 6*d.* each	1	10	6	average
	£267	5	6	

10. The mode of appointment or election to the office; the conditions of eligibity; of tenability?

Appointment.

It is directed by the charter of Downing College, that "The Professors shall be elected by the Lord Archbishop of Canterbury, the Lord Archbishop of York, and the Masters of St.

W. W. Fisher, Esq., M.D.

Professorship of Medicine.

John's College and Clare Hall, and Downing College;" and as regards the qualifications of the candidate for the Professorship of Medicine, it is directed, that "The Professor of Medicine shall be at the time of his election, a Master of Arts, who shall have been licensed to practise physic for the space of two years, or a Doctor or a Bachelor of Physic in one of the two Universities of England (Cambridge and Oxford), or a member of some one of the Scotch Universities of seven years standing, and twenty-five years of age, who shall have attended the medical lectures in one of the Scotch Universities for four years."

The professorship is vacated by election to the mastership or fellowship, by neglect of duty extending over three years, on complaint made by any member of the College to the electors;" and it is moreover directed by thecharter of the College, "that the Masters and Professors of the College shall hold and be continued in their offices and places respectively, during the term of their respective natural lives, or during so long time as they shall well and faithfully demean themselves therein respectively, and that they shall be removeable only by the Lord Archbishop of Canterbury, and the Lord Archbishop of York, and the Masters of St. John's College and Clare Hall, for the time being."

11. Whether there is any residence, museum, library, collection, or apparatus attached to your Professorship, and what available funds for the maintenance of them?

Residence.

There is a lodge with a garden and paddock attached to it; the lodge is kept in repair by the College. There is not any one of the other objects specified attached to my Professorship.

12. Whether opportunities are afforded to students for instruction in the actual manipulation of instruments, and the conduct of processes of experimental research in the departments of science requiring them?

Opportunities afforded to Students.

There are none: I have, however, a private collection of medicinal agents and chemical tests to which my pupils have access.

13. Whether, in your opinion, the duties enjoined upon you as Professor might be modified in any manner so as to contribute more effectually to the benefit of the University?

Opinion regarding present duties.

Having already stated the duties which I have endeavoured to perform, I must leave it t the Commission to judge whether they require any modification or not. It appears to me an advantage to the University that there are no prescribed subjects of instruction laid down by the charter or statutes of the College, for the professor is thereby left to select those in which he takes an active interest, or such as the University may stand in need of. For instance, previously to my appointment as physician to Addenbrooke's Hospital (1845), I was in the habit of giving a course of lectures on Medical Jurisprudence as well as one on the Materia Medica and Pharmacy.

14. The general condition in the University of the branch of study to which your Professorship relates, and the means of promoting its advancement?

General condition of the Study.

I believe I shall best fulfil the object the Commission has in view, by treating fully the subjects which the foregoing paragraph involves. In order to do so, I will first state in what the proceedings in physic at present consist, making at the same time such remarks as the details may appear to me to call for; I will next present such a general scheme of medical education as my acquaintance with some of the most important medical schools, not only in this kingdom but on the continent, enables me to produce; I will afterwards suggest such modifications of the present proceedings in physic as the latter may seem to me to require, and I will close by some general suggestions and observations which will not, I trust, be found either misplaced or unimportant.

Proceedings in Physic.

Proceedings in Physic.

"A Student, before he can become a Bachelor of Physic, must have entered on his sixth year, computed from the date of his admission at the University, have resided nine Terms, and have passed the previous examination?"

Time required for the B.M. Degree too long.

It appears to me that the time required for the degree, five years, is too long; and that the general academical qualifications, as tested by the previous examination, are too limited.

Course of Study.

The course of study required of the student is as follows:—He must have diligently attended the lectures of the Regius Professor of Physic during two terms; also those of the Professor of Botany if they consist of not less than twenty; and also those of the Professors of Chemistry and of the Downing Professor of Medicine, if their respective courses consist of not less than fifty lectures. He must also produce certificates of having been diligently employed in attendance on medical lectures and practice at some well known hospital for two years.

The aforesaid regulations appear to me to be good as far as they go; but supposing that the courses of lectures delivered by the last-mentioned professors do not consist of fifty each, then there is no obligation on the part of the medical student to attend in order to obtain the degree of Bachelor of Physic, any lectures besides those given by the Regius Professor of Physic, and those delivered at the hospital which the student is attending. I think it would be more consistent if the stipulations respecting the number of lectures given by the professors in question were set aside.

The candidate for the degree of Bachelor of Physic, is required to have passed satisfactorily the examinations of all the afore-mentioned Professors; he may present himself for examination in Chemistry and Botany in the fourth year of his admission; and for examination by the

Regius Professor of Physic, the Professor of Anatomy, and the Downing Professor of Medicine in his fifth year. He may proceed to the degree of Bachelor of Physic the year following, having previously kept two exercises, an act, and an opponency. *W. W. Fisher, Esq., M.D.*

Professorship of Medicine.

I have no observation to make in respect to the examinations, which are as efficient, I believe, as they can be; but I do not see, however, why the candidate should not be allowed to proceed to his degree as soon as he has passed them. The propriety of retaining the exercises in their present form appears to me to be questionable. I do not wish to speak disparagingly of exercises which, when the two parties engaged are not only conversant with the syllogistic mode of disputation adopted, but also accustomed colloquially to the language employed, afford a good test of general proficiency, but it must be admitted, that the syllogistic form of argument has fallen so much into disuse, that it no longer answers the end it formerly did. Indeed the dissertation itself has become merely formal as regards the details it embodies, so that its composition offers scarcely any interest to the student, whilst the defence of the thesis is in general too embarrassing to be instructive. I think, therefore, that some modifications might be introduced with advantage into the exercises in question.

Examinations.

Licentiate in Medicine.—A candidate for a license *ad practicandum in medicina*, being previously Bachelor of Physic cannot be examined for the said license, until the examination which shall occur next but one after his having passed the examination required for the degree of Bachelor of Physic. This regulation renders it necessary that a year should elapse between the two examinations.

Licentiate in Medicine.

Candidates for a license *ad practicandum in medicina*, being previously Masters of Arts, are required to bring satisfactory evidence to the Regius Professor of Physic, of their having been employed in the study of physic for five years after they became Bachelors of Arts. Both they and the Bachelors of Physic are required to produce certificates of their having attended on hospital practice for three years, and of having attended lectures on the following subjects:—

Practice of Physic and Pathology; Anatomy and Physiology; Chemistry and Botany; Medical Jurisprudence; Materia Medica and Pharmacy; Principles of Surgery; Principles of Midwifery; Practical Anatomy for two seasons. Every candidate for a licence *ad practicandum in medicina* is required to pass an examination to the satisfaction of the Regius Professor of Physic, the Professor of Anatomy, the Downing Professor of Medicine, and a Doctor of Physic to be nominated by the Vice-Chancellor, and approved by the Senate.

It appears to me that the list of certificates required of a Bachelor of Physic is greater than is needed; for it is to be presumed that he has been already examined in several of the subjects specified. As regards the examination for the licence, which includes amongst other matters an examination at the bed-side of the sick, I hold it to be as efficient as could be wished; and I should not do justice to my own feelings, if I did not avail myself of this opportunity to pay a tribute of respect and gratitude to the late Regius Professor of Physic, the much lamented Dr. Haviland. To his active solicitude the University is indebted for nearly all the improvements which the Faculty of Physic has received from its first institution, and more particularly for a system of examination which is, on the whole, as complete as any I am acquainted with.

Doctor in Medicine.—The degree of Doctor of Physic is granted to a Bachelor of Physic of five years, or to a Master of Arts of seven years' standing. Doctor in Medicine.

Every candidate for the degree of Doctor of Physic, who has not previously obtained a licence *ad practicandum in medicina* is required to produce to the Regius Professor of Physic the same certificates, and pass the same examination as are required in the case of candidates for a licence *ad practicandum in medicina*.

The exercises for this degree are two acts and one opponency.

It appears from the above regulations, that the shortest period in which the degree of Doctor of Physic can be arrived at is ten years. The person must be in his eleventh year, dating from the period of his admission at the University, a length of time which is sufficient in itself to deter in general those who choose medicine for their profession from coming here to graduate.

As regards the exercises for the degree of Doctor of Physic, the same objections apply to them as applied to those for the degree of Bachelor of Physic; there is, however, this additional consideration, that one of the acts and the opponency are not in ordinary practice kept; they may be omitted by the forfeiture of a certain amount of caution money (15*l.* 10*s.*) to the University chest. Exercises for the M.D. Degree.

The amount of fees for medical degrees varies according to the degree. For that of the Bachelor of Physic, the fees are,— Fees.

The means of promoting the advancement of the Study.

Having stated so much respecting the present state of the faculty of physic in this University, I shall now suggest according to the best of my judgment, "The means of promoting its advancement."

With this object I shall sketch out the following scheme or course for consideration :—

I shall divide the course of study to be pursued by those who intend to proceed in physic, into three stages or classes.

Stage 1st, or Class of Arts. This class shall comprise the most important subjects which enter into the examination for the ordinary degree of Bachelor of Arts, and shall include also attendance on a course of lectures on natural and experimental philosophy.

Stage 2nd, or Class of Natural Sciences. This class, which shall be purely scientific, shall comprise the following subjects :—

Chemistry,
Botany,
Zoonomy, and comparative Anatomy.

Stage 3rd, or Class of Medicine. This class, which shall be both scientific and technical, shall comprise those subjects which ought to be found in a comprehensive scheme of medical education, professionally considered.

Proficiency in Arts.

Proficiency in Arts.

If the time required to obtain a subordinate degree in arts, or in order to pass the ordinary examination for it, were abridged by one year, or even more, then I should say that the student who intends to proceed in physic might be required to pass it according to the general rule; but, although I consider that examination to be an appropriate test of those general acquirements which it is desirable a person should bring to the study of medicine, still to oblige him to devote more than three years, or even three years to that object, would be to cause a delay in his medical studies, which would be in many cases, I believe, a serious drawback. It must be borne in mind, that the course of study which the medical student is obliged to follow is long, laborious and expensive; it demands, moreover, on the part of the person engaged in it (and this remark is intended to apply to time and to age), manual skill, and considerable exercise of the memory, besides involving the acquisition of a habit which cannot be too soon acquired, the habit of observation. I suggest therefore that an under-graduate who has declared for medicine, shall not be required to pass the previous examination, but shall be allowed to present himself to be examined at the examination for the ordinary degree of arts in his sixth Term, or later if he pleases, and that he shall be required to pass only such a part of it as competent judges may think desirable. I shall merely observe that I think the whole of the mathematical portion of it should be retained. I suggest also that the certificate of approval he may thereby obtain shall not entitle him to a degree in arts, but enable him to register himself as a *Proficient in Arts*, to do which, however, he shall be required to produce a certificate of having attended a course of lectures on natural and experimental philosophy. This act of registration shall entitle the under-graduate to be styled a *Student in Medicine*, he shall date the period of his medical studies therefrom, and shall be thereby allowed certain University privileges, especially as regards the public library.

Proficiency in Natural Science.

Natural Sciences.

Although I think that the study of the natural sciences is quite compatible with that of medicine, yet the sooner the student gives proof of proficiency in them, the sooner will he be able to devote himself to the technical part of his education. To show proofs of proficiency in this department of study the student must either have attended the lectures of the different professors of those subjects enumerated in the class of natural science, and be provided with certificates of having passed satisfactorily their respective examinations, or have obtained an honour in the natural science Tripos.

Proceedings in Physic.

Proceedings in Physic.

In treating this subject, I shall first deal with the recent and present state of the Faculty of Physic, considering those terms as applied to the educational department of medicine in this University.

When the late Dr. Haviland was appointed Regius Professor of Physic, he was the sole representative, as it were, of that faculty; but he afterwards incorporated with it, by means of certain graces of the Senate, the Professors of Chemistry, Botany, and Anatomy, and also the Downing Professor of Medicine. Since, however, the new professorial system has been instituted and brought into operation, the two first professors have taken their places in the departments of Natural Science and the Professor of Anatomy, by taking up the subject of Comparative Anatomy, almost does the same. Considered, however, with reference to the examinations for medical degrees, the Faculty of Physic may now be said to consist of the Regius Professor of Physic, the Professor of Anatomy, and the Downing Professor of Medicine.

The proposition put by the Commission leads me next to inquire whether the present

professorial staff is adequate to the requirements of a Faculty of Physic; and, if not, in what it is deficient. *W. W. Fisher, Esq., M.D.*

Professorship of Medicine.

To determine that question, we must first understand in what capacity the Faculty of Physic here is to be considered. If its responsibility is to consist chiefly in ascertaining, by examinations, the competency of candidates for the different degrees of medicine, then I should say that the present professorial staff with the addition of the Doctor of Medicine appointed yearly by the Senate, is quite sufficient for the purpose. If it be intended that the medical faculty should be charged with conducting, to a certain extent, the education of the medical student, then a question is opened which offers for consideration a great many matters of detail, the first of which may be said then to be the practicability of establishing an efficient school of medicine in this University.

Cambridge as a Medical School.

I am aware that there is an opinion prevailing not only in the University but elsewhere, that Cambridge, considered in its double capacity as a University and as a town, does not offer wherewith to form a Medical School; but before we admit the correctness of this opinion, let us see on what grounds it rests. No one will be disposed, I think, to assert, that the University is not able to provide efficient teachers for that purpose; no: the opinion rests on the impression that the town of Cambridge is not sufficiently large to afford, especially as regards the hospital, suitable opportunities for study. The town of Cambridge contains about 25,000 inhabitants; but the hospital extends its sphere beyond the town, it takes the county within its range. Now let us see if there be not towns containing a population less than 30,000 which have been or are celebrated for their medical schools. In bringing some of them forward, I will, at the same time, mention the names of those persons who have been or are connected with those schools, and who have contributed to the advancement of medical knowledge. I shall distinguish by italics the names of those who were dead previously to the year 1842:—

Göttingen, under 10,000 inhabitants. *Haller, Blumenbach, Soemmering,* Langenbeck, Wagner, Kraus.
Heidelberg, under 12,000. Tiedemann, Gmelin, Nagelé, Chelius.
Halle, under 30,000. The two *Meckels.*
Pavia, under 29,000. *Scarpa, Spallanzani, P. Frank, Rasori,* Panizza.

I think that any one who is conversant with the history of medicine will admit that some of the names of the persons I have brought forward are not, in reputation and as regards their particular pursuits, second to any of those who have, during the last hundred years, contributed to the progress of medicine, and of the sciences associated with it.

Medical Schools in London.

In judging of the opportunities for the study of medicine offered by Cambridge, we are apt to be influenced by the consideration of those offered by the metropolis; but let us take the measure of the latter in their practical dimensions. The medical schools in London are, with the exception of those of King's College and University College, associated essentially with hospitals, and they are all independent of each other. Thus the member of King's College cannot as such attend the lectures of Dr. Williams, nor can the member of University College attend those of Dr. Budd. The student of Bartholomew's Hospital cannot follow the instruction given by Sir Benjamin Brodie, nor can the student at St. George's attend the anatomical lectures of Mr. Paget.

If there existed a National Institute of Medicine which gathered into one professorial body the original and distinguished talent which is congregated in London, then a field of instruction, rich in its kind, and great in its extent, would be opened to the medical student; but as that talent is scattered over a great many institutions, several of which may be regarded as being of a private rather than of a public character, the student can derive but a partial advantage from it at the best. We ought not to speak of any medical faculty in comparison with the Medical School of London, but only in comparison with one of its particular schools, and that mode of viewing the case offers limitations which would not appear on a cursory glance. I think it right to remark also, that there is no medical institution in England, which, with the exception of the medical faculties belonging to the Universities of Oxford and Cambridge, directs the course of education on the one hand and confers the right to practise on the other. The University of London, the College of Physicians, the College of Surgeons, and the Company of Apothecaries grant either degrees, licenses to practise, or diplomas; but they do not take directly a part in the education of those whom they examine; whilst King's College, University College, and the schools associated with the hospitals, afford opportunities for study, but they do not enjoy the privilege of granting the power to practise. Moreover, the majority of medical students who resort to London have been previously engaged in medical studies, so that there scarcely exists a system of early training for the medical profession in England, a circumstance which is not in my opinion, without its peculiar consequences.

Opportunities for Study of Medicine at Cambridge.

To return to Cambridge—its University is not wanting in opportunities for the study of medicine. The Anatomical Museum, recent as its institution comparatively speaking is, affords means of instruction in Physiology and Pathology such as few Museums I am acquainted with do. If the opportunity for dissection be limited, the deficiency might be remedied, should the Government be pleased to give orders to that effect. On the other hand, Addenbrooke's Hospital offers a field for clinical observation remarkably well suited for the purposes of elementary education. The number of patients is large enough to occupy fully the attention of the student, but not so large as to perplex it. He is not exposed to hindrance by a crowd of fellow-students, so that his attendance at the Hospital need not become an act of seeing instead of observing. The greater part of the medical officers attached to the hospital give courses of clinical instruction both in Medicine and Surgery.

Having shown the practicability, I will not say of establishing, but of maintaining and

W. W. Fisher, Esq., M.D.

Professorship of Medicine.

developing a School of Medicine in this University, let us next consider whether the present professorial staff is sufficient for that purpose. To arrive at a satisfactory opinion on this point, we must come first to an understanding about the subjects which should enter into a scheme of Medical Education, considered in a scientific and technical sense. To further that object, I shall take the liberty to give an exposition of my own views on that matter, trusting that I shall be able, by bringing the most important of those subjects under general terms, to offer such a programme of medical study as will not only be adapted to the course hitherto pursued by this University, but be found as comprehensive as any plan adopted elsewhere. But before I apply myself to the task, I should wish to make a few general remarks.

Present course of Medical Education.

The course of Medical Education which now obtains in this University is, as regards the degree of Doctor of Physic, and with the exceptional case of the Master of Arts, divided into two, by the subordinate degree of Bachelor of Physic and by the examination which precedes the taking of that degree. Now I shall call the first part of the course in question the elementary course, and the examination which terminates it *the first or elementary* examination; and the second part of it I shall call the *complementary* course, applying the terms second or complementary to the examination which precedes the grade of Licentiate in Medicine, or Doctor of Physic. Having premised so much, I shall now observe, that it appears to me that the system of medical instruction pursued here should be adapted to the elementary course; that the object of that system should be to make the student acquainted with the compass of study required of him by his intended calling; that the object of the first or elementary examination should be to ascertain that the student has acquired so much knowledge, and has been so far exercised in observation as to be competent to learn the technical part of his profession; and lastly, that the object of the second or complementary examination should be to ascertain that he has learned that part of it.

Programme of Medical Study adjusted to the general character of the proceedings in Physic which obtain in this University:—

I. Elementary Course.

Human Anatomy.

A. *Human Anatomy.*—Considered in a scientific point of view, this subject forms a part of Comparative Anatomy; but the anatomical study of the human body for the technical purposes of medicine, requires to be conducted in so peculiar a manner and so much in detail, that I think the task of lecturing on Human Anatomy, and also on Zoonomy and Comparative Anatomy, ought not to be made to devolve on the same person. I suggest, therefore, that an Assistant Professor of Anatomy, or a Lecturer on Human Anatomy, whose duty it shall be to assist the Professor of Anatomy, be appointed.

Institutes of Medicine.

B. *Institutes of Medicine.*—I am not aware that any definite meaning has been assigned to the term in question, but it is my intention to deliver a course of lectures so entitled. The Preservation of Health will constitute one of its subjects, but my principal object will be to enable the Medical Student to take a comprehensive view of the human economy, considered in all its phases, and to form a just appreciation of the powers of art to remedy or relieve the disorders to which it is liable. I intend to introduce into this course of lectures several subjects which do not appear to me to be sufficiently attended to, as the History of Medicine, for instance; but I mean to publish a Syllabus, in which I will explain in detail the subjects of which I shall treat.

Materia Medica and Pharmacy.

C. *Materia Medica and Pharmacy.*—The student who is acquainted with Chemistry and Botany will find little difficulty in dealing with the subjects that come under this head. It is necessary that he should have a knowledge of them in order to study special therapeutics, for they afford a great part of the means by which the principles of the latter are carried into effect. A course of lectures on the Materia Medica given here need not be long; it should not be burthened with chemical, botanical, or therapeutical details, but consist of an exposition of medicinal agents considered chiefly with reference to their officinal forms, their toxicological effects and their medicinal doses. This course should, however, include, amongst other matters of instruction, the art of prescribing.

I have myself hitherto given lectures on the Materia Medica and Pharmacy, but I should wish to be relieved of the duty.

General Pathology.

D. *General Pathology.*—This department of medical instruction belongs to the Regius Professor of Physic.

Special Pathology and Special Therapeutics.

E. *Special Pathology and Special Therapeutics.*—As regards the above subjects, the practice of medicine establishes technical but somewhat arbitrary distinctions, which may be thus expressed:—

1. Diseases, the treatment of which comes within the province of the surgeon.
2. Diseases, the treatment of which comes within the province of the physician.

Although I hold that surgery is made to stand too frequently in contradistinction to medicine, of which it is, properly speaking, a therapeutical branch, yet I feel that diseases usually called chirurgical, claim a distinct course of study, and one which the medical student would do well to follow in the first instance, and for this reason: in general the local characters of those diseases are obvious to the senses; and, moreover, the constitutional effects arising from them, especially in cases of external injury, are more directly traceable, and consequently more readily understood, than those which proceed from hidden causes. Now if the correctness of the foregoing statement be admitted, it must also be admitted that it is desirable the University should have some authorized teacher in Surgery. There are, however, objections, it appears to me, to the institution of a Professorship on that subject, for in order that the instruction given in it be of practical value, the teacher must be able to command that field of observa-

W. W. Fisher, Esq., M.D.

tion which a hospital only offers. Now the University has not the power to appoint any particular person to a surgeoncy in Addenbrooke's Hospital; the utmost it can do is to select one or all of the surgeons of that establishment as its authorized lecturers. I may here observe, that Mr. Humphry, one of the surgeons in question, has given lectures on the principles and practice of surgery, and these are recognized by the University; but this act on his part does not invest him with authority to enforce attendance on them by the medical students of the University.*

Professorship of Medicine.

The diseases which come within the province of the physician form, with their treatment, the most important department of medical instruction, the exigencies of which are fully met by the Regius Professor of Physic.

F. *Clinical Instruction.*—As the three physicians and one of the surgeons of Addenbrooke's Hospital turn the opportunities afforded there for clinical instruction to account, the University scarcely requires anything more in that respect.

Clinical Instruction.

G. *Morbid Anatomy.*—The University possesses, in the Anatomical Museum, means by which several branches of this subject may be taught, and of which the lecturers on special pathology can avail themselves, by way of illustration, in the description of disease. The student has moreover opportunities of making himself familiar with this branch of medical knowledge at the *post mortem* examinations made at the hospital. A short but systematic course of lectures on Morbid Anatomy, and, I may add, Comparative Pathology, by the Professor of Anatomy, or any other Professor, would be a valuable addition to this department of study.

Morbid Anatomy.

2. Complementary Course.

Complementary Course.

A. Practical study of diseases and their treatment, in some recognized hospital or hospitals, for two years.

B. *Obstetrics.*—Lectures on this subject, unless connected with some lying-in institution, can be of little avail; and as there is not one in Cambridge, this branch of the medical art should be studied elsewhere.

Obstetrics.

C. *The application of Medical Knowledge to Social Purposes.*—Under this head, and I cannot find any appropriate general term to express what I mean, I bring the following subjects:—

Application of Medical Knowledge to social purposes.

(*a.*) Medical police, or public health.
(*b.*) Medical jurisprudence.
(*c.*) Medical statistics.
(*d.*) Public establishments instituted for the purpose of affording medical assistance, as hospitals, dispensaries, asylums, &c.

It must, I think, be obvious to any one that, in order to do justice to the subjects enumerated under the last head, the student must be well advanced in medical knowledge, and that it is not desirable that his attention should be particularly directed to them until he approaches the close of his medical studies. Such being my impression, I do not think the subjects in question need form a part of the system of professorial instruction carried on in this University.

General Remarks.—Admitting the sufficiency of the programme I have brought forward, and the propriety of the distinction I have drawn, as regards the first or elementary course of study, and the second or complementary course, it remains for me to consider how far the present body of medical teachers in the University is adapted to the former; for I have laid down as a general proposition, that the second or complementary course had better be pursued elsewhere.

General Remarks.

For my own part, I do not think it desirable to increase much, if at all, the number of Professors constituting the Faculty of Physic, which, considered as a body of teachers and examiners, now consists of the Regius Professor of Physic, the Professor of Anatomy, and the Downing Professor of Medicine. Still, as regards the requirements of the faculty in the way of tuition, that body is not, I think, sufficient; and I have already suggested that a lecturer on Human Anatomy, and one on Surgery, should be appointed. To these I shall add a third, a Lecturer on Medicine, or Assistant-professor of Medicine, should the latter title appear more suitable, a part of whose duties shall be to assist the other Professors in case of need, and whose appointment, obtained by competition, shall last for three years, at the expiration of which period another shall be elected in his place. The duration of the appointment might, however, be longer if thought proper. My object in making this suggestion is, on the one hand, to obtain additional professorial assistance; and, on the other, to open a school for forming Professors, and to give talent an opportunity of attaining a distinction which would tend more than any I am acquainted with to furnish it with means of professional advancement.

Period of Study.—I have already said that I considered the time required for graduation at present to be too long; and I will now state, as briefly as I can, my own views on that subject.

Period of Study.

The student in medicine shall not be allowed to proceed to the degree of Bachelor of Physic

* Whilst speaking of Surgery, I think it right to remind the Commission that the University used formerly to grant licences in that branch of Medicine. Now it must be acknowledged that the responsibility attached to the practice of the surgeon is not less than that which belongs to the practice of the physician; indeed, in some respects, the former requires additional attainments. If such be the case, then it must be admitted that the education of the one demands, as regards either general or professional knowledge, as many guarantees as the other. Should the University resume its usage, and grant licences to practise in Surgery, then I should say it would be desirable to appoint a Professor of Surgery, whose duties would be to give a systematic course of instruction in his particular department, and to take a part in the examinations for Medical Degrees. This appointment need not interfere with that of Clinical Lecturers on Surgery in Addenbrooke's Hospital.

W. W. Fisher, Esq., M.D.

Professorship of Medicine.

until he have entered his fifth year, computed from the date of his admission at the University, nor until the sixth term after the one in which he passed his examination in arts: he shall, during the intermediate time, have resided five terms in the University, engaged in the study of the natural sciences and of medicine.

The Bachelor of Arts shall not be allowed to proceed to the degree of Bachelor of Physic before the fifth term after the one in which he graduated in arts, and shall, during the intermediate time, have resided four terms in the University, engaged in the study of medicine.

The Bachelor of Physic shall be allowed to present himself for examination at the second or complementary examination in the sixth term after the one in which he took his degree of Bachelor of Physic, and he shall be allowed to proceed to his degree of Doctor of Physic the term following.

The Master of Arts shall not be allowed to present himself for examination at the second or complementary examination, unless he can produce satisfactory proofs of his having been engaged in the study of medicine during three years, one of which he shall have resided at Cambridge. Having passed that examination, he may be allowed to proceed to the degree of Doctor of Physic the term following.

By the proposed arrangement, the grade of Licentiate in Medicine may be dispensed with.

I beg to observe, that I consider the periods of time I have just specified to be the minimum of what ought to be required for the respective degrees.

There remain for consideration several matters connected with the course of study to be adopted by the medical student, and the character of the examinations and exercises for degrees; but instead of expressing any opinion respecting them, I shall suggest that a Medical Board or Syndicate be instituted by the University, and that it consist of the Regius Professor of Physic (Chairman), the Professor of Anatomy, the Downing Professor of Medicine, and two or three members of the Senate, selected by the Vice-Chancellor, and approved by the Senate. Let this Board be charged with all the details connected with the Faculty of Physic, which are not specified in the statutes of the University; its proceedings being, however, subject to the approval of the Senate.

It appears to me that a Board so constituted would bring into more complete co-operation those Professors who take a part in the medical tuition carried on in the University, and who now act somewhat independently of each other. It might also spare the University much partial legislation on the subject.

Payments, Fees, &c.

Payments, Fees, &c.—I think that when the under-graduate has completed his studies in arts, and has become a student in medicine, he should be put on the same footing as the Bachelor of Arts, as regards payments to his College tutor, for his academical studies come no longer under the superintendence or direction of the latter. Whilst on this subject, I think it right to allude to the fees paid to the Medical Examiners. The Professor of Anatomy, and the Downing Professor of Medicine receive nothing for the part they take in the examinations for the degree of Bachelor of Physic, but they and the Doctor of Physic appointed by the Senate, receive 10*s.* 6*d.* each from each person that passes the second medical examination, if that person takes the degree of licentiate; but the Examiners are not entitled to any fee if that person proceeds to the degree of Doctor of Physic without becoming a licentiate. For my own part, I am ready to forego the fee in question; but I cannot help feeling, that if the present general scale of fees for medical degees be retained, and they amount to more than 75*l.* for the three, a fairer proportion of them should be shared by those on whom a part of the labour and responsibility of ascertaining the fitness of the candidate for those degrees devolves.

Terms.

There is a custom which now obtains in the University with regard to the Easter Term, which renders in difficult to adjust a course of lectures to it. The under-graduates are only required to reside during one-half of it, at least as far as their studies are concerned, so that the length of time becomes insufficient for an ordinary course of lectures, unless the latter be delivered almost daily. In looking back for the last ten years, I find the half of the Easter Term to consist of a number of days varying from 32 to 47, the average being 41. The length of the October Term is uniform, but computing it from the 21st of October to the 16th of December, it affords just eight weeks. The Lent Term begins always on the 13th of January, but it ends variably. Dating it, however, from the 1st of February, I find that the number of days of which it has consisted during the last ten years, varies from 42 to 74, the average being about 57. This computation shows that the length of the first half of the Easter Term is at least ten days shorter than the Michaelmas Term and the average of the Lent Terms, and in extreme cases nearly a month.

For my own part I do not think that justice can be done in general to a course of lectures in less time than eight weeks.

I would apologize to the Commission for the length of this Report, and for the many suggestions it contains, did I not feel myself bound to lend all the assistance that lies in my power to promote the advancement of the branch of study to which my professorship relates; for independently of my desire to comply in the best manner I can with the request of the Commission, I am influenced by the following considerations:—

Encouragement of the Study of Medicine.

In the first place, it is enjoined by the Charter of my own College, that the pupils admitted at it shall "be instructed in law, physic, and such other useful learning as is generally taught in other Colleges," and I presume that it was in part to meet the second requirement that my own professorship was established. Moreover, the foundation of the College will comprise ultimately, amongst other members, fourteen lay fellows, each of whom will be required in the first instance to declare for Law or Physic, and according to the declaration, will also be required to be called to the Bar, or to proceed to the degree of Doctor of Physic within a given time, or, in default thereof, the title to the Fellowship will cease. The Fellowships will be tenable for twelve years, and will be open to competition, members of both Universities being

W. W. Fisher, Esq., M.D.

Professorship of Medicine.

allowed to be candidates. Such being the case, it is not unreasonable for me to suppose that Downing College will ultimately offer as much encouragement for the study of Medicine as any institution in the land, and I am therefore anxious that that study in this University should receive the utmost development it will admit of; and for my own part I am convinced that the medical faculty in this University is as well calculated as any other to furnish that early training by which a sound and discriminating technical judgment may be formed in the mind of the medical student. To the latter it offers opportunities of learning from others, whilst it leaves him time to think for himself: he has no need to have the mind distracted by a multifariousness of pursuits. But there is another advantage he possesses, which in my estimation can scarcely be over-rated: he has the opportunity of profiting daily by the society of others engaged in intellectual pursuits different from his own, some of them indeed of the highest order; and he is thus guarded against acquiring that professional restriction of thought which students who are in the habit of associating only with persons engaged in the same pursuits as themselves are so liable to contract.

There is but one subject more on which I have any remarks to make, and that is, the encouragement offered by the University generally for the study of medicine. Although I have spoken of that which will be ultimately afforded by my own College, yet I do not think it would be becoming on my part to pass any observations on the manner in which appointments are made to those Fellowships, which, in several of the Colleges, are appropriated to the Medical Profession. I think, however, that I should be guilty of omission, if I did not call the attention of the Commissioners to the four Tancred Medical Studentships, which, connected as they are with Caius College, offer more favourable encouragement for Medical Study than any endowments I am acquainted with. Without intending to impugn the motives on which the elections are now made, I cannot but feel, from my experience as a Medical Examiner, that a mode of appointment might be adopted, more calculated to secure not only appropriate talent, but general abilities and acquirements, than the one which now obtains. I shall not, however, say anything in the way of suggestion beyond this. I think that Caius College, which contributes so much to the encouragement of the Study of Medicine in this University, should have a more favourable opportunity of judging of the respective merits of the candidates, and have a more influential voice in the appointment than it has at present, for it must be borne in mind, that it is on that College that the responsibility of the future education of the successful candidate mainly devolves.

Downing College, May 13, 1851. (Signed) W. W. FISHER, M.D.,
Downing Professor of Medicine.

Answers from William Hallows Miller, Esq., M.A., Professor of Mineralogy.

W. H. Miller, Esq., M.A.

Professorship of Mineralogy.

Foundation.

Statutable requirements.

Duties actually performed.

Endowment.

Fees.

Present value.

Appointment.

Residence.

Apparatus.

Museum.

Sir, *Cambridge, December* 27, 1850.

In reply to the questions contained in your letter of November 20, I beg leave to make the following statement:—

The first Professor of Mineralogy was appointed by the University in 1808.

The Professor was required to give a course of lectures every year, and to produce a certificate from the Vice-Chancellor that the lectures had been delivered, as the condition on which his salary was paid.

The superintendence of the Mineralogical Museum afterwards devolved upon the Professor as a matter of course. By recent Graces of the Senate, he is also to examine in the subjects of his lectures those students who attend them, as one of the conditions for the ordinary degree of B.A., and the candidates for honours in the Natural Sciences Tripos.

The duties which have actually been performed are,—The delivery, annually, of a course of lectures on crystallography and mineralogy; the superintendence of the Mineralogical Museum, and the preparation of treatises on crystallography and mineralogy suited to the present state of those sciences. To these will be added in future, the examination of the students who attend the lectures, as a condition for the B.A. degree, and of the candidates for honours in the Natural Sciences Tripos.

The original endowment was 100*l.* per annum, granted by the Government. In 1832 the salary was 100*l.*; in 1833-48, it was 99*l.* 16*s.* 3*d.*; in 1849-50, it was 99*l.* 15*s.* 3*d.*

There are no extraneous sources of emolument conjoined with it.

Hitherto no fees have been received from persons attending the lectures of the Professor Fees will, in future, be received from those students who attend the lectures as a condition for the B.A. degree.

The present value of the professorship, is 99*l.* 15*s.* 3*d.* per annum, paid by the Government It will receive an augmentation, arising from the source above mentioned, the probable amount of which it is not easy at present to estimate.

The appointment to the office is by Grace of the Senate. I am not aware of any conditions of eligibility or of tenability.

There is no residence attached to the Professorship; neither is there any apparatus. The instruments used in lectures are all my own property. There is a museum containing the collection of the late Dr. E. D. Clarke, purchased by the University; Sir Abraham Hume's collection, presented by Viscount Alford; a collection of minerals and books, presented by Dr. Whewell; and minerals presented by the Marquis of Northampton, the Rev. C. Francis, G. W. Hallam, Esq., and others. There are no available funds for the enlargement of the collection.

W. H. Miller, Esq., M.A.

Professorship of Mineralogy.

On account of the want of apparatus attached to the museum; of a convenient laboratory; and of a collection of minerals, expressly destined to be submitted to experiment; students have no opportunities, except immediately after each lecture, of learning the actual manipulation of instruments, and the conduct of processes of experimental research.

I am not aware that the duties enjoined upon myself, as Professor, could be modified in any manner so as to contribute more effectually to the benefit of the University.

Deficiencies in the means of promoting the Study.

The most striking deficiencies in the means of promoting the study of mineralogy in the University, appear to be the want of a laboratory and apparatus, for the use of students, as well as for carrying on original researches, and the incomplete state of the collection; for notwithstanding the extraordinary munificence of the donors of collections of minerals, the Museum, being wholly dependent upon the generosity of individuals for its enlargement, hardly possesses a single mineral found during the last twenty years.

I have, &c.,

(Signed) W. H. MILLER, *Professor of Mineralogy in the University of Cambridge.*

The Rev. W. H. Bateson.

SIR, *Cambridge, January* 2, 1852.

IN reply to the questions contained in your letter of February 19, 1851, I beg leave to state, that—

Lecture Rooms.

The lecture rooms belonging to the University are—

1. The Anatomical Lecture Room,
2. The Jacksonian Professor's Lecture Room.
3. The Norrisian Professor's Lecture Room.

The accommodation afforded by these, as regards the number of auditors, is probably sufficient. The first of these rooms is attached to the Anatomical Museum. The second communicates with the Botanical Museum, with a room which, though intended for a laboratory, is nearly useless for that purpose, with a room used by the Professor of Chemistry and in which he sometimes lectures when the proper lecture room is occupied by the Professor of Botany, and with a room containing the apparatus used by the Jacksonian Professor in illustrating his lectures, but too small to exhibit it properly.

The work rooms and laboratory afford but very insufficient accommodation to the Professors of Natural Philosophy, Chemistry, and Botany, who use them, and little or none to students. These rooms are at an inconvenient distance from the great masses of the academic population. In this respect, the lecture room under the University Library (used by the Norrisian and Lucasian Professors) is well situated. It possesses, however, no museum or working-room.

The Woodwardian Professor lectures in a room adjoining the Geological Museum, and, so far conveniently situated, though in other respects totally unfit for a lecture room. My lectures were at first given in a College Combination Room, afterwards in my own chambers in College, then in a room that happened to be vacant in the Pitt Press, and latterly in the Mineralogical Museum, which is extremely ill adapted for a lecture room. Some lectures are delivered in College Halls, Combination Rooms, or Lecture Rooms, by permission of the respective Masters and Fellows; others in rooms in the Pitt Press, by permission of the syndics of the Press; or in the meeting room of the Philosophical Society, by permission of the Council of the Society. The School of Arts is also used as a lecture room. The School of Divinity is not, being too dark and damp for the purpose.

The additions made to the University buildings in the Old Botanic Garden, providing a museum and lecture room for anatomy, and a room for the Professor of Chemistry, are highly valuable as far as they go. The additions to the library are less valuable, the accommodation afforded thereby for the Professors being very indifferent. Accommodation for students appears never to have been contemplated. To the best of my knowledge, the University possesses no funds, and no practicable means of raising them, for providing lecture rooms offering better accommodation. Under any circumstances, a more ample provision of lecture rooms is greatly required; but mere lecture rooms would be of little use, unless accompanied by laboratories for students, rooms in which collections of Physical Instruments, and the apparatus used in lectures might be duly exhibited, places in which original researches might be carried on, others where experimental apparatus might be constructed. To which should be added the employment of a competent artist to keep in repair the collections of instruments above mentioned, and also the Astronomical and other Instruments belonging to the Observatory.

Fees.

The fees for some of the courses of lectures vary from five guineas to one. The Greek lectures are gratuitous, as also the lectures on Geology and Mineralogy, except for certain students who require a certificate of attendance, and of having passed an examination, as a condition for the first degree. Students of this class are admitted by tickets, either special, costing three guineas, and admitting the holder to the lectures of some one Professor in one or more years, or general, costing five guineas, and admitting the holder to any one or more courses of lectures in the same or different years, delivered by thirteen different Professors, among whom the money paid for the tickets is afterwards divided. The regulations above described apply only to those Professors whose lectures are attended as a condition for the first degree by those students who do not seek to obtain either mathematical or classical honours, including the Downing Professor of Medicine and the Jacksonian Professor of Natural Philosophy, neither of whom are examiners for the Natural Sciences Tripos. They do not apply to the other eleven Professors in their capacity of lecturers on the subjects of examination

W. H. Miller, Esq., M.A.

Professorship of Mineralogy.

for the Moral and Natural Sciences Tripos. The payment of fees by those students who require certificates, may be considered as a small tax upon indolence from which the candidates for mathematical and classical honours are exempt, and cannot reasonably be complained of. Any extension, however, of this tax to the whole body of undergraduates would, in my opinion, be highly objectionable. In this respect, the adoption of some arrangement for making the admission to lectures gratuitous would be a great improvement, for the charge of even a very small fee operates most injuriously in checking the attendance of undergraduates upon the University lectures.

Mathematics and Natural Philosophy.

I shall not attempt to reply to Query 6, except so far as regards the subjects enumerated under heads 3 and 4. There is no adequate provision made in the existing foundations for a complete and systematic course of lectures on Mathematics, and their applications to Natural Philosophy. Of these subjects many could be much more efficiently taught in the University by persons confining their lectures to a limited range of subjects, and having at their command ample collections of apparatus, than in the several Colleges, especially if a system of instruction were adopted combining frequent examination with oral teaching. In the Natural Sciences, including Chemistry, some new foundations may, perhaps, be desirable. Yet it would, probably, conduce much more to the usefulness of the University if proper laboratories, &c., were provided, and if the desiderata in the museums, and collections of apparatus requisite for the illustration of lectures, were filled up, than if any more ill paid and ill appointed Professorships were added to those already in existence.

Residences.

Residences are attached to the Downing Professorships of Law and Medicine. The Regius Professors are, I believe, entitled to rooms in Trinity College. I do not see how the provision of houses or chambers for the Professors would facilitate the adoption of regulations for securing their residence during a considerable portion of the Academical Year. In most cases, the addition of an official residence to the existing endowment of the Professorship, would not enable the holder of it to reside, unless he had either a certain amount of private income, or some other more lucrative appointment in the University. Failing either of these, he would be obliged to let his house or chambers, live in lodgings, while lecturing, and reside during the rest of the year wherever he could contrive to eke out the means of subsistence.

I have, &c.,

(Signed) W. H. MILLER, *Professor of Mineralogy in the University of Cambridge.*

The Rev. W. H. Bateson.

Answers from George Pryme, Esq., M.A., Professor of Political Economy.

G. Pryme, Esq., M.A.

Professorship of Political Economy.

SIR, *Wistow, Huntingdon, November* 27, 1850.

IN compliance with the request of Her Majesty's Commissioners for inquiring into the state of the University of Cambridge, contained in your letter of 20th November, I answer the fourteen Questions, *seriatim*:—

Foundation.

1. The Professorship of Political Economy was founded by Grace of the Senate in 1828.

Duties.

2. No duties were annexed to it.

3. Nor has there been any addition, modification, or change in this respect.

4. At first, and again lately, a course of Lectures during one term of each academical year has been given; but in consequence of the small attendance on Professorial Lectures, a course of Lectures was, during the intermediate time, given in alternate years only.

Endowment.

5. There was no original endowment.

6. Nor any subsequent augmentation. Soon after my appointment, I applied to the Lords Commissioners of Her Majesty's Treasury for the annual grant of money which is given to all other unendowed Professorships; but received an answer to the effect that they had no funds at their disposal for this purpose.

7. There are no extraneous sources of emolument.

Fees.

8. For many years I have given the Lectures gratuitously; but am now entitled to a sixteenth share of the sums received by the Registrary, for tickets of general admission to Professorial Lectures; the probable amount of which I am as yet unable to estimate.

9. The value is nothing, except as mentioned in my answer to the preceding questions.

10. No mode of appointment or election, or conditions of eligibility or tenability, have been made.

11. None whatever; nor any funds for the purpose. I have formed, at much expense and trouble during thirty years, a valuable and rare collection of books on this subject.

12. I have laid many books on the Lecture-room table, after the manner of the late Professor of Modern History; and have lent them to such students as were desirous of it.

13. As the duties are voluntary, I can only suggest that some plan respecting them and the appointment of future Professors be adopted.

Condition of the Study.

14. The study of Political Economy has made less progress, either among the senior or junior members of the University, than, considering the demonstrative nature of most of its propositions, and its great importance to the community, might have been expected. But I think that attention to it is now on the increase.

Institution of a Prize Essay.

I would suggest the institution of a prize for an English Essay on some subject in this science.

I have now given such answers as seemed to me to be required by the questions proposed. If they be deemed in any respect incomplete, I will endeavour to supply the

G. Pryme, Esq., M.A.

Professorship of Political Economy.

deficiency, and I beg leave to state to the Commissioners, that I am desirous to lay before them, whenever they may think fit, suggestions on other matters connected with the welfare and utility of the University.

I am, Sir,
Yours faithfully,
(Signed) GEORGE PRYME,
Professor of Political Economy.

To the Rev. W. H. Bateson,
Secretary to the Cambridge University Commission.

Sir, *Cambridge, April* 3, 1851.

I return the best answers which I can give to your Queries, dated 19th February, with apology for having, from circumstances almost unavoidable, so long delayed them.

Yours most faithfully,
(Signed) GEORGE PRYME, *Professor of Political Economy.*

Lecture-rooms.

1. There is one very large Lecture-room under the University Library, very centrally situate, which has been generally used by the Plumian and Norrisian Professors; also two large rooms in the old Botanic Gardens used by the Jacksonian, Chemical, and Anatomical Professors, not very central. The rest of this query I leave to the Professors who use them.

2. There are two rooms at the Pitt Press, and one at the Geological Museum under the University Library, much used for Lectures. One of the public schools has also been used for this purpose.

3. The other Professors obtain the use of some of the above-mentioned rooms by leave of the Vice-chancellor or of the Professor entitled to them. The Professor of Moral Philosophy is allowed the use of a Trinity College Lecture-room, of which he is master.

4. I am unable to give any answer.

Fees.

5. The present system of fees is, I believe by a ticket from the Registrary, the details of which I do not exactly know, and beg leave to refer to him, or by a fee of two or three guineas from those who do not require a Professorial certificate. The plan was adopted after much careful discussion among the Professors connected with the Moral and Natural Sciences Triposes, and is, I believe, a very good one.

New Foundations necessary.

6. I strongly object to classing Moral Philosophy, (which of course includes Metaphysics) with Theology; but much prefer its remaining united with class No. 6. In other respects I quite approve of the seven classes. The provision for a "complete and systematic course of lectures upon them" seems to me as yet very imperfect. I think that new foundations for Zoology and Political Economy, and also for the English language and literature, which may be united with No. 2 (Classical Literature), are desirable.

Residences.

7. The Regius Professors of Divinity, Hebrew, and Greek, are entitled to rooms and commons in Trinity College, and the Downing Professors of Law and Medicine to lodges there. I think it would be right to enable any Professors to require rooms at his own College. Those who are beneficed Clergy are not exempted from residence except during their Terms of lecturing. Many of the Professorships are of such small value as not to afford inducement to the holders of them to bind themselves to so long a residence, though such a provision would certainly promote the inclination to do so.

The Academical Year too short.

It seems to me that the Academical year, or periods of residence of Undergraduates, ought to be much longer than it is.

(Signed) GEORGE PRYME.

T. A. Walmisley, Esq., M.A., Mus. D.

Professorship of Music.

Answers from T. A. Walmisley, Esq., M.A., Mus. D., Professor of Music.

December 1850.

The Professorship of Music was founded by the University in 1684, on the recommendation of the Crown.

Appointment.

Emoluments.

The election is by grace of the Senate. There was no salary annexed to the office, nor has there been any subsequent endowment. The only emolument is derived from fees for Degrees. The fee paid to the Professor for a Bachelor's Degree being five guineas, for a Doctor's Degree ten guineas. During the last fourteen years five persons only have taken Musical Degrees, four Doctors and one Bachelor. I was appointed to the office in April, 1836.

The following is a copy of the Grace presented to the Senate on that occasion:—

"Cum T. A. Walmisley Musices Baccalaureus Modulandi peritiâ sit insignis, et in Arte Musicâ ob eleganter et doctè inventa egregium sibi locum assecutus sit:
"Placeat Vobis ut titulo Professoris in Scientiâ Musicâ ornetur.
"Lect: A.M. } 29° Apr: 1836."
"Conc: P.M. }

Duties.

The principal duties of the Professor are to examine the Exercises sent in by Candidates for Degrees, and to compose the Music of the Installation Odes.

Since I have been resident in Cambridge, from February, 1833, when I received the appointment of Organist to Trinity and St. John's Colleges, I have composed three Installa-

T. A. Walmisley, Esq., M.A., Mus. D.

Professorship of Music.

tion Odes: the first for the Marquis Camden, the second for the Duke of Northumberland, and the third for H.R.H. the Prince Albert.

These Odes were written for voices and full orchestra, and were performed in the Senate-house on Commencement Tuesday in 1835, 1842, and 1848.

Note.—The first Ode was written at the request of the Heads of Houses, signified to me by Dr. French, then Vice-Chancellor; Dr. Clarke Whitfeld, who held the Professorship, being unable from illness to undertake the task.

Lectures.

No lectures have ever been given in the University, either by me or, I believe, by any of my predecessors.

Degrees.

Musical Degrees are chiefly sought by Cathedral Organists and other professional men: there is not a single instance (as far as I am aware) of any member of the University who had previously graduated in Arts applying for a Musical Degree.

State of the Study.

Music is not cultivated to any great extent by members of the University; but I believe that a taste for the art is rapidly increasing amongst us; and I have reason to expect a tolerably large attendance at a course of lectures which I propose to give in the ensuing year.

(Signed) T. A. WALMISLEY.

CAMBRIDGE UNIVERSITY COMMISSION.

EVIDENCE ON EXPENSES AND TUITION.

The following Paper was addressed to the Heads of the several Colleges, and to those who either were or had been for several years past Tutors of Colleges.

Cambridge University Commission,
Downing-street,
February 18, 1851.

SIR,

HER Majesty's Commissioners for inquiring into the state of the University of Cambridge and the Colleges thereof, respectfully invite your attention to the subjoined List of Queries; and request the favour of such information in reply as you may be kindly disposed to communicate.

I have the honour to be,
Sir,
Your obedient humble Servant,
(Signed) W. H. BATESON,
Secretary.

---

1. Does it appear to you practicable, consistently with what is due to the habits of those classes of society in this country to which Students usually belong, to diminish very materially the necessary expenses of a residence in College? Are there any privileges conceded to College tradesmen and servants which have the effect of increasing those expenses?

2. What check can the College Tutor impose upon the supply of goods upon credit, to his pupils, without his authority, by tradesmen in Cambridge, London, or elsewhere? What classes of tradesmen's bills are usually admitted into the quarterly accounts of the Tutors? What security or advantage does this practice afford to the tradesman? What control over extravagant expenditure does it afford to the Tutors? Can you suggest any regulations or enactments which would tend to prevent the indefinite credit sometimes given by tradesmen in London and elsewhere to young men *in statu pupillari*?

3. What lectures are given in your College? Are the Students classified, and at what period of their residence, so that the Lectures may be adapted to their capacity of profiting by them? Is the attendance upon them voluntary or compulsory? Does your College afford a staff of Lecturers sufficiently complete to provide for the entire course of public instruction, and to prepare the Students for the different College and University examinations, or are their functions to any considerable extent superseded by private Tutors?

4. What is the usual payment made to a Private Tutor for a term, a short or a long vacation, for an academical or entire year? What proportion of the Students engage Private Tutors for the whole or some portion of a year, and what is the average annual expense which, in your opinion, each Student may be considered as incurring for this purpose, and what relation does it bear to all the other necessary expenses of education?

5. Has the office of Private Tutor become a permanent and professional occupation of many men of eminence, both as mathematicians and classical scholars? Do they lecture their Pupils singly, or in classes, and in either case, during what time, and upon what terms? Do many Students become candidates for the higher honours of the University, without the assistance of some of the more eminent of these Teachers?

6. Does there exist a similarly organized system of private tuition for those Students who are not candidates for honours, but who merely seek to pass the ordinary examinations required before the first degree?

7. It was provided by a grace of the Senate passed in 1781, which was partially repealed in 1824, and has not since been acted upon, that no candidate for honours should be allowed to avail himself of the services of a Private Tutor, after his second academical year. Would it be expedient, in your opinion, to re-enact and enforce this or any similar prohibition?

8. What provision is made in your College for the maintenance or assistance of poor Students? What is its amount in value, to what number does it apply, and how are they selected? Is it, in your opinion, expedient to afford such aid in the education of Students, on the ground of poverty alone, without regard to merit and superior attainments? What would be the effect, as far as your observation would enable you to judge, of the establishment of a Hall or College for poor Students only, who should be educated and maintained on the lowest practicable scale of expenditure? What influence would the domestic system of Cambridge, by which the Students of one College are very rarely admitted to Scholarships or Fellowships at another,

have upon the probable success and public advantage of such an Institution, supposing it unprovided with ample endowments of its own?

9. What are the different College and University examinations for which the Students of your College are required to prepare in the interval between their first residence and the Degree of M.A.? What subjects, or classes of subjects, do they embrace? Are you disposed to think that these examinations are pushed to such an extent either in respect of frequency or difficulty as to interfere unduly with habits of independent study, and to make the assistance of a Private Tutor a matter not of choice, but of necessity? Has the increase of their number of late years diminished the average attendance of Students upon the Lectures of the Professors?

10. Is there any examination of the Students of your College previous to admission or matriculation, with a view of ascertaining their fitness to profit by the College Lectures? Are you disposed to think that a general examination, conducted by the University, and not confined to the members of particular Colleges, would be desirable? What would be the probable effect of such an examination on the number of admissions, and also in stimulating the public and other Schools in preparing their Pupils for the University?

11. What has been the effect, as far as your observation has extended, of the great increase of the emoluments, offices, and civil honours of the Law, and of the recent legislation with respect to Cathedral and other preferments in the Church, as well as the very general prevalence of higher views with respect to the obligations of the Christian Ministry, in inducing the more distinguished Students, after attaining Fellowships, to quit the University, and engage at once in professional studies, or in the active duties of a parish? Have these changes tended to increase the difficulty of retaining the best-qualified persons to fill the more important offices in the Colleges and the University? Can you suggest any changes in the collegiate or academical system, by which the emoluments of those who devote themselves, whether as Tutors or Professors, to the duties of public instruction, both in the Colleges and the University, may be increased so as to secure more effectually the services of the ablest men for these important offices?

12. If the staff of Lecturers and Tutors in your College be not sufficient in number to prepare Students of all classes for the various examinations which they are required to undergo, what plan would you suggest for supplying the deficiency?

13. Are you disposed to recommend any reduction of the number of terms required for the Degree of B.A., such, for instance, as the omission of the first and last terms now formally required by Statute and the substitution of nine terms of actual residence for ten? What are the inconveniences produced by the unequal accumulation of Students in the Michaelmas term under the present arrangements? If such a change were adopted, in what manner would you regulate the succession of examinations for the Degree of B.A., the classical Tripos, the Medals, the Moral and Natural Sciences Triposes? Should you consider it expedient to shorten any of the vacations, or to increase the proportion of each term required to be kept by residence?

14. Are the Students allowed to reside in your College during the long vacation? Is special permission required for that purpose? If allowed, to what regulations of discipline are they subjected? Is it usual to form reading parties under private Tutors elsewhere than in Cambridge? Of what numbers do they commonly consist, and how long are they continued? What proportion of the Students join such parties, and what effects have you observed them generally to produce?

15. Do any of the Students of your College reside in lodgings in the town? To what regulations are the keepers of such lodgings subject, and are those regulations, in your opinion, generally observed? Are you disposed to think that Students in the town are under less rigorous control or exposed to greater temptations than those who are within the College? In what manner does the external discipline of the University, exercised by the Proctors and their officers, tend to enforce the regulations of the lodging-houses?

16. Are there any other changes in our collegiate or academical system, beneficially affecting the welfare of the Students and the conduct of their education, which you are disposed to recommend?

Rev. G. Archdall, D.D.

Answers from the Rev. G. Archdall, D.D., Master of Emmanuel College.

Expenses. 1. This question seems to have been answered in a former paper, where it is said, we scarcely see how the necessary College expenses can be diminished, commons in Hall, rent of rooms, and tuition being already as low as they well can be. We are not aware that tradesmen or the servants of the College have any privileges conceded to them which have the effect of increasing the expenses of the students.

Credit. 2. We do not see how the College Tutor or other authorities can impose any further material check on the supply of goods to the Undergraduates. Such is the system of independence here that the mischief is done before the College authorities can possibly be aware of it, and the more especially as the tradesmen, even the most respectable of them, lend no assistance to the Tutors in checking, but do very much encourage, by their facility of credit, habits of extravagance in the Undergraduates: but suppose the University were to pass a Grace that no degree of B.A. should be granted until it were shown satisfactorily to the authorities of the College that the student applying for his degree has no outstanding debts against him in the town?

3. Answered in a former paper.

Expense of private tuition. 4. 14*l.* for a whole term, 7*l.* for a half term. A large proportion of the students do engage Private Tutors, and the expense on this head is a considerable addition to their expenditure.

Private Tutors. 5. The office of Private Tutor has become a permanent professional occupation in the University of several distinguished men, both as Classical and as Mathematical Tutors. They lecture both in classes and singly, and the terms are much the same as those stated in Answer No. 4. Few students become candidates for honours without the assistance of a Private Tutor.

6. Of those who are not candidates for honors it is believed few dispense entirely with the aid of a Private Tutor.

7. The Grace of 1781 was repealed in 1824, probably on the ground of its being so easily evaded by the affluent, who could afford the expense of private tuition *out* of Cambridge. The re-enactment of the prohibition would probably not work well.

Poor Students. 8. Partly answered in a former paper. Assistance given in College to poor students is always given with a due regard to merit, industry, and attainment as well as to poverty. In our humble opinion the establishment of a College or Hall for poor students only would not work well in this University. There does exist in all Colleges a strong feeling against engrafting "*out* of College men" on to the foundation.

Examinations. 9. Partly answered in former paper. It does not appear to us that the College or University Examinations are so frequent as to interfere with the independent studies of the students; it is believed that Private Tutors are generally resorted to on those occasions.

Matriculation examination. 10. In this College there is not now any examination of the students previous to admission. They are admitted on certificate of fitness from a Master of Arts of either University. It does not appear to us that a general examination of candidates for admission by the University would be desirable.

11. The answer to the first part of this question seems to be entirely matter of opinion; and with regard to the securing of the services of the best men in each department in College, it does not seem to us that any alteration of the present collegiate system would be desirable.

12. We conceive there is no deficiency.

Terms. 13. If any changes are to be made I should think it very desirable that the Easter or May Term should be lengthened, and the studies throughout the whole course of it better enforced. The amusements of boating and cricket-playing in that term now amount to a serious evil in the University.

Residence during Vacation. Reading parties. 14. No; not within the walls of the College. Some few remain in their lodgings, by special permission of parents and of the College authorities; others form reading-parties in the country at a distance from Cambridge. These parties consist usually of six, eight, or ten, under the control of a Tutor. The results are in general beneficial to the students both in body and mind, and we think this plan preferable to their remaining in College or in the town during the Long Vacation.

Lodging-houses. 15. Yes, a great many. Rules and regulations are enforced, with regard to them, both by the University and by the Colleges to which they respectively belong. The lodgings are all licensed by the University, and the College Gate Bill is equally applicable to them.

Discipline. 16. We do not exactly see what materially beneficial changes can be made in our present collegiate or academical system beyond a general and universal improvement of College discipline, and a stricter enforcement of the regulations in existence, not peculiar or arbitrary in any one College, but made imperative in all.

Rev. H. Arlett, M.A.

Answers from the Rev. H. Arlett, M.A., Senior Fellow and late Tutor of Pembroke College.

Expenses. 1. I think not in my own College, where great pains have been taken to reduce the necessary expenses of residence as much as possible.

I subjoin the actual average expense incurred by between 40 and 50 students during a

year's residence at Pembroke; it includes everything necessary, and is much above the minimum expense, as the items "sizings," "dean," "cook and butler," "grocer," might have been in great part omitted. *Rev. H. Arlett. M.A.*

No privileges are conceded to tradesmen or servants which have the effect of increasing the students' expenses.

2. The College Tutor can impose no *certain* check upon the supply of goods upon credit to his pupils without his authority by tradesmen in Cambridge, London, or elsewhere. He may generally acquire a knowledge of the habits of his pupils, and by timely communication with their parents or guardians often succeed in controlling these extravagances; but I do not think it possible to prevent young men, many of whom are of age and in possession of property, from dealing with tradesmen at their discretion. Credit.

The tradesmen who furnish articles of general necessity, are usually permitted to send in their bills to the tutors. I admitted bills from tailors, shoemakers, glaziers, painters, whitesmiths, upholsterers, apothecaries, booksellers, drapers, hatters, and grocers. The tradesmen whose bills are taken in by the tutors have the advantage of regular payment, and usually of prompt payment; few tutors allow the bills to be in arrear so long as private families do. The security from bad debts is also very great; during my own experience of 13 years the College tradesmen lost on the average a very small per-centage on their bills by bad debts. They are also enabled to collect a number of small bills at once with very little trouble and expense; an advantage which ought to enable the tutor to insist that the prices charged for goods supplied to his pupils shall be fair and reasonable. Tradesmen's bills.

In some few cases the practice affords the means of checking extravagant expenditure; for instance, it is not an unfrequent practice with the worst class of students to order large quantities of books or clothes from booksellers or tailors for the purpose of raising money by their sale at a very great loss. If the tradesmen send bills so incurred, as they usually do for their own protection, to the tutor, the latter can hardly fail to detect what is going on.

The practice of taking in tradesmens' bills by the tutor affords very little protection against that sort of extravagance which is ministered to by such tradesmen as "confectioners," "hotel keepers," "wine merchants," "horse dealers," and "dealers in fancy goods." On the whole, I consider the custom of considerable use.

I am not prepared to suggest any regulation or enactment which would tend to prevent indefinite credit.

I distinguish between tradesmen in London and in Cambridge. I do not believe that the former give indefinite credit till they are satisfied that the creditor has the means of payment either in possession or in prospect. A student at the University without means has as much difficulty in obtaining credit from them as a person similarly circumstanced elsewhere.

3. The lecture subjects for the freshmen's year include Euclid, Algebra, Trigonometry, and a Greek and Latin classic. The lectures are given five times a week in mathematics, and five times in classics. Lectures.

The second year have *five* lectures weekly in Mathematics, and *four* in Classics.

The subjects include Conic Sections, theory of Equations, the differential and Integral Calculus and Mechanics, with a Greek and Latin classic; they have also one lecture weekly on a portion of the Greek Testament.

The third year are lectured *four* times a week on Mathematical subjects, and once on the Greek Testament.

After the first year the students are divided into such as read for honours, and such as read only for a common degree; and the latter are lectured on the subjects required for the previous examination, and the examination for the B.A. degree. The attendance at lectures is compulsory. The staff of lecturers in this College is sufficient for all purposes.

The number of candidates for the highest honours, in a small College is not usually more than two or three in a year, and could such men be induced to rely on the College tutors, they would find their assistance and instruction quite sufficient; but the system of private tuition interferes most materially with the efficacy of College lecturers. The public lecturer has no inducement to exert himself when he finds his best pupils pre-occupied by their private tutors,

Rev. H. Arlett. M.A.

and fully employed on other subjects than that on which he is lecturing. The tutor's lecture, in consequence, usually takes the form of a short daily examination.

In addition to the ordinary classical lectures, Mr. Beatson, the classical lecturer in this College, delivers lectures on Greek and Latin composition to such students as are willing to attend them, and gives out subjects for composition, both in prose and verse, weekly.

Private tuition.

The usual payment to a private tutor is 14*l.* for a Term; 10*l.* for a short vacation; and 30*l.* for a long vacation. The practice of taking what is called "half tutors," who receive 7*l.* for a Term, and read with their pupils only three times a week, has become very common. I am unable to say what proportion of students engage private tutors, but supposing a student to read for the highest honours, either in classics or mathematics, I consider he would find a half tutor during Term time sufficient in all cases; and supposing him to engage a tutor for the long vacation, he would pay 51*l.* for private tuition during an academical year. I estimate the average expense of residence at 86*l.*, which gives 137*l.* per annum as the expense of education at the University of a student reading for honours. If the object be merely a common degree, no student (with very few exceptions) need engage a private tutor.

Private tutors.

The office of private tutor has become a permanent and professional occupation of many men of eminence, both as mathematicians and scholars. Some tutors, who are in the highest repute, lecture their pupils in classes, for an hour and a half or two hours daily, and receive 14*l.* per Term. Other men, of equal eminence as mathematicians or scholars, lecture their pupils singly for one hour each daily, at the same charge. Others again lecture their pupils either singly or in classes, on alternate days only, at 7*l.* the Term. This last mode of tuition is becoming very common, and promises to supersede the others. I consider it a great improvement on the old system, both because it is less expensive, and because it allows the student more time for thought and reading, whilst it is quite sufficient for the purposes of examination, instruction, and explanation.

Very few students read for the higher honours without the assistance of a private tutor, though unquestionably the assistance of the College tutor would be quite sufficient in many cases. No student, not a candidate for honours, ought to be allowed to engage a private tutor without the permission of the College tutor, and such tutors ought to be appointed assistant College tutors.

Many students, not candidates for honours, engage private tutors, especially in the Term in which the previous examination is held, and in their last October Term. The practice has increased as the subjects of examination have been extended, and is more general now than at any former time. It is altogether unnecessary, as in every College a sufficient staff of public tutors might be provided to afford the necessary instruction to students who are not candidates for honours. I do not think any grace or enactment on the subject would be advisable, as the custom might be discouraged, and the necessity for it effectually removed by private College arrangements.

I think it would not be expedient to re-enact the Grace of 1781, or to enforce any similar prohibition. So long as students are persuaded that the services of a private tutor are valuable, so long will they continue to engage them. The difference of a few places on either Tripos may often materially affect a young man's prospects in life, and putting out of the question the ambition to excel, which must be supposed to influence a student, it is not surprising that few are found willing to sacrifice the advantage which they suppose they will derive from the assistance of a private tutor.

The system of private tuition is therefore a consequence of our excessive competition for the highest honours.

Again, such a prohibition would give undue advantage to the students of the larger Colleges, who would possess facilities for acquiring information in the subjects of examination, not open to their competitors in the small Colleges; for instance, the staff of public tutors must be presumed to be more efficient on the average at a large than at a small College; and besides, the number of candidates for the higher honours, always to be found at Trinity and St. John's, affords great advantage in the way of mutual private instruction. At a small College the candidate for high honours is often a solitary man, and under the present system finds in the class of some eminent private tutor acquaintances with minds and pursuits similar to his own. I have reason to believe that the advantage of discussing the subjects they are reading, afforded to a class of men of similar minds and attainments, is highly appreciated by the under-graduates. Again, students whose relatives or friends had been distinguished and become eminent in the University, would have great and undue advantage, if the system of private tuition were much interfered with.

Poor Students.

8. We have no provision for the maintenance of poor students on the ground of poverty only. There are three Exhibitions of 12*l.* a-year each appropriated to sizars, who are selected when a vacancy occurs at the discretion of the tutor. I think it would be inexpedient to afford aid to students on the ground of poverty alone, without regard to merit. The advantage which a poor student, not gifted with talents or application, would derive from such an education as the University affords to such a man would, in my opinion, be more than counterbalanced by the acquisition of habits unsuited to his probable station in life, nor would the church or the public be benefited if mediocrity were thus forced into the learned professions. A student of high talent, however poor he may be, finds at present no great difficulty in passing through the University from the number of scholarships open to competition, and the assistance which almost every College tutor is disposed to afford to pupils of conspicuous merit.

The establishment of a College for poor students only would be liable to this objection, that it would be resorted to *exclusively* by students of the lowest class of attainments. The scholarships and exhibitions open to merit at almost all the existing foundations, would be sure to

attract the best class of students, as their emoluments would more than cover the difference of expense. At Pembroke, for instance, the necessary expense of residence may be set down as about 65*l.* per annum, and a student of moderate ability would get assistance in the shape of exhibitions and scholarships to the amount of about 40*l.* a-year; besides, his chance of a fellowship and future provision would be much greater than if educated at a College without ample emoluments of its own. Such a College, if amply endowed, might in time produce an effect in moderating the generally expensive habits of the University; but, if not so endowed, I think that it would be inoperative, except in so far as it would afford a cheap passage to a degree and to the church to a number of dunces. *Rev. H. Arlett, M.A.*

If my view be correct that students of high ability would rarely resort to such an institution, it follows, that its position in the University would be exceptional, and its influence small, and consequently that few of its members would be elected to fellowships or scholarships at other Colleges. I do not think that the existing system of the University presents great obstacles to deserving students obtaining fellowships at other than their own Colleges. From 1844 to 1848, five Pembroke men, for whom there were no vacancies at their own College, were elected to fellowships at Clare, Queen's, Sidney, and Trinity Hall.

9. In the first year the student prepares for the College examination in the Easter Term. The subjects embrace Euclid, Algebra, Trigonometry, a portion of a Latin and Greek classic, and Composition in prose and verse. Examinations.

In the second year he is prepared for the University previous examination in the Lent Term, and for the College examination in the Easter term. The subjects for the College examination, are Conic Sections, Theory of Equations, Differential and Integral Calculus, Mechanics and Problems; a portion of a Latin and Greek classic, with composition in prose and verse, and one of the Gospels and Ecclesiastical History.

In the third year he is prepared for the College examination in the Easter Term, and for the University examination for B.A. degrees, either in honours, or for a common degree, at his discretion.

The third year's College examination embraces the following subjects:—

Newton and Dynamics, Optics, Hydrostatics, Astronomy, and Miscellaneous Problems, also one of the Gospels and Ecclesiastical History.

I think that the examinations are neither too frequent or too difficult, and that a student tolerably prepared on his admission to the University, may be expected to pass them all creditably without the assistance of a private tutor. I believe that *in general* they do not unduly interfere with habits of independent study, but that most students derive benefit from them, as they confine their exertions to fixed and definite objects. I would, however, qualify this opinion by saying that in this, and other small Colleges, the merit of candidates for fellowships is, as I think, too exclusively measured by their relative places on the classical or mathematical tripos. I prefer the system adopted at Trinity, which allows a student to follow a course of independent study without absolutely forfeiting his chance of a fellowship. No doubt the concentration of the energies of the highest class of students upon mathematical and classical subjects is, to a great extent, incompatible with the pursuit of other studies, and must, *pro tanto*, tend to thin the professors' classes; but I am disposed to think that a growing distrust of the efficacy of professorial teaching, as a means of conveying other than superficial information, is the real reason that so many lecture-rooms are deserted. The Divinity Professors have large and attentive classes partly, as it appears to me, because the subjects of their lectures are of the highest possible interest to all students, and have a direct bearing on the professional education of a numerous class, and partly because, in such subjects, authoritative teaching is more relished and more useful than in the sciences where the student must think for himself at every step, and acquire accurate information or none. The same may be said of the Professor of Modern History. It should be observed, also, that no professor has a large class who does not lecture gratuitously. Again, the private tutors are, in fact, professors in their several subjects, who have superseded the University Professors by the superior usefulness of their lectures.

10. Students are admitted on the certificate of an M.A. of Cambridge or Oxford to the effect that they are fit to be admitted at the University; they are examined by the tutor on coming to reside, but there is no general examination instituted by the College. Matriculation Examination.

I think an admission examination conducted by the University would produce no good effect whatever. It would have scarcely any effect on the number of admissions, unless it were made more severe and searching than the "previous examination," in which case it would exclude from the University many students who, though not regularly educated, might be qualified by their abilities and industry to derive great profit from a residence here.

I assume that any such examination would not be so extensive or searching as to exclude students of ordinary abilities, in which case it would produce no effect on the public schools, where boys already pass several years in attempting to learn the elements at least of Latin, Greek, and arithmetic, whilst its effect on schools of inferior character would, in my opinion, be injurious, as it might induce them to educate boys with a view to their passing a "minimum examination" and nothing else.

Again I believe that many students might pass such an examination and yet be very ill qualified to profit by the College lectures. At present, the cases where they are so unfit are exceptional; in nine cases out of ten they have been regularly educated so as to fit them for the University, and are not so fitted, usually from a want of application, and, sometimes, from positive stupidity.

I object also to an examination previous to admission because it would seem to proclaim to the world that the University recognizes no subjects of study but those which it prescribes to candidates for a B.A. degree.

Rev. H. Arlett, M.A.

Inducements to distinguished men to leave the University.

11. So far as my observation has extended, the causes alluded to have produced no effect whatever; quite a sufficient proportion of the best qualified persons appear to me to reside in the University, and to devote themselves to public or private instruction. Any change in the collegiate or academical system which should tend to diminish the proportion of distinguished men who yearly quit the University to engage in professional studies and occupations, or the public service, would in my opinion derogate from its claim to be considered a place of education for "persons duly qualified to serve God in church and state."

Remedies.

At the same time, it would appear desirable to increase, if possible, the emoluments of our public teachers, so as to secure not only able men but the ablest in their respective subjects, and this might be effected if the number of students were susceptible of increase. It is remarkable that the number of Undergraduates has not increased in the last 25 years; it was 1,672 in 1825, and 1,622 in 1850, exclusive of 10 year men in each case. Now as the population and wealth of the nation must have greatly increased in a quarter of a century, and as the class requiring education may be presumed to have increased in a still higher proportion, it would seem to follow either that some change is required in our system, or that its merits are not sufficiently known and appreciated. I attribute our stationary position to both causes. The expenses of a residence at the University are greatly exaggerated, and the advantage which our foundations enable us to afford to students are not generally known, and, secondly, there is a large class of persons who require an education of a high order, but who do not require exactly the education which the University offers. I assume that numbers would gladly avail themselves of the teaching of our distinguished Professors in the several branches of Natural and Moral Science who would hesitate to pass three years in preparing themselves for a degree in either of the faculties. I would suggest, therefore, that the Natural Science and Moral Science Triposes should be made subservient to the views of such persons; that they should not only be open to students who may have taken a B.A. degree, but to all who may have resided (kept Terms) here a certain time, say two years; this would extend the teaching of the University to other students than those intended for the learned professions, and I believe would greatly increase its influence and usefulness.

Staff of Lecturers and Tutors.

12. In my college the staff of lecturers and tutors is sufficient to prepare students of all classes for the various examinations which they are required to undergo, and if need were, it could be increased from the resident Fellows who are engaged in private tuition.

Reduction of the number of terms.

13. I think the substitution of nine terms of actual residence for the ten now required might be made with advantage.

The hall and chapel are in some Colleges not sufficiently large to accommodate the number of students accumulated in the Michaelmas Term. An inconvenience which, of course, may be avoided by limiting the numbers to be admitted in each year.

I attach the least possible importance to this circumstance as a reason for omitting the tenth Term of residence.

I would commence the examination for B. A. degrees on the first Monday in June; the admission to B. A. degrees to take place on the Saturday before commencement Sunday. The examination for mathematical honours might take place in the following January, as at present, nor would I alter the times or order of succession of the examinations for the medals or the Classical Tripos.

I have already suggested the changes which I should wish to see made in the regulations affecting the Moral Science and Natural Science Triposes.

Vacations.

I am not disposed to consider that it would be advisable to shorten either of the vacations, or to increase the proportion of each Term to be kept by residence.

14. The students at Pembroke are not permitted to reside in College during the long vacation, but in consideration of the number of eminent private tutors who reside in Cambridge during the vacation, they are allowed to lodge in the town by special permission, which is only accorded to those whose previous conduct has been unexceptionable.

Reading parties.

Reading parties, under private tutors, elsewhere than in Cambridge, are not so common as they formerly were, but several tutors still continue the practice. The parties commonly consist of from two to twelve pupils, and remain with the tutor twelve weeks. I cannot say what proportion of the students join such parties, perhaps an eighth of all who read for honours, which would give about 60 of the whole number of students in residence, but it is difficult to make an estimate which can be relied on as a fair average.

I have not observed any difference in the progress made by men who have read with tutors in Cambridge, and those who have gone elsewhere during the long vacation, but without doubt the temptations to, and facilities for, the coarser kinds of dissipation are greater here than elsewhere.

Lodging houses.

15. Some of the students of my College have from time to time resided in lodgings in the town. The keepers of lodging-houses are required to close their doors at 10 P.M., and to report daily to the College-tutor the names of such of his pupils as are out of their rooms at that hour.

In my opinion these regulations are observed. I do not think that students in lodgings are under less rigorous control than those who reside within the College.

They may sometimes, but not often, be exposed to temptation to which those who reside in College are not exposed.

The Proctors are accustomed to visit suspected lodging-houses, and as students are liable to be questioned by them at all hours of the night, the lodging-house-keeper is constantly in danger of detection, if he transgress the College and University regulations in their favour.

16. I am not disposed to recommend any other change in our collegiate or academical system.

Pembroke College, March 29, 1851. (Signed) HENRY ARLETT.

Answers from the Rev. Joseph Williams Blakesley, B.D., late Fellow and Tutor of Trinity College, Cambridge.

Rev. J. W. Blakesley, B.D.

Expenses.

1. I THINK it impossible to diminish to any material extent the *necessary* expenses incurred by a student at the University. But the really *necessary* expenses are extremely small;—smaller than those involved by residence (otherwise than as a free scholar) in any boarding-house of any public school with which I am acquainted. The great proportion of expenditure, in most cases, is due solely to the social habits of the place; and in these, at the time I left college, I think there had for some years been a gradual improvement.

I know of no privileges granted to college servants or tradesmen of a kind calculated to increase the necessary expenses of the undergraduates to any appreciable amount.

Tradesmen's Bills.

2. The tradesmen whose bills are admitted into the quarterly accounts of the tutors, are, grocers, tailors, hosiers, shoemakers, hatters, booksellers, and licensed lodging-house keepers (*a*). The accounts of the college cook, the college appraisers, and the college coal merchant also pass through his hands (*b*). Medical charges, charges for private tuition, and those for professors' lectures, likewise often do so (*c*). Lastly, the college makes him accountable for the room-rent, wages of the bedmakers and laundresses, and steward's charges (*d*). These four classes of accounts require a separate notice.

(*a*.) The first class is the one in which the power of the tutor is most available to check undue credit, but this only at Cambridge; as it is only to Cambridge tradesmen that the permission to send in their bills is granted.

The taking in of bills may be regarded in the light of a voucher on the part of the tutor to the respectability and general fairness of the tradesman. The power of giving or withholding this voucher enables him to impose certain conditions; and these conditions may be so contrived as to give him a considerable insight into the habits of his pupils. Those which I imposed were the following:—Each tradesman furnished me with a book, which was taken by my servant to him a short time before quarter-day, that he might enter in it the items of the goods furnished severally to my pupils. It was always accompanied by a printed order, that each pupil should be called upon to countersign the total amount of his bill, and should also have a duplicate copy of the items delivered to him. Wilful neglect of this injunction I should have punished by refusing to receive the offender's bills afterwards. But the tradesmen often complained that they found great difficulty in obtaining the countersignatures, from no fault of their own, but from the carelessness or indolence of the undergraduate, or from inability to find him in his rooms. These excuses were, undoubtedly, in many instances, quite sound ones. But to diminish the evil as much as possible, it was my practice to take a note of those tradesmen whose books were the best signed, and to recommend them to the notice of the freshmen at the next October term. Persistency in this practice produced gradually a considerable improvement, especially as I took care to let the reason of my favour be known.

When the freshmen came up in October, my habit was to furnish each with a list of tradesmen (for whose general respectability I vouched) who would supply him with the articles most immediately necessary for him; but at the bottom of the list was printed a notice, that in so doing, it was not my wish to bias his choice, should he prefer to deal with any others.

I also made a point of informing him that it was not at all necessary or desirable that his accounts should pass through my hands. But with the object of knowing, as far as possible, whether such accounts were really paid or not, I imposed it as a condition on all tradesmen whose bills I received, that they should every quarter enter in my book the amounts owing to them from those of my pupils "who preferred to pay their own bills."

(*b*.) The second class of bills, except perhaps those of the college cook, furnish the tutor with but little information as to the habits of his pupils; but their passing under his eye is to a certain extent a protection against excessive charges.

(*c*.) The third class furnish some indication of the habits and pursuits of the pupil.

(*d*.) The fourth class necessarily pass through the hands of the tutor, as the conduct and character of the parties to whom they are paid is an important matter of discipline. The same may be said of lodging-house keepers.

Difficulty of preventing credit.

There is no power whatever, other than that resulting from the system just described, possessed by a college tutor, to prevent unlimited credit being given to his pupils by tradesmen in Cambridge, London, or any other part of England, or the world. Nor do I think it possible to frame any regulations which shall *materially* contribute to this object. A college tutor is (except for the practice above described) quite as helpless with regard to his pupils in this respect, as the colonel of a regiment of Life Guards is with regard to the subaltern officers.

Discommuning.

The power of *discommuning*, sometimes exercised by the University, should perhaps be noticed here. This *discommuning* consists in constituting it an academical offence to have any dealing whatever with a given party—such, for instance, as a tradesman who has been convicted of fraudulent proceedings. But although this power is some protection against gross misconduct, its operation is scarcely appreciable as a check upon habitual extravagance.

How a diminution of Undergraduate expenditure might be brought about.

I am myself satisfied that any important diminution of undergraduate expenditure can only be brought about by the indirect method of increasing the percentage of sober and thoughtful students, and thus elevating the general morality of the undergraduate body. This effect undoubtedly might be furthered by judicious regulations.

College Staff.

3. The staff of Trinity College, at the time I was tutor, consisted of 12 persons, viz. three principal tutors and nine assistant tutors. The number of students under lecture in residence

Rev. J. W. Blakesley, B.D.

might have averaged about 350. I think there was quite sufficient educational force; certainly there would have been, had the standard of admission to the College been as high as it ought to be in every College of an University. There was excellent instruction in Greek and Latin literature and philosophy, and in Mathematics, both pure and mixed.

Hindrances to Instruction.

The hindrances to the complete and regular development of the system of instruction arose from two causes: (*a.*) The existence of a considerable number of students quite inadequately prepared for academical instruction; and (*b.*) the necessity imposed by the University upon all undergraduates whatever of passing a futile examination—futile, at least, except as a measure of police, even if useful for this purpose—in the fifth term of their residence. These two causes operated banefully in several ways. (1.) By deteriorating the character of the lectures given, which were necessarily lowered in order that the inferior students might receive some benefit from them. (2.) By consequently diminishing the interest felt by the higher class of students in the work of the lecture-room. (3.) By furnishing incapable students with a plausible excuse for inattention to the collegiate course, on the ground that it was necessary for them to give themselves up to preparation for the "previous examination." (4.) By occasioning a dislocation of the collegiate course itself, with the object of meeting, as far as possible, the last-mentioned evil.

Classification of Students.

The students were usually classified, so far as might be, in the second term of their residence. During the first year of residence attendance at lectures was uniformly compulsory. In the second year a fresh classification was made and considerable discretion exercised, especially with regard to the higher class of students. At no time, however, can it be said that the

Attendance on Lectures.

attendance on lectures became voluntary, although the attendance on *some particular* lectures was allowed to be so. There was always a great disposition in the student to resort to private tutors, and to plead attendance upon *them* as a ground for exemption from attendance at College lectures. This arose partly from certain injudicious regulations of the University, which have since, to a great extent, been altered, and partly from the excessive interest attached to University distinctions, for which, of course, the special training of the private tutor was more available than the general instruction of the lecturer. I do not think it arose in any degree from the deficiencies of the College lectures, but from a desire for special qualifications which College lectures neither give nor ought to attempt to give. For a full exposition of my views on the whole subject of private tuition, I beg to refer the Commissioners to a pamphlet enclosed herewith.

4, 5, 6. I forbear from returning any answer to these questions, as it appears to me that the Commissioners require precise information as to the actually existing condition of things at the University, which information I cannot now furnish of my own knowledge.

Private Tuition.

7. I do not think the re-enactment of the Grace desirable, and feel satisfied its provisions could not be properly enforced. The evil, to remedy which such re-enactment might be proposed, would, in my judgment, be better met in a different way, viz., by a modification of examinations.

Poor Students.

8. At Trinity College there are 16 Foundation Sizars who are entitled to commons, rooms, and some other small emoluments. Various consolidated benefactions (amounting in 1845 to 136*l.* per annum) are divided among them. Every nobleman also pays 2*l.* 2*s.*, and every fellow-commoner 1*l.* 1*s.* per quarter for their benefit. A portion of the admission fees of every student is likewise appropriated to them. I should consider the money value of a Foundation Sizarship to be from 50*l.* to 60*l.* per annum. The tutors possess the power of admitting sub-sizars in any number they may think expedient, and these succeed to the Foundation Sizarships according to their places in the College Examinations.

The only advantage possessed by a sub-sizar, except this prospective one, is, that he pays 4*l.* per annum for tuition instead of 10*l.*, which is the charge to a pensioner, and that his admission fees are 2*l.* 15*s.* instead of 5*l.*

It is, in my opinion, highly undesirable that mere poverty, independent of superior attainments, should be allowed to constitute a claim to admission either as a sizar or sub-sizar. I had seen great evils result from such admissions before I became tutor, and I made the resolution not to admit a sub-sizar without examining him either myself or by one of my own assistants, and ascertaining that he came up to such a standard as furnished a security that he would, in the ordinary course of things, be able to take a respectable degree, and consequently find no difficulty in maintaining himself respectably afterwards. The utility of this rule was proved, not only in the cases in which I adhered to it, but also in one or two others where I was unfortunately induced, by strong representations, to waive it.

Hall for Poor Students.

I think the establishment of a hall for poor students only would prove a positive evil. The benefit arising from a residence at the University is by no means wholly (or perhaps mainly) derived from the technical instruction there furnished, but proceeds in a great measure (as in the principal public schools) from the influence exercised by the young men upon one another, *under the general guidance* of the pursuits of the place. The establishment of a hall exclusively for poor students would, in my judgment, be only less detrimental than one exclusively for young men of rank or remarkable wealth. Both the one and the other would be obstacles to that process which under the existing system is insensibly going on in a greater or less degree with students of every rank, namely, the gradual substitution of aristocratic (in the good sense of the word) for oligarchal or timocratic feelings. In other words, they would tend to the perpetuation and strengthening of caste-prejudices at the only place where, so far as my knowledge extends, caste-prejudices are in any important degree softened, if not destroyed.

Such a hall would, undoubtedly, not be able to exist in any vigour by the side of the existing Colleges, unless well endowed; and, if well endowed, it would rapidly lose its distinctive character. But in the mean time its establishment would probably divert attention from other agencies by which there is (in my opinion) a much better prospect of effecting the desired

Rev. J. W. Blakesley, B.D.

result, without paying the price for it which is involved in the principle of a timocratic classification of students.

Matriculation Examination.

9. and 10. At Trinity College there is an examination of a very elementary character to which students are subjected on their first entrance upon residence. There are also examinations in College at the end of the third, sixth, and ninth terms of residence. For the classes of subjects embraced by them, I would refer the Commissioners to my answer to their third question. To those there mentioned may be added a portion of the New Testament in the original, and of the works of Butler and Paley. The University examinations are two in number, one in the fifth term of residence, the other in the eleventh: the former is termed "the previous examination," it being regarded as preparatory to the latter, which is the examination for the B.A. degree (or, technically speaking, for admission *ad respondendum quæstioni*). I do not think the College examinations too frequent, and on the whole I think they are well conducted; but I consider the so-called "previous examination" the most prejudicial regulation existing in the University. The reasons for this opinion will appear from what I have said in answer to the third question of the Commissioners, and in the pamphlet (above referred to) enclosed herewith. To that same pamphlet I beg also to refer the Commissioners for my opinion on the points suggested in their question No. 10.

Inducements to leave Cambridge held out to distinguished men.

11. I think it quite certain that the difficulty of retaining the best qualified students in the University, after obtaining fellowships, has been materially increased of late years by the course of events. It will be remembered, that practically there is no obligation to residence attaching to a fellowship. The alternative, therefore, is between a fellowship with the prospects of official employment in the University, and the same fellowship with prospects of advancement in the world. With the public opinion of the country so strongly in favour of a practical life as it is, it cannot be a matter of wonder that the choice of young men should generally be in accordance with it. The increase of such emoluments and offices of the law as are attainable by men of talents at an early period, is doubtless an additional influence to that continual pressure of public opinion just noted.

Cathedral preferments.

The legislation with regard to cathedral preferments, and to residence on benefices, has likewise been operative in the same direction. This assertion, perhaps, requires some explanation, as I would not be understood to mean that antecedently to that legislation there was any distinct appropriation of cathedral preferments to persons holding official situations in Colleges or in the University. But I do not doubt that the *indirect* operation of such legislation has been unfavourable to the production of an assemblage of persons eminent for scientific attainments, and engaged in the cultivation and extension of the several branches of human knowledge:—first, by establishing the rule of compulsory residence upon benefices with cure of souls, even when held by University officials, such as professors; secondly, by the abolition of a large portion of that kind of preferment to which literary and scientific eminence was formerly regarded as establishing a kind of claim, when private interests might not interfere with public principle in deciding the judgment of its distributors; thirdly, and perhaps chiefly, by favouring the opinion that such an employment as the cultivation of literature and science is foreign to the office, if not alien from the character, of a clergyman, and thereby aiding the popular disparagement of such pursuits as an occupation.

Proprietary Schools.

In addition to the causes above mentioned, I would name the increase of proprietary schools, district churches, inspectorships of schools, and situations of the like kind, as operating prejudicially upon the particular object of securing the best qualified persons for permanent residence in the University, so as to provide a satisfactory succession of College Tutors and University Professors. The whole question may, in my opinion, be summed up in a very few words, as follows:—

The only prospect of securing a regular supply of well-qualified persons to any employment in this country, is to give it the character of *a definite career*. The anomalies of ecclesiastical preferments did, antecedently to the recent legislation, contribute very considerably to this result. The benefits of the legislation have, therefore, been purchased by the sacrifice of it. And, on the other hand, this same effect has been increased by the opening of new lines of employment of a kind to attract the attention of young men of capacity *at the time when they are making up their minds* as to the course they shall pursue in life.

From what I have said, it will be seen that I consider the evil in question, which I regard as one of deep importance to the nation, only susceptible of perfect cure by measures which would secure an appropriate career to that particular class who are the depositaries of the civilization of the age, and the principal agents in its transmission to others. In other words, the pursuit of science should be sufficiently recognised as a definite calling to warrant those who feel themselves competent to engage in it, in refusing to relinquish it in favour of the ordinary professions, such as the bar, the church, medicine, and the several branches of the public service. As to the mode in which this object may be attained, there may be many opinions. I will content myself with laying down a few points which I think ought to be observed in the endeavour to attain to it.

Restrictions on Fellowships.

(1.) I consider that the obligation to take holy orders in order to retain a fellowship ought to be removed in the great majority of cases, but that the obligation of residence should be enforced in all. If a large view be taken of the science of theology, so as to bring within its sphere almost all human knowledge of a liberal character, as contradistinguished from knowledge of a technical and professional nature, there seems nothing really inconsistent with the ordination vows in those pursuits which should form the staple of an University; and on this ground alone, I conceive, did those who took the vows in question cheerfully devote themselves to the cultivation of liberal knowledge. Such a view was, in a manner, *sanctioned* by the exemptions from residence on benefices enjoyed by University professors and others; and indeed it is not easy to assign any other

Rev. J. W. Blakesley, B.D.

principle upon which to defend the appropriation of tithes to the support of collegiate institutions.

But of late years, whether rightly or wrongly, this view has found little favour. It was entirely ignored in the legislation emanating from the recommendations of the Ecclesiastical Commissioners, and expressly rejected by those Commissioners themselves when petitioned to consider the claims of persons employed in the office of public instructors in the University. It may, therefore, be assumed that a much narrower and more professional view of the clerical office is now generally recognised; and if so, it seems abhorrent to all proper feeling that holy orders should be imposed upon persons from whom duties quite alien from clerical ones are required, simply as a clumsy expedient to prevent their devoting themselves to lucrative employments.

Increase of Professorships.

(2.) The number of professorships ought, in my judgment, to be increased, their endowment materially augmented, and the election to them (as a general rule), placed *libero arbitrio* in the hands of *bonâ fide resident* members of the senate. The University position of professors ought also to be improved. I think that *in every respect* their power should be co-ordinate with that of Heads of Houses.

The Resident Members of the Senate.

(3.) In the event of any modification of the University Charter by the Legislature, the *resident* members of the senate should, in my opinion, form a separate house, the consent of which should be requisite for any change in the regulations of the University. The members of this house should also have the power of discussing and amending (as well as of accepting or rejecting) any proposition brought before them.

(4.) In the event of such powers being entrusted to the resident members of the senate, I think they would constitute appropriate trustees for any fund which might be formed for endowing existing professorships or erecting new ones.

Fund for endowment of Professorships.

(5.) Such a fund might, in my opinion, be advantageously augmented by the suppression of some of the fellowships in the different colleges. This object I should pursue until about 20 per cent. of the number had been suppressed, or in other words, until each college was burdened with the payment of a contribution (equivalent to the amount of dividend on 20 per cent. of its fellowships) to the Professorial Fund. Provisions might, in my judgment, be framed without difficulty which would bring this state of things about gradually, and prevent any vested interest from suffering hardship.

College Staff.

12. I consider that in Trinity College the staff of lecturers and tutors is sufficient to prepare students of all classes which have a legitimate claim to be allowed to reside at the University, for the examinations they are required to undergo. I believe that the same degree of efficiency might be secured in the smaller colleges by a confederation of three or four for the purposes of tuition. An arrangement might be made between the tutors of these (as is made between the tutors of Trinity College), for a classification of their pupils, and for securing the advantage of the principle of the division of labour in lecturing. I do not see the impossibility of extending this union even further, to the free election of scholars and fellows indifferently from among the students of the colleges so united. And I am disposed to think that such a confederation, if the terms of union were framed on a liberal basis, and the arrangement carried out in a generous spirit by the individuals who were parties to it, would in some respects secure the advantages now possessed by the large colleges and escape the drawbacks. For instance, an union of four colleges, which in the aggregate mustered as large a number of students as Trinity, would be able to secure equally efficient lectures, and at the same time would supply much better accommodation both in hall and chapel, and be free from the evils attendant on an accumulation of very great numbers within the same walls.

Terms.

13. I think the reduction of the number of Terms required for the degree of B.A. very desirable. Under the present arrangement, the presence of the so called questionists, during the 10th, and part of the 11th Term is a great evil. They are in a very anomalous position: and in those Colleges where they retain their rooms, entail the necessity for sending all the freshmen, with an inconsiderable exception, into lodgings.

A very great improvement would in my opinion result from converting the present "previous examination" into an *entrance* examination, having an *examination of qualification* for B.A. at the end of the 6th Term, and conferring the B.A. degree at the end of the 9th. In the 7th, 8th, and 9th Terms, the student should be required to attend Professors' lectures. In the 10th, 11th, and 12th Terms I would place *all examinations for honours*, which should be free without any further condition, to all who had passed the examination of qualification, and attended Professors' lectures. I would uot require any residence after the 9th Term, but would allow candidates for honours to present themselves at the time of the particular examination to which they were desirous of subjecting themselves. The examinations for Mathematical honours, Smith's prizes, Classical Tripos, Chancellor's medals, and Moral and Natural Sciences Triposes should be spread, in my opinion, equably over the 10th, 11th, and 12th Terms, so as to allow a week or fortnight's interval between each.

Vacations.

I do not think much good would be gained by shortening the vacations. The long vacation especially ought not to be curtailed. Sanitary, moral, and intellectual interests would, in my opinion, all suffer by sacrificing *it*. If such a thing could be done consistently with statutable rights, I should think it very desirable to *completely clear* the University during the whole of the long vacation. It would be better (in my judgment) to give up the whole of the short vacations than at all curtail the long one.

Lectures.

I know no objection to extending lectures through the whole length of the Terms, but I see little advantage to be gained by it, except in the case of the Easter Term, which is certainly too much curtailed by having the examinations so soon after division.

Rev. J. W. Blakesley, B.D

14. I forbear answering the first part of this question, being ignorant of the special regulations which may be in force at the present moment.

Reading parties.

Reading parties in the country are very common during the long vacation. They commonly consist of four, five, or six students, with a tutor. The good or bad results entirely depend upon the character of the party; it is impossible to give any opinion of them irrespectively of this. The only two in which I have been personally concerned turned out very well. iAs an undergraduate, I once made one of a party of four Trinity scholars. Two of us obtained fellowships; a third narrowly missed a fellowship, and has since acquired a high official character in one of the departments of Government. The fourth took a very respectable degree, and is at this moment a much esteemed dignitary of the Church. As a Bachelor of Arts, I also once took out a party of four. One of them became a fellow of Trinity College. Two others were men of rank, who took honorary degrees, and acquired a very creditable position in the examination; and the fourth met with an untimely death from sudden illness.

Lodging-houses.

15. The majority of the students of Trinity College reside in lodgings in the town. The principal regulations affecting lodging-house keepers are the necessity of letting their lodgings to students, if at all, at a certain price: the necessity, in order to obtain a licence, of procuring a voucher from the College tutor of some one of their lodgers; and the obligation to report the hour at which their lodgers came home, if later than 10 P.M. After that hour they are forbidden to allow the lodgers to leave the house. I think these regulations are observed in the great majority of cases. The risk of detection if they are broken is not small, and the punishment of loss of licence is invariably inflicted upon detection. I do not think that the students in lodgings are under less control, or subjected to greater temptations, than those in College. In some respects perhaps the latter is the case, but I should say in a very inconsiderable degree; and in some other respects lodgings have the advantage. From my experience of the University both as an undergraduate and as one of the authorities (comprising on the whole 18 years), I should be unable to give a general preference to either. If compelled to give a recommendation, I should be inclined to say that a well-selected lodging was rather the safer situation for a young man.

16. I think it extremely desirable that the regulation of the University (dating, I believe, from the time of Elizabeth) which prohibits the residence of students that may not have been admitted as members of one of the existing Colleges, should be carefully considered with a view to its modification.

Hostelries;

It appears to me that the ancient system of hostelries might, under proper precautions, be revived with much advantage, a part of which would probably be, in the end, a very great increase in the number of the students from classes of society more frugal and diligent in their habits than is the case with the average of those who come from the great public schools. Hostelries might spring into existence, the habits of which should scarcely differ from those of a private family. Indeed, it is very conceivable that the *nucleus* of such might often be formed under the roof of the father of a family residing at Cambridge, for the purpose of educating his own children at the University. Suppose the case of such a one being willing to receive other boarders for the same purpose: here there is in fact an elementary hostel. As things now are, each of the members of this family (as they may be called) would be required to belong to some College, and consequently to dine in the Hall and attend the lectures and chapel service of the College. But if they preferred to dine together in their own house, there is certainly no academical reason why they should be called upon to incur the additional expense of commons. If they satisfied the examinations of the University, their non-attendance at collegiate lectures would be no breach of academical discipline, and many persons (myself among the number) may think more advantage to their religious habits likely to follow from family prayers, than from the daily service in the College chapel.

I conceive, therefore, that there should be power for the establishment of hostels of this description under proper regulations. They need create no rivalry with the Colleges, but they would (I believe) gradually be the means of infusing an element of domestic influence into the habits of the University.

how they would be important.

A hostel which should be nothing more than a small unendowed or poorly endowed College would be, in my judgment, simply a nuisance. But such an arrangement as I have imagined is more akin to that of a large family; and although nothing is farther from my thoughts than to consider such small unions as a desirable *substitute* for the existing Colleges, I believe they would form a very salutary *supplement* to them. At any rate, it is quite clear that they could do no harm; and that they would never rise to importance, except they were found useful. And as their establishment would be a restoration of ancient privileges, and would place before the eyes of the world the important distinction between the University and the aggregate of the Colleges, there seems every reason to allow of their institution, failing any obvious objection to them.

There are two points, however, which appear to me to render the consideration of this question especially interesting at the present time. The first arises out of the recent academical legislation, by which *examinations of distinction* (Triposes) have been constituted in the moral sciences and in certain branches of natural philosophy, not susceptible of mathematical treatment. Now I do not think it possible that the present course of collegiate instruction can be modified so as to prepare students for these examinations by a systematic training; at any rate, many years will pass before this can be expected. But if we suppose professorships constituted and well endowed, which shall furnish systematic instruction on the subjects in question, the establishment of hostelries in which a training subsidiary to this systematic instruction should be carried on would be a desideratum. Such hostelries would stand in exactly the same relation to the new Faculty represented by its professors, as the existing Colleges formerly did to the Faculty of Arts.

Rev. J. W. Blakesley, B.D.

Admission of Dissenters, &c.

The second point refers to the *vexata quæstio* of the admission of students not being members of the Established Church to the privilege of residence at the University. The Commissioners are doubtless aware that there is no University regulation to debar Dissenters of any description from residence, and from academical *distinctions;* and that the first religious test is applied at the time of admission *ad respondendum quæstioni.* I have known Protestant Dissenters of most kinds, Roman Catholics, Quakers, Jews, and even a Mahometan admitted as members of existing Colleges. At the same time it must be remembered, that the authorities of each particular College have it in their power to refuse admission to any or all of these, or indeed to any person whatever. It can scarcely be doubted that this power will, if religious differences should come to excite a much more intense interest in men's minds, be exercised, and that by its exercise additional exacerbation will be produced. Under such circumstances the power of establishing new hostelries might operate as a safety-valve, and enable the humanizing influences of common literary and scientific pursuits to be brought to bear upon parties who otherwise would become thoroughly alienated from one another; while at the same time the independence of each particular College would remain unviolated.

It may be worth while for the Commissioners to consider as a constitutional question whether the provisions of the Act of Uniformity would be applicable to such hostelries.

(Signed) J. W. BLAKESLEY.

Ware Vicarage, Herts, March 14, 1851.

Rev. J. Cooper, M.A.

Answers from the Rev. J. Cooper, M.A., Fellow and Tutor of Trinity College.

SIR, *Trinity College, Cambridge, January* 1, 1852.

I BEG to submit to Her Majesty's Commissioners for Inquiring into the State of the University of Cambridge, and the Colleges thereof, the following remarks in reply to the list of Queries with which you furnished me, in a communication dated February 18, 1851.

Expenses.

1. I do not think that the necessary expenses of a residence in College can be very materially diminished, consistently with what is due to the habits of those classes of society to which Students usually belong.

There are no privileges conceded to the tradesmen and servants connected with this College but such as are designed for the protection of the Student from imposition, unnecessary expense, and other risks. They are all of the nature of exclusive dealing in the supply of provisions, coals, personal attendance, and washing.

Credit.

2. The check which the College Tutor can impose upon the supply of goods upon credit to his pupils, without his authority, by Cambridge tradesmen, is derived from the practice of including tradesmen's bills with the College bill, which is furnished to the parents of the pupils every quarter; and, from a recent regulation of the University, requiring a quarterly return to be made to the College Tutor of all debts incurred by his pupils with Cambridge tradesmen, above a certain amount, whatever may have been the nature of the articles supplied.

The classes of tradesmen's bills usually admitted into the quarterly bills of the Tutors will be seen from the enclosed form of such bill (A.) The advantage afforded to the tradesman by this practice is, that his charge is presented to the parent much on the same footing as that of the College, and with its sanction; and in general it secures him payment within 12 months after the delivery of his goods. The control it affords the Tutor over extravagant expenditure is only to such extent as the pupil is willing to allow: for as students are left at liberty to discharge all or any part of their tradesmen's bills without reference to the Tutor, the quarterly College bill gives no information on any part of the expenditure they may desire to keep out of sight.

The University has endeavoured to supply the deficiency by making the regulation referred to, that every tradesman or dealer with whom any person in *statu pupillari* shall contract a debt exceeding the sum of 5*l.* shall be required to send notice of the amount of the same at the end of every quarter, to the College Tutor of the person so indebted, on pain of being punished, by discommuning or otherwise. (See Enclosure B.)

Legislative aid required.

Over the London tradesman and the money-lender the College authorities have no control; and I do not see how anything short of an enactment withdrawing legal protection, under any pretext, from all who make advances of goods or money to persons in *statu pupillari*, without sanction previously had from the parent or guardian, could have any tendency to limit the credit sometimes allowed to students whose expectations are known to be large.

Lectures.

3. The Lectures given in this College are described in the enclosed Schedule, marked (C.) The students are classified as soon as the Lecturer perceives that the nature of his subject and the proficiency of different portions of his class require it; usually in the course of the second term of residence. The attendance is compulsory; regard being had, after the first year, to the expression of a preference on the part of a student for any particular course of Lectures.

College Staff.

I believe that the staff of Lecturers employed in this College is sufficiently complete to provide for the entire course of public instruction, and to prepare Students for the different College and University examinations, so far as regards an intelligent and accurate acquaintance with the works on which they are examined. There is no subject in either set of examinations, the nature of which admits of oral instruction in class, which is not made the subject of Lecture by a Fellow of the College, who has bestowed upon it careful

Rev. J. Cooper, M.A.

and sometimes very elaborate preparation. The Lecturers' functions are, however superseded to a considerable extent by the Private Tutors. The competition for University honours is so great that the Students eagerly seize upon any advantage which can improve their prospect of success, and as the Private Tutor can devote more of his time to the individual student, and carry him more rapidly and with less exertion over his field of study, they lean more upon his assistance than that of the College Lecturer. In the present state of our mathematical examinations for honours, I believe that it cannot be otherwise. I do not think that the higher classes of students could acquire that readiness in displaying the knowledge they possess which the work of the Senate-house demands without some private assistance in addition to College Lectures. The Lecturers are both able and willing to give more attention to the wants and difficulties of individual students than is at present given or sought for by them, but I do not think that any system of public instruction can entirely supersede the use of Private Tutors. There will always be a class of persons resident in the University, but not officially concerned in its teaching, of great attainments, and well-earned reputation for skill in imparting instruction, and to these successive generations of Students will naturally resort as the safest guides to distinction. There is also a pleasure and an advantage in the more close and confidential relation which usually subsists between the Pupil and the Private Tutor, as compared with that which holds of the Lecturer and the members of his class, which will be appreciated, and, where it is possible, obtained; and there is to some Students a satisfaction in selecting their own guide which will always interfere with the regular working of a prescribed system.

Private Tuition.

4. The Private Tutor who gives his pupil one hour daily, receives 14*l.* for the Term, and 30*l.* for the Long Vacation. If the assistance is afforded every alternate day, these charges are usually diminished one-half. There are very few Students who do not avail themselves of the assistance of a Private Tutor at some period of their career. I should say that no Student now graduates in Mathematical honours without such assistance.

The whole charge for public tuition, which includes all College Lectures, and the superintendence of a responsible officer, with whom communication by correspondence or otherwise is at all times open to the friends of the Student, is 10*l.* for the year.

5. The office of Private Tutor has become a permanent and professional occupation of several men of eminence in the University, both as Mathematicians and as Classical Scholars. Some of them classify their Pupils. The more usual course is to instruct them singly.

6. There is a similar system of private tuition for those Students who are not candidates for honours. I believe there are very few cases in which this assistance is really required. The subjects of the ordinary examinations are such as can easily be prepared by a Student of less than average ability, with the assistance of College Lectures in the time which is allowed for preparing them; and this is frequently done by young men of careful habits. The assistance of a Private Tutor is necessary when, as is too often the case, the work of preparation has been deferred to the last few months of residence. It is not uncommon, however, for Students who are well able to pass their examination, to engage the assistance of a Private Tutor in order to obtain a high place on the list.

7. I am not disposed to think that any restriction can be effectually imposed by the University upon the employment of Private Tutors.

Poor Students.

8. I do not think that any institution for poor Students only would be found successful or beneficial, supposing it unprovided with ample endowments of its own. I think that, if it offered only intellectual advantages, it would fail in holding out sufficient inducement to persons of narrow means to join it, and in furnishing sufficient motive for exertion to those who might belong to it. A strong natural love of science or literature, and a desire of distinction, will not unfrequently lead a young man to devote himself to the pursuit of those branches of study to which his tastes incline, but it is the prospect of sharing in the endowments which furnishes the stimulus to the poor Scholar, and gives steadiness to all his efforts.

Examinations.

9. The College Examinations and their subjects are described in Enclosure (C.) The University Examinations are two; the first at the close of the second Lent Term, the second in the eleventh Term of residence.

A full description of the subjects of these Examinations is given in the Cambridge Calendar, p. 8 to p. 20. All Students, without exception, are required to pass the previous Examination. They are at liberty to select the Ordinary or the Honour Examination for the Degree of B.A.

I am disposed to think that there has been a tendency to push the examination for mathematical honours too far in respect of difficulty and range of subjects, and that it would be an advantage if more of the higher subjects could be reserved for competition amongst the best mathematicians of the year, in a distinct Examination to take place after a longer interval than is now allowed between the Examination for degrees and that for the Smith's Prizes.

Period of College Residence.

I do not think that the period of College residence is sufficiently long to allow in general of the prosecution of habits of independent study, or of several different lines of study, with good effect; or that the great mass of Students can be more profitably employed during the three years and a quarter they spend at the University, than in following a prescribed course.

Matriculation Examination.

10. There is an Examination in this College previous to residence. See Enclosure (C.)

I am not disposed to think that a general Admission Examination conducted by the University would be desirable. The experience I have had of our own, though, on the whole, decidedly favourable as regards its general results, leads me to the conclusion that

Rev. J. Cooper. M. A.

it is by no means easy to conduct such an Examination so as to secure with certainty the object aimed at; which I take to be the exclusion of such as will not hereafter profit by the studies of the place. It certainly does not exclude the indolent. But supposing it practicable and easy to form an accurate opinion of the present state of a Freshman's proficiency, and his capability of improvement with reference to the particular system of instruction adopted by any College, the advantages offered by the University, both intellectual and other, are too extensive and varied in character to admit of the useful application of any such test of qualification. I am of opinion that an Admission Examination, conducted by the University, unless of so elementary a character as to be unworthy of a learned body, would exclude many Students who are well able to follow some particular line of study for which it holds out encouragement and assistance, and to derive important advantages from their residence in that learned and consecrated shelter which the institution affords to young men who are preparing for the active duties of life.

Inducements held out to distinguished men to leave Cambridge.

11. There is every reason to believe that larger emoluments, with the removal of the restriction on marriage in the case of Tutors of Colleges, would retain in the University distinguished Students who now accept situations in public schools and other institutions of a similar character. But I have great doubt whether the difficulties of obtaining men of distinguished ability as Tutors and Professors depend so much upon the greater inducements which may now be held out elsewhere, as upon the rarity of those peculiar qualifications which are necessary to make the duties involved in the instruction and charge of youth acceptable, in this country, to men conscious of great powers, and influenced by a natural ambition of moving in a wider sphere than the academical body affords. I do not understand the nature or bearing of the changes mentioned, but, within the last 20 yeast the office of Tutor in this College has been filled by a list of persons, amongst whom occur the names of the present Bishop of St. Davids, the Dean of Ely, the present Master of Trinity, Professor Sedgwick, Archdeacon Hall Hare, and the Rev. R. W. Evans. All of these, with one or two exceptions, were employed upwards of 10 years in the discharge of their duties of tuition and public instruction at a time of life when their personal interest in the studies of the place must be supposed to have been most fresh, and consequently their sympathy with the Students, on which so much of the efficiency of teaching depends, most strong. If the advantages of the position of College Tutor were increased in the manner referred to, I think it very possible that we might retain even the best men too long.

Residence required for the B.A. degree.

13. I do not think that the period of residence required by the University for the Degree of B.A. is too long in the case of the industrious Student who is a candidate for honours, especially if he is to give any attention to the subjects which lie beyond the range of the Mathematical and Classical Tripos; and it must be remembered that the Examination for the Degree will be practically the limit of residence to the mass of Students who are looking forward to professional life, whatever subsequent Examinations may be thrown open to them.

In the case of those who are not candidates for honours, the period of residence has been hitherto, in the opinion of most Tutors, too long; the interval which elapses between the previous and final Examination being greater than can be fully occupied with the preparation of the subjects for the ordinary Degree of B.A. The University has, however, very recently introduced a most important regulation with respect to this class of Students in requiring from them a certificate of attendance at some Professor's Lecture, and as this certificate is only given to such as pass satisfactorily the Professors' examination, the amount of work required of them will depend in future upon the Professors' demands. I should wish to see this system fairly tried before any alterations made in the duration of residence required for the ordinary Degree.

In the College the unequal accumulation of Students in the Michaelmass Term occasions some inconvenience in the accommodation of the Freshmen, and the arrangements of hall and chapel, which might come to be of importance, if a restriction were not placed upon the number of our admissions.

Vacations.

I do not see any important advantage in shortening the vacations, if by this is meant the increase of Lectures. The intelligent and industrious Student finds the period of comparative seclusion the vacations afford him, unbroken by Lectures, of good service. So far from being unprofitable, I believe they are frequently his seasons of most intense application. I doubt the expediency of attempting to compel the unwilling and indolent to give more of their time to an attendance upon the public instruction of the place than is now by our regulations required of them.

Residence during Vacation.

14. A Student who conducts himself with ordinary propriety may reside in College the whole of the year, with the exception of the interval from the end of June to the 10th of October. Such Students are allowed to reside in the Long Vacation as are supposed by their place in the College Examinations, and their regularity of conduct, to have proved themselves suitable persons to profit by the indulgence. They obtain special permission from the Master, and are subjected to a discipline more strict, in respect of hours, than is enforced in Term time.

Reading Parties.

Reading parties are frequently formed to spend the summer elsewhere than in Cambridge. They consist of numbers, varying from 2 to 12 or 14 Pupils, and the engagement is continued in general for three months. I believe them to be, on the whole, productive of good. They consist, in great part, of such students, as would be exposed to evil if they remained in Cambridge, and would do nothing if they remained at home. I should say that where no great advance is made in their studies, this mode of spending the vacation has a wholesome effect on both mind and body. Much, of course, depends upon

Rev. J. Cooper, M.A.

the prudence and influence of the Tutor, and upon the neighbourhood which is selected for their temporary residence.

15. A considerable proportion of the students in this College reside in lodgings in the town—about one-half. The lodging-house keepers' regulations are enclosed (D.)

Lodging-houses.

I believe that the majority of the persons intrusted with this responsibility discharge it, on the whole, with fidelity; but, in justice to themselves, they require more supervision than is now practised. Students who reside in lodgings have more frequently to pass through the streets at night than those who are in College; and they are sometimes exposed to temptation from want of sufficient care in the selection of the persons who wait upon them; but I consider that when the lodging-house keeper is to be depended upon, they are under more rigorous control than in College. In lodgings, the habits and companions of a Student are more or less under the eye of the person with whom he resides,—the hours he keeps, the amusements he follows, are known; in College there is no check upon his movements when once within the College gate: so long as his proceedings are not of a nature to attract attention by creating disturbance, he and his companions may pass the night together engaged in any pursuit they please. When the lodging-house keeper is a man of respectability, I consider that the College, and the friends of Students in his charge, have a more complete control over their conduct than if they were in College rooms.

The lodging-houses are licensed by the Vice-Chancellor and Proctors, and are under their immediate control. The Proctors have always the opportunity of ascertaining whether the rule with regard to the closing of the outer door is observed; but it is not usual for them to make any regular inspection of the lodgings. . . . . .

Discipline.

For the external discipline of the University, we are in need of some permanent officer, in communication with the Vice-Chancellor and Proctors, who could both carry on a systematic inspection of lodgings, and also, in other matters, hand on the experience of one year to another. As our officers of discipline are all elected annually, their duties are scarcely well learned before the office is laid down. I should not think it indispensably necessary that such officer should be a graduate of the University. It is also of great importance to the efficiency of the external discipline that there should be a good understanding between the authorities of the University and the magistracy of the town, and that for this end a speedy adjustment of any differences existing between the two bodies, with reference to the police force or any other matter, should be effected, and, if necessary, the respective jurisdiction of the two bodies defined by new legislative enactment.

In submitting these remarks to Her Majesty's Commissioners, I beg respectfully to disclaim any acknowledgment of the existence of such a state, either of the University or the Colleges thereof, as would, in my opinion, furnish grounds for the issuing of the Royal Commission at the present time. I have answered such questions as I conceived my position enabled me to answer, in compliance with the request for information the Commissioners have so courteously communicated to me, Sir, through you, and in the conviction that, if the present state of the University of Cambridge, and the Colleges thereof, is to be laid before the public, the best service which can be rendered to these bodies is to assist in making such representation as faithful and complete as possible.

With regard to projected improvements of the academical and collegiate system, I would add two remarks:—

Suggestions.

First, I believe that what the University now requires for the advance of learning within her body is freedom from change, and the prospect of change for some years to come: time to work out the experiments which she has recently set on foot. The success of any institution which has for its object the promotion of learning amongst the young must always depend very materially upon the personal exertions of those engaged in carrying on its operations, and I am of opinion that there is a great tendency to impair the energies and efficiency of those who have to administer the academical system when they cannot look upon it as permanent.

Secondly, I would express my belief that any great extension of the advantages of the University is only to be produced by recurring to what appears to have been the ancient method of stimulating learning adopted by royal and other benefactors; the extension of judiciously framed endowments to be disposed of by free competition.

If the country is not prepared to make sacrifices of this kind, I do not think it can reasonably look for any important extension of the English University system; an extension at all commensurate with the increase of wealth and diffusion of intelligence which have taken place in our times.

I have the honour to be, Sir,
Your obedient humble servant,
(Signed) J. COOPER.

Regulations respecting Credit.

Whereas it is highly injurious to the good order and discipline of the University that facilities should be afforded to persons *in statu pupillari* to contract, without the knowledge of their Tutors, large debts, or debts with a long extension of credit:

Notice is hereby given,

That if any vintner or victualler shall be proved before the Vice-Chancellor to have permitted, after the date hereof, any person in *statu pupillari* to contract a debt for wine or spirituous liquors exceeding the sum of ten pounds, without the knowledge and consent of the Tutor of such person, he shall be deprived of his license.

Also, that every vintner or victualler, with whom any person *in statu pupillari* shall hereafter contract any debt for wine or spirituous liquors, shall be required to send notice of the amount of the same at the end of each quarter to the College Tutor of the person so indebted, on pain of deprivation of his license, if he shall be proved to have neglected to comply with this regulation.

Notice is also hereby given,

That every tradesman or dealer, with whom any person *in sttua pupillari* shall hereafter contract a debt exceeding the sum of five pounds, shall be required to send notice of the amount of the same at the end of every quarter to the College Tutor of the person so indebted, on pain of being punished by discommuning or otherwise, as to the Vice-Chancellor and Heads of Colleges shall seem fit.

Also, that if any vintner, victualler, tradesman, dealer or other person shall take from a person *in statu pupillari*, without the knowledge and consent of his College Tutor, a promissory note, he shall for so doing be punished by deprivation of his license, by discommuning, or otherwise as to the Vice-Chancellor and Heads of Colleges shall seem fit.

Regulations of Lodging-houses.

Regulations of Lodging-houses.

We whose names are hereunto subscribed do promise:

1. That we will not let our lodgings to any Student without an express permission signed by his College Tutor.
2. That we will lock the doors of our houses at ten o'clock at night, and note down the hour after ten o'clock at which any lodger enters or leaves his lodgings.
3. That we will deliver or send a list every morning to the porter of the College to which any lodger belongs, to be by him inserted in his gate-bill for the inspection of the College officers; and also will deliver or send a weekly statement of the above particulars to the respective tutors of those Colleges to which any lodgers belong.
4. That we will report to the Tutor the next morning if any lodger shall come into his lodgings after 12 o'clock at night, or shall pass the night out of his lodgings.
5. That we will not allow on any account a key of any outer door of our houses to any of the lodgers.
6. That we will not supply or receive into our houses a dinner or a supper for any lodger without a note being previously obtained from the Tutor.
7. That the house for which each of us individually applies for a licence is in our own occupation, and that we have no connexion with any other.

Mr.

Above is a copy of the regulations which you have signed in the book. You will take notice, that on detection of any false return in the daily or weekly bills, or of evasion of any of the above regulations, the licence of the lodging-house will be suspended or wholly revoked, according to the nature of the offence, at the discretion of the authorities who granted it.

And you will further take notice, that you are to show your licence to such Student as is desirous to take your lodgings, and you cannot require him to take it for more than one term certain.

G. E. Corrie, Vice-Chancellor.

Jesus College,
1851.

N.B.—Undergraduates lodging in houses not licensed will not be considered as resident in the University, or keeping their Terms.

Lodging-house Licence.

Lodging-house Licence.

Rev. J. R. Crowfoot, M.A.

Answers from the Rev. J. R. Crowfoot, M.A., late Fellow of Gonville and Caius College.

Sir, 10, *Park Terrace, Cambridge, March* 1, 1851.

With regard to those of the Queries which relate to College practice, I think it my duty to refer to those in authority who are now upon the foundations of the Colleges with which I am connected. In the following answers I shall confine myself to those Queries which concern the public instruction at the University, apart from any particular College system.

My experience is based on a residence of about 15 years in Caius College. During six years I was one of the Deans, and I have for three or four years discharged the duty in which I am now engaged, that viz., of lecturing on Divinity in Caius and in King's Colleges.

Expenses.

1. It does not seem to me that the necessary expenses of residence at College can be materially reduced, neither am I aware that College tradesmen or servants have any peculiar privileges which have the effect of increasing those expenses. The real cause of extravagance at College is, in my opinion, due to the force of *expensive*, but it may be, not extravagant examples. This is found to be the case in all societies where the more and less opulent are socially upon an equality, and this would be very much remedied if the College authorities and the friends of all the students would discountenance, as much as possible, *expensive habits*.

Private tuition.

3, 4, 5, 6, 7. The necessity for a Private Tutor depends very much upon the efficiency of the College Lectures. If the College Lectures be good, a reading man of average talent, who has entered College after fair preparation, needs little or no further assistance in order to do the best for himself; on the contrary, by reading much with a Private Tutor, he is likely to impair his powers of penetration and reflection for want of exercising them, failures are repeatedly caused by students leaning too much on their Private Tutors. Again, I have known instances of students attaining in recent years the highest honours in the University with almost no aid from a Private Tutor; such men invariably become the most manly, sound, and clear thinkers in after life. Men of dull faculties, and those who come to College with little or no preparation, need the assistance of a Private Tutor in order to keep up with a regular and general course of College Lectures. I am of opinion that it is advisable, first of all, to have in each College the most efficient Lecturers that can be obtained, and then to re-enact, and, *if possible*, enforce the old prohibition with regard to candidates for honours reading with Private Tutors.

Hall for Poor Students.

8. The effect of a Hall exclusively for poor students would, in my opinion, be bad, as it would interfere with the established and good principle, according to which it is assumed that all members of the University are *gentlemen*. It would produce very marked distinctions and *grades* in the University, depending entirely upon wealth. The advantages of such a Hall might be almost all obtained, without the same objection applying, by the establishment of "University Hostels," conducted with very strict regard to economy.

Matriculation Examination.

10. If College Lectures are to be efficient, it is quite necessary that those who attend them should be able to follow and appreciate the Lecturer's remarks; and I do not see how this can be secured unless by an entrance examination. There is one strong objection to a *general* entrance examination; it would preclude any allowance for the peculiar circumstances of those who offer themselves, and so deter, for a longer time than necessary, many of those who desire to leave an active profession or business, in order to adopt one that requires a course of University study.

Inducements to leave the University.

11. I believe that the desire to marry and settle in domestic life has, more than any other motive, had influence in withdrawing those of my own personal friends who were capable and willing to take part in the duties of public instruction, from the University.

Lodging-houses.

15. In my opinion, and I have given a good deal of attention to this subject, the regulations for the lodging-house keepers are at present in many cases ineffectual, chiefly because that class of persons is now so large that there are many among them who are not in a station of life to be intrusted with so much responsibility. I take the liberty of enclosing some printed remarks on a "University Hostel," for the purpose of giving more explicitly my conclusions on this subject.

Recommendations.

16. In my opinion a Colonial and Missionary College, a Museum of Natural History, and a large pleasure-ground are desiderata in this University.

I have the honor to be, Sir,

Your obedient humble servant,

(Signed) JOHN RUSTAT CROWFOOT.

Rev. W. H. Bateson, Secretary.

Rev. R. W. Evans, M.A.

Answers from the Rev. R. W. Evans, M.A., late Fellow and Tutor of Trinity College.

Rev. Sir, *Heversham, March* 17, 1851.

I beg to apologize for not having sooner made any reply to the circular of the University Commission. But it came at the most busy season of the clergymen's work, and with me the season has been more full of occupation than usual, so that I have not

Rev. R. W. Evans, M.A.

been able hitherto to direct my attention to matters which have been to me so long external. Nor am I able now, I fear, through my long cessation of residence, to afford any more than general results of my former experience, and that had nothing to do with financial matters, except such as came before a Board of Master and Seniors.

Classification of Students.

3. I think that classification according to capacity, if it be adopted in an early stage of pupillage, requires great delicacy. Men are often stimulated by the higher tone of the lectures to such an interest in them, as to make great exertions to qualify themselves to profit by them. Besides the lectures, if Classical, will have something for all, and gradually bring up the lower.

Private tuition.

7. The Private Tutorial System seems to be making the same inroad on the College Tutorial System, which this latter has made upon the University Professorial System. The system of examinations, quite independent of the lectures of the University and College, have led to this result, which must become more decided in proportion to the frequency and widening range of those examinations, and their consequently growing independence of the immediate scope of the lectures. It seems advisable to look to the nature and effect of these examinations in laying down limits to private tuition, which certainly requires them. I do not feel competent to answer this question more positively.

Hall or College for poor Students.

8. I cannot but think the plan of establishing a Hall or College, for poor students only, quite impracticable. Such a separate classification of rich and poor is alien to the feelings of the age. There is, indeed, the example of the line of demarcation between Sizars and Pensioners. But I believe that a College of Sizars would be very differently treated from a body of Sizars in a College, inasmuch as it would admit of none of those communications and gradations which so happily blend all classes in a College, and have comparatively effaced the invidious distinction, but it would stand out in its naked essence of a poorer house, if not of a poor-house. Its very use and effect of its purpose depends upon this isolation being rigorously enforced. And in these days how shall it be enforced, how shall all the rest of the University be kept on perpetual quarantine. And supposing it to be enforced, the rules cannot but imply and effect a distinction more invidious and odious than the manners and feelings of the age will endure.

But may not such an establishment be placed within a reasonable distance of Cambridge (say Stamford, for the sake of old connection), with every privilege that a College on the spot would have as to its members graduating, becoming candidates for University Scholarships, &c.

Excessive number of Examinations.

9. I believe that the excessive number of examinations, both in College and University (besides being the cause of so much private tuition), are fatal to the independence of the mental character of the young men. They are kept in perpetual leading-strings; and any exertion of originality is so much diversion from the course, and therefore so much loss. With these numerous and exacting examinations, the conductors of education are like those who are continually pulling up cuttings to see how they shoot. They may, indeed, produce a higher average of qualification, but must be injurious to the growth of original minds.

Matriculation Examination.

10. I cannot help thinking that it would be exceedingly difficult to regulate the proper standard of an *University* examination on this point. The tendency is to too great range, at least uncertainty; besides, is it not an interference with the essential rights of Colleges? Their statutes would, I conceive, need alteration to admit of it.

Inducements to leave the University.

11. It is well known, I believe, that these changes, especially in the case of the Law, have had the effect of much diminishing the number of residents from which the official staff must be supplied. Perhaps the desire of a more personally active life has quite as much to do with the matter as that of emolument. I do not feel qualified to suggest any changes, &c.

Terms.

13. It does seem very desirable to cut off the overlapping Michaelmas Term from the 4th year, were it only on account of accommodation of room, the want of which is unfavourable in several results to the early discipline of Freshmen.

I wish, Rev. Sir, that I could have sent you something more satisfactory. But from long disuse, and much present and pressing occupation, I am unable to bring my mind back to the subject.

I remain
Your faithful servant,
(Signed) R. W. EVANS.

Answers from the Rev. John Alexander Frere, M.A., Fellow of Trinity College.

Rev. J. A. Frere, M.A.

SIR, *Trinity College, March* 10, 1851.

I HAVE the honour to acknowledge the receipt of a List of Questions submitted to me, through you, on the part of Her Majesty's Commissioners for inquiring into the state of the Universiy of Cambridge. My reply will, I trust, not be considered discourteous if I feel compelled to commence it by remarking that I must guard myself from being supposed (in what I shall have the honour to lay before them) to acknowledge any *right* on their part to demand information on such points at my hands. But as I cannot but have the highest respect for those Members of the Commission with whom I have the privilege of being personally acquainted, and as I have the fullest confidence in their having the best interests of the University at heart in the inquiry they propose

Rev J. A. Frere, M.A.

to themselves, I do not see why I should not do my best to afford them information, so far as it is in my power, on the subjects referred to in the Paper sent me. And I feel the more ready to do this, because I conceive that any reluctance in speaking out, on points to which Her Majesty's Government have desired the Commissioners to direct their attention, might not unnaturally lead them to a very false impression with regard to those engaged in tuition in the University. It might lead Her Majesty's Commissioners to suppose that there were many points as to which the body of Tutors in the University were conscious they had failed in their duty, and which they were, therefore, unwilling to have brought into notice. As I am sensible that such an impression would be utterly groundless, I should be sorry to do any thing, which might contribute to it.

Expenses.

1. To the earlier part of the first question, I should reply, that it does not seem to me practicable very materially to diminish the necessary expenses of a residence in College. I am not aware of any privileges conceded to Cambridge tradesmen or servants which have the effect of increasing those expenses; and I may further say that, were any such to come under my observation, I should take the earliest opportunity of bringing them under the notice of the governing body of the College, with a view to their abolition.

Lectures.

3. The earlier part of the third question I know to have been already answered, as far as Trinity College is concerned, by the printed scheme of Lectures being forwarded to Her Majesty's Commissioners. I shall, therefore, merely touch on the second point to which it relates, to the classification of the students, and that as regards lectures in Greek and Latin literature. I first became Assistant-Tutor in October, 1840. It was then the custom, at the commencement of the Lent Term, to divide the Freshmen into two classes. A lecture-room examination was held (as is indeed now done) at the end of the Michaelmas Term; and the students arranged in Class A, or Class B., according to proficiency. It was supposed that while the more advanced students might be profitably occupied with a lecture of a higher order, entering in detail into questions of Antiquities, Roman or Attic Law, or the like, the interests of the less advanced might be better consulted by the lecturer dwelling more particularly on grammatical or etymological difficulties. This system was, however, not found to answer, and has been since abandoned. To some students, industriously disposed, but perhaps but poorly prepared before coming up to the University, the plan was found to act as a discouragement. The proficiency they had already attained was not such as to qualify them to take rank in Class A. and yet they felt that to be placed in Class B. was a sort of stigma upon them. And even the less industriously disposed were found to be kept better up to their work, by being in the same lecture-room with others who were fully alive to it, and fully competent to deal with the subject of lecture, than when forming part of one general level of mediocrity. To this it may be added, that it is an essential part of our system of lectures in classical subjects (in the first year at any rate) that the students be themselves called on to translate, and explain if they can, the difficulties in the author under study. The more advanced among them are thus, along with the lecturer, made the teachers of those who are less so. And it may be seen why it was not always easy to find in Class B. any students competent to take such a part, in cases where the subject of lecture was one of more than average difficulty.

Attendance on Lectures.

The attendance at lectures is generally compulsory. In the first year, attendance is strictly enforced, both at Classical and Mathematical Lecture. In after years, greater latitude is allowed as to the class of lectures attended, according to the bent of the studies of the individual; but throughout the three years course, attendance at some one or other lecture daily is enforced. I conceive that the staff of lecturers at Trinity College, which has been considerably enlarged of late years, may now be pronounced sufficient for the purposes named.

Private Tutors.

4. A private Tutor ordinarily takes a fee of 14*l.* a Term, provided the pupil come to him daily; or 7*l.* a Term, provided, as is now very commonly the case, his pupil only comes to him three times a-week. It was a custom formerly in Trinity College for the Fellows to charge their private pupils a somewhat higher fee than this. Twenty pounds per Term was then the ordinary charge for a whole pupil, and 10*l.* for a half-pupil. I believe this custom to be now generally discontinued.

7. I do not think it would be expedient to re-enact and enforce the prohibition alluded to in Question 7.

Poor Students.

8. There are 16 Foundation Sizarships in Trinity College. As a considerable part of the advantage thence derived arises from the Sizars having their commons free, the actual gain to each individual varies according to the proportion of the year that he is in sidence. A Foundation Sizarship may, however, be put as worth from 50*l.* to 60*l.* a-year on the average. The number of Subsizars is not limited. Their advantages, however, are but small. They succeed to the Foundation Sizarships as the latter (which are not tenable after the B.A. degree nor along with a Scholarship) become vacant. Till lately, it was the custom for them to be placed on the List of Foundation Sizars, according to their seniority of standing on the boards. This has now been altered; they are now put on the List *according to their standing in the Examinations* at the end of the first year: seniority on the boards being taken into consideration, only as between those who in those Examinations, have been placed in *the same class.*

If, as not unfrequently happens, there are, after the B.A. commencement in January, more vacancies on the Foundation than there are Subsizars who have passed their first year's Examination, the remaining vacancies are filled up from the Subsizars among the Freshmen.

Rev. J. A. Frere, M.A.

An Examination is held for this purpose by the Head Lecturer for the time being, assisted by any other whom the Master and Seniors may appoint as his coadjutor.

Matriculation Examination.

10. I may as well say a few words on this head, as in my office of Senior Dean I have to conduct (along with the Head Lecturer for the time being) the Examination of the students of Trinity College previous to their matriculation. This is held two or three days before the lectures commence in the October Term. It dates from the year 1836, so that we may now speak, in Trinity College, with some experience as to its results. These are found to be on the whole satisfactory. It has had with us no effect in deterring students from applying for admission, for we have constantly far more applications than we are able to satisfy. I consider that it has had a good effect in stimulating Private Tutors to a greater degree of attention in preparing their pupils for residence at the University. The subjects of Examination are of sufficient difficulty to test very fairly the fitness of the students to profit by the College Lectures.

A proposal was made some time ago for a general Examination of this kind, conducted by the University. I am disposed on very many grounds to hold, that such an Examination would not be so satisfactory as one of equal difficulty conducted by the several Colleges in their individual capacity. The University Examiners could, it is clear, know nothing of the Candidates beyond what appeared from the result of the Examination. But in a trial of this kind, where there is any doubt of the competency of the student to profit by a residence at the University, the circumstances whether the applicant be of quiet and studious habits, and whether, in the period immediately preceding his entrance, he has made such progress as to make it reasonable to suppose that in a brief space of time, he will come up to the average, may be fairly taken into view. In an Examination, with which the College officers have to do, such points are, in cases of difficulty, generally ascertainable. In an University Examination no allowance could be made for individual cases.

Inducements to leave Cambridge.

11. It is more common for those among the Fellows of our Society, who are not called on to assist in the College Tuition, to take charge of a parish elsewhere, than it used to be. During the period of my residence here, I have known but few Fellows to reside here for any considerable time, if unemployed on the College Staff. Still I am not aware that the changes that have taken place elsewhere, both as to the legal and clerical profession, have occasioned any difficulty in retaining the services of those best qualified to fill College offices.

College Staff.

12. I believe the Staff of Lecturers in Trinity College to be now sufficient in number to prepare students of all classes for the Examinations they have to undergo. It has been considerably increased within my recollection.

Terms.

13. I think that the substitution of nine Terms of residence for ten would be a very considerable advantage. The practical inconveniences produced by the unequal accumulation of students in the Michaelmas Term are very great. It disturbs our College arrangements in Trinity to a very serious extent. To say nothing of other points, it compels us, during the Michaelmas Term, to have a double Hall-dinner, it overcrowds our Chapel, on the Sunday evenings more especially, and with our limited accommodation in College, makes it almost a matter of necessity that all our students should pass their first Term in lodgings in the town, in lieu of being quartered in College rooms.

I think that it would be a very material advantage to increase the proportion of each Term required to be kept by residence. Whether it would be such to shorten the vacations, I am not so clear, but I incline to think that it would not be desirable to do so.

Residence during vacation.

14. It is not very easy, except under special circumstances, for any of our students to obtain leave to reside during the Long Vacation, who are not either on our Foundation as Scholars or Sizars, or have not been in the first Class in the College Examination at the end of the May Term. The regulations of discipline, to which (in case of such permission being granted) they are subjected, are much the same as in Term time, with the exception that they have no lectures to attend. Our Chapel is open during the whole Long Vacation, and one or other of the two Deans constantly in residence. The rule, with regard to their not being out late at night, is enforced with greater strictness than in Term time. It is common with the students to form reading parties elsewhere than in Cambridge. When not too large, and when a moderate degree of care is exercised by the Tutor in the selection of those whom he is to take with him, rejecting (as I have done myself) men of known idle habits, such parties are, I think, quite unobjectionable. For four or five years I was in the habit of taking such out; and I never studied with more regularity myself (and I may say the same for my companions) than during the three months which we spent together.

Lodging-houses.

15. Owing to our limited accommodation in College, a very considerable proportion of our students at Trinity are lodged in the town. Prior to opening a lodging-house, the keeper of it has to produce a paper signed by two respectable householders in his own neighbourhood, attesting his good character; and leave is formally given in writing, by the Tutor of each of the Undergraduates who is to reside with the lodging-house keeper in question. The lodging-house keeper is sworn to a faithful return of the hours at which the students return at night. The account, if the hours range between 10 and 12, is sent in to me as Dean (or the Junior Dean) weekly: if any student return *after* 12, I am informed of it the next morning. There are, I have every reason to believe, a large number of lodging-house keepers who make these returns truly and faithfully. I wish I could say the same of all, but I am compelled to add, that there are some whose accounts I suspect to be falsified. Nor do I know what remedy can be proposed, except incessant watchfulness on the part of the

Rev. J. A. Frere, M.A.

Deans: where any inaccuracy is detected, the offender is deprived, generally for ever, of his licence as a lodging-house keeper; and this penalty is so serious a one, that no householder will be willing lightly to incur it, if he conceives that the College officials are awake to their duty. I should always be most strongly opposed to the restoration of a licence so forfeited.

I have the honour to be, Sir,
Your most obedient humble servant,
(Signed) JOHN ALEXANDER FRERE.

Rev. W. M. Gunson., M.A.

Answers from the Rev. W. M. Gunson, M.A., Fellow and Tutor of Christ's College.

Christ's College, June 26, 1851.

Expenses.

As I have never had any experience in the monetary part of a Tutor's office, I do not feel justified in offering any opinion on the questions asked in Nos. 1 and 2.

Lectures.

3. The following is a synoptic view of the lectures given to the students of Christ's College:—

Years.	Students.	Attendance compulsory.		Attendance voluntary.	
First Year . .	All Students	9–10 daily in Classics or Greek Testament.	10–11 daily in Mathematics.	. . .	11–12 Lectures in Hebrew, on two days in the week, for Students of all years. There is also generally a voluntary lecture on Greek Testament, or one of the Fathers, on the Monday or Saturday of each week.
Second Year . .	Candidates for honours.	. . .	9–10 daily in Mathematics.	10–11, on alternate days, in Classics, for Candidates for Classical honours of the second and third years.	
	Ordinary degrees.	9–10 daily in subjects for previous Examination.	. . .		
Third Year . .	Candidates for honours.	. . .	9–10 daily in Mathematics.		
	Ordinary degrees.	9–10, on alternate days, in Classical subjects for B.A. degree.	9–10, on alternate days, in Mathematical subjects for degree.		
Fourth Year . .	Candidates for honours.	. . .	Preparatory Examination for degree of B.A.		
	Ordinary degrees.	Preparatory Examination in Classics.	Preparatory Examination in Mathematics.		

The students are divided into *two* classes in Mathematics at the end of their first term of residence, so that the lectures may be better adapted to their respective wants. At the beginning of their second year, students generally divide themselves into two great classes, viz., candidates for honours, and candidates for the ordinary degree, and the lectures are adapted accordingly.

Staff of Lecturers,

The College provides a competent staff of Lecturers to prepare students for the Mathematical and Classical Triposes, and also for the ordinary degree; but no attempt has been made to meet the wants of those students who may be candidates for honours in the newly-established Moral and Natural Sciences Triposes.

Private tuition.

4. The payments made to Private Tutors are either 20*l.* and 10*l.* or 14*l.* and 7*l.* per Term, the first or last sum being paid, according as the student engages the Tutor daily or on alternate days, and the larger or smaller sums being paid according to the standing and reputation of the individual Tutor. The corresponding payments for the Long Vacation are 40*l.*, 20*l.*, 30*l.* or 15*l.*, according to the above varying circumstances.

From my observation I should suppose that at least three-fourths of the candidates for honours engage private Tutors during the greater portion of their period of residence, and that five-sixths of the candidates for ordinary degrees engage private Tutors during the Terms immediately preceding the Previous and Degree Examinations. I have not sufficient data to enable me to infer, with anything approaching to accuracy, what may be the average annual expense of each student for private tuition, nor what proportion it bears to the other necessary expenditure. In my own case, the expense of private tuition was about one-fourth of the whole expenses incurred; and, I should think, this is somewhere about the average of candidates for Honours.

5. The office of private Tutor has become a permanent and professional occupation of many eminent men, both as Mathematical and Classical scholars. The most eminent of these Tutors in Mathematics lecture their pupils in classes, generally during a period of one or two hours daily, though many of the Mathematcial Tutors, and all the Classical ones, as far as I am aware, teach their pupils singly. I should suppose that the number of students who are candidates for the higher honours of the University, without the assistance of an eminent private Tutor, is very small, and the number of those who attain these honours without such assistance is still smaller.

6. There exists a similarly organized system of private tuition for those students who are not candidates for honours; though there is this difference in the two cases, viz., that whereas the candidates for honours generally have the aid of a private Tutor during the greater part of their residence, candidates for the ordinary degree generally employ a

private Tutor only during a Term or two preceding the Previous and Degree Examinations. *Rev. W. M. Gunson.*

7. I think that a restriction (such as that imposed by Grace of the Senate in 1781) upon the employment of private Tutors would be expedient (for it would teach the students self-reliance and independence of thought), but not practicable. I fear any such prohibition would be eluded, and, from its very nature, found impossible to be enforced.

Poor Students.

8. At this College there are 49 Scholarships of the value of 15*s.* a-week during residence, and tenable till the student is of standing for the M.A. degree. The scholars are elected after the Annual Examination at the division of the Easter Term, from among those who have acquitted themselves best at that Examination. There is also a great number of Exhibitions, varying in value, appropriated to different schools or counties. Such students as have a claim to any of these Exhibitions invariably (I believe) receive them; and the unclaimed ones are formed into a fund (amounting generally to about 170*l.* per annum), from which the College rewards the most deserving Undergraduates of each year, according to merit. There are also four Sizarships, of which the value is about 30*l.* per annum each, which are given to those students who have the strongest claim on the score of poverty, if their moral character also be good. Besides these several encouragements, there are four studentships founded by the late C. Tancred, Esq., of the annual value of about 108*l.* each; but of these the patronage is not in the College. I do not think it would be advisable to afford pecuniary aid to students simply on the ground of poverty, without regard to merit and superior attainments. Such assistance might be construed into an encouragement given to ignorance and idleness. There must always be some standard by which to measure the conflicting claims of students to rewards at our disposal, and I can think of none better than that of scholarship. I do not think the establishment of a College for poor students only would work well. The members of the older foundations would feel prejudiced against such an establishment, and the spirit of the existing institutions would lead them to confine their Scholarships and Fellowships as much as possible to members of their own body. A much more desirable object would be, in my opinion, to discover some means whereby the *necessary* expenditure of all the Colleges and Halls might be reduced to the lowest possible amount.

Examinations.

9. The following are the College and University Examinations required to be passed by students of this College :—

	College.		University.		
	First Term.	Third Term.	First Term.	Second Term.	Third Term.
First Year . .	Examination in Classics and Mathematics at end of Term.	Examination in Classics and Mathematics at division of Term.			
Second Year .	Examination in subjects for the previous Examination at end of term.	Examination in Classics and Mathematics, both for Candidates for honours and ordinary degrees.	. .	Previous Examination, for all Students, at the end of this term, the fifth of residence.	
Third Year .	. . .	Examination in Classics and Mathematics for honours and in the B.A. degree subjects for the rest.			
Fourth Year .	. . .	. . .	. .	Examinations for Mathematical honours, or for the ordinary degree, at the beginning of this term.	

There is also an Examination in Theology at the beginning of the October Term, which all who have been admitted *ad respondendem quæstioni* may attend, and which is generally attended by all those Graduates who intend to enter into Holy Orders. I think it might be an advantageous change, to do away with the previous Examination, and substitute in its stead an Examination on coming into residence. (*See* Answer to Question 10.)

I do not think the College Examinations too frequent, as they have the good effect of inducing the students to practise accuracy, and also give the Tutors an opportunity of seeing how their pupils are progressing.

Matriculation Examination.

10. There is no Examination of the students of the College previous to admission or Matriculation. I think that a General Examination, conducted by the University, would be an inestimable good; for many students come into residence lamentably ignornnt, whose subsequent course is one of great difficulty, and who find themselves compelled to engage the services of a private Tutor, because the College does not make provision for such extreme cases. It is to be hoped, that if the permission to come into residence at all was contingent upon the possession of a certain amount of knowledge, that knowledge would in most cases be caefully required beforehand: and in a few years, after the standard of requirements was generally known, the University would not be under the necessity of rejecting any one who might wish to enter. Schoolmasters and others engaged in preparing pupils for the Universites would find it concerned both

Rev. W. M. Gunson, M.A.

their interest and fame to exert themselves, and to send up their scholars with at least such an amount of knowledge as to ensure their not being rejected by the University.

Inducements to leave the University.

11. The effect of the increased emoluments in the legal profession, and preferments in the Church, and especially the improved revenues of many public schools (owing to the operations of the Charitable Bequests Committee), has been to draw away many of the ablest men of the University, often at the time when experience and practice has rendered them most useful. I am inclined to believe that if Members of the Senate were allowed to open houses for the board and education of students, who should be Members of the University, though not of any College, such permission would induce many of them to remain settled here and engage in the cause of education. The men so engaged, who best performed their duties, would have the most support, and in a few years would, I am convinced, reap ample emolument for their labours. The external discipline of pupils thus lodged in private houses should be under the Proctors, while the standing of the Members of the Senate would be a sufficient guarantee for the domestic discipline.

Attendance on Lectures.

The plan of compulsory attendance upon the Lectures of some one or more of the Professors in operation, with respect to candidates for ordinary degrees, seems to work well, and might, I think, be usefully extended to all students. If the University Examinations were so arranged, that the subjects on which the Professors are lecturing should form part of such Examination, little compulsion would be required, as students would find it their interest to attend the Lectures, and would cheerfully pay a small sum for so doing. Suppose each student paid 5*l.* during his course, I apprehend that a sum of 2,500*l.* might thus be annually raised. To augment this, the Colleges should be taxed either in proportion to their respective revenues, or the number of students in each. If the sums set apart for the ordinary maintenance of the Colleges should be insufficient to meet this additional payment, (as in most Colleges, I believe, would be the case), then the non-resident Fellows might fairly be called upon to surrender part of the emoluments which they receive for the supposed performance of duties which they do not perform, especially as many of them are engaged in duties or professions elsewhere for which they receive proportionate recompense. I believe a sum of 2,500*l.* might easily be raised in this way. The Pitt Press, too, might be managed in such a way as to yield a considerable surplus revenue, as it seems difficult to discover under what great disadvantage our press labours, why it should not be as productive as other establishments of the kind.

The sums thus raised should be formed into a fund, from which the Professors should be paid in proportion to the number of students attending their lectures. This would act as a spur to the Professors, to make them do their duty, and render their lectures profitable. The choice of what lectures they would attend should of course be left to the students themselves. At present I apprehend that the lectures on subjects connected with the new Triposes would be most attended, as the Colleges have not made any provision generally to meet the wants of students in these respects.

Staff of Lecturers.

12. The Staff of Lecturers in this College is quite competent to prepare students for the older subjects of Mathematics and Classics, but not for the new Triposes. In the ordinary course of things it would require some time to breed a race of Tutors in these latter subjects. I would suggest, therefore, that students who are candidates for honours in these subjects should be left entirely to Professors, of whom no doubt a sufficient number might be found, in or out of the University, competent to give all requisite instruction.

Number of Terms.

13. I think it would be advantageous to reduce the number of Terms required by statute from 12 to 10, and substitute nine Terms of actual residence in place of the present plan. It would also be desirable to have *one* examination, at which students should be required to pass, consisting of a fair amount of Classics, Mathematics, Theology, and History: and upon passing this to the satisfaction of the Examiners, students should have the degree of B.A. conferred. This Examination should take place at the end of the Easter Term in the student's third year, so that the Examination should not interfere with the ordinary College work, as the Examiners would generally be persons engaged in College tuition. The Examination for Mathematical Honours should then be held the following September, as well as those for the Classical, Moral, and Natural Triposes, in their present order of succession. The present Voluntary Theological Examination should be converted into a Theological Tripos of Honours, and succeed next in order to those mentioned above. All these Examinations should be finished before the regular work of the October Term commenced, for the same reason as before.

Residence during vacation.

14. Students are allowed to reside in College during the Long Vacation; the Master's permission is required, but never withheld from a deserving student. Students thus residing in College during the long vacation are required to be at Morning Chapel daily, and not be out of College later than 11 o'clock at night without express permission of the Master or resident Tutor. It is very common to form reading parties for the Long Vacation elsewhere than at Cambridge. The members in such parties vary from two to twenty, and generally continue twelve weeks. I have no means of deciding what proportion of students join such parties.

Lodging houses.

15. Part of the students of this College resides in lodging-houses in the town. The keepers of such houses are required to report to the College porter the exact hour (after closing the gates) at which any of the students may have come into the lodgings. This regulation is, to my knowledge, often neglected, the keeper frequently asking the students whether they have come out of the College (to which they belong). If the answer be No, then the report is seldom made to the porter; if Yes, then such report is made. I think that students in the lodging-houses are under less control, and exposed to greater tempta-

tions, than those who are within the Colleges. I do not know that the Proctors at all interfere to see the regulations of lodging-houses carried into effect. *Rev. W. M. Gunson, M.A.*

16. I should recommend the establishment of a Latin Professorship, the Professor to be paid out of the fund mentioned in Question 11. Latin Professorship.

I should also recommend that Modern History be separated from the Moral Sciences Tripos, and be united with Modern Languages, to form a "Modern Language Tripos." The neglect of modern languages is a great defect in our system, and is beginning to be felt more and more every year; and if the University is to keep up with the general information of the age, it is a defect which must be remedied. Modern languages.

One more recommendation I venture to make, though doubtingly; it is this: that the University should give up the Spinning House, let alone the *feminas de malo suspectas*, and confine the attention of its Proctors or pro-Proctors to the students only. This might require more officers to render the discipline effectual. Two additional pro-Proctors should therefore be appointed, so that there should be four officers at least with nothing else to attend to than the discipline of the students. The Spinning house.

(Signed) W. M. GUNSON.

To Her Majesty's Commissioners for Inquiring into the State of the University of Cambridge.

Answers from the Rev. James Hildyard, M.A., late Fellow and Tutor of Christ's College. *Rev. J. Hildyard, M.A.*

Ingoldsby Rectory, near Falkingham, Lincolnshire, March 11, 1851.

1. The *necessary* expenses of Students are not large, varying from 50*l.* to 80*l.* per annum; it would be difficult *materially* to diminish these consistently with the credit of the place. Perhaps the charge to B.A.'s for *tuition*, after leaving the University (but still keeping their names on the Boards), ought *to be abolished.* The charges for *private* tuition are, in my opinion, excessive, and might be superseded by assistance from Professors or others for a small annual payment from each Student. I tried such a system myself with the Pupils of my own College for some years, and found it answer for the *ordinary* class of Students. The saving thus effected was very considerable. Expenses.

2. The College Tutor cannot impose *much* check upon the supply of goods, without his authority, in Cambridge; in London or elsewhere, I conceive *none.* A law might, perhaps, pass the *legislature*, rendering such bills *irrecoverable* if ignored by the parent or guardian, which would be some check, no doubt. Credit.

3. I was engaged in the public tuition of my College, more or less, from 1834 to 1847, during which time I considered one of the greatest difficulties the Tutor had to contend against was the *inequality* of capacity or attainment amongst his Pupils, rendering it almost *impossible* to lecture with equal profit *to all.* There was no means of distributing these Students otherwise during their *first* year of residence; I conceive a *general admission examination* would be some remedy (though only a *partial* one) for this. Lectures. Matriculation examination.

The attendance on lectures was made *compulsory*, though I rarely found occasion to resort to compulsion. The staff of Lecturers was much *increased* in my College during the years above mentioned; but even with *five* persons engaged in the business of tuition, I did not think it enough. The number of Students in 1847 was about 90 in the Michaelmas term; about 70 at other times. Attendance on Lectures.

The functions of the Tutors, notwithstanding efforts taken to prevent it, appeared to me in 1847, and do still upon reflection, to be needlessly superseded by *private* Tutors, to the injury of the Students themselves and the serious expense of their parents.

4. The usual payment to private Tutors, in my experience, was 14*l.* per term; or 7*l.* per half-term, *i. e.* three days in the week instead of six; and 30*l.* per long vacation; 10*l.* per short vacation. *Above two-thirds* of the Students, I should say, engaged private Tutors, more or less, at an annual *average* cost of, probably, 40*l. per head.* My *own* expenses on this head, as an Undergraduate from 1829 to 1833, for a private Tutor in *Mathematics alone* (and many Students have private Tutors in both *Classics* and Mathematics), were 72*l.* per annum, inclusive of the long vacation, for which I three times over paid 30*l.* with little or no advantage, as far as *mental* training was concerned. Private tuition.

5. The office of private Tutor *has* become of late a permanent and professional occupation n the University; several married gentlemen having taken up their residence in Cambridge or this professed object, some even resigning Fellowships for the purpose. The Pupils are ectured partly singly and partly in *classes.* The *latter* system was becoming very general in 1840-1847. It was not so in my own Undergraduateship. I had *no* assistance from a *classical* private Tutor in any shape whatever, and think I owe much of my success in that department to having been independent of such direction.

6. There is (or *was* in 1847) an extensively organized system of private tuition for those Students who are not Candidates for honours. This was almost wholly a system of cramming, often at variance with the College lectures, intended to save *trouble* to the Students, and most injurious (in my judgment) to them in an intellectual point of view. The Tutors for this class were rarely men of any superior attainment, and *generally* men who had *not* taken honours themselves.

7. I think means would be taken to *evade* such an *enactment* as that suggested. Something might perhaps, be done to mitigate the evil, by *disallowing* ALL charges for *private* tuition in

Rev. J. Hildyard, M.A.

the *Tutor's bills*, at the same time *permitting* a *small extra charge* (say from 2*l.* to 3*l.* per term) for such of the Students as required *extra* assistance from persons to be provided by the College These persons might be either some of the *public* Professors (who might in a few cases be not unwilling to devote two or three hours daily to such an object), or Fellows of the Colleges *not* already engaged as *Tutors*, or B.A.'s of high degree not *yet elected* to Fellowships, or resident *married* M.A.'s.

Poor students.

8. Four foundation Sizarships are provided at our College, bestowed on the threefold qualification of attainment, conduct, and pecuniary necessity. I do *not* think it desirable that *superior* attainments should be the single recommendation to Sizarships. A Hall or College provided *exclusively* for such Students would, in my opinion, be a failure; such persons would lose caste in the University, would not be generally associated with, and would miss, in consequence, all those advantages of intercourse with their equals in standing which they now possess by being distributed promiscuously amongst the other Students.

Examinations.

9. I do *not* think the different examinations for which Students are required to prepare too numerous or too difficult; on the contrary, I think their effect is to promote habits of industry, and to check dissipation and expense. I do not see that they need interfere unduly with habits of independent study, or make *private* tuition a matter of necessity. The lectures of Professors would be better attended if the subjects of such lectures bore more *directly* upon these examinations, as some might do.

Matriculation examination.

10. I established myself and kept up, while Tutor, an examination of Students at my College *previous to matriculation*. None existed previously; but I am most strongly of opinion that a *general* examination, conducted by the *University* (on *a low scale*), upon *admission*, is desirable. It would be expedient that the *Colleges* to which Students mean to attach themselves should *not* be *declared* at such examination, it being sufficient for them to give in their *names* alone, and upon receiving a certificate of approval, to take it to the Tutor of such College as they may then (or previously) select. Such a system would in great measure do away with the objection of a *possible bias* in the examination, and also remove much of the publicity attaching to *failure before* becoming a member of the University. After a few years' trial, it is my opinion that the admissions to the University would be rather *increased* than diminished by such a system, while it would undoubtedly have the effect of materially improving the character of some of the inferior schools, and generally operate well upon the *whole* course of scholastic and University education.

Inducements to leave the University.

11. It is questionable, in my judgment, whether it is desirable to retain the more distinguished Students *in* the University after attaining Fellowships. I think sufficient for the purpose of *education* will always be induced to remain by the prospect of succeeding to the College offices, with the hope of attaining to the Professorships, some of which are *not* inadequately remunerated. The addition of stalls to the Greek and Hebrew Professors has given them a respectable endowment, while others are well provided from independent sources. A Professorship of *Latin* is grievously wanted, and the absence of such direction severely felt in the *comparatively* inferior knowledge of that language to the *Greek* in the classical examinations of the place. A permanent endowment of 300*l.* or 400*l.* a-year would secure for the Students of all the Colleges gratuitous guidance in their studies in this important language.

Increase of Lecturers.

12. I have before suggested that a trifling extra charge of 2*l.* or 3*l.* a head might with propriety be levied on the Students (and would be cheerfully paid by the parents), for the most desirable end of *increasing* the number of Lecturers and Sub-lecturers in each College.

Number of Terms.

13. I think (if an *admission examination* such as that suggested at No. 10 were carried into effect) the *first* term now formally exacted might with the greatest propriety and advantage be given up.

I see no valid reason, also, for requiring the *last* term (on the same supposition), consequently the payments being reduced for tuition to *nine* instead of *eleven* terms, the surplus might advantageously be applied to additional *public* tuition during those nine.

Private tuition.

I have before said that for *non-resident* B.A.'s the payment for *tuition* is, in my opinion, utterly untenable. It would also be expedient to charge the tuition money by *three separate terms*, and not by *four quarters*, to avoid the anomaly of charging for the long vacation, during which no tuition is given.

The academical year.

It is possible the academical year might be commenced with advantage by about the 20*th of September;* but I could not recommend the detaining Students in the University *after the beginning of June*. All my experience convinces me that more than half the idleness and dissipation of the whole academic year is concentrated into what is usually designated the *Easter Term*. I found this particularly while serving the office of Proctor of the University in the year 1844.

Residence during vacation.

14. It does *not* seem to me desirable to encourage Students in residing in College during the long vacation, though under *certain* circumstances the privilege used to be conceded in my College. As a *general* rule, I think it unhinges the mind for the work of the ensuing academic year, for which reason I cannot but approve of the *private Tutor* system for the long vacation, *away* from the University; the charge of 30*l.* is, however, excessive when parties often (or even so large as *twenty*) have thus gone forth under *one Tutor*. If the number going under one Tutor could be restricted to five or six, or the salary reduced by one-half, I should then say there was not much objection to the system. The health and spirits acquired by such a mode of spending the three summer months, with the absence from the interruptions of *home*, are well purchased at such a price, even if the *Tutor* contributes (as is often the case) but a *small portion* of the advantage on *his* part.

Lodging-houses.

15. As Proctor I had reason to believe (and discovered in several instances) that the "gate" returns of the lodging-houses were much tampered with; in other respects I do *not* think the Students in the town are exposed to greater temptation than those in College.

16. Having stated my opinion freely, and I hope without presumption, upon the points suggested by Her Majesty's Commissioners, I do not venture to add anything to so complete and searching an inquiry. *Rev. J. Hildyard, M.A.*

State of the University.

It appears to me that the *University* is upon the whole in a very healthy condition at this moment, and honestly desirous of doing its duty by the country. The statutes of some individual Colleges might be with advantage relieved of a few obsolete forms, and released from a few restrictions in the matter of elections to Scholarships and *Fellowships* (such as north and south, or particular *counties*), which time has made no longer desirable. In other respects I am not aware of much external legislation of which they stand in need.

I have the honour to be, Gentlemen,
Your very obedient servant,
(Signed) JAMES HILDYARD.

Rev. A. M. Hoare, M.A.

Answers from the Rev. Arthur M. Hoare, M.A., Fellow of St. John's College.

Lectures.

3. I understand that a List of the Classical Lectures, and those in Moral and Theological subjects, delivered in St. John's College, has been already submitted to Her Majesty's Commissioners.

In the first year of residence the students are not classified according to their proficiency, but are divided according to their order on the boards. I believe that, upon the whole, it would be better that they should be roughly classified with regard to their proficiency, and that the Lectures should be more or less elementary accordingly.

At the commencement of the second year of residence, the students who are candidates for Honours, and those who are candidates for the ordinary degree, are generally divided, and attend the Classical and Mathematical Lectures separately. Also the Voluntary Classical Lecture embraces those who are anxious to pursue Classical studies. In the third year the same divisions are generally retained.

College Staff.

I do not consider that the Staff of Lectures in my own College is sufficient to prepare the students for the University Examinations without any assistance from private Tutors. Those students who are badly prepared originally, require more personal superintendence and assistance, both in their Classical and Mathematical studies, than can be afforded them in a public Lecture as at present given. They require also examinations upon paper, in order to prepare them for the Senate House.

Private tuition.

I do not think that amongst ourselves it would be necessary to divide each year into more than three classes; nor do I think that the services of more than one additional Lecturer in Mathematics, and one in Classics, would be required, in addition to the four already engaged in tuition upon my own side. But I think that this addition would be very beneficial.

7. I think that the difficulty of enforcing any such regulation, so as to act fairly by all the students, is an insuperable argument against it. One student may have opportunities of gaining assistance from friends to such an extent as will give him a very great advantage over another man of equal industry and ability, who may be debarred by his position or circumstances from gaining any aid at all. Independently of which, I cannot but think that during vacations, especially the Long Vacation, when no public lectures are delivered, the occasional assistance of Tutors is of great importance, and that it cannot be prohibited without lowering the standard of general attainment.

It seems to me that the best, if not the only way of diminishing the burden which private tuition imposes upon most men who are candidates for high honours, is to increase the efficiency of College Lectures, by dividing the students more carefully, by devoting more time to each subject, and, if necessary, by increasing the number of Lectures and the duration of each. I think that if College Lectures were made a sufficient preparation for the University Examinations (which is quite possible), the expenses attendant upon private tuition would prevent the students from having recourse to it while the Lectures lasted; but that till this is done any prohibitory regulations with regard to private tuition would be unfair to particular men, and would lower the standard of attainments.

Hall or College for poor Students.

8. The establishment of a Hall or College, at a reduced rate of expenditure, does not seem to me advisable.

1. The students would lose the opportunity of associating with others in a different sphere from their own, and of gaining the advantage which accrues to all from a mixed society.

2. There would be a natural prejudice against electing men from such a body into Fellowships at other Colleges (supposing all other impediments to be removed), on the ground that it would be inexpedient to raise any persons to authority over a body of students with whose feelings and habits they were not thoroughly acquainted.

3. If such a College induced poor students of inferior abilities to come to the University, the advantage is questionable; but poor men of superior abilities are generally enabled, by the aid which they derive from the College endowments, to support the expenses incident to their residence.

Examinations.

9. I cannot think that the University or College Examinations are too severe or too frequent, since they do not prevent a large body of the students from spending a great portion of their time in idleness.

Rev. A. M. Hoare, M.A.

Matriculation examination.

10. There is no such Examination at St. John's College. I believe that a general Examination before Matriculation would be advisable. I do not think that the effect of it would be to deter men from entering who are anxious to pursue the studies of the University, and to take a degree. It might restrain some who enter for the sake of passing a year or two agreeably before they go into the army or into other professions; and this would (in my opinion) be a great advantage to the rest of the students. It would probably induce some others to defer the time of their coming into residence until they are better prepared; and as there are some men who when they come into residence cannot profit by the ordinary Lectures* (which necessarily presuppose a slight acquaintance with the subject), I think that in these cases this effect would be highly desirable. It would also act advantageously in stimulating those who undertake the charge of preparing youths for the University; and in causing the qualifications of those who profess to be able to do so, to be more carefully inquired into by parents and guardians.

Inducements to leave the University.

11. It does not appear to me that there is a difficulty found in retaining the best qualified persons to fill the more important offices in the Colleges and University. The position itself offers advantages which constitute a sufficient inducement to those persons who are willing to devote themselves to the pursuits of learning or the profession of education. I believe that the cause which tends most to draw away able men is the increase of the number and emoluments of the masterships in large schools. But I think that employment in tuition at the University is generally preferred even to more lucrative positions elsewhere.

I am also persuaded that any plan which enabled men to establish themselves for life in their present positions (as Tutors, &c.), with a certainty of a fixed salary, would act most prejudicially on the University. If the salary was left dependent upon the efficiency of the person receiving it, this would tell hardly upon the superannuated, or any one who might fall into bad health; and were it otherwise a great stimulus to exertion would be withdrawn; while in both cases the continual infusion into the tuition of young and energetic men, possessed of a thorough acquaintance with the most recent and most approved systems (which now operates most favourably) must necessarily cease.

Staff of Lecturers.

12. I have already stated that I think we require an addition to the staff of Lecturers. If the present payment for tuition made by the students is not sufficient to meet the additional salaries required, a small increase in this fee might be made, which would bear a very trifling proportion to the expense of private tuition, and would no doubt be cheerfully paid by the students if the necessity of the private Tutor was thereby avoided. This extra payment should be strictly limited to those actually in residence, and receiving advantage from the Lectures.

Length of residence.

13. I do not think the present time of actual residence longer than is necessary for candidates for honours. But I think it is too long for the majority of candidates for the ordinary B.A. degree; that is, that the interval between the Previous Examination and the Examination for the B.A. degree allows them to pass a considerable portion of their second and third years of residence in comparative idleness.

It would evidently be injurious to the University to exact a longer residence (entailing additional delay and expense) from candidates for Honours than from the Polloi. In fact, it would be a premium upon passing the ordinary Examination, instead of aspiring to Honours. This would be a sufficient reason for not placing the B.A. Examination at the end of the ninth Term of *actual* residence, and still retaining the Honour Examination, as it is at present, at the commencement of the 11th Term of actual residence. The only remedy which seems to me likely to meet the evil is, to divide the Examination for the ordinary degree so that part of it might take place at the close of the eighth or ninth Term of *actual* residence, the rest of the Examination and the B.A. degree following as at the present time.

The B.A. Examination.

I should not think it advisable to increase the subjects of the ordinary B.A. Examination, but a more thorough acquaintance with the principles of each branch might reasonably be expected, and the powers of the students be better tested, if they were not required to pass a General Examination in so great a variety of subjects, at the same time, as our present system demands.

Lodging-houses.

15. I have no doubt that the regulations imposed upon lodging-house keepers are not generally observed; and that the students are exposed in this position to greater temptations; and that the consequences are, in many instances, highly prejudicial to themselves and to others.

Theological instruction.

16. I cannot but think that it would be highly desirable to provide a more systematic Theological training in College for such of the students as are not anxious to compete for high Honours, but wish to qualify themselves for entering into Orders shortly after taking their degree. I should not wish to have any such Course of Lectures compulsory upon the whole body of the students; but it might be placed with advantage upon a similar footing to the Voluntary Classical Lectures which are now given in St. John's, and be followed by a similar Voluntary Examination. The Hebrew Lecturer has given such Lectures in the Hebrew language and the Scriptures, and his services might be made available for the purpose proposed.

I have the honour to be, &c. &c.,

(Signed) ARTHUR M. HOARE, *M.A.*,
Classical Lecturer of St. John's College, Cambridge.

To Her Majesty's Commissioners, &c. &c.

* I speak principally of *classical* lectures.

Answers from the Rev. H. H. Hughes, M.A., late Tutor of St. John's College. Rev. H. H. Hughes, M.A.

SIR, *Layham Rectory, February* 27, 1851.

I ANSWER your questions in the order in which they are proposed.

1. I do *not* think it practicable to diminish materially the *necessary* expenses of a residence in College. Expenses.

I never heard of any privileges conceded to tradesmen and servants which have the effect of increasing expenses.

2. A College Tutor can impose checks upon those tradesmen in *Cambridge* whose bills he takes in: for example, he can limit the *amount* supplied by any tradesman. He may prevent more than *one* tailor or shoemaker supplying the same individual. He may require them to state the *whole* sum due from the pupil beyond the amount he (the Tutor) allows. I do not see that he can exercise any control over tradesmen *out of* Cambridge. Credit.

The tradesmen's bills admitted by the Tutor are for *necessaries*, as distinguished from *luxuries;* for example, the bills of booksellers, tailors, hosiers, &c., are admitted, but not those of wine-merchants or stable-keepers.

This gives a kind of *sanction* to the tradesman's bill, but is not a security, in the proper sense of the word.

If a Tutor took the trouble to look at the items of the tradesman's bill, he might check extravagance in the pupil and exorbitant charges in the tradesman.

I do not see any way of preventing tradesmen in London from giving credit to young men.

3, 4, 5, 6. Can be better answered by residents in the University. I ceased to reside at Easter, 1837.

7. I do *not* think it would be expedient to enact any prohibition against the services of a Private Tutor Any prohibition might be easily evaded, and it seems contrary to sound policy to interfere with any educational advantages which wealth can procure to its possessor. Private tuition.

8. The former part of this question can be better answered by a resident in College. Assistance is *not* given to poverty without reference to merit and attainments, and it would be inexpedient to regard poverty only. Poor Students.

I do not think an institution of the kind described in this question would be beneficial. It might enable some poor men of small ability, who failed in obtaining Sizarships, to continue in the University, but they would probably form a class by themselves of men of small attainments who could not improve each other, and would not be likely to mix with the rest of the University. I consider that one main benefit of University education arises from the association of men of various attainments and ranks among one another. This benefit would be lost *altogether* if the institution was not so well endowed as to attract men of ability; and even if well endowed, the benefit of association of different ranks would be lost, as all the students in the proposed institution would be of the poorer class.

9. This I leave for residents to answer.

10. I think an examination before matriculation, conducted by the *University*, would be desirable. It would probably diminish the number of students at first, but it would stimulate schools in preparing pupils for the University, who would come up more advanced, and so make it less necessary to pass the present number of Terms before B.A. degree. Matriculation examination.

11. I do not think there is any difficulty in the *large* Colleges in finding able men to fill the offices of Tutor and Lecturer. In the *small* Colleges there may be a difficulty. Tutors and Lecturer.

12. The only plan I can suggest is to raise the fee for tuition, and increase the staff, which would be easy enough in large Colleges, and might be practicable in small Colleges, by enlisting the services of able men in the University who are not employed on the existing staff of any College. This plan would be really economical, as dispensing, in great measure, with Private Tutors.

13. I think nine Terms would be an improvement, and if students came up more advanced (as would probably be the effect of an examination before matriculation), they might pass the ordinary examination for B.A. at end of the seventh Term, and the other examination in the two following Terms. I think the Michaelmas Term might begin at the beginning of September, the Long Vacation practically beginning as now at the beginning of June. Length of residence.

14, 15. I leave to residents to answer.

16. With regard to the expenses of an University education, I think these might be diminished— Expences of an University education.

1. By a residence of nine Terms instead of ten.
2. By diminishing the necessity for *private* Tutors, which might be effected, I think, by an increase in the staff of College Lecturers.

(Signed) H. H. HUGHES,
Late Tutor of St. John's College.

Rev. H. Latham. M.A.

Answers from the Rev. H. Latham, M.A., Fellow and Tutor of Trinity Hall.

GENTLEMEN, *Trinity Hall, Oct. 27th,* 1851.

I have the honour to transmit to you the following answers to some of the queries contained in your Paper of Questions of Feb. 18, 1851.

I remain
Your obedient servant,
(Signed) HENRY LATHAM.

To Her Majesty's Commission for receiving evidence on the State of the University of Cambridge, &c.

Expenses.

(1) The necessary expenses of a Student at Trinity Hall, that is to say, the amount of his College bills, including all charges for board, lodging, attendance, coals, washing, tuition, College and University payments amount to about 68*l.* per annum, in which sum no material reduction can take place; the price of commons depends entirely on the market price of provisions, and the other payments, such as rent, &c., are fixed upon a very moderate scale.

College tradesmen.

There are no appointed College tradesmen at Trinity Hall. An upholsterer is appointed to value the furniture, but Undergraduates may deal with any one they please.

Servants.

The College servants have been lately put on fixed salaries instead of being paid by fees, profit, &c.

Pies, puddings, &c., in hall are not here, as in some Colleges, the subject of an extra charge made by the cook, they form part of the regular dinner.

Students are supplied with dishes in their rooms by the College cook, according to a list of prices constantly revised by the Steward.

Parties.

A breakfast, dinner, or supper party cannot be provided without a written order from the Tutor.

Regulations for tradesmen.

2. Every tradesman is bound to send in to the Tutor of the College a list of such accounts with his pupils outstanding at the end of the Term, as may exceed 5*l.* If he fail to do so he is liable to be discommuned, and this penalty is regularly enforced.

This list is sent regularly to the parents.

London tradesmen.

I do not think that a tradesman in London would grant credit to a young man with greater facility from the fact of his being at the University. A Cambridge tradesman does so because he knows that if his bill be fair, and he have complied with the above regulation, the Tutor will use his influence to get it paid. A London tradesman has not this protection, and would not treat a member of the University differently from any one else; he would indeed have less hold over such a customer than over a young officer, or young men in various situations; if then Students have no greater facility of credit than others, they have no greater temptation to extravagance, and therefore no claim to increased protection.

I do not see how any special enactment could be made to refer to University men, or how a tradesman could be supposed to distinguish them from others. Parents might possibly avail themselves more freely than they do of the protection afforded by the law to minors.

No tradesmen's bills are paid through the Tutor at Trinity Hall, with the exception of some very small items for necessary repairs to rooms, such as mending windows, &c.

I find that some London tradesmen have established offices here to receive orders, which are executed in London; such do not comply with the above University regulation, alleging that they are not Cambridge tradesmen. If a case were made out against such persons they might be so far discommuned that Undergraduates might be forbidden, under heavy penalties, from holding any communication with their agents. Horse-dealers and some others also endeavour to evade the regulation.

Power of discommuning.

It is very desirable that the power of discommuning should be so clearly defined as to afford no room for cavil. If it could be enacted that any debt incurred by an Undergraduate, clearly known to be such, above 5*l.*, without written authority from his Tutor, should not be recoverable, extravagance would be still further prevented than it is at present.

Great assistance would be afforded to the authorities if parents would at once inform the Tutor when they find that their sons have *any bills over* 5*l.* not contained in the list sent in quarterly by the Tutor.

Men viciously disposed might in all cases get into difficulties here as elsewhere; all that Tutors can do is to see that Students are not exposed to temptation by finding that they can easily contract debts unknown to their parents. This facility has been very much diminished within the last ten years by the above regulation and other means. Cases of extravagance are, in fact, infinitely rarer than is commonly supposed; they are not one per cent. on the number of resident Students, and are generally discovered at the end of the first term.

Lectures.

3. A full statement of the Lectures given in Trinity Hall will be found in another portion of the evidence furnished by the Society.

The Students are constantly removed from one Lecture to another, according to their capacity for profiting by them. They obtain, in fact, as nearly as possible the same assistance as they would from a private Tutor.

Each Student reading for honours, or the ordinary Degree, calls on the Tutor at the beginning of Term, and it is then settled what he shall read, and what Lectures it will be advisable for him to attend. Each Student is compelled to attend certain lectures, in general 10 per week during the first year, and afterwards a number varying according to the subjects he is studying.

Some Students also attend certain Lectures voluntarily, *e. g.*, Mathematical Students of the third year not unfrequently attend the Lectures of the second year, besides those on the subjects with which they are more particularly engaged. *Rev. H. Latham. M.A.*

Students who intend to proceed in Law are similarly directed in their reading by the Law Lecturer.

The College staff of Lecturers is quite sufficient to prepare Students for the different College and University Examinations, including the Law Tripos. Staff of Lecturers.

4. The proportion of Students at Trinity Hall who read continuously with a private Tutor is very small, not greater than one in ten. Private Tutors.

Those reading for Mathematical Honours find the College Lectures, in general, afford them sufficient assistance; some have a private Tutor for a term occasionally.

In the term preceding a College or University Examination, a larger number of Students have recourse to private Tutors than at other times.

During the Midsummer term, 1851, which is that preceding the College Examination for Scholarships, and the Examination of the Regius Professor of Laws, those who had private Tutors were to those who had not as 8 : 9.

Such of our Students as have private Tutors, almost invariably attend them for an hour every other day, and have an occasional Examination in their Tutors' rooms. Some Tutors who take pupils in classes allow them two hours instead of one. For this the Tutor's fee is 7*l.* a term.

More rarely the pupil attends his Tutor every day, when he pays 14*l.*

The payments during the Long Vacation are, for similar advantages, 15*l.* and 30*l.* respectively.

Undergraduates so seldom read with Tutors during the shorter vacations, that I am not aware that any rate is fixed.

7. Any attempt to abolish private tuition by an enactment would probably be utterly futile, and if it were to succeed, I think it would be detrimental.

College Lectures are being daily made more efficient, and a student ordinarily prepared may obtain from them all necessary assistance.

Undergraduates have ready access to the College Tutors, and can always obtain from them explanation and advice.

It is to the exertions of the College authorities that we must look to prevent private tuition being a necessary expense, or becoming in any way an abuse.

In many cases it is of great service.

A man who has been idle or unwell, and is anxious to regain lost ground, is by this means enabled to do so. Students sometimes come up so ill-grounded as to require having the foundations of their knowledge laid afresh, and this is the case sometimes even with men who are enabled to pass an Elementary Entrance Examination. Such find a private Tutor very useful. Besides, there are some men of little capacity for Mathematics who yet study steadily though finding difficulties at almost every step, and finally succeed in obtaining a low honour. It is sometimes said that it is a pity such men should go on reading Mathematics; with this I do not agree; I have certainly found that such men, by keeping their faculties steadily bent on a subject, and by taking pains to obtain clear conceptions, which they are forced to do, have gained a more distinct habit of thought, and greater intellectual power. Every Examiner for the ordinary degree since the recent alterations will, I think, bear witness that even those students who, failing to obtain a Mathematical honour, are sent down to pass in the Classical and general subjects of the Ordinary Degree Examinations, show a very superior capacity to the great mass of the other candidates. Advantages of private tuition.

Yet such men require so much individual attention, and so much explanation, as to want a private Tutor, and if they could not obtain such assistance, they would leave Cambridge with a worse education than they at present obtain.

8. There is no special provision in this College for the maintenance or assistance of poor Students. For particulars as to the Scholarships, &c., I would refer to the evidence already furnished. Poor Students.

A Hall or College, without ample endowments, for poor Students only, who should be educated and maintained on the lowest practicable scale of expenditure, would not, I conceive, answer its end. The necessary expenses would be as great as in the other Colleges, and the comfort and advantages less. For all the functionaries, such as Principal, &c., would have to be paid from the fees of the Students, whereas in our Colleges all officers except the Tutors, and they only in part (for without the addition of the Fellowship the tutorial income would be in many cases insufficient to secure the services of valuable men), are paid from the funds of the foundation, and even if the numbers of such a College were very considerable, the payments would have to be large, because Mathematics cannot be efficiently taught to large numbers at a time (where this is supposed to be done, the men who really make progress obtain private assistance from the Professors or others), and the staff would have to be considerable. The scale of expenditure could not be less than that at St. Mark's College, Chelsea, for the training of lads to be National Schoolmasters, and there, distributing the cost of the establishment over the numbers, which are by no means small, the expense averages 70*l.* per head per annum. Men of the class who would come to such an establishment do now resort in considerable numbers to some of the Colleges, and would always be attracted by the assistance and emoluments they might hope to obtain. I do not believe that they are led into expense by contact with the more wealthy; like other classes of men here, they live pretty much in the style to which they have been accustomed.

Rev. H. Latham. M.A.

Each individual in this College undergoes an Examination once or twice a-year. To the statement already furnished by the Society on this head, I would add that the Examination in Law and History, there mentioned as contemplated, is now resolved upon.

Examinations.

I found in my own case the College Examinations most benefieial; I believe them to be one of the mostv aluable parts of our system; they include many subjects, so as to leave a Student to a certain extent independent in choosing his course of reading without allowing him to contract the habit of an inaccurate and desultory mode of study. The previous Examination is the principal new Examination introduced of late years, and I do not think that men who would find themselves hampered by that would be likely to engage in independent study or voluntarily to attend the lectures of Professors.

I do not think that any such causes have thinned the attendance at Professorial lectures. The greater abundance and cheapness of good popular works on scientific and other subjects, has enabled men to acquire the knowledge that they would obtain from the lectures of some of the Professors with greater ease and convenience than by attendance on them, and at less cost.

Such Professors as lecture on popular subjects requiring illustrations by specimens or experiments, on such matters as admit of rhetorical ornament, or on such as cannot be well learned from any English books, have generally, when endowed with the faculty of presenting their subject in a clear and attractive manner, obtained fair and in many cases crowded audiences.

Matriculation Examination.

10. There is no actual Examination at this College previous to admission. A certificate is required from an M.A., that he has examined the candidate, and considers him qualified to enter on the University course of study.

A slight entrance examination would, I think, have a beneficial effect on education in the country. It would serve as a stimulus to idle lads, and induce schoolmasters to give more attention to their less promising pupils. At present many students come up very ill prepared, even from schools which furnish some excellent scholars. Of course the subject of examination should be very elementary, so as not seriously to delay the entrance of persons willing and able to study, but who have not been originally designed for the University.

I would suggest that Students should be allowed to enter at the Colleges as at present, but that their terms should not be allowed till they had passed this examination, which should take place every term.

It might be left to the option of each College whether it would allow Students who failed to continue in residence until they could try again. Such would require the aid of a private tutor, which could be obtained cheaper and more efficiently here than elsewhere.

I would not have those who failed necessarily sent out of residence, because it would be a heavy discouragement to a youth to be sent back home as rejected, and the sense of this would probably act on the Examiner so as to lower the standard required.

The expenses of printing, paying the Examiners, &c., would be a serious charge on the University, heavily burdened as it already is, while the matriculation fee (5*l.* 10*s.* for pensioners) is even now too high. It would be a great boon if the Government would abolish the tax of, I think, 1*l.* per head, which is now levied on each person who matriculates; the fee might then be reduced to 5*l.*, and the remainder would cover the additional expenses.

Term of residence.

13. There are some difficulties attending the substitution of nine terms of residence for ten.

I should be sorry to see the time abridged in the case of Candidates for Honours, as it would certainly lower the general standard of attainment, and give an undue advantage to such as come up older and more advanced than the average. At present a man of ability may hope for a high place in the lists of honours, though he may come up with no great stock of knowledge, which he could not do if he had six months less time afforded him at the University.

I should therefore object to seeing the Honour Triposes placed before the Long Vacation of the third year. Every person who has taken his degree in honours knows the immense importance of that vacation as a time in which previously acquired information is digested and assimilated. But supposing the Honour Triposes to remain where they now are, and the ordinary degree Examination to take place at the end of the Easter Term, then I fear that we should much lower the general average of the education which we give.

I have already said that I know the education obtained by a man in studying for honours to be very superior to that obtained by reading for the ordinary degree.

Hence I would hold out every inducement to Students to read for Honours.

But if by taking an ordinary degree, men were to save six months of study, and the attendant expenses, this would be a most effectual discouragement to such Students for honours as could not hope for any great distinction or emolument. It would most seriously thin the numbers of Senior and Junior Optimes, and of second and third Triposes.

With men who read only for second-rate honours there is generally a time when they doubt whether it is worth while pursuing their studies, when they balance the advantages against the self-denial of the labour, and are inclined to abandon their reading; they are in general urged by their parents to continue their studies, but this saving of six months and some expense would be such a palpable and certain gain, one that every parent would so well appreciate, while few would fully enter into the advantages of an improved education, that the influence of the parent would almost certainly, where no emolument could be hoped for, be thrown into the opposite scale.

Number of Students in the Michaelmas Term.

The inconveniences of the unequal accumulation of Students in the Michaelmas Term are not very serious. It does not much matter whether a College have a few men more or less in lodgings, and the additional number can, by a little arrangement, be accommodated in hall and chapel.

Rev. H. Latham, M.A.

A greater inconvenience is that arising from the increased labour then thrown upon the lecturers; but if in any College this were felt to be serious, additional and very able lecturers might always be engaged for the term from the unemployed resident fellows.

I would suggest as a more advisable method of reducing the number of terms of residence from 10 to 9, if it were thought advantageous to do so, that Students should *enter in the Lent Term* instead of the October Term; thus the Degree Examinations would remain where they are, and the Academical course would comprise three years exactly.

The time of residence might be a little increased, as it will be by the proposed new statutes, but this would not much affect an Honour man, who at present studies as long during the year as he can, and who requires not only work but time to let his subjects settle in his mind.

If it were arranged for men to come up at the beginning of the Lent Term, some would probably enter as at present, in October, for greater advantages in obtaining Scholarships, &c.: it might be left to the Colleges to take them or not as convenient.

Residence in College during vacation.

14. Some Students were allowed to reside in College during last long Vacation: special permission is required, which is only extended to those in whom the authorities have full confidence, and who are known to be diligent Students.

There was a regular Hall Dinner provided as in Term time, and the Students were obliged to be in College early.

Reading Parties.

About one-tenth of our Students joined reading parties last year and the year before. I have generally found good effects result from such parties.

Lodging-houses.

15. We have about 10 Students in lodgings. If the housekeepers report regularly, Students are subject to more rigorous control in lodgings than in College, as they are reported if not actually in their *own rooms* at 10 o'clock, which they cannot leave afterwards. The great majority of housekeepers report correctly, but some cases of neglect or connivance do occur: they are promptly punished when discovered. The Proctors try the doors of lodging-houses, to ascertain whether they are shut at 10 o'clock; and if an Undergraduate come under their notice after that hour they frequently enquire at his College whether he has been duly reported. Lodging-house keepers should not receive dishes from any cook's shop in the town; but this regulation, I fear, is frequently infringed, so that Undergraduates are under less control on this point in lodgings than in College.

16. Colleges sometimes find a difficulty in dealing with their very best men; there may be one man in each year so far in advance of the others as to require a lecture to himself; in fact he would have to be treated as a private pupil, and in case of money being an object to him, he not unfrequently is so treated by the Lecturer; even then, however, he suffers from not being enabled to measure his strength against men of his own calibre.

Private tuition.

In general such a Student has recourse to one of the private Tutors of highest repute, where he comes in contact with the best men of his year, and obtains instruction from a person of the greatest experience in instruction, and who has obtained his position in his profession, from his rare talent for imparting knowledge and his well-known success.

Such persons are the working Professors of the University, and I have no doubt that from such our young Mathematicians obtain the best instruction that can possibly be given. It only remains to be seen whether such a person could not be attached to the University, and his services be in part remunerated by the office and emoluments of one of the Professorships of Mathematics, so as to enable him to afford his instruction at a lower rate.

One of the larger Mathematical Professorships might be augmented, say from the Sadlerian Fund,* and the holder of it, who should of course be constantly resident in Term time, might receive the best men from the Colleges on the recommendation of the Tutors, some discretionary power being allowed him as to deciding what amount of qualification should be required for joining his classes.

Each pupil might pay a fee, say 5*l.* a term, or perhaps less. The Professor would have about 20 men both of the second and third years, who would form about five classes, each attending for an hour and a half every other day, and these classes he would take regularly through their course of subjects as a private Tutor does now.†

In this way I conceive that Professorial Lectures would be of great practical advantage, and work in perfect unison with the rest of our system.

I have particularly referred to Mathematics, but I believe that a similar arrangement would be advantageous in other branches of study.

Answers from the Rev. C. Merivale, M.A., late Fellow and Tutor of St. John's College.

Rev. C. Merivale, M.A.

Lawford, March 13, 1851.

Expenses.

I. I AM of opinion that the *necessary* expenses of Students at the University cannot be materially reduced. The fees which they pay to University officers, Professors, the Public Library, &c., are small; nevertheless, if means could be found to make the College property

* A superannuated allowance would be necessary if the duties of the Professorship were meant to be constantly and efficiently discharged.

† Detached lectures on single branches of Mathematics are generally disregarded by students; however good they may be in themselves, they seldom take place at the time when the student is wishing to give his time to that particular subject, and are regarded by him as interruptions.

Rev. C. Merivale, M.A.

assessable for University purposes, I should be glad to see the Students still further relieved from such burdens.

The expenses of Students might be reduced, I think, indirectly by a constant and vigilant superintendence of the *College* Authorities; as, for instance, by adopting a system of monthly reports of conduct and progress, addressed to the parents, and submitted to the *Board* of the College Authorities. But such a matter of internal arrangement, if thought expedient, would follow probably from the influence of public opinion, increased earnestness, and a free competition of Colleges and Halls.

II., III. These questions will be answered more accurately by gentlemen at present engaged in the tuition of the University.

Private tuition.

IV., V., VI., VII. These particular questions will be better answered by residents. I will take the liberty of expressing my views on the general subject of private tuition in a few words.

I do not conceive that any improvement in the tutorial or professorial system would supersede the inclination of Students to avail themselves of the real or supposed advantages of private tuition.

With our existing distinction of large and small Colleges, it seems impossible for the smaller to give uniformly and permanently the same security for efficient tuition which may perhaps be afforded by the larger.

It would be very undesirable to establish restrictions upon private tuition which should constrain the great mass of Students to rush to the largest and best appointed Colleges, and leave the smaller to pick up the remnant, who could not get admittance there.

An arrangement by which three or more small Colleges could be united for the purposes of tuition, by opening their emoluments one to the other, and extending the circle from which election to scholarships and fellowships could be made, would be of immense importance, as it would allow of a fair competition between the Colleges, which does not now exist.

Nevertheless I do not think, even supposing so great a change as this to be made, that private tuition could be practically forbidden, or, perhaps, materially checked, by any improvement in the tutorial and professorial systems.

It has, therefore, been a question with me whether *College tuition* should not be abolished altogether, and the Students be left to private assistance, guided by College examinations, and placed under some College or University regulations. But I feel that the benefits derived by the Student from receiving instruction, often of the highest quality, from the same persons whom he is accustomed to respect as the superintendents of his moral conduct, his friends and advisers, are too great to allow of such a sacrifice.

The conclusions to which I come are these: 1. What is faulty and imperfect in private tuition can only be corrected and supplied by raising the standard of College and Professorial Lecturers, and by care in framing College and University *examinations*. Much of the imperfection of our system is to be traced to the inexperience of Examiners, and the absence of control and system which pervades the examinations. Education in the present day, with the abundance of books and other helps, must, I conceive, tend more and more to become a cycle of examinations; and our best endeavours ought to be directed to improving our system in this respect.

2. As regards the expenses of private tuition, the ordinary fee for a term, 14*l.*, might be abated, considering how common it is now to collect several pupils into a class, and that the sum of 14*l.* is itself an advance upon the fee of 10*l.*, which was customary some years back.

But if the rate of remuneration were left entirely open to private arrangement, I am inclined to think that it would fall below any standard which the University would be likely to fix for it.

Poor Students.

VIII. The special inquiries made in this question will be answered by those on the spot. I think that inducements and facilities ought to be held out to poor Students by the Colleges: such was the intention of our Founders; and it is desirable that, as far as practicable, poor Students should have the advantage of mixing with other classes, and not be confined to a class by themselves, as they probably would be if collected in Halls established for the purpose. But it is highly important that poverty should not be admitted as a plea for election to Fellowships, which should be considered as endowments for the advancement of learning, that is to say, as *places of trust* for carrying on the government and education of the University. I would draw a clear distinction between *exhibitions*, that is to say, helps for poor Students, for which the consideration of merit might be secondary, and *scholarships*, that is to say, honourable rewards for attainments.

I think permission for the establishment of Halls, especially with a view to the accommodation of poor Students, ought to be given as an experiment. The immediate effect of such establishments would probably be to increase the vigilance and sense of responsibility of the College authorities, and lead the way to the discovery of methods for checking expense and improving discipline.

I should expect that institutions for special purposes, such as training of missionaries, or of parochial schoolmasters, would be attached as halls to the Universities. We want to attach to ourselves more sympathies, and I should rejoice to see the University made the centre of educational establishments of various kinds.

Matriculation examination.

X. I am in favour of a general examination before matriculation. I suppose it would cut off some classes of men from the University, at least at first, but to a small extent, and the advantages would more than compensate for the evil.

The advantages would be twofold:—

1. As regards the greater efficiency it would introduce into tuition and discipline in the University.

2. As regards the influence it would have upon the schools. *Rev. C. Merivale, M.A.*

Lecturers and Examiners in Classics have a great difficulty to contend with from the increasing anxiety of the masters of schools to prepare boys for the highest University examinations, giving them, for instance, a smattering in Plato and Aristotle, while they neglect the most elementary books. A careful examination in Virgil and Horace, &c., upon admission, would constrain the schools to pay more attention to the ground-work of classical education than is often the case now.

In framing a system of classical examinations, such as I should like to see instituted in the University, it would be important to lead the students *seriatim* through a range of proper authors, and an examination upon admission would form the basis of such a system.

XI. My experience of the University does not reach far enough back to perceive much difference in this respect. There is probably more activity and spirit of enterprise among young men now than there was one or two generations back: but I should think that if there be, as I suppose, less disposition to remain in College now than there was formerly, it is not to be attributed so much to any change in the prospects of professions and the distribution of emoluments as to a general impression, felt perhaps unconsciously, that the system of the University is carried on in an *unsatisfactory* manner. There is felt, I imagine, to be a want of *method,* of scientific arrangement, of progression and improvement in it; young active men want to see more effects produced (for instance, every man who takes a school now has a theory of working it, which he is anxious to carry out); in short, there is a disagreeable sense that our methods and arrangements fall behind the requirements of the age. I think I observe a disposition among such men to prefer connecting themselves with new institutions (without reference to views of marriage) rather than subside into the routine of the University. If this be the case, it is probable that any means by which new vigour could be infused into the general character of University education would tend to retain the services of many who are now lost to us. Inducements to leave the University.

My answer to Question XVI. will indicate the quarter in which I think such means may be found.

XII. The emoluments from *tuition money* are sufficient in *large Colleges* to increase the staff of Lecturers, which, I think, should be done to *some extent;* but I believe this would be impracticable in *small Colleges,* and I would by no means raise the fees for tuition. The grand remedy in the small Colleges would be to combine them in groups for such purposes, as I have before suggested. Staff of Lecturers.

XIII. It would be convenient to cut off the *first* or the *tenth* term of residence. Length of Terms.

1. According to the present system, the accommodation of the Colleges is liable to be overcrowded at one time of the year and the reverse at another.

2. The idle and evil-disposed among the Questionists are apt to exercise a pernicious influence on the Freshmen.

3. The tuition of the College is liable to be overworked at one period of the year and underworked at another.

I question the expediency of reducing the time of residence to *two* years. It would diminish the attachment of *alumni* to their University. The Students would probably enter a year *later,* and the whole expense of education would be little diminished. A large number of excellent men lose their first year in idleness, their second in ill-directed attempts to recover themselves, and make all their real advance in the third.

Nor do I approve of the middle course which has been suggested, that of giving the ordinary degree at the end of six terms, and postponing the examinations for honours to the ninth. I fear this would reduce the number of candidates for honours. It would also tend to stamp decisively from the first a distinction between the professed reading and the professed non-reading men.

I would place the general examination for B.A. degree at the end of the ninth Term, and in January, as at present. Students would be admitted at the commencement of the year, and the academical year would coincide with the civil. It would be undesirable either to have the general examination in the middle of the summer or to have it immediately after the Long Vacation, which would be the alternative if residence were reduced to nine Terms, and Freshmen commenced residence, as now, in October.

I think the Long Vacation should be shortened by a month, and extend from the middle of June to the middle of September. Vacation.

XIV., XV. I leave to the residents.

XVI. I wish, in this place, to urge the *principle of Educational reform,* which I would advocate, and which I have already indicated in reply to other questions. Educational reform.

I think that it is vain to attempt to assign by legislative enactment the due place and subordination of Professors, College Tutors, and Private Assistants. These must and will be regulated by the sense the Students entertain of their own interests. The only security the University can have for the efficiency of the instruction imparted through any of these channels is through its *examinations.* I would, therefore, leave these modes of instruction to compete with one another, and regulate themselves; that is, I would not materially interfere with the existing system, by which the Professors deliver lectures to as many as choose to attend them, the College Tutors employ a mixed voluntary and compulsory system, and the Students are free to seek further assistance from private hands, at their own discretion.

I conceive that the University has the power of securing that which is the main point to aim at (namely, that the time and money of the Student should not be wasted or misdirected in his efforts to obtain good education from all or any of these sources), by a carefully and methodically arranged *system of examinations.*

At present, the most important Classical Examination (that for the Classical Tripos) is con- Classical Tripos examination.

Rev. C. Merivale, M.A.

fided to very young and inexperienced Examiners, and great complaints are heard of the variable and capricious manner in which it has frequently been conducted. I fear that great injustice has sometimes been done by this inexperience. On the other hand, the Greek Professor and the Public Orator, the only classical examiners who are necessarily men of experience in examination, are lamentably overburdened. I may add that the *ex-officio* appointments of certain Heads, Professors, and other officers, to examine for certain Scholarships, introduces another element of confusion into the system.

Recommendations.

Without presuming to give the details of the system I would recommend, I venture to urge that the object to be attained is a *full, searching, and methodical examination* of the Classical Students three times, at least, in the course of their three years. In order fully to check, or bring out the merits of the modes of instruction they have been subjected to, the examination, in every case, should embrace translations, composition, and questions on paper, construing *vivâ voce*, writing of essays, and much personal communication between the examiner and the examined. If there be three general examinations appointed, the authors to be read, and the kinds of composition to be practised, should be fixed and arranged on a certain system. All this would require a perfect understanding between the various Examiners, and it could only be worked under the supervision of a Board. It would be necessary, I conceive, to combine a Board of permanent Examiners with a staff of a more fluctuating character.

I would propose, then, that the number of Classical Professors be increased by the addition of, perhaps, *three* new ones; as, for instance, of Latin, of Ancient History, and of Ancient Philosophy. These, with the Greek Professor and the Public Orator, should constitute a permanent Board of classical examination: the Senate should appoint younger men, as at present, by grace, to assist and act under them; all papers should be submitted to their revision before being set; while the departments which each co-examiner should take should be clearly known and defined beforehand.

I would try to reduce examination to a science.

I am bound to suggest some means for paying these new Professors.

1. They would be expected to give lectures, and the fees thence accruing might be thrown into a common fund, divisible among the group of Professors.

2. If necessary, the Students might be required to pay a fee for examination.

3. The College funds ought, in my judgment, to be assessed for the purposes of the University. If this should be found impracticable, some portion should be reserved from the tuition money to defray the expenses of examination.

A similar plan might be carried out in the other departments of University education; but I confine myself to that with which I am most familiar. I have said enough to indicate what I consider the great object to be attained, namely, *a thoroughly scientific system of examinations.*

With these remarks, I have the honour to subscribe myself, Gentlemen,

Your obedient servant,

The Commissioners for Inquiring into the State of the University of Cambridge, &c. &c. &c.

(Signed) C. MERIVALE.

Rev. J. G. Mould, M.A.

Answers from the Rev. J. G. Mould, M.A., Fellow and Tutor of Corpus Christi College.

Expenses.

1. I do *not* think the necessary expenses of students can be materially diminished. I have supplied the Master of Corpus Christi College, with a statement of the amount of our students' bills, which he will communicate to the Commission. My belief is that those bills fully bear out the opinion here given.

Credst.

2. A college tutor can, with the approbation of a student's parents or guardians, warn Cambridge tradesmen not to supply goods on credit. Such warning would be attended to; but this would after all effect little. A student could, when one tradesman had been thus warned, apply to another. Moreover, a college tutor has no influence over tradesmen out of Cambridge. In consequence of the checks lately applied by the University to students obtaining credit in Cambridge, it is said that tradesmen out of Cambridge have obtained more custom in the University. A tutor has no means of knowing the debts which a student incurs out of Cambridge; nor do all the Cambridge tradesmen attend to the rule which requires them to send in a quarterly return to the tutor of debts due to them from men *in statu pupillari.*

Lectures.

3. Lectures at Corpus Christi College.

		Per Week.

	Mathematical lectures for *high* honormen	5
(α)	„ „ „ *low* honormen	3
(β)	Classical lectures for classical honormen	3
	Classical and Mathematical lectures in the subjects of the ordinary B.A. examination, and in divinity . .	7
Junior Sophs.		
	Mathematical lectures for *high* honormen	5
(α)	„ „ „ *low* honormen	3
(β)	Classical lectures for classical honormen	3
	Lectures preparing for the previous examination . .	6
	Lectures in Greek Testament	3

Freshmen.

Rev. J. G. Mould, M.A.

Classical lectures	5
Mathematical (*higher*)	5
„ (*lower*)	3
Hebrew lectures open to all students	2

N.B. (α) (α) are combined in one class.
(β) (β) „ „ „

As regards mathematics, *freshmen* are divided into two classes in their second term; and *senior and junior sophs, honormen,* are divided into two classes: so that a student reading for mathematical honors has from his second term onwards the choice of a higher or lower class of lectures according to his capacity.

Questionists undergo examinations in all their subjects, preparing them for the tripos, or the ordinary B.A. examination. Attendance on college lectures is compulsory. The lecturers are all fellows of the college. All subjects belonging to the common B.A. examination, and all belonging to the mathematical honor examination, except the highest class (Airy's Tracts) are included in the college lectures.

4. The charge for private tuition, *every* day is 14*l.* per term, and 30*l.* for long vacation; *every other* day 7*l.* per term, and 15*l.* long vacation. Private tuition.

5. Some private tutors take their pupils *singly*, some *in classes.* Very few students aim at university honours without the help of a private tutor. The private tutors are in general fellows of colleges, who employ themselves in that way only for a few years, until they settle in some profession. Some private tutors are permanent residents in Cambridge, making tuition their profession. Some private tutors are men of eminence as mathematicians and scholars. The number of able men permanently resident as private tutors is small.

6. There is a system of private tuition for the common B.A. examination.

7. I do not think the restriction here referred to would be advantageous or practicable.

8. A list of the scholarships at Corpus Christi College will be found in the Cambridge Calendar, p. 235-6. There are also six sizars, two chosen by examination at the beginning of each Michelmas term. A sizarship is worth about 20*l.* a year. I do not think poverty without talent and attainments good ground for such aid. My opinion is, that a hall or college for poor students, simply as such, apart, would be a thoroughly bad thing. Scholarships.

9. Our students undergo an examination at the end of each Easter term. There is also a voluntary classical examination at the beginning of that term. The subjects of examination are those embraced in the lectures of the year then ending. Examinations.

My opinion is that students read too much with private tutors. I explained myself on this head in a former letter. Private tutors.

10. Our students do not pass a matriculation examination. A certificate of competency signed by an M.A. is judged sufficient. A matriculation examination, if such a thing were established, ought to be conducted by the University. The expediency of such a thing is doubtful: on the whole I should give my assent. Matriculation examination

11. A *considerable* part of the highest talent of the University is drained off to the law. I am not aware that high ideas of the Christian *Ministry* prevent men from acting as college tutors; men consider such duties quite compatible with the office of a Christian *Minister.* Possibly high ideas of a Christian *Priesthood* might act as supposed in this question; but I never heard of a man's declining college duties on that ground. Inducements to men of talent to leave Cambridge.

Most of our ablest men are in the course of ten or twelve years taken out of the University. The reason of this I gave in my former letter.

12. There is no lack of hands to conduct the tuition, without going beyond our own fellows. A limit to the actual number employed is in most colleges fixed by the amount of the tuition receipts. Staff of Lecturers and Tutors.

13. I think nine terms of actual residence, kept fully, might be advantageously substituted for the present system. Subordinate details the University might easily arrange. Number of Terms.

14. A few students, well-conducted and industrious, reside in college during the long vacation by special permission. Reading parties out of Cambridge are also common; except on the ground of expense, I think them preferable. Residence in College during vacation.

15. None of our students reside in lodgings in the town. I believe the lodging-house system bad, and that no regulations can make it otherwise. Lodging-house system.

If the time of residence were reduced to nine terms, the necessity of lodging-houses would be diminished.

Colleges ought not to take students whom they cannot accommodate; they might raise new buildings; or establish halls for students, every such hall to be placed under the same discipline as college rooms, and presided over by an M.A.

Answers from the Rev. J. N. Peill, B.D., Fellow and Tutor of Queens' College.

Rev. J. N. Peill, B.D.

Queens' College, Cambridge.

1. It does not appear to me practicable. I am not aware, that any privileges conceded to College tradesmen and servants have the effect of increasing these expenses, so far as my own College is concerned. My answer refers to the strict meaning of "the necessary expenses." Expenses.

Rev. J. N. Peill, B.D.

Checks to extravagance.

2. The College Tutor can impose a check only upon tradesmen in Cambridge; and chiefly with respect to goods furnished to the Students who reside within the College walls. I myself only admit into my quarterly accounts the bills of such tradesmen as supply what are deemed *necessaries:* circumstances may occasionally require a deviation in some particular case from this rule. I do not think this practice affords any security or advantage to the tradesmen, *except* when the Student cannot be trusted with the money for the discharge of his bills by his parents. It certainly allows the Tutors the opportunity of examining the several items, and in this way is calculated to give to the Tutors the means of checking extravagant expenditure. I cannot suggest any which would not interfere with the liberty of an English subject. The bills of Cambridge tradesmen, which are not taken in and entered in the Students' College bill, are endorsed on the back of the College bill; so that the parents or guardians have an opportunity of becoming acquainted with the extent of the liabilities incurred by their son or ward.

Lectures.

3. The Lectures are upon all the subjects, both Classical and Mathematical, which are required by the University for the B.A. degree—from the candidates for Honours, and the πολλοι. The Freshmen are lectured in both a Greek and a Latin classical author—in one of the four Gospels in Greek—in Euclid, Algebra, Trigonometry, and Conic Sections. In the May Term they are classed according to their merit in Classics and Mathematics; and five or six Scholarships are generally awarded to those who have passed the Examination with the greatest credit. The Lectures are adapted to the capacity of the Students, and the attendance is compulsory.

The Junior Sophs are lectured in the Differential Calculus, Mechanics, Newton's three first sections, Geometry of three dimensions: these are compulsory Lectures for the Honor men, who also, together with the "not candidates for Honours," are lectured in the subjects appointed for their previous Examination. The Junior Sophs are classed according to merit in the May Examination of the College, and have their Scholarships increased according to a fixed rule, subject to the decision of the President and Fellows of the College.

The Senior Sophs, in Honours, are lectured in the higher branches of Mathematical knowledge; and the "not candidates for Honours" are lectured in Arithmetic, Algebra, Elementary Mechanics, Hydrostatics, in the Greek and Latin subjects of their Degree Examination—in Ecclesiastical History, Moral Philosophy, and the Greek Testament.

The Senior Sophs are also classed in the May Examination of the College according to merit, and the Scholarships of the two first in the list increased according to the decision of the President and the Fellows of the College.

Attendance on lectures.

The Tutors of the College have the responsibility upon themselves of supplying the Lectures and paying the Lecturers, with the exception of the Lectures in Algebra given by the Sadlerian Lecturer. The attendance on all the Lectures above mentioned is compulsory, and no Student is allowed to absent himself except with special permission. There has lately been introduced a course of Lectures on Moral Philosophy, open to all Students, but the attendance at such Lectures has not as yet been made compulsory. Our

College Staff.

College staff of Lecturers is sufficiently complete to prepare the Students for the different College and University Examinations, excepting some portions of the new triposes: hitherto we have not had any Student reading a subject beyond the usual subjects for B.A. Degree, and so soon as the necessity arises we shall provide ourselves with efficient Lecturers in the newly introduced subjects.

Expense of private tuition.

4. 14*l.* per term as full pupil, or 7*l.* as half pupil. 30*l.* for the Long Vacation as full pupil, and 15*l.* as half pupil. The answer to the remainder of this question, and also to 5, 6, 7, is contained in my former communication.

Poor students.

8. The Chapel Clerks have their commons free during residence, together with a Scholarship of 15*l.* per annum each. The Librarian has 15*l.* per annum paid according to residence. There is a fund under the sole control of the President, for the purpose of aiding such poor Students as may be considered deserving of pecuniary assistance by the President himself, or the Tutors of the College. We consider it expedient in the disposal of this fund, to have regard to the merit and good conduct of the Student as well as his poverty, without measuring such merit by his ability and attainments. It appears to me that there is prevalent among persons unacquainted with the details of a University education, a false estimate of the necessary expences incurred by the poorer class of Students, viz., Sizars, in passing through their College career. From a reference to my own books, I find that the necessary expences of a Sizar, resident in College, need not exceed 45*l.* per annum, such Student not having the benefit of any Scholarship, exhibition, or donation from the College. I consider myself, therefore, fully justified in stating that no College or Hall could be maintained with an efficient staff of Tutors and Lecturers in which College or Hall the necessary expences of the student could be reduced lower than the present scale, except the board, lodging, and tuition be in a great measure gratuitous; nor can I conceive that such a gratuitous system of education would be attended with any beneficial results to the community, inasmuch as it would necessarily introduce a pauper class of Students who might not duly appreciate the advantages thus extended to them.

Examinations.

9. The annual College Examinations, the previous Examination required by the University, and the Examination for B.A.

Admission of students.

10. Every candidate for admission to the College must present to the President or College Tutor, a certificate from a Master of Arts, or some competent person, stating that such candidate for admission is qualified to profit by the College lectures and is capable by industry and attention to proceed to the Degree of Bachelor of Arts at the usual time.

11. To answer this question satisfactorily to myself, I should have to suggest a more

radical change in the University and College system than it is possible in my opinion to carry out at the present time. *Rev. J. N. Peill, B.D.*

12. See answer to Question 3.

13. I am not disposed to make any alteration in the length of the Terms or in the number of Terms kept in a year. I think it desirable that there should be for *all* Students in the University, shortly before the close of their third year of residence, a Pass Examination for B.A., and that such students as satisfy the Examiners in the said Pass Examination shall be considered qualified to offer themselves as candidates for the Mathematical, Classical and other Triposes in the ensuing year. Length of terms.

14. Special permission to reside during the Long Vacation is granted to such Students as the Tutors consider deserving of the indulgence. There is always provision made for the residence of one of the Tutors during the Vacations to enforce all necessary discipline. Residence during vacation.

15. Several of the Students reside in lodgings in the town—during Term time.

16. I am disposed to think that the taxes imposed by the Legislature on Degrees conferred by the University, might be remitted with advantage to the Students. Taxes on degrees.

(Signed) JOHN NEWTON PEILL, B.D.,
Tutor of Queens' College, Cambridge.

Queens' College, October 2nd, 1851.

Answers from the Rev. H. Philpott, D.D., Master of Catharine Hall. *Rev. H. Philpott, D.D.*

1. An estimate of the necessary expenses of a residence in College has been for some years past printed annually in the Cambridge Calendar. The amount is stated to be 61*l.* 2*s.* 10*d.* a-year. I have reason to believe that this statement is not far from the truth, as regards my own College, and I do not think it practicable to diminish such expenses materially, if regard be had to the habits of those classes of society to which students usually belong. Expenses.

There are no privileges conceded to College tradesmen and servants in my College which have the effect of increasing the expenses of residence.

2. The Vice-Chancellor and Heads of Colleges issued an order on February 11, 1847, to the effect that no vintner or victualler should permit any person *in statu pupillari* to contract a debt for wine or spirituous liquors, exceeding the amount of 10*l.*, without the knowledge and consent of the Tutor of such person, on pain of deprivation of his license; also, that every tradesman or dealer with whom any person *in statu pupillari* should contract any debt for wine or spirituous liquors, or a debt exceeding 5*l.* for any other goods, should send notice of the amount of such debt at the end of every quarter to the College Tutor of the person so indebted. Debts.

The College Tutor has it thus in his power to prevent the supply of wine exceeding 10*l.* in value upon credit to any of his pupils by a tradesman in Cambridge; he is able also to ascertain nearly the whole amount of debt owing by any of his pupils to tradesmen in Cambridge at the end of every quarter: he is thus in a position to take means to restrain extravagance and debt by remonstrance with his pupils and their friends, or by the exercise of College discipline and authority. He is also in a position to remonstrate with tradesmen who are disposed to give facilities for contracting large debts, and to express his desire that further credit should not be given without his knowledge and consent; and in the case of tradesmen refusing to comply with his desire he may warn his pupils against dealing with them.

The tradesmen's bills admitted into the quarterly accounts of the Tutors in my College are the following:— Tradesmen's bills.

Cook, not exceeding 5*l.* a-quarter.	Milk.
Lodgings.	Hatter.
Chandler.	Tailor.
Barber.	Shoemaker.
Bookseller.	Hosier.
Upholsterer.	Hardware.
Painter.	Lectures.
Glazier.	Apothecary.
Whitesmith.	Chimney-sweeping.
Brazier.	Laundress.

The tradesman whose bill is admitted into the Tutor's accounts is certain of having his bill brought to the knowledge of the parents or guardians of the young man who contracts the debt. The Tutor's bill also is, in most cases, paid at an earlier period than other debts which a student may have contracted with tradesmen whose bills are not admitted into the Tutor's accounts. All Tutor's bills are usually paid before a student is allowed by the College to proceed to his degree. The tradesman whose bills are admitted into the Tutor's accounts is thus more certain than other tradesmen of having his bills paid, and of having them paid at an early period.

When a tradesman's bills are admitted into the Tutor's accounts, the bills themselves, with all the items of expenditure, are brought before the Tutor, who is thus able to form an opinion of the habits and mode of living of his pupils, and can advise or remonstrate

Rev. H. Philpott. D.D.

with them accordingly. The regulation which has been already mentioned that all tradesmen whatever should send to the Tutor of a College notice of the amount of every debt exceeding 5*l.* contracted by his pupils, seems to make complete the opportunity which the Tutor has of becoming acquainted with the habits and expenditure of his pupils. A student might contract debts with several persons of the same trade, one only of whom has his bills admitted into the Tutor's accounts, but the amount at least of all debts which exceed 5*l.* is now made known to the Tutor at the end of every quarter.

London tradesmen.

As the University has no effectual means of exercising control over tradesmen who do not live in Cambridge, the attempts of the College Tutors to check the supply of goods upon credit by such tradesmen cannot be supported by authority, and the present facility of communication with London and other places makes it very difficult to exercise control over the expenditure of persons *in statu pupillari* who are disposed to contract debts with such tradesmen.

I am disposed to think that something might be done towards preventing the evil which arises from this source by making it an academical offence, to be punished by suspension of degree, by rustication, or by other means, for persons *in statu pupillari* to contract any debt whatever with tradesmen who do not live in Cambridge, during their time of residence, without the knowledge and consent of the College Tutor.

Lectures.

3. The Lectures given in my College are—

For students in their *first* year of residence—
On Euclid, Arithmetic, and Algebra, and Plane Trigonometry;
Also on one or more books of the Greek Testament, and on one or more of the Classical Greek and Latin authors.

For students in their *second* year—
On Conic Sections, the Differential and Integral Calculus, the elementary parts of Mechanics, and Newton's Principia;
Also on the Greek Testament, and on one or more of the Classical Greek and Latin authors which have been fixed for the Previous Examination of the year;

For students in their *third* year of residence—
On the higher parts of Pure Mathematics and Natural Philosophy;
And on the subjects of examination for the degree of B.A., which the students of that year are preparing to attend.

The students are divided into classes in the Mathematical Lectures soon after they come into residence, so as to separate the more ready and better prepared men from those who require longer time for considering the subjects of lecture. The same division into classes in Mathematical Lectures, separating the students who intend to compete for honours from those who seek only an ordinary degree, is continued throughout their residence afterwards, and different lectures are given to the different classes.

Attendance on lectures.

The attendance of every student upon the lectures proper to his course and standing is made compulsory, unless sufficient reason can be shown to the Tutor for his absence.

There are five Fellows of the College engaged in giving lectures, and I consider that this staff of lecturers is sufficient to prepare the students in Arts for their several College and University Examinations, and the students in Law and Medicine for that part of the University course of study for such students which is preparatory to their attendance on the lectures of the Professors.

Expense of private tuition.

4. The payment usually made to a Private Tutor for a term is 14*l.*, if the student attends him for an hour every day, and 7*l.* if the student attends him only once in two days, as is frequently the case. The payment for twelve weeks in the long vacation is usually 30*l.*, if the attendance be daily, and 15*l.* if the attendance be once in two days.

I have no means of estimating the annual average expense of private tuition for each student.

5. There are many persons of great ability and attainments, both in Classics and Mathematics, who reside in Cambridge permanently for the purpose of taking private pupils. In some cases they give lectures to their pupils singly, and in other cases in classes, and not unfrequently the pupils are lectured in classes, while, at the same time, each pupil is allowed the opportunity, singly, of obtaining information and proposing difficulties for solution at certain stated periods.

The terms and times of attendance, either singly or in a class, are the subject of agreement in every particular case, and I am not aware that any general rule can be said to regulate such matters.

I am inclined to think that there are not many students who become candidates for the higher Classical and Mathematical honors without the assistance of Private Tutors during some part of their time of residence in the University, but I would ask permission to refer to the remarks which I have already made on this subject in my answers to the questions proposed respecting the Mathematical Studies and Examinations of the University.

6. There are many members of the University also who reside in Cambridge for the purpose of giving assistance to those students who seek only to pass the ordinary Examinations required for the degree of B.A., but who from deficiency of attainments or ability, or from idle habits, find difficulty in preparing themselves for the Examinations by the aid of the College Lectures only. The private tuition which such students obtain does not usually extend over the whole or a great part of their residence, but they are accustomed to avail themselves of it only for a short time before the Examination in each case.

7. I do not think it would be expedient to re-enact the prohibition referred to or any similar direct prohibition. There are great difficulties in the way of enforcing penalties

Rev. H. Philpott, D.D.

or offending against such prohibitions, and it is to be feared that means would always b ound to evade and make them ineffectual.

In some few instances among the candidates for ordinary degrees private tuition can hardly be dispensed with; and while the *abuses* of it are to be deplored and prevented as much as possible, it cannot be regarded otherwise than as an efficient means of education when both the Tutor and the pupil are disposed to turn it to a good purpose.

I have already made remarks respecting some means of checking the *abuses* of private tuition in my answers to the queries on Mathematical subjects, to which I would again take the liberty of making reference.

Poor Students.

8. There are two Sizarships in my College, intended for the benefit of poor students. The value of one, the Master's Sizarship, is 42*l.* a-year, with rooms in College rent free. The value of the other, the Chapel Clerkship, is 11*l.* a-year, with rooms rent free and commons in Hall free of charge during residence. The Sizars are in both cases appointed by the Master.

I think that there are cases in which a very good purpose is answered by provision of this nature for the education of poor students; as, for instance, in enabling the children of the poorer clergy to receive an education which they could not otherwise obtain, or in assisting persons whose circumstances have been reduced by misfortune to give their children the advantage of a course of study and of graduation in the University, for which they have been already in some measure prepared. The promise of such aid also is often effectual in drawing young men of talent to the University who would not be able to compete with others that have enjoyed greater advantages of early education, at their first coming to the University, and would thus fail to obtain the prize, if it were decided with regard to merit and attainments, but who eventually derive great profit from the advantages of College Lectures, and compete successfully at last for high honours. Reasons of this nature induce me to think that some provision for the assistance of poor students, given chiefly on the ground of poverty, may be of great use and value, but I do not think it desirable to afford such aid to a great extent or in very many cases. The endowments of the University in general would seem to be more advantageously devoted to the reward of merit and superior attainments.

Hall for Poor Students.

I am inclined to think that the establishment of a Hall or College for poor students only would not have a good effect either upon the students of that Hall or College, or upon the students of the other Colleges. It seems to be one of the advantages of the present system of admission and residence in Colleges, that students of different classes of society and of different means and circumstances are brought to associate together during their residence at the University, and the good effect of this arrangement upon both the higher and lower classes of students is very obvious, and produces permanent results. The *necessary* expenses of residence in College being small, persons of limited means are enabled to reside and join upon almost equal terms in all common pursuits of University study and in the competition for honors with the sons of persons of a higher class of society and of more abundant means. I should fear that the institution of a College or Hall of the kind described for poor students only would give rise to feelings of inferiority on the one hand, and of superior position on the other, between the members of that College and the students of other Colleges, which would not fail to have an unfavourable effect upon both classes.

It must be remarked also, that the *necessary* expenses of the present Colleges are so small that it would perhaps be found impracticable to bring the expense of residence at a new and unendowed College below the sum which is found sufficient, with strict economy and management, to support students in the existing Colleges.

I am of opinion that the system which has long prevailed in the University of selecting the Scholars and Fellows of a College from among its own members would still prevail in general notwithstanding the institution of a College for poor students only, and that the more intelligent and better prepared students would usually seek admission at the old Colleges, unless means were also found to provide the new institution with endowments of the same nature as those of the older foundations.

College examinations.

9. The College Examinations for which the students of my College are required to prepare during their residence before the degree of B.A., are three in number, one at the division of each Easter Term. The subjects of Examination in each year are those upon which lectures have been given during the three terms of that year.

The University Examinations are—

1. The previous Examination to be passed in the Lent Term of the year next but one after that in which the student has kept his first term. The subjects of this Examination are one of the four Gospels in the original Greek, Paley's Evidences of Christianity, the Old Testament History, as contained in the books from Genesis to Esther both inclusive, one of the Greek and one of the Latin Classics, the Elements of Euclid, Books 1 and 2, and certain specified rules of Arithmetic.

2. The Examination of some one of the following Professors (if the student be not a candidate for honours), viz.:—
   Regius Professor of Laws,
   Regius Professor of Physic,
   Professor of Moral Philosophy,
   Professor of Chemistry,
   Professor of Anatomy,

Rev. H. Philpott. D.D.

Professor of Modern History,
Professor of Botany,
Professor of Geology,
Jacksonian Professor of Natural and Experimental Philosophy,
Downing Professor of the Laws of England,
Downing Professor of Medicine,
Professor of Mineralogy, and
Professor of Political Economy.

The Examination is to be held in subjects appointed by the Professor, whose lectures also the student is obliged to attend, the choice of the particular Professor being left free to the student himself, and the examination must be passed before the student can be admitted to examination for the degree of B.A.

3. The Examination for the B.A. degree.

The subjects of this Examination (if the student be not a candidate for honors) are—

The first fourteen or last fourteen chapters of the Acts of the Apostles, one of the longer or two of the shorter Epistles of the New Testament, one of the Greek and one of the Latin Classics, three of the six books of Paley's Moral Philosophy, the History of the Christian Church from its origin to the assembling of the Council of Nice, the History of the English Reformation, Arithmetic, Algebra as far as Equations of the second degree, Euclid, Books 1, 2, and 3, and the first six propositions of Book 6, and certain fixed propositions in Mechanics and Hydrostatics, 46 in number.

If the student be a candidate for Mathematical honors, the subjects of Examination are defined to be, for the first three days, Euclid, Conic Sections, Arithmetic, Algebra, Plane Trigonometry, Statics, and Dynamics, Hydrostatics, Optics, Newton, and Plane Astronomy. For the remaining five days, the subjects are not defined otherwise than by the general terms of Pure Mathematics and Natural Philosophy. The candidates for honors are also required to attend, with the other questionists, the Examination in Paley's Moral Philosophy, the New Testament, and Ecclesiastical History.

Students who come to the University without adequate preparation made at school, or who are naturally of slender ability, find sufficient occupation during their residence in preparing for their several College and University examinations, and have little time for other objects of pursuit and study; but I do not think that the number and difficulty of the examinations are such as to interfere unduly with habits of independent study in the case of those students who come to the University sufficiently prepared in the learning taught at schools.

I am disposed to think that the number of subjects, both in the previous examination, and the examination for the ordinary B.A. degree, may be reduced with advantage. I do not think, however, that the assistance of a private tutor in preparing for the examinations can be said to be a matter of necessity in the case of a very large majority of the number of our students.

I believe that the voluntary attendance of students on the lectures of Professors, who treat of subjects not immediately connected with College and University examinations, has been less on the average of late years than it was formerly. The increase in the number of examinations and their greater strictness have probably contributed much to this result, as well as the increase of the number of subjects of study, which now form part of the course of proceeding to the B.A. degree.

Matriculation examination.

10. There is no examination of the students of my College by the tutors or other College authorities previous to admission or matriculation. A certificate is in general required before admission, from some graduate of Cambridge or Oxford, that the candidate for admission is properly qualified in point of learning for residence at the University.

A proposal was submitted to the Senate in 1848, to appoint a Syndicate for considering and drawing up a plan for a general examination of all students by the University before matriculation; but the proposal was rejected by the Non-regent-house. A printed paper was circulated about that time among the members of the Senate, containing a statement of reasons against the proposed measure; the paper was dated, "Trinity College, December 3, 1847," and it is now printed in the Appendix to Dr. Whewell's work on Cambridge Education, part 2, published in 1850. I think that the reasons stated in that paper cannot be sufficiently met by the arguments on the other side which have been brought to urge the adoption of the measure; and I am of opinion that it is desirable to leave every College free to make its own plans and conditions for the admission of students to College lectures, and for the preparation of them for the examinations which the University may institute for ascertaining the qualifications of the candidates for its degrees.

I think it is probable that a general examination of all students before matriculation would tend to diminish the number of resident under-graduates. Some students might be deterred by the fear of it from proposing their names for admission; and some who fail to be approved in the examination might probably decline to present themselves a second time. Many deserving students might thus be excluded who now come to the University less prepared than others, but by availing themselves diligently of College lectures make great progress during their residence, and eventually acquit themselves with credit in the University examinations.

Rev. H. Philpott, D.D.

It does not appear to me that any considerable effectwould be produced on the public and other schools by the institution of a general examination of students before admission or matriculation. The particular subjects proposed for such an examination would probably be made the subject of attention and instruction in the upper forms of schools, but the stimulus which the schools now feel and recognize in preparing scholars for acquitting themselves with credit and distinction in the University could hardly be expected to be increased by it.

Inducements to leave Cambridge.

11. I am disposed to think that, from the causes mentioned in this question, a greater number of persons, who have gained distinction in the University, leave College and enter upon active professional duties at an early period than formerly. Many, who thus quit the University, would have filled important offices in the Colleges and in the University (if they could have been retained in it) with great advantage to our institutions and course of education, and the loss of them is felt and regretted accordingly. But I am not aware that, with such emoluments and such prospects of useful and honourable occupation as the University is able to afford, any great difficulty has been found in securing the services of well-qualified men for University and College offices.

Attendance on Professorial Lectures.

By the Regulations made by the Senate in 1848, the several Professors are called upon to take a more direct share in the education of students than they had previously done, every candidate for an ordinary degree in Arts or in Law being required to attend a course of lectures given by some one Professor, and to pass an examination, satisfactory to the Professor. The fees paid by students for attending such lectures will increase the emoluments of the Professors, though not to any considerable amount.

I have suggested, in my answer to the eleventh question proposed respecting mathematical studies and examinations, that the increase of the fee paid for tuition would enable the tutors of Colleges to obtain the services of a larger number of qualified assistants in carrying on the system of education in Colleges, and in preparing students for the examinations for degrees.

Staff of Tutors and Lecturers.

12. I have stated in my answer to the third question, that I consider the staff of tutors and lecturers in my College to be sufficient to prepare students for the several examinations which they are required to undergo. If it were not sufficient, I should think it desirable to endeavour to obtain the services of Fellows of other Colleges, or of graduates living in the town, to assist in conducting the work of College lectures and tuition. This plan has been sometimes adopted, and is now used by some Colleges with very good effect.

Time of residence.

13. I am of opinion that the time of residence of students proceeding to the degree of B.A. might be reduced to nine terms with advantage. I am, also, of opinion that there is no sufficient reason for retaining the last term, now formally required by statute, and it seems to be desirable that the student should be admitted to his degree as soon as he has kept all the terms required for residence, and passed the examinations instituted by the University for his degree. I think, however, that some advantage is gained by retaining the first term, now formally required by statute, inasmuch as it affords an opportunity for communication between the authorities of the College on the one hand, and the student and his friends on the other, previously to the commencement of his residence, and preparation may be made by the student more effectually after such communication for entering upon his course of College study with advantage.

The present arrangements require that, in the Michaelmas Term of every year, the students who are about to proceed to the degree of B.A. in the following January, should be in residence together with the students who then come into residence for the first time. There are thus students of four several years' standing in residence during the Michaelmas Term, while in each of the other two terms of the year there are the students of three years only in residence at the same time. In some Colleges the Hall and Chapel are thus inconveniently crowded during the Michaelmas Term; and it is also necessary either to remove students of the fourth year out of College rooms into lodgings for that term, or to place the students, then commencing residence, in lodgings in the town for their first term, both of which arrangements are attended with much inconvenience. It may be said, moreover, that students in their first term, and students in their last term of residence require more care and attention from the tutors and lecturers than students of any other standing: the one class, commencing their residence and studies, require the attention of the tutors to become acquainted with their attainments and characters; and the other, being in course of preparation for the examination for degrees, require continued exercise and examinations in College to test and improve their knowledge of the subjects. The anxiety and labour of College tutors and lecturers are thus much increased beyond their ordinary amount by the accumulation of students in the Michaelmas Term, and a staff which is sufficient for all purposes at other times may be unequal to discharge the duties of that term fully.

It is the practice of the University, when any change has been contemplated in the course of study or in the Examinations, to intrust the formation of a scheme for arranging the details which the change would render necessary to a Committee or Syndicate of Members of the Senate. I consider that the details of the arrangements respecting Examinations which the reduction of the time of actual residence from ten Terms to nine would require to be made, cannot be satisfactorily settled without the deliberation of a Syndicate composed of persons who are acquainted with the present system of study, and have had experience in the conduct of University Examinations. If the residence of our students were to be generally commenced in October, as at present, it might be desirable that the Examinations for the B.A. degree should be

Rev. H. Philpott, D.D.

held, and the degree conferred in the Easter Term; and that the Examinations for the Classical Tripos, the Medals, and the Moral and Natural Sciences Triposes should be held in the following Michaelmas Term. Or, if it should be thought better that the residence of our students in general should be commenced in January, the Examinations for the B.A. degree might be held, and the degrees conferred, before the end of the Michaelmas Term, and the Examinations for the Classical Tripos, the Medals, and the Moral and Natural Sciences Triposes might then be held, as at present, in the following Lent Term. I make these suggestions, however, with much diffidence, knowing how desirable it is, in settling the arrangements for details of this character, to have the advantage of the discussions and deliberation of a Syndicate of persons who have the requisite knowledge and qualifications for the task.

Vacations.

It does not appear to me that sufficient reasons can be given for shortening any of the vacations.

I think it is desirable that students in general should be required to reside for a longer time than the half of each Term, and that the College Lectures should be made to extend over such periods of time accordingly. It seems to be worthy of consideration, however, whether the University or the Colleges should not have the power of permitting residence for half a Term only to be counted, as at present, in particular cases when good reasons can be assigned for such indulgences.

Residence in College during vacations.

14. The students of my College have not been permitted hitherto to reside in College during the long vacation; but it has been recently determined to allow such residence in particular cases when the conduct of the student has been satisfactory, and his reasons for desiring to reside shall be approved by the Tutors. Special permission will be required to be given in the case of every student, and the following regulations of discipline have been drawn up for them:—

That they shall attend divine service twice on every Sunday, and once on every other day.

That they shall not absent themselves from the dinner in the College Hall, nor remain out of College later than eleven o'clock at night without special permission from the Tutor or Fellow in residence.

That they shall never go out of College without their academical dress, except during reasonable hours in the day for the purpose of recreation.

Reading parties.

It is not uncommon for Fellows of Colleges and other Graduates to form reading parties of private pupils in the summer at places distant from Cambridge, but I believe that such parties are not so frequently made as they were formerly. The number of pupils is different in different cases: perhaps six or seven may be stated to be the average number. They generally continue to read together for twelve weeks.

As far as my observation has enabled me to judge, I am disposed to think that the effect of such parties has been in general advantageous to the students; and I think that the summer may be spent more profitably in this way, in the majority of cases, than in continuing to reside and read with a Private Tutor in Cambridge.

Lodgings in town.

15. In the middle of last Michaelmas Term there were 27 students of my College residing in lodgings in the town.

No student is allowed to reside in any lodging-house which is not licensed by the Vice-Chancellor and the two Proctors, upon the recommendation of the Master and Tutor of some College; and the price of each set of lodgings is also determined by the same authority.

Every person to whom a licence is granted is required to promise, by his signature in writing, that he will observe the following regulations:—

1. That he will not let his lodgings to any student without express permission signed by his College Tutor.
2. That he will lock the door of his house at ten o'clock at night, and note down the hour after ten o'clock at which any lodger enters or leaves his lodgings.
3. That he will deliver or send a list every morning to the porter of the College to which any lodger belongs, to be by him inserted in his Gate-bill for the inspection of the College officers; and also will deliver or send a weekly statement of the above particulars to the respective Tutors of the Colleges to which any lodgers belong.
4. That he will report to the Tutor the next morning if any lodger shall come into his lodgings after 12 o'clock at night, or shall pass the night out of his lodgings.
5. That he will not allow, on any account, a key of any outer door of his house to any lodger.
6. That he will not supply or receive into his house a dinner or a supper for any lodger without a note being previously obtained from the Tutor.
7. That the house for which he applies for a licence is in his own occupation, and that he has no connexion with any other.

There have not been many cases in which lodging-house keepers have been punished of late years for offending against any of the Regulations. It is, however, obviously difficult to detect offences against them; and in many instances I am apprehensive that they escape detection and punishment.

I am inclined to think, however, that in the great majority of cases the keepers of lodging-houses are honestly desirous to observe the regulations which they have signed.

Students residing in lodging-houses are in some respects under stricter control than those who reside in College, inasmuch as no student can leave his lodging-house after ten o'clock at night without a note of it being sent to the authorities of his College; whereas

Rev. H. Philpott, D.D.

a student who resides in College may leave his rooms and go to any other part of the College and join parties at late hours of the night without restriction.

Students residing in lodgings are not unfrequently exposed to temptation, from the character of the servants employed in them, more than students in College; for the same control cannot be exercised over the appointment of servants in lodging-houses which can be held over College servants.

It is the custom of the Proctors to walk through the streets of the town and its suburbs every evening after the time when it is directed that the doors of all lodging-houses should be locked. It is thus in their power to note the hour at which students, whose persons they know, are seen by them, and to ascertain by inquiry at the Colleges the next morning whether correct returns of the times of the students returning to their lodgings have been made by the lodging-house keepers.

They are able also to try the outer doors of the lodging-houses, and ascertain whether they are kept locked, as the regulations require.

In the case of dinner parties or supper parties also being given at any lodging-house, they may make known the fact to the Tutor of the College to which the lodger belongs, and learn from him whether leave has been given for the admission of the dinner or supper as the regulations require.

By these and other similar means the Proctors are able to assist in enforcing the regulations of the lodging-houses, and exercise control over the keepers of such houses whom they may have reason to suspect of deceiving or being negligent in the observance of the rules.

Catharine Lodge, Cambridge, May 5, 1851. (Signed) H. PHILPOTT.

Answers from the Rev. Joseph Shaw, B.D., Senior Fellow of Christ's College, Cambridge.

Rev. J. Shaw, B.D.

Expenses.

1. I do not think it practicable to diminish materially the *necessary* expenses of a student's residence in College: nor am I aware of any privileges conceded to College tradesmen or servants, tending to increase those expenses. With respect to the College servants, my own experience leads me to the conclusion that they are underpaid for their attendance on the students in the College.

Credit.

2. The regulations in force within the University give the College Tutor, with the sanction of the Vice-Chancellor and Heads of Colleges, a powerful check upon the supply of goods on credit, without his authority, as far as tradesmen in Cambridge are concerned: it appears to me that the check must be imposed on the tradesmen themselves; but that the College authorities have no control over the expenditure of students in London or elsewhere. The tradesmens' bills usually admitted into the quarterly accounts of the Tutors are those of the apothecary, bookseller, brazier, cook, glazier, grocer, hatter, joiner, linen-draper, woollen-draper, painter, shoemaker, and tailor. The advantage of this practice to the tradesmen is the greater probability of their bills being paid. The control over extravagant expenditure, afforded to the Tutors by this practice, arises from their knowledge of the amount of expenses incurred, their being able to advise their pupils as to their future habits of economy; and, if need be, removing them from their College.

Lectures.

3. I do not know with certainty what lectures are now given in this College; but I believe they consist of Mathematical, Classical, and Theological. The students are classified at various periods, according to their abilities and acquirements. The attendance on the lectures is compulsory. Our staff of Tutors is amply sufficient to prepare the students for the College and University examinations. There is no doubt that their functions may be said to be, to some extent, superseded by Private Tutors; but perhaps it is scarcely correct to say their functions are *superseded* by Private Tutors. The assistance derived from these Private Tutors may be described as so much *added* to the instruction derived from Public Tutors. But it is matter of notoriety that almost all those students who aim at high distinction in either the Mathematical or Classical Tripos have availed themselves of such extra assistance.

Private tuition.

4. The usual payment to a Private Tutor for a term is 14*l.*; for a half term of three days in the week, 7*l.*; for a long vacation of three months, 30*l.* I am unable to give any answer or even form any conjecture as to what proportion of the students engage Private Tutors, and consequently cannot state the probable average annual expense each student may be considered as incurring for this purpose.

5. The office of Private Tutor has for many years become a permanent and professional occupation to many men of eminence, both as mathematicians and classical scholars. The mode of lecturing their pupils many years ago was singly; but for some years past, the practice has prevailed of lecturing them in classes, and I believe with good effect. The latter part of this query has been before answered by me in my reply to question 3.

6. There certainly exists, to a considerable extent, a similarly organized system of private tuition for those students who are not candidates for the honours of the University. But I feel convinced the opportunity such students possess of gaining sufficient knowledge for those degrees is amply afforded by the public College lecturers.

7. I should be sorry to see any regulation adopted and enforced in accordance with the

Rev. J. Shaw, B.D.

Grace of the Senate in 1781 or otherwise, which might be interpreted to mean a prohibition on the acquisition of knowledge.

Poor Students.

8. In this College we have four Sizarships which we give to the poorer students, after due inquiry into their circumstances, and those of their relatives. I am disposed to approve of the plan of giving these Sizarships on the ground of poverty alone, as the College has it in its power otherwise to reward its other students by bestowing upon them Scholarships: and these Scholarships are given as the reward of merit and superior attainments, after an examination passed at the end of the first academical year. It seems very difficult to say what would be the effect of establishing a Hall or College for poor students only. My own opinion is unfavourable to such an establishment, as likely to produce a set of men who in after-life would be but ill qualified to take their place in society on a level with those who have had their education in our present more liberal establishments.

Examinations.

9. The first examination in this College is of the first-year men at the Christmas succeeding the commencement of their residence in College. The next is an examination of the same men at the division of the following Easter Term, when vacant Scholarships are given to the most deserving. These College Examinations embrace the subjects of College Lectures, and include Mathematics, Classics, and Theology. We have also voluntary Classical Examinations, as a preparation for the University Examinations of the same kind.

The tendency of late years seems to be, to push these examinations, and to multiply the subjects of them to an extent not compatible with the limited powers of the youthful mind. Opinions have also prevailed to some extent that at the same time a residence of one Term less should be required from the candidates for a B.A. degree. Thus an extended range of study, and a possibly diminished time allotted for it, may well be expected to drive young men into the hands of private Tutors, and at the same time tend to make superficial rather than sound scholars. I am unable to say whether the average attendance of students on the lectures of the Professors has been increased or diminished of late years.

Matriculation Examination.

10. There is no examination of the students of this College previous to admission. The *immediate* effect of an examination conducted by the University, and not confined to the members of particular Colleges, would probably be a *very great* diminution of the number of admissions, but might possibly in the end stimulate public and other schools to prepare their pupils better for admission to the University.

11. This query seems to me to embrace so wide a field of conjecture, as to possible contingencies and probable results, that I feel it would be presumptuous in me to attempt giving any opinion on the matter.

Staff of Tutors and Lecturers.

12. I consider the staff of Tutors and Lecturers in this College amply sufficient to prepare all the students for the various examinations they are required to undergo.

Number of Terms.

13. The number of examinations established of late years in the University, with now for the first time the Moral and Natural Sciences Triposes, make me most unwilling to give any opinion in favour of a diminution of the number of Terms required for the degree of B.A.

Residence during Vacation.

14. Such of the students of this College as have conducted themselves regularly, are frequently allowed to reside in the College during the long vacation. For this purpose they must have the special permission of the Master. An attendance at the College Chapel once a-day is required of them, and any irregularity would be immediately followed by a withdrawal of the permission to remain in College. Reading parties are often formed elsewhere than in Cambridge; but I am unable to give any account of their numbers, continuance, or the proportions of the students who join them.

Lodging in private houses.

15. Those students of this College who cannot be accommodated within its walls reside in lodgings in the town. They are subject to the same regulations as to being within their lodgings, as they would be within the College gates. The lodging-house keepers are required to make a return of the hours at which their lodgers come home; and I have reason to think, from long experience, that these regulations are generally observed. The danger of detection by the Proctors and their officers, with a consequent loss of their lodging-house licence, tends greatly to enforce the regulations of the lodging-houses.

16. On this, the last of the list of queries with which I have been honoured by Her Majesty's Commissioners for inquiring into the state of the University of Cambridge and the Colleges thereof, I have no remark to make.

(Signed) JOS. SHAW, B.D.,
Senior Fellow of Christ's College, Cambridge.

Rev. J. J. Smith, M.A.

Answers from the Rev. J. J. Smith, M.A., late Fellow and Tutor of Gonville and Caius College.

June 4, 1851.

Expenses.

1. It does not appear to me practicable to make any *material* reduction in the *necessary* expenses of a residence in College.

There is much common misapprehension about these *necessary* expenses, which it was endeavoured to correct by inserting a *table* of *necessary expenses* in the "Cambridge Calendar." It stands at p. 42 in the "Calendar for 1849."

Rev. J. J. Smith, M.A.

I think the *sytsem* could scarcely be more economical: the administration of it, depending upon the carefulness and activity of the superintendents, will make some difference in the result.

There are no privileges allowed to tradesmen or servants now which go to increase the necessary expenses of a Student. Fees and *perquisites* have been for some time almost wholly abolished, as far as College authority is concerned, and are forbidden; and the Students' expenditure placed as much as possible under their own control. Where any of these causes of expense continue in action, it is through their own carelessness and want of resolution.

Tradesmen.

2. As to tradesmen *in* Cambridge, the College Tutor can make rules, the non-compliance with which, in any case, he would visit with the penalty of not taking in for payment that tradesman's accounts, which all esteem as a privilege; he might go further, and prohibit dealings with him by any of his pupils. Over tradesmen in London and elsewhere the College Tutor has no control, and can put no check on their proceedings, except, with the College sanction, forbidding the delivery of goods and preventing their agents coming into College.

Almost all tradesmen are allowed to send in their bills to the Tutor, with whom a Student may have dealings for supply of *necessaries* (or reasonable indulgence), *i. e., to send in for payment.* A copy of the College bill is enclosed to show this.

A recently established order of the University requires all tradesmen to send in the bills of Students to their respective Tutors at the end of each *quarter,* if the amount is above 5*l.*, and in some cases, as of wine-merchants, &c., not to supply goods to a Student beyond a certain sum (5*l.*) without his Tutor's leave. But the *class* of tradesmen whose bills have not been usually received by the Tutors, I fear, have systematically neglected that order.

The admission of the tradesman's bill into the Tutor's quarterly account does not give him *security* for payment, but considerable advantage as to obtaining payment through the Tutor's influence with the Student's friends. All the tradesmen are glad to have their bills admitted [taken in] on this account.

If the tradesman honestly and carefully complies with the College rules, there is, so far, a very effective check on the Student's expenditure, provided the Tutor also is watchful and firm.

I do not think the University and Colleges could make better, or more, regulations than have been made. Doubtless they are not enforced with sufficient strictness and carefulness; but whatever care or stringency might be used, the end would be very far from being attained, through the want of power. It seems to me that there should be special laws applying to Schools and Colleges (for the same evils are experienced at the public schools). It has been suggested that debts contracted by Students, under certain circumstances, should be made by law irrecoverable; but this would not be a sufficient preventive. Might it not be constituted an *offence* punishable by law, the giving credit to *Schoolboys* and *Students*, without the knowledge of Master or Tutor? The object should be, to attach to such practice the character of *discreditable*, which it fully deserves.

One source, and a large one, of the mischief at the Universities, is the influx of agents of London tradesmen, who go round the University for orders. The Colleges have, practically, little (if any) control over this system. The London tradesman (or of any other place) being unfettered by academical rules, gets much illicit dealing to the prejudice, no doubt, and to the great complaint of the Cambridge tradesman. An enactment might reasonably make tradesmen *anywhere resident* subject to the same rules and laws to which those in the precincts of the University were amenable. The existing facility of communication ought to justify any such enactment.

Lectures.

3. There are lectures given in my College, in Classical, Mathematical, Theological, Moral and Medical Science, and in Hebrew.

The *classification* of Students is very *partial.* The principal one is made at the beginning of the *second* year, when they are divided into those who study for *honours* and those who do *not.* A subordinate classification is *occasionally* used in both the above divisions.

Attendance.

The attendance on the lectures is *compulsory*, in regard to the Classics, Mathematics, Theology, Morality, and Medicine (for the Medical Students).

The staff of Lecturers of the College *is* sufficiently complete, if they *gave their* whole time to their office and *could* command the full attention of the Students. Neither of these conditions is practically fulfilled. The Lecturers themselves take private pupils in order to increase their income, though the salaries are as much as the College tuition payments will admit: and the Students, having private Tutors, *will* follow their system by preference. The Private Tutors ought to make their course of instruction subordinate to the College course, as the College course is subordinate to the University course of studies; but many (if not most) do not so.

Private tuition.

4. Private Tutors in general receive for a whole term 14*l.*, for a short vacation (I believe) 10*l.*, for the long vacation (of 12 weeks) 30*l.* For a *half-pupil, i. e.*, a Student coming every other day, they receive half the several sums. An hour each time is the time supposed to be given to each pupil.

A *few* receive 20*l.* each term, who are in highest repute, and I believe still that Fellows of Trinity College take this fee. Lecturers in all Colleges used to receive this payment from Private Pupils, but within the last 20 years they dropped that privilege.

Private Tutors are not engaged *by the* year, but there exists an understanding that if the Student take a private Tutor *first* for the long term, he shall continue him the following short term.

Rev. J. J. Smith, M.A.

Almost all the Students have private tuition in some measure. I should think, about half the Students have private tuition through their whole course, being *nine* terms, either as *whole* or *half pupils*. A fourth part have it *half* their time. The other fourth part, or nearly so, have it a *quarter* of their time. This is a *rough* estimate—certainly I should say not over the mark. About half the number in a year take a Private Tutor for the summer vacation, a *small* number in other vacations.

Expense of private tuition.

Thus the largest amount incurred by a student for private tuition would be, possibly, 100*l*., but generally 72*l*. per annum by whole pupils, or 36*l*. per annum by half pupils. A small number would expend thus but 7*l*. There are scarce any who do not spend something in that way.

Considered in itself, the charge for private tuition, in the old way of giving it, may not be inadequate to the labour and attention given by a good Private Tutor; or a high price for the advantage gained from such a one when that assistance is wanted. But in most cases, in the absence of those conditions, the assistance I think acts injuriously. The moral influence of the Private Tutor is almost nothing,—too often worse than nothing. And, in comparison with the charge for college tuition or professor's Lectures, I consider the expense very costly.

In the greater number of cases the Private Tutor is *really* needless, and the payment for him is a superfluous expense.

The office of Private Tutor has become a permanent and professional occupation.

5. Only in a very few instances of eminent men. There are several whose occupation is giving private tuition to Students who take the common degree; a few of them indeed are very objectionable.

The general plan *now* with Private Tutors is to lecture their pupils *in classes*, as by adopting this method he could have twice the number of pupils, all still paying the *same* sum. There are thus instances of private tutors having from twenty to thirty pupils. This system commenced twenty-three years ago; and at the first was considered a fraud on the part of the private tutor. Still it went on and became a confirmed practice. This practice altered the character of private tuition, taking away much of the peculiar advantage of that method of instruction, and making it little else than a repetition of the College Lecture room.

Most of those who get the highest honours have been under the more eminent private teachers. This would necessarily happen, because Students of ascertained abilities would naturally seek the best reputed teacher. Still there are not a few exceptions to this rule.

6. There does exist the like system of private tuition for Students who merely seek to pass the common examinations; and in many ways this is very inconvenient and improper.

7. Though I consider private tuition, as now practised, quite inconsistent with the academical and College system, and most burdensome and productive of extensive mischief in several ways, I do not believe that any *simple* prohibition would be *effective*. But preventive means might be devised for removing the evil almost entirely.

The College Lectures must have a more effective arrangement, and the system be more strictly enforced, in order to take away the need of further aid to the Student. Students might be required to make *declaration* (as medical and law students do) respecting their use of private tuition. The consent of the Heads of the College to the use of private tuition might be made requisite; Private Tutors might be required to have the University license, such license describing and limiting his system of teaching. All these would be checks useful in several important ways.

Scholarships and Exhibitions.

8. There are Scholarships and Exhibitions, all given, with a few exceptions, according to *merit*.

Poor Students.

Simply as *for poor students*, there is no provision directly, except a few exhibitions amounting to about 50*l*. a-year. The recipients are selected and recommended to the Master of the College, who bestows.

To the question of giving aid independent of *merit* and *attainments*, experience may be considered as having given answer in the negative. And I think, on the broad view of the matter, quite justly, since the giving aid independent of merit and attainments causes the bringing forward of a number of persons who are not fit or able to maintain the position they gain with credit and effect.

All academical experience is against the permanence of these preferments to Students. This could easily be shown by facts and examples—the Westminster Scholars at Trinity College—and many other like cases. I may mention particularly the Tancred Studentships The appointments should be annual for Scholarships and Exhibitions, *i.e.*, *given* for one year and renewable for three or more, according to their institution, if the holders prove their claim.

In most Colleges there are Sizars, anciently called Poor Scholars. I do not see that there could be a very different result from what takes place now, by making a distinct College or hall for students of that class. About twenty-five years ago these Sizars were very distinct from the rest of the College; but the liberal feeling of the time prevailed to abolish outward distinctions almost wholly.

Whether any such College or Hall could afford to educate at a lower scale of expense must depend on the state of its endowments. If such an establishment had not ample endowments of its own, it is to be expected that it would almost entirely fail to succeed or give public advantage.

It would not be easy to have a College in which the absolutely necessary expenses (independent of endowment) shall be less than at one of the existing Colleges, where the system is well overlooked and the student careful of his own affairs.

Examinations.

9. The Students in Arts have two College Examinations in each year to prepare for—one

Rev. J. J. Smith, M.A.

in Mathematics, the other in Classics and Theology. Of these examinations the subjects are the same as those required to be studied for the University examinations up to the B.A. degree. General questions may be given in the course of these examinations at the option of the Examiner. There is an examination in moral philosophy in the second year for an exhibition.

There are also examinations in Chemistry for a Scholarship, and in anatomy and physiology for a Scholarship.

There is ample time for independent studies for those who do not aim at the distinctions and prizes which are given according to the results of examinations. A few do pursue courses of reading of their own choosing; and any might do the like. The minimum of requirement in examinations, both College and University, is really very low. But, if a prize or preferment is made the object in reading, the examinations are so wide and extensive that the Student's attention must be given up wholly to the preparation for them, who desires to have a good prospect of success.

Private tuition.

The aid of a Private Tutor is, I believe, not nearly so requisite as is commonly supposed. In many respects it is prejudicial, especially to sound study; but such is the inveterate and prevalent use that the Students will, in spite of assurances, feel at a great disadvantage without it.

The increase of the number of Private Tutors has arisen from the increased zeal for distinction in the University Examinations. I think it is a mistake to suppose the attendance at Professor's Lectures has *systematically* decreased of late years. When a Professor's Lectures have been very attractive, there has been quite as much of late, and always will be, a good attendance; but *their* disadvantage has always been that they do not lead *immediately* to any distinct end, such as the University Examinations and Prizes.

Matriculation examination.

10. There is no Examination in any College previous to admission or matriculation any more than at any other College, except the *nominal* one by an M.A., anywhere resident, upon which a certificate of qualification is given; I need scarcely observe this examination is utterly valueless.

I have argued for and proposed the institution of such an Examination, believing it firmly to be the most important improvement which can be introduced into the University system, on account of its large effect on the whole system. It would have this effect by shutting out a few incompetent students who keep down the standard of requirements, and so keep open the way to pass for a multitude of students who thus are enabled to spend their time of preparation in idleness and extravagance.

Secondly, it would act most wholesomely upon the Schools all through the country—in cutting off the prospect of indulgence to idleness and negligence which is afforded by this facility of obtaining a degree.

If an Examination previous to admission or matriculation were confined to a College, it would entirely destroy the effect; because it is vain to expect the same care and independence on the part of a College as in the University, *i.e.* in a more or less *private*, as in a *public* administration. *One* bad College would make the good effects of all the others, as far as the University is concerned, useless.

I do not expect it would diminish the number of admissions in any sensible degree. What little effect of that kind might be produced would only be for the first two or three years. But if there were a permament diminution, it would be no real loss to the University or the public—the cutting off of those who do themselves little benefit by coming to the University and do the University a great damage.

The result in the reaction of such an Examination in the schools of the country must, I think, be manifestly most excellent.

Inducements to distinguished men to leave the University.

11. As far as my observation goes, there has not been as yet any serious difficulty in retaining the best qualified persons to fill the offices in College or University. The emoluments attaching to the most important offices, together with the *honour* attaching to the name and the *certainty* of the remuneration, are sufficient to induce men well qualified to reside in the University. Those considerations are even enough to induce men to come into residence for the purpose of holding some offices. Some of the offices, less prominent, to which only small salaries are attached, are conferred on those who hold other offices, which is doubtless detrimental to the fulfilment of their duties.

I do not know what effect the recent legislation as to Cathedral preferments has produced, or tended to produce in general. Whatever measure tends to secure the *bonâ fide* residence of the members of such Societies and of the University officials is doubtless most beneficial to the University: such as attaching Prebendal Stalls to Professorships, and not giving cause and encouragement to Professors and Masters of Colleges to be non-resident, as has been done often. The non-residence of any members of a College I hold to be an abuse; but that of high officers, Heads, Professors, &c., to be especially mischievous and most inconsistent.

Recommendations.

The mode of rendering the College and academical system really efficient in their several relations is, I believe, what I have advocated in public, to increase the tuition payment and increase the number of Lecturers, suppressing the vocation of Private Tutor; all these to be done *simultaneously*. In this way the system of College would be brought into close subservience to that of the University, as was intended, and as it is well fitted to be; and no increase of expence, but quite the contrary: a considerable saving would be thus effected in the cost of the education. And this also would enlarge the means of the Colleges for retaining the services of some who now are drawn away by more remunerative prospects. The most obvious example of this remark is the large income of the Masters at Schools, out of all proportion to the salaries of Lecturers and Tutors; I should be inclined to say, to their own labours also.

Rev. J. J. Smith, M.A.

The non-residence of Fellows is now without *any check*, contrary to all the intentions of founders and the spirit of the institutions. The prescribed checks might be exacted or made effective in the spirit of them. Or the statute which now in some Colleges makes the taking certain benefices vacate the Fellowship might, indeed ought, for consistency's sake to extend to *all benefices*, and to *other offices and occupations* which are inconsistent with the *active duties* of a Fellow of a College.

12. I have answered sufficiently already.

Examination for the B.A. Degree.

13. I would have the Examination for the ordinary degree of B.A. take place in the last half of the Easter term of the third year, and to cut off the *first* term which is *nominal*, and farther objectionable, because it reckons in the Student's payments. The inconveniences produced by the unequal accumulation of Students in the Michaelmas Term is exceedingly great; only Tutors of Colleges know the amount of the inconvenience Were this change made (but it must be in conjunction with those proposed in answer to No. 10, in order not to produce other evils) the Examination for Mathematical honours should take place at the end of the Michaelmas Term preceding the present time at which it is held, the others retaining their periods. The advantage would be very great on all points.

Terms.

In most Colleges the Students are now required to keep *whole* terms, except in the *Easter* Term, when *they all* keep only the first half. This I consider quite unreasonable and most inexpedient, producing the very evil which, it is said, is endeavoured to be prevented. The shortness of the term prevents the Students settling to their work; and indeed this evil effect extends to the whole body; for no public business is scarce ever begun in this half term, because the Senate are so unsettled, and there would not be time to finish. It is the maintenance of an old custom for which there was once a cause, but it has long since been removed.

Residence in College during vacations.

14. The Students are allowed to reside in College during the Long Vacation on receiving special permission; and those receiving such permission are expected to adhere closely to rules which are rather more stringent than those to be observed in term time.

Reading parties.

Numerous parties are formed for reading under Private Tutors who reside in various parts of the country, occasionally on the Continent, for three months in summer. The number in each party varies from two to twenty, seldom, of course, so many or so few, perhaps 200 are so bestowed every summer. The effects to a great extent, I believe, are not what is intended; but, it may be, more study is done than if that expedient were not used.

The worst case of all is where the College refuses to let its Students reside within the walls and takes no cognizance of them during the period, so that they may and do reside where they like,—in the town or neighbourhood.

Lodging houses.

15. The *greater* number of Students in my College reside in lodgings, owing to want of accommodation in the College buildings.

The regulations of lodgings are those prescribed by the University, almost exclusively, but strictly construed. I think that, on the whole, they *are* observed.

Where the lodgings are *well kept*, the control is more rigid than in the College.

The regulations in lodgings are some of a different kind from those in College.

The discipline of the University exercised by the Proctors does, to a considerable extent, and might much more contribute to promote the observance of the regulations of the lodging-houses.

Improvements in the University system.

16. The University has of late years been continually improving its system, as far as its powers extend, or as it feels them to reach; and there exists, I believe, a full disposition to extend improvement as soon as any proposals can be proved to be improvements.

The impediments to improvement are only those which naturally belong to a large body; and, if slow to adopt an improvement, when it is once made, they are as slow, or more so, to go back.

I could mention other measures besides what I have already ventured to suggest, which, in my judgment, would be most beneficial. I will state a few, but not presuming here to enter at length into my reasons:—

1st. The state of the Law Faculty, and the system which is followed up to obtain the Degree in Law is very imperfect. There has been recently an attempt to amend it, which failed. It is to be presumed that the effort will soon be repeated.

2nd. The same must be said of the Divinity Faculty, as far as the system of the school is concerned. It is in a condition quite worn out.

3rd. The succession in Fellowships is slower than it should be for the advantage of the Colleges and University. If non-residence were abridged or abolished, as I have proposed, some gain in this matter would be made. It has been suggested that a portion of the smaller benefices in the Chancellor's gift should be somehow distributed among the Fellows of the different secieties. Any measure of that kind having such effect would be highly advantageous to the University. On this principle, and for other *most important* reasons, it would be highly objectionable to make Fellowships tenable after marriage, as some desire. That Heads of Colleges should have that permission is quite a different thing, though even there it produces some evils.

The jurisdiction of the University.

4th. The jurisdiction of the University over its members, which was once both *extensive* and *clear*, is now, by the course of public legislation (how, I need not say) become uncertain and therefore ineffective. If the University as a place of education for the youth of the country is to be free from great evils and dangers, the University officers must have *extraordinary* and *well-defined* power; and that will be in every way expedient for the town also, however it may in a degree be repulsive to the ambition of some few of the inhabitants. Of course all gifts of power must be accompanied with safe-guards for its due exercise.

I allude chiefly to the Proctor's power over offending students, or in the detection of offences, and over other offending parties. I could easily specify cases. *Rev. J. J. Smith, M.A.*

Also to the power of the University court in cases where its members are concerned.

5th. A very great advantage to the University at large would be to give it the power, which it believes it does not hold, that of taking *contributions* from its members for its own purposes. I allude especially to the University library. It is most important that this institution should be well supported, and that cannot be without contribution from the members of the body. If the University had the power (which is in question), this important object might be attained in a proper and regular way

The students at present have not the access to it which they ought, I think, to have by right and propriety. But that change will, I believe, shortly come.

6th. The power exercised by the Caput, I believe without warrant, is, in my judgment, a considerable evil. The appointment of it is bad to begin. That is only by custom, and might be at once, and ought to be, changed. It would be quite enough to fulfil the statutable way of election, abolishing the wrong practice. The Caput.

At present it exercises a power over *all* graces or proposals by giving to any *one* voice out of *six* an absolute *veto*. This I consider most unreasonable, prejudicial, and an abuse of its constitution.

Such a body is useful; but all its important control could, I think, be exercised by a simple majority.

7. The statute about Grand Compounders acts very oppressively to individuals and detrimentally to the University. The payment is fair enough, but should be otherwise arranged. The University, I believe, has not the power to alter such a matter as this. Grand Compounders.

(Signed) J. J. SMITH.

NOTE.—Some of the above observations will lose their ground if the changes in the statutes proposed to be enacted are agreed to.

Dec. 16, 1851.

Answers from the Rev. J. Smith, M.A., Fellow of Christ's College.

Rev. J. Smith, M.A.

SIR, *Christ's College, May* 30, 1851.

I BEG leave to return the following answers to the questions of Her Majesty's Commissioners forwarded to me by you.

I have the honour to be, Sir,
Your obedient humble servant,

Rev. W. H. Bateson, Secretary. (Signed) J. SMITH.

1 (*α*). It does not appear to me practicable to diminish very materially the necessary expenses of a residence in college. Expenses.

(*β*). I am not aware that any privileges are conceded to college tradesmen which have the effect of increasing those expenses. To college servants there are, but only to such an extent that, if withdrawn, the advantage derivable therefrom must be supplied in some other way.

2.

3 (*α*). Two lectures are given daily by each of five lecturers (three of whom are mathematical and two classical) during the major part of each term. Hebrew lectures are also given twice a week for the same period by a Hebrew lecturer. Lectures.

(*β*). As a general rule the students are classified, each year being arranged in three divisions for mathematical, and in two for classical studies.

(*γ*). The attendance on these lectures is for the most part compulsory,

(*δ*). The staff of lecturers is, I think, sufficiently complete to provide for the entire course of public instruction and to prepare the students for the different College and University examinations, though their functions are to a considerable extent, I believe, superseded by private tutors. Additional private tuition may be requisite in those cases in which a student is so far superior to the rest of his class that his progress would be arrested by being kept with it, but not in other cases. College Staff.

4 (*α*). The usual payment made to a private tutor is 7*l.* or 14*l.* for the term, and 15*l.* or 30*l.* for the long vacation, the greater or less sum being paid according as the student reads every day or every second day with his tutor. Private tuition.

(*β*). The average expense which in my opinion each student may be considered as incurring annually for this purpose is about 15*l.*

5 (*α*). The office of private tutor has become a permanent and professional occupation of a few men of eminence both as mathematical and classical scholars.

(*β*). Some of these lecture their pupils separately, some in classes, and that usually for the term.

(*γ*). I believe that but a small number of candidates for the higher honours of the University attain those distinctions without the assistance of some of the more eminent of those teachers.

6. There exists a similar system of private tuition for those students who are not candidates for honours, but who merely seek to pass the ordinary examination required before the first degree. There being a complete course of lectures for this class of students, I am

Rev. J. Smith, M.A.

strongly of opinion that no private tuition would be required by them, except in a few extreme cases, if they could be induced by any means to attend to the subjects of their future examinations at an early period of their academic residence.

7. Under present circumstances, it would not be expedient in my opinion to re-enact this or any similar prohibition.

Poor Students.

8 (α). There is provision, by means of sizarships, for the assistance of four poor students.

(β). The average value of each sizarship is about 30*l.* per annum. They are selected chiefly on the ground of poverty, but not without some reference to merit. I may add that some of the exhibitions appropriated to particular schools are directed by their founders to be conferred on poor scholars from those schools.

(γ). Poor students, in my opinion, would derive in this University more benefit by being distributed amongst the different existing Colleges, than by being congregated together in one institution by themselves, particularly if they received some pecuniary aid from that fund which would be required to found such an institution.

Examinations.

9 (α). There is in this College an annual examination for each year in mathematics and classics, besides an additional one for freshmen. The University examinations are the previous and the B.A.

(β). The subjects are chiefly the classics and pure and mixed mathematics; popular scientific subjects not having been hitherto much required.

(γ). The examinations (except perhaps in one instance) I think numerous enough and sufficiently difficult: as many alterations have been effected within these few last years, all that is required, in my opinion, is that our present system of examinations should be fully and efficiently carried out, without further change, at least for the present.

(δ). I do not think that the lectures of the professors have been much, if at all, diminished by this cause.

Matriculation Examination.

10 (α). There is no examination previous to admission; a certificate of qualification from an M.A. is required by the College in all cases.

(β). A general University examination previous to matriculation, I am of opinion, would be beneficial, if too much be not required of the examined.

(γ). Such examination would at first probably diminish the number of admissions, but would stimulate the public and other schools to attend to the elements of every branch of a liberal education.

11.

12.

Number of Terms.

13 (α). I am not indisposed to recommend the reduction of the number of terms of residence to nine; the freshmen then first coming up in January instead of October.

(β). Under the present arrangements, we cannot accommodate so large a number of students within our walls as we otherwise might during the *whole* of their academical career.

(γ). I think it not undesirable to increase that portion of the May term which is usually devoted to academic business, and thus shorten to a small extent the long vacation.

Residence during vacation.

14. Students are allowed to reside in College during the long vacation. Special permission is required for that purpose. It is not unusual to form reading parties under private tutors elsewhere than in Cambridge. The number of students who join such parties in proportion to the whole body is not so great, I think, as it was formerly.

Lodging-houses.

15. Some of the students of this College do reside in lodgings in the town, but I think it highly desirable that they should be accommodated with rooms in College when it is possible.

Rev. C. A. Swainson, M.A.

Answers from the Rev. C. A. Swainson, M.A., Fellow and Tutor of Christ's College.

Sir, *London, September,* 25, 1851.

I beg to submit the following replies to the queries which I had the honour of receiving from Her Majesty's Commissioners for inquiring into the state of the University of Cambridge and the Colleges thereof, under the date February, 18, 1851.

I have the honour to be, Sir,
Your obedient humble servant,

Rev. W. H. Bateson.
&c. &c. &c.

(Signed) C. A. SWAINSON,
Tutor of Christ's College.

Expenses.

1. I do not know of any privileges conceded to College tradesmen, the effect of which is to increase the necessary expenditure of a Student at the University. It is entirely at the option of the Student whether he deal with a College tradesman or no—and the effect of this is to make the prices of all articles much the same everywhere. I approve of the system of the Tutors admitting into their accounts the bills of certain respectable tradesmen: the abuses to which it is liable are the following:

Tradesmen.

(1.) The tradesman feeling generally confident of payment is tempted to press his goods on the Student to an extravagant extent, whilst the latter not being compelled to pay in ready money is tempted to go beyond his due wants.

(2.) There may possibly here and there be money transactions between the two parties, which are returned to the Tutor as transactions in goods. But these evils exist everywhere and are not part of the necessary expenditure. Judicious treatment on the part of the parent can alone obviate them.

Parents.

Rev. C. A. Swainson, M.A.

The College servants are generally highly paid, but their positions require men of great trust, and I should be unwilling to see their incomes much reduced. But I feel confident that if these incomes were made up in fixed money payments, and the present system of fees and perquisites entirely abolished, there would be a gain to the Students of considerable amount in the year. I refer chiefly to the system of providing for the dinner in Hall. A Student *might* dine cheaper in his lodgings than he now does in the Hall and many *would* do so.

College servants.

2. The only check by which a College Tutor can control the supply of goods on credit by tradesmen in Cambridge, is to learn at the end of each quarter what bills above 5*l.* are due, and to transmit a notice of the amount to the Student's friends. But I believe that few but the most respectable tradesmen attend to this regulation. The check therefore is incomplete. Moreover the rule is easily evaded by those tradesmen who have establishments of their own, or in the hands of correspondents, elsewhere. And I believe also that one effect of the regulation of the Heads of Colleges to which I have referred, is to throw business into the hands of London tradesmen, who send down their travellers to solicit business from the Students. No University enactment can touch transactions of this kind. They could be only affected by a law of general application.

Checks on credit.

The only items of unnecessary expenditure which are admitted into the quarterly accounts of the Tutors at my College are connected with the practice of giving entertainments. I accept the bills of the College cook, of the College steward and of the grocer for desserts, &c. I mention the College steward, for when I find that the amounts of his bills against the Students vary from 3*l.* a quarter to 6*l.*, I know at once that the difference arises from the number of dinner parties or supper parties given. But in admitting these bills into my accounts, I do not consider myself as responsible for them, either to the parents for their correctness or the tradesmen for their payment: all that I vouch for is the general good character of the parties employed, and I believe that other Tutors besides myself can speak with feelings of gratitude to the College tradesmen, for bringing before their notice speedily instances of flagrant extravagance on the part of Students.

Entertainments.

3. I understand that Mr. Wratislaw has fully described the system of Lectures adopted with the Freshmen, and in the Classical subjects afterwards. I will therefore confine my remarks to the Mathematical Lectures.

Lectures.

During the last eight years, it has been the invariable custom of the Tutors of this College to divide into two classes at the commencement of their second year of residence the Candidates for Mathematical Honours; each class is lectured according to its proficiency. The attendance at Lectures is compulsory. For the Students whom we have had, I consider that the College has provided amply to prepare them for the University Examinations, but if we had had *also* men of very high calibre amongst the Undergraduates, I do not think that the means for their instruction, as well as that of the rest, could have been found. In a small College, the funds provided for maintaining the staff of Tutors and Lecturers are not sufficient for such a multiplication of Lecturers as would render private Tuition unnecessary. Indeed the Lecturer, and sometimes the Tutor, is compelled to take private pupils for his own maintenance, his income from his College post being inadequate. For instance, with a number of 80 Students, Pensioners, and a staff of five Tutors and Lecturers, the average income of each will be less than sufficient either to attract or retain adequate men, unless they can resort to the taking of private pupils, or unless they can regard their office as more permanent than it is now.

4. I think the sum spent in "private Tuition" in Cambridge now is much less than it was 10 years ago. The custom of "reading" only every other day has much increased during that time. But I should infer from the observations I have made, that there are few Students who attain the position of "Wrangler," who have not spent at least 120*l.* on the whole, in gaining the advantage of a private Tutor; few Senior Optimes who have not spent between 40*l.* and 60*l.*

5. The more eminent private Teachers, I believe, *lecture* their pupils in Classes, but the chief advantage of gaining their services, lies in the direct personal intercourse, which always ensues afterwards, in the Examination of their answers to the papers of questions which the private Tutors are in the habit of proposing to their pupils. When the pupils are lectured in classes, the lectures generally extend over an hour and a half. The *terms* are the same as with any other Tutor for his undivided attention during the usual hour. I find that the more advanced Students prefer the class system.

Private teachers.

6. There exists a similar system of private tuition for the Students who are not Candidates for Honours. But this does not embrace the higher classes of such Students now, so much as it did six years ago, the change being due to the altered form in which are now published the names of the successful Candidates. But the majority of the Students of inferior abilities, or worse education, or greater idleness resort to private Tutors, during the two or three Terms which precede their Examination for their Degrees.

7. I understand that the Grace alluded to was passed to correct a special evil which no longer exists. I do not think that any advantage would be gained at present by establishing this or any similar prohibition. An adequate provision should be made to supply the place of the private Tutors, which should be tested and found to work, before any attempt should be made to abolish or restrain their use.

8. In addition to the College Scholarships and Benefactions mentioned in the Cambridge Calendar, we have only four (what are called) Foundation Sizarships, the holders of which receive their dinners (except during the Long Vacation) free, have a deduction in the charge for their rooms, and have an allowance of 4*l.* a-year besides the usual deduction in the fee for Tuition. I think that for the ordinary duration of residence, the value of the

Scholarships and Benefactions.

Rev. C. A. Swainson, M.A.

Sizarship may be estimated as between 24*l.* and 26*l.* a-year. I know of more than one instance in which the expenses of a Sizar did not amount to 37*l.* a-year. With his Sizarship he may hold a Scholarship which would still more reduce the cost of his education, and if he obtain a high place in the Examination, he will be almost able to pay his private Tutor. The vacancies are filled up as they occur, reference being had to the circumstances, the character, and the attainments of the Candidates. We do not consider ourselves bound to such attainments merely as will gain distinction in the University Examinations, but we do not wish to encourage Students to come to the College who have nothing but their poverty and their desire to go into Holy Orders to recommend them.

Hall or College for poor Students.

I should not look with a favourable eye on the establishment of such a Hall or College as that mentioned in the question. I think that the funds of our present existing bodies ought to be first made more directly available for the purposes of education: in the first place, there are several Exhibitions and Scholarships which are at present lying unemployed from want of such claimants as come under the terms of the deeds of foundation of these, some are vested in the Colleges in Cambridge, others in the hands of Trustees in the country. But the schools with which they were connected no longer furnish a supply of Students. These Exhibitions might be applied under some general Act of Parliament to purposes kindred to those for which they were originally founded, full regard being still had to the wishes of the founders.

But I think that the Colleges themselves should, out of their own funds, contribute directly towards the support of the Tutors and Lecturers. It is certainly true that they were founded, not merely as places of instruction, but also as homes for men of learning and piety. Indeed, according to the foundation statutes of my own College, I should say that the idea of its being a place of education for young men, was in the mind of our foundress secondary to the other. But this is now the primary duty. But still of the Fellows of Colleges, not one fourth engage in it; and the advantages which they receive from residence in Cambridge and connection with the Tuition are not equal to the income which they would obtain in positions of less importance elsewhere. I do not wish to see the Fellows forced into residence, but I consider that the non-resident members of the foundations ought to contribute more than they at present do to the maintenance of the work of education within its walls. I think that Cambridge should present inducements to reside and labour at least equal to the temptations to go elsewhere. And then I feel confident that more work would be done in the Colleges, and men would be found willing and anxious to enter heartily into it. At present, of the newly-elected Fellows many who would be most useful, remain in College two or three years, taking private pupils, and then finding themselves with neither position, nor occupation, nor prospects, leave Cambridge for other spheres of duty, still retaining their Fellowships, and then the University receives no advantage from them. With a different system, the Colleges might be made far more available than they are now.

Moreover the presence of such a Hall in the University would be injurious. The young men of ability would still go to those Colleges where there is room and encouragement for them. The Students therefore at this Hall would be inferior in point of talent as well as income to the rest of the University. They would have no opportunities of mixing with young men of a different class; the interchange therefore of sentiment would be lost. They would leave Cambridge better instructed perhaps, but less educated. Besides they would be marked men, and *feel* that they were marked. If such a College were deemed necessary, which I do not think it is, it seems to me that it would be far better to have it placed at some distance from the University, but still in union with it. But the expense of an adequate staff would be so great, that I would, on this account also, prefer to increase the accommodation of our present institutions.

Suggestion for increasing the accommodation in Colleges.

If I might be permitted to give expression here to an idea which has been long entertained in my own mind, I would respectfully suggest that some such scheme as the following might be feasible. In the neighbourhood of one of the Colleges (which would be willing to accept the Institution in union with it) erect a building containing between 20 and 40 sets of apartments, on the most economical principles consistent with due regard to health. Let the tenants of these rooms be duly selected, especial regard being had to their circumstances and their character, and the rooms be let at very low rents. Let the Students occupying them be on a par with the rest in every respect, save one, viz., that they must be under sumptuary laws, they must dine in the Hall with the rest, but no extras should be allowed them; their other meals they might have in common. The services in the College Chapel and the Lectures they must attend with the rest. The "warden" of this hospice or hostel might be a present or late member of the foundation of the Parent Society (there would be no necessity that he should be required to be the former, for he would be to a certain extent isolated from the rest of the Society,) and he might assist in the conducting the education of the College.

I have little doubt that any of the smaller Colleges which would encourage such a scheme would find no difficulty in raising the funds necessary not merely for the erection of the building but also for the partial endowment of the Institution: I think it would be almost self-supporting, and I am confident that offers would be soon made for the founding of additional Scholarships and Fellowships in the parent body, corresponding to the increase in its members. But in my opinion it would be essential that this hostel should be in connection with one of the older Colleges, and governed entirely by it. (I have spoken of the smaller Colleges alone, because I think that the machinery already at work in them would with the addition of a warden of the hostel and a few underservants prove sufficient for twice or thrice the present number of Students.)

Rev. C. A. Swainson, M.A.

Examinations.

9. My colleague Mr. Wratislaw, has, I believe, answered this question so far as regards the Classical subjects required in the College Examinations. The Mathematical subjects are with us the same as are embraced elsewhere. In my opinion University Examinations at the end of the first and second year's residence would serve to guide the reading of the less diligent and less advanced Students better than the present College Examinations, and I do not think that these Examinations, if they were of no greater difficulty than the present University Examinations, would to any appreciable extent interfere with the private study of those who, not being candidates for honours, have any genuine taste for other branches of science or literature. Candidates for honours are certainly now much annoyed by the previous Examination, the reading for which lies in a totally different direction from their usual course. But I do not think that the annoyance forms a sufficient cause for doing away with this Examination; neither do I attribute to it chiefly the falling off in the attendance at the Professors' Lectures.

Matriculation examination.

10. There is no Admission Examination at our College. I believe that a General Examination conducted by the University on admission would be attended with almost unqualified good results. Then umber of Students coming into residence would not be affected more than 5 per cent, but the class excluded would contain almost all those who now cause the greatest trouble and anxiety to parents and tutors. Young men are frequently sent to the University, of whom from the first there is not the slightest hope of their passing the Final Ordeal. The parents are difficult to convince of this; after three years expense and delay they discover it, and the consequences of the discovery are at times fearful. There are frequent instances of the most unhappy results. The avoidance of such painful consequences would amply compensate for the annoyance caused to the few young men who are taken suddenly from the army or navy, or other professions, or commercial pursuits, and immediately sent to College. On these it would entail a delay of a few months; but to others, an Examination at entrance would save from loss of time, loss of money, sometimes, from loss of intellect and loss of life.

Of course such an Examination would act as a stimulant, not merely on the schools, but still more on the large class of private tutors scattered over the country. The success of the mode of teaching of these gentlemen would be at once tested, and many parents would be guided accordingly in the choice of a tutor.

Inducements to leave the University.

11. I do not consider that the openings alluded to in this question have served so much to create an inducement to leave the University, as they have furnished means of obtaining a livelihood elsewhere to those who have other inducements to leave. For instance, for one anxious to fulfil his duties as a Minister of Christ there is as great and important a field within the walls of a College as in the populous districts of a town, and very many of the Resident Fellows so consider it. The difficulty *of* retaining men of ability in the University, in my opinion lies in this, that the Lecturers and Tutors are underpaid; their offices lead to nothing: when they cease to hold their Fellowships their employment is gone; they must begin life afresh. And moreover this shortness of tenure of office affects the character of the instruction given. The duty of lecturing is not the business of life; no one hopes that it will be so, and therefore cannot enter into it with such energy and devotion as is desirable. The present limited number of Professorships would not, however well they were endowed, furnish a remedy to this defect, which seems to me to be owing rather to the uncertainty of tenure, than to any other cause.

If the University held forward to those who are charged with educational employment in it, any opportunity of continuing those occupations after they cease to be Fellows of their Colleges, I feel confident that the defect alluded to in this question would be almost entirely remedied. It is impossible, under any circumstances, and with any encouragements for residence, to employ within the University any large number of those whom from their attainments it would seem desirable to retain; and if they should be unemployed in Cambridge, they had far better be engaged elsewhere. But at present, from the uncertainty of tenure, it is not always possible for a College to call into play the services of its more eligible members: when the time arrives when these services are needed, they may be engaged elsewhere, and they will decline to give up a certain employment for that which is at best an uncertain one.

Celibacy.

Perhaps I should explain, for fear of being mistaken, that I do not consider it desirable that the Tutor of a College should be married: I think his influence is greater if he is so far on a par with his pupils as to enter into their difficulties and temptations, if he live among them, attend Hall and Chapel with them. But the Lecturers have very different duties; there seems to be no adequate reason why these duties should not be ably performed by one who is not at the time a Fellow. I would thus draw a marked line between the Tutor's and Lecturer's duties. The Lecturer's office might be deemed permanent, and even if the salary were continued small, still as being permanent it would attract and retain gentlemen of the highest qualifications.

The remarks I have made refer rather to a small College than to a large one, because in the former the intellectual character of the residents is more liable to fluctuate than in the latter. A large College will always supply men adequate to fill the highest positions in the University at a moment's notice.

College Staff.

12. I have explained above that I consider the staff of Tutors and Lecturers at my College amply sufficient to fulfil the duties which have been required of them.

Length of Terms.

13. I think that for the Students not candidates for honours, even the proposed residence of nine Terms is unnecessarily long, unless during their residence they are required to do more than the present regulations require. By the majority of such Students the greater part of the first year is neglected, so far as relates to any branch of their University

Rev. C. A. Swainson, M.A

training. The period between Easter in their second year, and the subsequent January is wasted also. If there were a University Examination at the end of each of three years of the proposed course of nine Terms, this defect might be obviated.

With an Examination prior to admission not much less stringent than our present "Previous Examination," the general studies of the University might be advantageously finished at the end of the second year, and the third year might then be devoted to the study of Theology by those who are candidates for admission to Holy Orders. I would not however interfere with the Examination of candidates for honours.

For the latter I think the Terms are at present quite long enough. The excitement of the full Halls and Chapel, the additional College Lectures, the Professors' Lectures, all tend to wear the mind, when in addition to their own reading; and for their sake I should not be willing to see the length of residence increased beyond that required from them now.

Residence during vacations.

14. Students of good character whether Scholars or not, are permitted on application to reside with us during the Long Vacation. They must reside in College and attend strictly to the College regulations. I always prefer that my Pupils who are candidates for honours should join reading parties to reside at a distance from Cambridge. They do not perhaps work so hard in the country, but their minds are unstrung and they return with a stock of health and spirits more than sufficient to enable them to regain all their lost ground.

15. Our College contains 71 sets of rooms of which 11 last Term were occupied by Fellows of the College: 13 Students were in lodgings, five with their parents. I have no means of knowing from direct observation whether the lodging-house regulations are attended to, but we look with so much disfavour upon these houses, that we require any one of whose good conduct we feel any doubt, to reside in College.

Lodging in private houses.

Recommendations.

16. I may be permitted here to sum up the chief suggestions I have ventured to make.

I do not consider it desirable that the Fellows of Colleges should be required generally to reside, but I think that the Colleges in their Corporate capacity should take care that all who are engaged in conducting the education of the Students should be amply remunerated, and if it be necessary, out of the College funds. Of those who are so employed it is not necessary that all should be Fellows of the College. For I believe that it would be more easy to work the smaller Colleges if there was a prospect held forward to those who are employed in the tuition, that they need not expect to resign all connexion with it when they cease to be Fellows. Good Lecturers would be gained and retained, under such circumstances, who now never become connected with the College duties, or if they do so, are soon again dissociated and their places supplied with fresh hands. The position of such men would be good, and they would therefore be secured even at a comparatively low salary. And if instead of founding a distinctly new College for poor Students, hospices or hostels for the purpose of containing them were grafted on the old foundations, the charge of these hospices would furnish to the Lecturers additional occupation and additional remuneration.

Rev. W. H. Thompson, M.A.

Answers from the Rev. W. H. Thompson, M.A., Fellow and Tutor of Trinity College.

Expenses.

1. At this College, not "very materially," though I think that *some* diminution is practicable. College tradesmen, so called, have the privilege of sending in their bills to the tutor, and receiving payment through his hands, but as the number of these privileged tradesmen is now considerable, at Trinity not fewer than 100, their prices are necessarily affected by competition. Moreover, as they are more secure of payment than others, they have not so strong a motive for overcharging their customers as those who have a greater proportion of bad debts to reckon upon.

Servants.

Among the superior servants of this College, the butler is allowed the privilege of retailing butter to the Fellows and students, who, however, are not restricted to this source of supply. The under-librarian receives, I believe, a small sum out of the admission fees, and the porter is entitled to a halfpenny for every letter which he delivers. Coals are supplied by two privileged persons, but at fixed and moderate prices.

I am not aware of any privileges conceded to the ordinary servants, beyond that of receiving fixed wages for their services. All perquisites and additional fees are discountenanced; and any attempt to extort them, would, if reported, entail immediate rebuke or punishment. Of this the enclosed Notice is a proof.

Credit.

2. Formerly the tutor had no direct control, and not necessarily any knowledge of the debts contracted by his pupils, except those due to the *College* tradesmen, whose accounts were "sent in" to him. Hence it not unfrequently happened that debts accumulated for a considerable time, and to a large amount. In February, 1847, the representations of some of the tutors induced the heads of houses to pass a decree, that *all* tradesmen and dealers whatsoever residing within the town of Cambridge, should be compelled, on pain of being "discommuned," to furnish the tutors of their respective customers (whether B.A., or undergraduates), with a statement of every debt due to them *above the amount of* 5*l*. This regulation has in many cases enabled the tutor to give timely warning to the friends of his pupils; and so to check extravagant habits before they became confirmed. Its operation is especially salutary in the case of freshmen, whom mere inexperience will occasionally betray into expenses beyond their means and intention. In the case of undergraduates whose extravagance is of a more culpable and determined character, the difficulty of enforcing the rule is naturally greater. Such persons will seek to evade the regulation in one of the three following modes:—Either

Rev. W. H. Thompson, M.A.

they will resort to London tradesmen over whom the University has and can have no control, and who sometimes give credit to a surprising extent: or so soon as their bill with a Cambridge tradesman rises within a few shillings of 5*l.*, they will commence running up an account with another tradesman in the same line of business, and so on, perpetually; or thirdly, they will resort to money-lenders, of whom there are some in Cambridge of a class so disreputable, as to regard the punishment of discommuning, the only one the University can inflict, with perfect unconcern. The last mentioned practice is happily most exceptional: but the tutor's vigilance is not unfrequently baffled by those who resort to the two former expedients. The second mode of evasion might be met by extending the rule to all debts however small; but to say nothing of the trouble thus entailed on all parties, it is obvious that the London tradesmen would be gainers by the change. In fact, I do not perceive how any rule of the *University* can adequately prevent the mischief complained of. The *Legislature* have, of course, full power to put an end to the evil: either by *defining* the "necessary expenses" for which the father of a minor can be sued at law, and, perhaps, extending the privileges of minority to the whole period of undergraduateship; or, if that be thought unadvisable, by enacting that no debt shall be recoverable which shall be contracted by an undergraduate (or *minor* generally), for which the tradesman cannot show a written permission from the father, (or guardian), stating the precise amount to which credit is to be allowed to his son (or ward), within such and such periods of time. The lending of money should be made illegal, even if the debt be subsequently acknowledged by the contractor. In the German Universities, if I am not misinformed, strict checks are enforced on tradesmen by the law; and strong as may be the objection to legislate for a class, I cannot but think that the very exceptional circumstances in which students at a University are placed, go far to justify exceptional legislation for their protection.

Money lenders.

Legislative aid necessary.

To the better-disposed undergraduates the regulations of the University undoubtedly afford considerable protection. The quarterly returns have the effect of bringing under their notice, and that of their friends, the actual amount of their expenditure; whereas, if their bills were permitted to run on to the end of the year, it might not unfrequently be found that they had inadvertently exceeded the means at their disposal.

The tradesmen's bills admitted into the quarterly accounts of the tutors are those for all articles of clothing, for groceries, for furniture, books and stationery, and medical attendance. As the *items* of these accounts are included in the tradesmen's books, it is obvious that the tutor will frequently obtain, by their perusal, an important insight into the habits and characters of his pupils. The advantage to the tradesman consists, I suppose, in the greater security of payment; bad debts of this class being, according to my experience, of rare occurrence.

Tradesmen's Bills.

3. In Trinity College the number of lecturers (or, as they are called, tutors and assistant-tutors), has been augmented since the accession of the present Master, from nine or ten to thirteen. As regards the mathematical lectures, the students are divided in the second Term of their first year into two classes, and in the third Term into three classes. In the latter Term they are classified without distinction of "sides." Throughout the whole of the second and third academical years, the students are lectured in three classes, according to proficiency, also without distinction of "sides."

Lecturers.

With regard to the conditions of attendance, the students are compelled to be present at two lectures daily during the whole of their first year. In the second year, attendance is so far compulsory, that every student is obliged to frequent *one* lecture at least. Many will attend two and even three lectures daily; and with regard to the higher classical lectures, no compulsion is found necessary or expedient. In the third year, the rule is the same, but it is not so strictly enforced, and attendance is found to vary according to the popularity and efficiency of the lecturer. The majority of the "reading-men" attend regularly, and of those not candidates for honours, many are glad to avail themselves of the lectures on the "Poll" subjects, mathematical and classical. Others are excused, on the ground of having to attend the lectures of University professors; others again, on the score of inability to keep pace with the rest, in mathematics. Notwithstanding the various causes of exemption, I find that more than half of the third year students under my own superintendance, attend regularly at least one College lecture daily.

Attendance on Lectures.

From this statement it will be perceived that the staff of lecturers is in this College fully adequate to the requirements of the *mathematical* examinations both for honours and ordinary degrees. Perhaps a little more might be done in the way of preparing students for classical honours. Many of the best scholars among my pupils avail themselves to a very limited extent of private instruction, being content with the classical lectures of the College tutors and the Greek professor. If, as I think ought to be the case, the University had two or three, instead of one classical professor, all would be done which the most exacting students could require.

College Staff.

I have hitherto said nothing of any preparation for the moral and natural sciences examinations. For the former, I can see no difficulty in providing instruction supplementary to that of the University professors, should such be found necessary or expedient. The demand, when it arises, will create the needful supply. With regard to the natural sciences, there may be greater difficulty, though, if the professors will lecture with a view to the examination, it may be long before the need of additional college instruction is felt.

Examinations.

4. Private tutors usually receive 14*l.* for a Term's instruction: 30*l.* for the long, and 10*l.* for the Christmas vacation. For these sums a pupil is entitled to an hour's instruction daily, if he think proper to claim it; or to two hours, and in some cases more, if he prefer attending with a class. A practice has lately become prevalent, of reading with a tutor *alternate days*. This is called by the undergraduates "taking a half-tutor;" and in such cases the payment is reduced one-half. I have no precise *data* on which to found a calculation of the average

Private Tutors.

Rev. W. H. Thompson, M.A.

annual expense incurred by students for private tuition: but I think I shall not be far from the mark if I assert, that of the pupils under my care few during the academical year spend more than 21*l.* upon tutors. The exceptions are to be found among the candidates for the *highest* mathematical honours, with whom it has become a fashion to read in large classes, with a certain distinguished mathematical tutor, not of this College. The entire addition to their academical expenses arising from this cause amounts, I understand, to 144*l.*, for which they receive instruction during two academical years, and two long vacations.

Average Expenses of a Pensioner.

It is very difficult for me to estimate the average actual expenditure of a pensioner even at this college, much more throughout the University. Speaking generally, I should say that at Trinity it varied from 150*l.* to 250*l.* per annum; the former being rather a low, the latter a high average. Some spend less than 150*l.*, others more than 250*l.* I suppose that few students would be inclined to add so large an *item* to their total expenditure as 144*l.*, unless they or their friends regarded it in the light of an investment, to be repaid with interest in the form of Fellowships, which in all Colleges, except this, are usually bestowed upon those candidates who have obtained the highest place in the "Tripos." The number of pupils whom I admit annually ranges between forty-five and fifty, and of these, I do not think that more than three or four seek the assistance of the gentleman in question. The rest are in the habit of resorting to a private tutor occasionally, and in the majority of instances, to a "half-tutor." When consulted, I usually recommend the latter. Of those to whom success in the University is not an object, or by whom it would be unattainable if it were, and who naturally form the majority, few I should think, spend more than 100*l.* upon private tuition, during the whole three years and a half of their academical course.

Private Tuition.

Besides the very distinguished gentleman to whom I have alluded, I could enumerate some half-dozen eminent mathematicians, who may be said to make "the office of private tutor a permanent and professional occupation." Of distinguished *classical* scholars, but one answers to the description of a professional private tutor. I frequently recommend the more distinguished classical scholars to read with this gentleman for a Term or two towards the end of their academical career, and I should be sorry to see my pupils deprived of the opportunity of profiting by the instructions of so eminent a teacher.

6. Besides the professional tutors described above, there exists a third class, familiarly known under the appellation of "poll-tutors," answering to the "Répétiteurs,"* who prepare students for the degrees conferred by the University of Paris, and to an analogous class, who, as I am informed, carry on a prosperous trade in preparing medical students for the examinations at the colleges in London. This class has unhappily become more numerous in the University since the year 1838, when the Senate issued a new programme of studies for "undergraduates not candidates for honours," including a variety of subjects not previously required from such persons. It would be invidious to characterize tutors of this description; suffice it to say, that their services are commonly sought in the terms or vacations immediately preceding the "previous examination" and the examination for the B.A. degree, *i. e.*, during the Lent Term of the second, and the Michaelmas Term and Christmas vacation of the fourth year of residence; and that, so far as I know, their classes consist mainly of persons of idle habits or inferior abilities, who have neglected or refused to profit by the opportunities of instruction afforded them in the lectures to which they have given a compulsory attendance. I consider the existence of such a class of tutors as a nearly unmixed evil.

7. I doubt extremely the expediency of re-enacting this grace, even in a modified form. I think the shortening of the time of residence alluded to in (13) would do away with some of the grosser features of the private tutor system, at least in the case of those who are not candidates for honours. I have always entertained a strong objection to the introduction of such subjects as Scripture and Ecclesiastical History into a general examination, like that for B.A. These subjects were, I believe, originally introduced out of deference to certain prelates of the Church; but, however well-intended, I believe their effect on the undergraduates to be injurious in practice. They certainly throw much additional employment into the hands of the "poll tutor," and I think they ought to be discontinued.

With regard to candidates for mathematical honours, the rule might be a good one, if it could be rigidly enforced. The fact of its having fallen into desuetude is a proof of the extreme difficulty of securing its observance.

As regards the classical examinations, I should be well content if students were debarred from resorting to tutors during the month or two immediately preceding the examination.

Poor Students.

8. In this College there are now 72 scholarships, and 16 sizarships. The value of both has been increased by the College within the last five years, and the number of the former has been recently augmented by gifts and bequests from Fellows and others, aided by the College. Both scholarships and sizarships vary in value according to the length of residence of those who enjoy them; the former being worth from 40*l.* to 50*l.*, the latter from 50*l.* to 70*l.* per annum. The selection of scholars is made from the whole body of undergraduates, excluding the Fellow-Commoners, that of the sizars from those who are entered as subsizars. The scholars are selected after an examination held in the Easter vacation of each year; the subsizars succeed to sizarships in the order in which they stand in the first three classes of the first College examination. When vacancies take place at an earlier period, the freshmen subsizars are subjected to a special examination, and the most meritorious selected to be sizars.

It would be contrary to the express direction of our statutes to choose students for the enjoyment of these emoluments without regard to merit and superior attainments. It would

* A few years ago, Mr. James Heywood, M.P., printed a pamphlet containing curious and interesting details respecting this department of literary industry in Paris.

Rev. W. H. Thompson, M.A.

also, in my opinion, be extremely detrimental to the students themselves, and injurious to the discipline and reputation of the College. In the case of *sizars*, the poverty of the candidates is sufficiently secured by the name they bear, coupled as that is with certain slight and not invidious marks of inferiority, without which it would be quite impossible to prevent the intrusion of candidates from the wealthier classes. The *scholarships* are open to rich and poor alike; but it is provided, that in case of equality the poorer candidate shall be preferred.

College or Hall for Poor Students.

A College such as that described in this question could hardly be self-supported. The students would necessarily consist of persons of inferior attainments, and the same description would probably apply to their instructors. The experiment has been tried on a smaller scale in the recently founded University of Durham. Whether, if it should seem expedient to the Senate to create a class of poor "students in theology," in order to meet the increasing exigencies of the Church, it might not be expedient also to encourage the foundation of a College or Hall for their special reception, is a question which deserves consideration. The danger to be guarded against would be, that persons able to afford a more complete and expensive education might avail themselves of the privileges of shorter residence, which would probably be accorded to the class of students alluded to. In this way a door would be opened to the entrance of a large number of comparatively uneducated ministers into the Church.

For students in arts, I think that such a College would afford an *inferior* education, and I think it extremely unlikely that it would be frequented by any large number of such persons. The whole sum at present paid for tuition by persons of the class of sizars is 3*l.* per annum. In a College without endowments, a much larger sum than this would be required, in order to remunerate the Principal and Tutor. (At Bishop Hatfield's College in Durham 15*l.* is paid.) Sizars' apartments are rated in Trinity College at 10*l.* or 12*l. per annum*, and I cannot see any probability that in the supposed College they could be let at a much lower rate. If students were admitted as pensioners, the College would become the receptacle of the idle and ill-prepared; of those, in fact, who despaired of attaining the advantages of the endowed foundations. If I am not much misinformed, the history of some of the smaller Halls in another University would be found to confirm this opinion.

Examinations.

9. The *University* examinations for the degrees in question are but two. Their nature is fully described in the Cambridge Calendar. Of the examinations at this College, I enclose a printed list, with the particulars required.*

I think the frequency and difficulty of our examinations could not be increased with advantage. It has been affirmed that the previous examination, instituted some 25 years ago, had the effect of diminishing the attendance on the lectures of the then Professor of Modern History. It does not, however, prevent the present distinguished Professor of that science from drawing to his lecture a crowded and attentive audience. Any harm which may have been done by the examination in question, has, I conceive, been amply compensated by the grace of 1848, making it compulsory on all persons not candidates for mathematical honours to attend one course at least of Professorial lectures, and to obtain a certificate of having passed an examination on the subject of such course. The institution of the two new Triposes is also working favourably in the same direction. My own opinion is, that audiences might be found for a much larger than the present staff of Professors in the University; in fact that an increased supply would create a more extensive demand.

Matriculation Examination.

10. At Trinity, there is such an examination, which has not been found to diminish the number of applicants for admission. If a *general* examination of this kind were instituted, the utmost care would be necessary in the selection of Examiners, who ought to be persons of judgment, experience, and superior, or even first-rate attainments. It would otherwise operate as an encouragement to extra-academical "cramming" by hireling tutors. The *general* cultivation of candidates for admission would be sacrificed to the *special* preparation required for this particular examination. The tutors of this College are aware that this is no imaginary danger, though from the circumstance that its numbers are in a great degree recruited from the superior class of schools, the evil is not felt so much as it would be in the case of an University examination for the same purpose.

As regards the public schools, such an examination might have the effect of ensuring a greater degree of attention to the elements of mathematics than that which, at present, exists in many of them. But it might also induce a considerable number of distinguished *classical* scholars to proceed to another University where no mathematical test is exacted on admission.

I am informed that at the University of Bonn no student is admitted until he has passed an examination in English or French. Substituting German for English, I think the same rule would be very advantageous at Cambridge.

Inducements to leave Cambridge held out to College Officers.

11. The changes enumerated in this question have undoubtedly been injurious to the University. Able men are driven from us, not so much in consequence of the inadequacy of the remuneration received by tutors and other College officers, as by the absence of any outward inducement to devote themselves to literary or scientific pursuits as the business of their lives. Many would be retained if there were a prospect of obtaining *permanent* offices in the University, Professorships for instance, unclogged with the conditions of remaining celibate and entering into holy orders. The natural substitute for the ecclesiastical preferments, the prospect of which in former times kept many able men among us, would be the creation of additional Professorships. An increase in the proportion of lay to clerical Fellowships would be a natural corollary to this proceeding (it being provided that such lay Fellows should lose their Fellowships in case of non-residence).

* As this list appears in Dr. Whewell's Evidence, p. 208, it is here omitted.

Rev. W. H. Thompson, M.A.

Increase of Professorships.

The creation of such a body of Professors may seem a visionary scheme, and it is with some hesitation I propound it. The only chance I see of its realization is this; let powers be given to every College to convert a certain number of its Fellowships into Professorships, a number proportionate to the amount of its resources, or let it have power, without diminishing the number of Fellows, to institute well-paid Professorships, reserving to itself a voice in the nomination of the Professors. A precedent exists in this College, which, shortly after its foundation, was called upon to pay an annual stipend of 40*l.* to the Professors of Divinity, Hebrew, and Greek, in addition to maintenance and chambers in College.

12. I do not admit the existence of such deficiency in this College (as appears from the answer to Question 3).

Terms.

13. It is probable that a proposal will shortly be laid before the Senate to apply for the necessary powers in order to diminish the number of terms required for B.A. to nine of actual residence, and I should give such a proposal my cordial support. If carried, as I trust and believe it will be, any change required in the succession of examinations alluded to would be provided for without difficulty by a syndicate appointed for the purpose. I think the proportion of each Term required to be kept ought in this case to be increased. Both regulations would tend to strengthen the discipline of the Colleges, as regards attendance at lectures, and in other respects. To diminish the length of the vacations would be unnecessary—to diminish it materially would be equivalent to increasing the expenses of a University education to an inconvenient extent.

Residence during Vacation.

14. In this College, the indulgence in question is accorded to those students who hold scholarships or sizarships on the foundations; and to those who, having punctually conformed to the discipline of the College, have also obtained a place in the first class at one of the annual College examinations. During the vacation such students are required to attend chapel daily, and to be in College every evening before the closing of gates at 10 o'clock. I am disposed to think that the practice of forming reading-parties elsewhere is not increasing. I am unable to give the statistics of such parties, as they are usually formed without the intervention of the College Tutors; but, if I may speak from general impression, I should say that the proportion of students who spend their vacation in this way is not considerable, and that it is rather diminishing than the contrary. I cannot say that I have a strong opinion either in favour of the practice or against it. When the expense can be afforded, it is obviously very conducive to health; and if the locality be judicially chosen, it need not be unfavourable to the industry and morals of the pupils. Ordinary care on the part of parents, in the selection of the Tutor and place of sojourn, is sufficient to prevent the probability of great abuses.

Lodging-houses.

15. Of the students in this College nearly three-fifths reside in lodgings in the town during the Michaelmas Term, and about one-half during the rest of the year.

Of the conditions imposed on every licensed keeper of lodgings, the three following are the most important:—

1. That he procure the written permission of the College Tutor of the undergraduate who may wish to engage apartments in his house.
2. That he will not permit any breakfast, dinner, or supper to be conveyed into the rooms of such undergraduate without a written order from his Tutor.
3. That the street door of the house shall be locked at 10 o'clock, P.M.; and that a paper shall be left every morning at the Porter's Lodge of the College, containing a statement of the precise hour of the preceding night (after 10 o'clock), at which every lodger may have entered the house. No lodger being allowed to leave the house after the hour of 10.

Of these regulations the second is found the hardest to enforce; and its violation is the most rarely detected.

The first is, so far as I am aware, uniformly complied with.

The third, there is reason to fear, is partially disobeyed by some among the lodging-house keepers. I do not think that any habitually omit to make the returns required; but I think it not unlikely that in some instances the lodger is represented as having come in at an earlier hour than the true one. The evil, however, supposing it to exist, is not so great in practice as might be supposed. For instance, if an undergraduate—to put an extreme case—should be reported during a whole week to have returned to his lodgings at 11 o'clock (meaning before 12) each night, when, in fact, he did not come home until after 12 or 1 o'clock, a Tutor of ordinary penetration will not fail to draw his own inferences from the appearance of such undergraduate's "gate-bills," as the returns in question are called. He will infer the neglect of study from the false, as confidently as he could from true returns.

It is fair to observe, that *many* respectable lodging-house keepers are exempt from all suspicion of such evasions; and that those who are so exempt are invariably recommended by the Tutors. When such an offence is detected, it is visited by the Vice-Chancellor and Proctors with the suspension or withdrawal of the offender's licence.

The discipline exercised by the Proctors operates as a check upon the lodging-house keepers in two ways. In the first place, these officers are in the habit, during their nocturnal rounds, of trying the doors of the lodging-houses, in order to ascertain whether they are really locked after 10. One person was called to account by a Pro-proctor in the course of last Term, for a violation of his engagement in this particular. Secondly, when they are so unfortunate as to meet with a gownsman in improper company, they not unfrequently report the occurrence to the authorities of the College, specifying the hour at which it happened.

The lodging-house keepers are also deterred from false returns by the fact that the porters mark the hour at which students pass through the gates of the College on their way to their lodgings.

Regulations like these, if they do not render false returns impossible, undoubtedly render them unsafe. Without going so far as to assert that the control exercised on the students in the town is in all respects so great as that to which those in College are subjected, I think that the difference is not so great as persons unacquainted with the working of regulations of this description are apt to suppose. *Rev. W. H. Thompson, M.A.*

Tutor of Trinity College.

Answers from the Rev. E. Warter, M.A., Fellow and Tutor of Magdalene College. *Rev. E. Warter, M.A.*

Magdalene College, Cambridge,
June 27, 1851.

My Lord and Gentlemen,

In reply to a series of questions forwarded to me as Tutor of this College, on the 18th of February, 1851, I beg to state that I have already, in replying to another set of questions issued December 20, 1850, given my opinion and such information as I possess on many of the heads or queries contained in the second document. However I will take the questions in order and again touch briefly on each.

In reply to Question 1, I would say, that it does not appear to me either practicable or desirable to diminish very materially the necessary expenses of a residence in College, so long as we contemplate the old Universities continuing to be the resort of those classes in this country to which the students have hitherto generally belonged; and now that so many new seats of learning are being established, there is no sufficient reason, in my opinion, for altering the character of the old. The provision of some new degree, such as that of a Licentiate in Divinity, requiring a much shorter residence (which I trust to be embodied in the revised statutes of the University), would be in itself practically a great reduction in the expense of a College course, and meet the increasing calls and exigencies of the Church, while the class of students, who come to the University, as preparatory to other professions, may, I think fairly be expected to submit to such payments, for the most part as are at present required. The question of degree-fees, &c., is of course distinct from the above, and may probably be *re-considered* with advantage. Expenses.

If I understand the latter part of Question 1, I am not aware that any privileges are conceded either to College tradesmen or servants in our own body, which have the effect of increasing such expenses.

2. I am not aware that a College Tutor can impose *any* check on the supply of goods to his pupils by any tradesmen *out of Cambridge;* but I think this might be effected by some such enactment as I have hinted at already in reply to a former series of questions. I do not, however, conceive that the *University itself* could pass any effective grace against such a class. The mere exclusion of such people from College walls is of course no remedy. As regards the *local* tradesman, the fact of his being *now* obliged to make a return of all bills contracted over 5*l.* each quarter, puts the Tutor in possession of such knowledge as enables him to prevent his pupil running into any great excess beyond what may be done *in a single Term.* Most respectable tradesmen do give the Tutor information, in case they see any great extravagance even during *this short space of time;* but probably some further steps might be taken by the University itself to remedy even this. If the parents or guardians of youths neglect such information, when forwarded to the Tutor, they have only to thank themselves. I need hardly add that these regulations are only of recent date. The danger, however, from the London tradesman and Jew require some further legislation, and from *some other* quarter. In answer to Question 6 of series dated December 20, 1850, I have given a list of the tradesmen's bills and the amount admitted into the College bill. The tradesman himself is a gainer by this system of having his bills inserted in the Tutor's account; but unless the rule were that nothing beyond this sum should be recoverable under any circumstances, I do not see that much good can result to the pupil. At some Colleges the whole amount contracted is sent home in the Tutor's bill; but still, by an arrangement not uncommon, this does not secure an accurate return; and, under the new regulations, I see no advantage gained thereby, while it involves this evil—that it seems in some cases to recognise the debt. Credit.

3. The first part of this question has been answered by me under No. 5, of December 20, 1850. The attendance at all lectures except the Voluntary Classical Lecture, is as far as possible compulsory. Neither our own College, nor any other in the University, *in my opinion*, has or can afford a staff sufficiently complete to provide for the entire course of public instruction, or to prepare the Students for the different College and University Examinations, under our present system; and the consequence is that a great portion of the instruction is supplied by private Tutors. Attendance on lectures.

4. Private Tutors are either what is called whole or half; that is, their pupils attend them either every or every other day, and for either 14*l.* or 7*l.* per Term accordingly. Some Tutors receive 10*l. for the half-pupil*, and formerly *Fellows of Trinity* used to receive 20*l.* per Term (from the valuable assistance, I presume, they were supposed to render to their private pupils); but whether such is at present the case I am not aware. Those engaged in the public tuition of their College also have generally received the 20*l.* per Term. What the sum generally paid for a short vacation may be, I do not know; but the whole pupil pays 30*l.* or 40*l.* for the long vacation, and the half-pupil 15*l.* or 20*l.* Some private Tutors take their pupils singly, and for an hour; others by classes; and I should say that there are *very few* candidates for the higher honours of the University Private Tutors.

Rev. E. Warter, M.A.

who do not avail themselves of the assistance of private tuition either in the Classical or Mathematical department.

6. A similarly organized system of private tuition exists also for those students who are not candidates for honours; and unless the University as a body (for I do not believe in the admission examinations which I hear of in certain Colleges) establishes some test prior to residence, it will be no easy matter to supply the place of *this class* of private Tutors for the very ill-prepared men who are to be found at present in almost every College.

7. I do not think the prohibition here alluded to can be practically carried out, so long as private Tutors for pupils in residence continue in the University. The remedy I would suggest will be found under Qu. 12.

Poor Students.

8. The little my own body is enabled to do for poor students has been already mentioned by me under Question 9, of the series dated December 20, 1850. I have always been of opinion that the establishment of a Hall or College for poor students, to be maintained on the lowest possible scale of expenditure, would be preferable to a general reduction on a larger scale of the necessary expenses of a University education; but I have never seen any practicable plan put forth, though many have been suggested.

Examinations.

9. The first part of this question I have in some part replied to under No. 5, of December 20, 1850. I considered that both our University Examinations for the ordinary degrees, and some of our College Examinations, are too much of a *lanx satura;* and that the latter do often interfere with habits of independent study. In fact I consider the present Examination for the ordinary B.A. degree to be, from its confused, mixed, and imperfect nature, most objectionable; and I trust that the day is not far distant when, in spite of the strong opposition of some of our leading authorities, and the natural prejudices of others, all this will be remodelled. I approve of what *many have suggested*, that there should be one general B.A. degree to be taken by all at the end of the third year of residence; that for this, three Examinations should be required, one at the end of each academical year, and that the third should complete the course. By this means the subjects might be subdivided and classified, and the non-reading men (as they are quaintly called) be compelled to work regularly, and not devote the Easter Term to boating and cricketing only.

I would at the same time leave the Honour Examinations just as they are, and so rid candidates of the *unequal* burdens which at present press upon them. I am aware that there would be many difficulties in detail, when one came to work out this plan; but I, for one, do not fear but they would be soon surmounted, and a healthy system introduced. As regards the Professorial system, I believe, although I may be singular in my opinion, that it was better suited to the olden time than the present for particular instruction, although it is undoubtedly very valuable in other ways; but the recent alterations in our degree system will be the best test of this.

Matriculation examination.

10. I have already given an answer in part on this subject under Question 6. The result of a general University Examination would certainly give a stimulus to our public schools, and provincial private Tutors (the refuge for the very ignorant), in preparing their pupils more adequately for the University.

Means of securing the permanent residence of eminent men.

11. Although I am fully aware of the facts here mentioned, and that the quick succession and great youthfulness of College Tutors and officers have been decidedly detrimental to the good of the Colleges themselves, I have no remedy which I can venture to suggest, although there are those who tell us that Tutors and other permanent officers might be allowed to marry with advantage, and thus the services of many valuable men permanently secured to the University.

Private tuition.

12. Under this head I shall give my opinion on the subject of private tuition, inasmuch as it will constitute my answer to the question. I would then suppress private tuition altogether for resident students, and in lieu thereof restore to a certain extent the old system. I would in the first place either double or treble the public tuition (as a matter of ultimate economy), and then by means of this source of income employ the whole body of resident Fellows as a staff, distributing the different subjects in such a manner as to secure competent lecturers or teachers in each department; or in case the College did not supply such, I would call in assistance (as many Colleges do, to their credit, now-a days) from without. I would then turn the body of good private tutors into public ones, and entail a responsibility on them which at present they do not incur; at the same time they would have an additional reason for taking interest in their pupils. I am quite aware that it will be stated as an objection to my plan, that many men who come up to the University in a state of *great* ignorance, do ultimately, by aid of *these private* Tutors, succeed in obtaining a degree. My answer to this is, that they may avail themselves to any extent they please of such assistance elsewhere than in Cambridge during their vacations, and then the increased means of instruction provided (as I propose) in College would surely be sufficient for this class. For the Honour men there can be no question but the provision would be ample. I am quite aware that my plan or proposition is by no means well digested; but I am satisfied the detail might be worked out satisfactorily by abler heads than my own. I would further add, that in suggesting any such plan as the above, I do not for a moment mean to dispute or deny the valuable services of the class called "Private Tutors." I am quite aware that they comprehend the *most able and rising men* from time to time out of our resident members, and render most important service to the University; but I do wish to see them put in a different position, and all publicly employed in their respective Colleges during the Term. I was myself for some years engaged in the private tuition of Classical Honour men, and must ever retain a grateful recollection of the kindly expressions conveyed to me by many of my old pupils; and I

would not, therefore, wish such a body of men to be done away with, except, as I said above, they could be placed in a better position. *At present* the University would be *helpless* without them. For although all Tutors are not drones, the private Tutors are certainly working bees, and, I may add, get a fair portion of honey for winter. *Rev. E. Warter. M.A.*
